I think the proper way to settle such points as those raised by Dr. Meyer is for each member to give his ideas about the necessary changes in proper form to the committee, for them to act on. And when a majority of the committee agrees, let them send a copy of their proposals to each member for approval, yes or no. I do not mean as my friend Meyer has done, send them to the press, but send them by mail, with instructions to return them at once to secretary. They should then be kept on file until a regular meeting of the club can be had at some point away from New York, as some members live in California.

I am at a loss to know where the club has not been progressive both in character and firm to its principles. I am surprised to see a letter from Dr. Meyer condemning the club and its president. When Dr. Meyer has done as much for the Gordon as the president has done, then and not till then can such a letter be justified. A word about our standard: It is adopted, and those that own Gordons had better breed up to it, for the nearer they come to it, the better will be their stock, in the estimation of our judges who have the prizes to award.

I hope that after this, all members will transact their affairs with the secretary, and not rush into print and get up controversies that no good comes from. Any one wishing to write me will have courteous attention.

ST. LOUIS, Mo. J. WHITAKER, M. D.

MASTIFF TOE NAILS.

Editor Forest and Stream

A year or so since I was visiting Mr. R. A. Craig and we were immensely amused at some mastiff correspondence, wherein the writer was deploring that "this" dog of his had so many white toe nails on this foot and so many on another, saying that "that" dog had all black toe nails, and giving a decided preference to "that" on account of this point of perfection. If I remember aright, Mr. Craig or I knew both dogs and knew that the solid black nailed one was a rank duffer and the white blemished one a tolerably fair specimen. Anyhow we were vastly amused at it and wondered what in thunder the loony was driving at. And when we compared notes neither could say whether any dog owned by either had white toe nails or all black, nor did either remember anything on the subject concerning any dog we ever saw or heard of, and it got to be a sort of a joke between us, "all white nails," or "no white toe nails."

But recently I received a letter from a gentleman who was evidently no "loony," but a man of sense and judgment, deploring that his dog, very well bred on both sides, had so many white toe nails on one foot, and asking if it was evidence of any impurity of blood, and whether I knew of any champion that had white toe nails. The tone of this letter, so far above being laughed at, set me to thinking where such an idea could come from, and I finally investigated the standard of the old English Mastiff Club, and to my surprise found it there set down "Toe nails black." Of course I replied to the writer that the color of the nails was of absolutely no significance as to the animal's blood, that I didn't believe that one mastiff breeder out of ten ever noticed the toe nails, and that a judge who would set a good specimen back on account of this point would be howled out of the ring. Whether I told him that a majority of the brindle dogs of Lukey's had even white blazed faces, and that Wolsey, the great crack of his day, had white toes and as a consequence would have white toe nails, I do not now remember, but such was certainly the fact. Certainly I never knew a dark brindle or dark fawn that did not have some white on his toes, and generally a white spot on the breast; and in a litter where there are some pups much darker in mask and ears than the others, white markings are very common. From memory only, I would say that this is the case in a vast majority of instances. Photographs are rather unreliable in such a matter as this, but from a careful examination I would say that the English mastiffs Orlando, Duchess (2,366), Hanbury's Queen (dam of Nichol's Prince and Wolsey), Beau, Ilford Baroness, The Lady Rowena, Jack Thyr and Ilford Cromwell all have (or had) white toe nails, and several of the most distinguished of them had white toes and white breasts as well. Reine, that fine bitch that Dr. Perry imported, had a white blaze running nearly the whole length of the leg; Wynn's champion Peeress, the best mastiff he ever bred, had a white blaze down her face, or if not a distinct white, it was of so much lighter shade of fawn as to amount to white. Mr. Kingdon and Mr. Wynn had a grand encounter in Webb, but agreed on one point, that color was the very last point to be considered in a mastiff; and this is set forth in every standard that was ever drawn up.

Now, I am a great stickler for conforming to the requirements of established standards, and if I were judging mastiffs in England, or if judging here, I attached sufficient importance to "The Clique Club No. 1 of America" to heed any of its sayings or doings, I would put every white-toed dog back, were it Lady Coleus herself. Of course it would raise a howl and would be bad judging in itself, but when a specialist club enacts specific requirements it should not complain if taken at its word and its ideal realized by the judge. I have no doubt that the point of "toe nails black" was put in the English standard without intending it to carry any weight, just as a suggestion or preference, but as stated it is as obligatory as the broad short head or any other desideratum. Now, as elucidating this point I would like such judges as Messrs. Mason, Naylor, Watson, Mayhew, Marshall and Mortimer to say whether they ever took this into consideration. I can imagine how several of these gentlemen will laugh at the question being put to them, but would ask them to remember that many new adventurers at mastiffs have been worried at finding their dog thus "disfigured," and the expressed opinion of known judges will (or should) settle their worries and extinguish their doubts.

This curious outcome of "standard" requirements illustrates the value of a scale of points, not to guide the judge in "point judging," but to attach definite and comparative values to the various points of the standard. Had the O. E. M. Club standard been accompanied by a scale of points rating black toe nails at 1 and head properties at about 40, any body could have extracted a clear idea of the sigificance of the two, and questions of "purity of blood" would never suggest themselves in consequence of the white toes or toe nails. W. WADE.

HULTON, Pa.

EASTERN COURSING CLUB.

AT a meeting held Sept. 16, 1889, Mr. W. J. Blackham, president, in the chair, on request of the president, Mr. Huntington, chairman of the committee on grounds, hares, etc. (appointed with power to act), reported as follows: "After examining several large plots of ground on Long Island to be used by the club as a preserve for the hares, one was selected and secured as being eminently suitable for the purpose. Privilege was obtained from lessor to course over his entire property and that of his neighbors. The committee has further to report that the club has now 20 hares on hand, and 20 more are to be delivered Oct. 1, making 40 in all. They are all strong and healthy. The wire netting used for the inclosure is of the very best quality, and galvanized. The number of hares can be increased if the club desires it." The committee was then discharged with thanks.

It was moved and seconded that by this provision of committee on grounds, etc., the club should hold its meeting beginning either on the 6th or 13th of November, 1889, at which time prizes of money and plate will be offered. There will be two stakes, one a 16-dog (puppy) stake and the other a 16 or 32 dog (all-aged) stake, trials to be run under rules of American Coursing Club. The Executive Committee expressed the hope that each member of the club would enter at least one dog in the stakes.

H. W. HUNTINGTON, Secretary.

THE TRACY ARTOTYPES.—San Francisco, Sept. 21.—*Forest and Stream Pub. Co.:* Please accept my thanks for the prompt delivery of the four Tracy artotypes. I am much pleased with them and can fully indorse all you have claimed for them and consider them a most welcome addition to my list of sporting pictures. Very truly yours, S. L. ABBOT, JR.

AN ALL-ROUND DOG.

Editor Forest and Stream:

In one of the late issues of this journal "Novice" asked for information in regard to training a beagle puppy and as to an "all-round bird dog." The Kennel editor supplemented his question with a request for contributions on these subjects.

Since then Mr. A. C. Krueger has responded as regards training the beagle puppy, but I have failed to see any answer to the remainder of the question, at which I am not surprised, as it is a vexed question. However, I should like to relate the story of a dog which came as near to the above requirements as we usually find them. His owner was what is popularly known in the country where he resides as a swamp angel. How he came into possession of the dog may be thought but not mentioned.

My idea on first seeing the dog was that he was of the Chesapeake Bay breed, but I wondered how his owner had got possession of such an apparently well-bred dog of that breed. A later inquiry, however, as to manner of possession and breeding confirmed my first conclusion.

He had two of the qualities which always go with that breed—intelligence and affection—especially well marked, and as to his sporting qualities, I fear my pen will fail to give him his deserts. He would retrieve any bird or animal you might kill, that he could lift, from anywhere. This, of course, was a necessary quality as a duck dog, and he had all the others.

Used as a flusher he was a first-class woodcock dog, and for partridge (ruffed grouse) he was excellent, as he would work in a half circle in front of the shooter, sending nearly all birds in when flushed and promptly treeing those which were missed, a very necessary requisite in that country. I may be permitted to say that my experience with partridges in trees has led me to the conclusion that if a partridge "trees," shoot him there before he gets a chance to put not only that tree, but several others between you and him, for if he flushes from a tree the odds are one hundred to one in his favor, and that is several more than I can afford to give. To return to the dog, he would run rabbits and give tongue freely, while he was as good a still runner on coons as one could wish for. Also, when he was after coons he never would run a rabbit track, as many dogs are wont to do. Numerous minks and very many muskrats owe their sudden demise to his unerring scent and cruel teeth. I owned this dog once for about two hours, having traded a breechloading rifle, a very fair pointer dog, and a few shekels to boot for him, but in the short space of time above mentioned his former owner appeared and wished to "trade back," as he said. I objected at first, but on second thought, and knowing the party's reputation, I thought that I would rather have my dog, rifle and money than to have the "angels" come by night and take the other dog, forgetting the while to return my chattels which were given in exchange for him. So after the "angel," very generously for him, granted me the privilege of using said dog at any time. I gave him up and received my property in return. It is needless to relate that I borrowed him many times, and I would that I owned one exactly similar to him to-day. OSCEOLA.

THE TRUE USES OF A STUD BOOK.

Editor Forest and Stream:

There is a controversy going on between Messrs. Peshall, Hopf and Shotwell on one side, and so far Mr. Anthony on the other, the subject being the Stud Book of the American Kennel Club. In this I do not propose to engage just now, I bide my time. But there is a side issue raised between Mr. Peshall and Mr. Anthony as to the propriety of admitting "mongrels" to a pedigree register, on which I entirely agree with what I understand Mr. Anthony's position to be—that it is not only no objection, but an advantage to have all animals registered, pedigree or no pedigree. It is most pernicious mischief to attach any definite value to a registration in any dog pedigree register, and no greater piece of humbug was preached during the war over Rule 2 than that registrations in an official register would have a higher value than in a volunteer one; not in difference in character of the two, but in the idea that registration in any register could add one jot or tittle to any dog's value. Doubtless this may be true of stud registers of horses, cattle, etc., for there the produce of one female is generally restricted to one per year, while a bitch may have twenty, and the greater number cannot be handled on the lines of the lesser one. Everybody knows that there are dozens of mastiffs entered in the Stud Book that either as breeding or exhibition animals are not really worth the entry fee, and also that many animals of very great value cannot be entered in the Stud Book. There are the mastiff bitches Wunna and Gytha II., dams of Holda, Gerda, Wodan, etc., etc., Holda and Wodan being among the very cream of late mastiffs, yet neither of these bitches could be entered, as their dam had no pedigree and neither of them ever won a prize. When Debonair, Ilford Coroner, Ilford Chancellor, etc., appeared, their dams, Idalia and Brenda Secunda, could not have been registered in our Stud Book, their granddam having no pedigree, and at that time their great grandsire was wrongly given in the English Stud Book, and there was a stupendous error in giving their dam the number of Mr. Nichols's Brenda, a bitch that was whelped in 1866.

As to the particular stud book that Mr. Peshall takes such care of, as excluding "mongrels," the gross blunders in mastiff pedigrees registered in it, blunders that for gross stupidity surpass anything extant, minimizes the value to be attached to the magic letters "A. K. C. S. B, number 000000."

The idea that so many have, and that was so developed during the war over Rule 2, that a thoroughly pedigreed animal is humiliated by appearing in a register in company with animals destitute of pedigree, is the veriest nonsense, and the calling unpedigreed animals "mongrels" is a co-relation of rot. Mona had absolutely no pedigree whatever, yet her daughters, Wunna and Gytha II., are fountains of winning blood. Mr. Morris's Flora had no pedigree, and she was the dam of that "wonderful bitch" Mrs. Rawlinson's Countess, who in turn was the dam of The Emperor, probable sire of Crown Prince. So here the choicest animals of the day run straight into "mongrels!" The pedigreed animal doesn't need any painting of the lily, nor is the unpedigreed one a "a sow in silk" by its registration.

But apart from this, entries in stud books often inflate the owner of the registered animal with a false idea of the value of it, and he will triumphantly quote "A. K. C. S. B. No. 000!" as though that settled it. There would not be the slightest difficulty in entering an animal with a bogus pedigree in the Stud Book, nor do I believe that it would be detected, and from the enormous blunders appearing in the English Stud Book and passing without correction, it does not seem more reliable than ours, so where is the good of them? To the breeder, who wishes to keep track of the blood he is using, be it known or unknown, and for the enlightenment of him, a stud book is of very great value, but for any other purpose it is not worth the paper it is printed on.

No stronger presentation of this matter was ever made than that by "Hibernia" in a late number of the *Fanciers' Journal*, and his idea of a novice buying a pedigree as the first consideration and the dog as a secondary one, completely fills the bill. The perfect ideal of a stud book was realized in the *A.K.R.*, which made no pretense to absolute accuracy, but relied on its own vigilant watchfulness and that of outsiders to correct any errors. W. WADE.

HULTON, Pa., Sept. 26.

"PODGERS" TALKS DOG.

THE other day when I happened in at the FOREST AND STREAM office and saw the care-worn expression of the editor-in-chief and the piles of manuscript lying around, I thought I would not disturb him, and shortening my visit turned to go out. As I did so my eye caught the sign over another door, "Dogs." "Oh," said I to myself, "dogs, that is my strong suit. I will go in and see the dog editor and his dogs." I found him whittling off the corner of a plug of Virginia Cavendish wherewith to fill his pipe. He was cool and salubrious in his shirt sleeves, while the literary editor was warm and uncomfortable and saying some bad things against Sergt. Dunn for giving us such a spell of muggy irritating weather. The contrast was noticeable, and I mentally reflected on the different effect of the two callings on two men, and said to myself, "Just see the influence of association with dogs. Literary work versus dogs." The surroundings of the dog editor's den were soothing and conducive to a calm state of mind, and even the work was made pleasant, for the editor had only to raise his eyes to the walls and let them rest on numerous plates and pictures of all the famous dogs of the country, a noble array of portraits, displaying in their countenances intelligence vastly superior to what one would observe in the same number of human beings. My selection was made at once. I should take the dog end of FOREST AND STREAM if the choice were ever offered to me.

That brought to my mind the mournful and miserable condition of a man that is doomed to live in a city where he cannot keep a dog. My mind wandered back to the bright days when my household consisted principally of dogs: thirteen, if I remember correctly, and if my best friend had come to me and said, "I want a dog, you have a world of dogs," I could not on the life of me have selected one out of the lot that I could have parted with. Occasionally when one of them misbehaved, and for the moment was in disgrace, and I said, "Look here young man, you and I will have to part company," he would sit down in front of me (for dogs always know what you are saying), look so penitent and beseeching and when he saw that I was relenting, would wag his tail faintly and hesitatingly, until he was sure the storm had passed, and then how he would show his delight by nearly jumping out of his skin to lick my face. Give that dog away? Not much. Not for a hundred.

I tried keeping a dog once in New York, a small specimen, whom during the day I relegated to the back yard of my boarding house, after entering into a treaty offensive and defensive with the cook, involving pecuniary considerations; but it was attended with great embarrassments and troubles, and continually led to differences with the landlady. I think I moved seven or eight times that winter on account of such differences, besides frequently losing the small dog and expending many dollars for advertisements and rewards, until the frequency of mysterious disappearances became chronic, and led to a suspicion that a certain dog merchant was making his season's expenses out of me.

It was in vain I moved, he followed my wanderings until on the last occasion a long interval ensued without his producing the dog, and when he finally appeared, I had struck a landlady of strong views and prejudices on the dog question, a woman of decided opinions. It was a good place, the surroundings were pleasant, the table excellent, added to which was a heavy charge by the dog man for capture and maintenance. I hesitated, and working myself up to a pitch of indignation with the small specimen, for his vagabond propensities, I declined further investments, and gave the man the animal for his bill, much to his dissatisfaction, I believe, but he walked off with Peter under his arm. It was many a day before I could rid my mind of the reproachful, beseeching last look that little dog gave me, as he stretched his neck over the man's arm as he walked down the street. I felt mean, for the little thing looked heartbroken. I often wondered what that dog thought of me. What a mean opinion he must have had of human nature.

I have not tried it again, but I mourn for the society of some respectable, right-minded dog. I know a good many men, friends who honor me with their company at times, but they don't fill the bill. They think I have a bank account. (What a delusion.) Don't believe they would come if they thought otherwise, but a dog never asks the question. He is too much of a gentleman to do that. The man would wag his head if I said, when I came home from down town, that I had dropped a lot of money that day down in Wall street; the dog would simply wag his tail in welcome, and be just as glad to see me as if I had made a thousand or two. There's the difference, and the difference is in favor of the dog every time. The longer I live, I say as the chap did, "The more I see of men the better I think of dogs."

I am looking for a place to board this winter, where I can keep a dog. Know of any such? If you do wire me.

PODGERS.

THE "STOCK-KEEPER" AND ITS ASSAILANTS.

Editor Forest and Stream:

I propose in the following lines to defend an English journal, the *Stock-Keeper*, from the currish thrusts that have been made at it by such Englishmen as Mr. Mayhew ("Bl'rst'd Britisher") in *Turf, Field and Farm*. Mr. Hussroft in another journal, and their unclean allies in this country. I claim to do so as one of the editors and proprietors of the *Stock-Keeper*, and I reply over my own signature for two reasons; first because my name is not mentioned in the kennel world with averted eye and hand-screened utterance, secondly because I am no swash-buckler; shield or protection of any kind is unrequired for such opponents.

With your permission, sir, I will introduce, feeling it is necessary, a word or two about the *Stock-Keeper*. Four years ago this journal passed into the hands of its present proprietors, who are all men of good repute and some standing in the realms of fancy. None of them was dependent upon the paper for his living, they all had other occupations; but they were prepared to devote their leisure hours to an earnest purpose, which was to create a journal that should raise the tone of the kennel press and with it that of the kennel world. They have tried to give their readers an interesting paper, void of scurrility and personalities, and superior to all other considerations than those of duty. Success has rewarded their efforts, and envy, like an ill-bred cur, snaps at their heels. Beyond material benefit, however, are prized the thanks of the most eminent and representative members of the kennel world, which the *Stock-Keeper* has received for its share in elevating the standard of kennel ethics.

Mr. Mayhew has tried to weaken the position of the *Stock-Keeper* by an attack on me. As to the burden of his charge against me, I believe my character as a gentleman, even in a strange land (which America is to me), is sufficiently known to render it superfluous for me to say that I have never made use of my hobby as a means toward business; in fact, my friends and acquaintances know the contrary to be the case. I will proceed to furnish the clew to Mr. Mayhew's bitterness. When the respectable portion of the terrier world started their crusade against trimming, they met an active opposition from a body of men who made a considerable share of their living by exhibiting and dealing in a breed of dogs that are by some exhibitors trimmed. Against trimming and plucking and such devices to deceive were arrayed gentlemen of the highest standing in the kennel world; in favor of the practice and continuance of these arts were "the clever division" and Mr. Mayhew, who under the old order, which suited him so well, had snatched a few successes on the bench in wire-haired fox-terriers. Mr. Mayhew opened up for his party with a violent and outrageous attack upon the honorary secretary of the Fox-Terrier Club, Mr. Tinne, one of the most esteemed members of the Kennel Club. The letter was such a bare-faced backing up of trimming that the *Stock-Keeper* in commenting upon it stated that Mr. Mayhew might think himself lucky if he escaped an interview with the Kennel Club committee. Mayhew heard the crack of the whip, but he just escaped the thong. It came to the *Stock-Keeper's* knowledge that Mr. Mayhew was, after this, going about telling people he intended to prosecute the paper for libel. To stop his trading on such cheap notoriety, an editorial was inserted, offering Mr. Mayhew every facility for bringing an action. He did not do so, and the kennel community missed the revelation of hearing him under cross-examination. He waited for his revenge till he had the Atlantic between him, and till he found an American paper that would print his attacks. This is not English, not the English character of those who stop at home, and I venture to hope that publishing the cowardly attack was not American, but an accident. However, the respectable party here won, and trimming was condemned. Mr. Tinne and his friends would have deserted the fancy had they lost the day, but the climax came when the Kennel Club issued its ukase against the operation, classing it as tampering, and instructing the judges to report cases.

He never had an appointment here in connection with the press. He was simply employed on odd jobs, though never, I believe, by the *Stock-Keeper;* if so it would have been without my knowledge. This may even have served to embitter him against myself, added to which I studiously avoided any contact with him. In showing dogs one is compelled to mix with many people whom one is not obliged to know. Outside his own set Mr. Mayhew was only known in the catalogues as a wire-hair fox-terrier exhibitor. He was not known in any other breed, and so little was he thought of in this country that the Kennel Club never asked him to judge. This distinction, which many regard as a hall-mark of the kennel world, was never offered to Mr. Mayhew; but still he is considered good enough for America, where, being unknown, he can pose as an authority upon all breeds of dogs.

A word is necessary to explain why this reply does not appear in the paper that published the attack on me. When Mr. Mayhew's attacks were read here they excited universal contempt, and no secret was made of the fact that an English exhibitor had written to the paper to give expression to that feeling. His letter was not published, nor has a word of apology appeared in that journal for inserting such abuse of an editor of a friendly contemporary. Such a course is so opposed to English canons of fair play, that I still suspend my judgment, thinking a retraction or explanation may yet be forthcoming. It was noticed over here that Mr. Mayhew's contributions over the *nom de plume* of "Bl'rst'd Britisher" had ceased to appear, but I observe that he has broken out with a new *alias*, of which he gives a maudlin account. With his shifting signatures I have no concern, but I do indignantly draw the attention of the American public to Mr. Mayhew's last offense in calling his compositions "Canine *Whispers*." The name "Whispers," never before used in any newspaper to describe paragraphs, was adopted by myself for the *Stock-Keeper* paragraphs, consequently the word has become inseparably connected with the *Stock-Keeper*. It is monstrous that Mr Mayhew should adopt from the paper he has already done his best to decry. I trust the editor of my American contemporary will arrest this move, and tell his pilfering contributor, who has no originality of his own, that this robbing men of their ideas is exceeding the limits of decency and toleration.

GEORGE R. KREHL.

LONDON, England.

JACK.

I AM sorry to be obliged to confess that Jack was not, strictly speaking, a blue blood dog. On the maternal side his lineage was pure, but his father was only just dog. Poor Jack! Pride of blood or something, would not permit him to associate with his paternal ancestor, whom he would regard with a look of disdain from the corner of his eye, as he sat on his haunches with nose well in the air, sleepily and innocently studying the horizon till his obnoxious parent withdrew from his presence. Then, with a shake of his glossy brown coat and silky ears, he would go to his bed, doubtless overcome by the cruel necessity of cutting his father's acquaintance.

Generally speaking, Jack was strictly honest. Bread, meat, milk, anything in fact was safe for any length of time when Jack was left alone, because he knew they belonged to his human superiors.

But to the cat he owed no debt of gratitude for scoldings and switchings; consequently he and pussy would often differ as to the proprietorship of certain saucers of milk. Often have I watched him when he little thought human eye could see his evil doings. Giving the cat her milk I say, "Jack, don't you touch that, now!" Understanding perfectly what I say, Jack walks sadly away, while I go into the kitchen and very nearly close the door. Jack pricks up his ears as he sees me go in, and assumes a more cheerful expression; he studies each window closely; if any one is there pussy's milk is safe, but now there is no one in sight; he sniffs; no one watching evidently, so very cheerfully, now, he walks over to pussy's dish and assists in cleaning it out. Just here I open the door suddenly. Like a flash he drops on his haunches, half closes his eyes, raises his nose, and sniffs the air, as though looking for signs of rain or ducks. Slowly and indifferently he turns his head to give me a glance from his sleepy blinking eyes, and while giving his tail a recognizing wag he slyly hitches a half inch or so further away from the saucer.

"Jack!" I say, "did you touch that milk?"

Blink, blink go Jack's eyes, and he hitches away another half inch, never once relaxing his expression of innocence and sleepiness, yet so very plainly showing that he is consciously oblivious to cat, saucer or milk. But to save him he cannot help a quick, anxious glance at the rapidly diminishing quantity of milk, though he does not turn his head, even a hair's breadth, as he flashes his eye in kitty's direction.

Finally I go and close the door, but hastily peep out from behind the curtain. Jack, still sleepily blinking, is taking a sly sniff toward the closed door; once more he views the windows, and sees nothing. Suddenly resuming his natural expression, he briskly turns to the now empty dish, and seeing its condition, he makes a sudden spring at his playmate, which causes her to fly in terror, while he looks, and I truly believe he thinks, too, "I'm well out of that scrape; but didn't I fool him, though!"

Jack knew as well as any one when I was preparing to go shooting. He made no demonstrations of delight when I would don business coat and hat, but let me draw on gum boots and canvas coat, and his delight knew no bounds. He would spring and leap as he whined, "sung," and fairly howled in his delight. Sometimes I would say: "Can't go to-day, Jackie; stay home now." With a heart-broken expression he would sit down, while howl after howl made the neighborhood ring as he watched me go through the gate. Turning back after a short distance I would call: "Would you like to go, Jackie?" Oh, how expectant and hopeful he would look, but not a step would he take yet. "All right, old boy, come on!" and with a bound Jack would clear the gate, joyful once more.

When quite a young pup I left him home one day in earnest. He howled pitifully for a while, but near the house I shot a grouse. At the sound of the gun his misery was intense; he sprang at the door, scratching and pawing the panels frantically; from that he leaped out to the kitchen table, jumping at the window in a wild endeavor to get out. Fearful lest he should break the window my wife held him; but caresses were powerless to quiet his howls for some time. All through the day he would start from his naps and utter fresh howls as the memory of his sorrow seemed to return to him.

I taught him, when a very small pup, to retrieve. To carry a ball of yarn he was obliged to hold his head very high, and to this I attribute his habit of carrying his head well up when he retrieved a bird. His legs were very short, his chest broad and powerful; and with head held high as he brought in a duck, and his extremely long silky ears reaching over his shoulders, he made a beautiful picture.

Jack proved to me that a spaniel will learn by observation as well as by training. Often when I was out for a day my game bag would become heavy, and to relieve myself of the weight I would hide a few birds in tufts of meadow grass, to be taken up on my way back to camp, but at no time did I tell Jack to hide game.

One night as I was returning to camp I shot a duck. Giving it to Jack I told him to take it "home," and he ran on ahead. Suddenly I remembered that I had left my coat in some brush on a tiny hill, and turned back to get it. Hidden by the brush, and from the elevation I watched Jack. After trotting proudly along for a while, he looked back to see if I was coming. Not seeing me, he dropped the duck, sniffed and watched the deserted trail. No signs of me. Picking up the duck he trotted off quite a distance from the path, bid the duck in a tuft of grass, and came back in search of me. Soon he found me and we started on together, I taking no notice of the fact that he was without the game. We walked on rapidly till suddenly, when opposite his game, he rushed off, pawed away the grass, and secured the duck, trotting on as before, till he took it into camp. I was proud of Jack then. But the poor fellow was the victim of a joke one day. I shot a duck on a tiny pond close to the house. It floated apparently dead and Jack retrieved it, while I started back to the house. As he neared the gate he laid the duck down a moment to get a better hold of it, when, like a flash it was off. Astonished at his lively game, Jack stood for one brief moment and watched its flight; then, like a streak, he tore round the fence, and off through the bushes, determined on heading off and capturing that duck. In vain I whistled and called, Jack was deaf. Looking up I saw my wife on the veranda with tears of laughter rolling down her face, "over the expression on Jack's countenance," she said.

Two or three hours later Jack returned, panting, tired and disgusted. I suspect he blamed me, he looked reproachful, I fancied.

A more ambitious dog never hunted. One day in winter he retrieved ducks from the water to the side of the boat, where two of us were shooting, till he had brought in thirteen without leaving the water. Then I pulled him into the boat, and wrapped him in a great coat, for he was chilled and stiff. As another duck fell he struggled to get into the water, but I held him back.

Never shall I forget my last day's sport with my favorite. He had retrieved a number of pigeons and a grouse or two. Finally I shot a grouse, which fell and fluttered away. Jack followed, and feeling sure that he would soon catch it, I sat on a log to rest; for I was tired after a long tramp through the bush. Suddenly I heard a close shot and soon a young half-breed boy appeared on the trail.

"What did you shoot?" I asked.

"Dunno; seen a animal runnin', an' fired; guess I didn't hit 'im." And he passed on.

A few minutes later Jack emerged from the bush, weak and tottering from pain and loss of blood. Springing forward I bent over him as he laid the captured grouse at my feet. "Jack, old boy, did the brute shoot *you*?" I exclaimed, and for answer Jack looked up into my face, whined, licked my hand, and turned over, dead.

KENMARE.

THE ALL-DAY FIELD TRIALS.

A MEETING of the committee who have in charge the inauguration of the All-Day field trials was held on Tuesday afternoon at the office of Mr. F. R. Hitchcock, in this city. An informal discussion of the details was had, and it was decided to hold the trials at some convenient point in the South, beginning Monday, Jan. 27. The event will be a sweepstake, open to all pointers and setters, with $50 forfeit and $100 additional to start; 70 per cent. of the stake to the winner, 20 per cent to second and 10 per cent. to third. Entries will close Dec. 10, additional money to be paid the night before the race. The committee guarantee the expenses, and the entire stake will go to the winners. The rules of the Eastern Field Trials Club will govern, except if there is a bye dog in the first series he must run a heat with the best dog that has been beaten, and in case of defeat he will be retired, and his competitor will run in the second series. Each heat in the first series will be an all-day one, from 8 A. M. until 5 P. M., with an hour's intermission at noon. In the remaining series the heats will be of four hours duration each, except the final, which will be similar to those of the first series. The following named gentlemen comprise the committee: Col. C. H. Odell, New York; Mr E R Coleman, Lebanon, Pa.; Messrs. J. O. Donner, H. B Duryea and F. R. Hitchcock, New York; Mr. Heath, Newark, N. J.; Mr. Robert McCook, Steubenville, O., and Mr. Bayard Thayer, Boston, Mass.

DOG TALK.

THE *Stock-Keeper* says of the increase of the registration fee: "The mind of the American kennel world is much exercised with the decision of their Kennel Club to raise the registration fee from fifty cents to a dollar. What sort of reception would the plan receive in this country were Cleveland-row to propose to charge 4s. 2d. for registration! We should all go out on strike. Even the shilling has been loaded with epithets, and grizzling arithmeticians have made laborious calculations to show that the cost of labor, stationary, etc., etc., to the Kennel Club would be well covered by a 6d. charge; and then they ask what does the club do with the balance? No doubt the club do have a surplus when all expenses have been allowed for, and that surplus is fairly distributed in special prizes to provincial shows. We consider a charge of 4s. 2d. altogether beyond consideration. That any less sum would entail a loss on the American Kennel Club we must believe, because we have for the genuineness of that statement the word of three respected members of the American kennel world, but even so, such a fee is too high, and the A. K. C. should submit to a loss on their stud book rather than put such a prohibitive price on the entries."

The same journal also expresses its opinion about compulsory reports from judges: "For an institution in a republican country we must say that the American Kennel Club is an extraordinarily autocratic body. Its last imperial decree insists that judges shall furnish reports for publication in their official organ, and, considering that the judges are gentlemen who discharge the judicial duties with no other return than that very empty one—"the honor of the thing"—an observer cannot help being struck with the curious idea of blending an onerous obligation with an honorary office. The committee of the American Kennel Club probably smooth out any objections to this proposal with the excuse that appears to satisfy all doubts on sporting subjects in the United States: "It's English, you know." But is this English? We think we can show our transatlantic cousins that they have misunderstood the practice in

this country, and have gone far beyond what is done by our club. The English Kennel Club would never have ventured upon such an arrogant step as insisting that all judges at shows held under Kennel Club rules should write the reports for their paper. The utmost that they do is to forward a polite appeal to the judges at their own shows for their notes on the classes they judged. This courteous request is often acceded to and sometimes not. To many men such a task is not easy—nay, it is even disagreeable, and we are pleased to say that in this monarchical country we are too independent to be bullied into doing other people's work. If our committees with their invitations to judge were to couple the request for a gratuitous report, they would have to create a new breed of judges, for the body of men who at present give their services gratis would draw the line at being compelled to act as reporters at the same time." For the information of the *Stock Keeper* we will say that "the honor of the thing" is not, as a rule, the only compensation our judges receive, as very few of them do not pocket a round fee for their services.

The amendment to the rules of the A. K. C. proposed by Dr. Perry at the last meeting of the club, which will compel all judges at dog shows to write a report of their classes, is rather too arbitrary, and we fear that the result aimed at will not be accomplished nearly so satisfactorily as it would be were the matter differently arranged. Official reports of the judges are desirable, and their publication in the *Kennel Gazette* would be useful to the exhibitor as well as gratifying to the public. We believe that this could be accomplished, in most cases at least, by a courteous request for such report instead of an imperative demand. Man the world over is notoriously a very contrary animal to drive, but a little coaxing will nearly always succeed in accomplishing its purpose.

We published in this column in our issue of Aug. 15 an article from the *Stock-Keeper* relating to Mr. Huscroft, who, it will be remembered promulgated the Salisbury pedigree scandal. The article, among other things, stated that it was the belief of the *Stock-Keeper* that Mr. Huscroft had furnished other journals with advance news of the doings of the Kennel Club. *Fanciers' Gazette* having published Mr. Huscroft's denial of this charge, regards us as "guilty of gross unfairness" in not apologizing for having published the charge. This strikes us as being very, very funny, as this charge was a trivial one compared to the other charges which neither the *Gazette* nor Mr. Huscroft disprove or even apologize for.

The Eastern Field Trials Club has secured the services of Mr. D. C. Bergundthal, of Indianapolis, Ind., and Mr. J. R. Henricks, of Pittsburgh, Pa., to judge at their coming field trials. Mr. F. I. Stone, of Chattanooga, Tenn., was also invited, but owing to business engagements he was obliged to decline. As already announced, Col. Arthur Merriman, of Memphis, Tenn., will be one of the judges in the Pointer Stakes, and we hope to be able to announce the third judge for the Setter Stakes next week.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

BRED.

☞ Notes must be sent on the Prepared Blanks.

Spinaway III.—Bang Bang. Westminster Kennel Club's (Babylon, L. I.) pointer bitch Spinaway III. to their Bang Bang, Aug. 10.

Pocahontas—Lad of Bow. F. R. Hitchcock's (New York) pointer bitch Pocahontas to Westminster Kennel Club's Lad of Bow, July 31.

Madstone—Lad of Bow. Westminster Kennel Club's (Babylon, L. I.) pointer bitch Madstone to their Lad of Bow, July 29.

Luckystone—Naso of Kippen. Westminster Kennel Club's (Babylon, L. I.) pointer bitch Luckystone to their Naso of Kippen, July 28.

Glauca—Lad of Bow. Westminster Kennel Club's (Babylon, L. I.) pointer bitch Glauca to their Lad of Bow, July 22.

Pattie of Naso—Naso of Kippen. J. R. Daniels's pointer bitch Pattie of Naso to Westminster Kennel Club's Naso of Kippen, July 20.

Bessie Bravo—Bang Bang. E. C. Freeman's pointer bitch Bessie Bravo to Westminster Kennel Club's Bang Bang, July 20.

Queen—Naso of Kippen. J. H. Winslow's (Philadelphia, Pa.) pointer bitch Queen to Westminster Kennel Club's Naso of Kippen, June 24.

May M.—Bang Bang. H. E. Thomas's pointer bitch May M. to Westminster Kennel Club's Bang Bang, June 11.

Modesty—Naso of Kippen. T. H. Terry's (New York) pointer bitch Modesty to Westminster Kennel Club's Naso of Kippen, May 8.

Kate VIII.—Lad of Bow. Westminster Kennel Club's (Babylon, L. I.) pointer bitch Kate VIII. to their Lad of Bow, May 19.

WHELPS.

☞ Notes must be sent on the Prepared Blanks.

Wanda. Stratford Kennels' (Newark, N. J.) pointer bitch Wanda, Sept. 17, six (two dogs), by E. Dexter's Pontiac

Lass of Bow. Westminster Kennel Club's (Babylon, L. I.) pointer bitch Lass of Bow, June 19, ten (six dogs), by their Naso of Kippen.

Kate VIII. Westminster Kennel Club's (Babylon, L. I.) pointer bitch Kate VIII., July 16, eleven (nine dogs), by their Lad of Bow.

Nancy. Westminster Kennel Club's (Babylon, L. I.) pointer bitch Nancy, Sept. 19, eight (five dogs), by their Westminster Cato (Naso of Kippen—Kate VIII.).

Patsey Bang. The Elms Kennels' (Forest Lake, Minn.) pointer Patsey Bang (Bang Bang—Peggie), Sept. 24, nine (four dogs), by Dr. J. Hausen's Duke (Sensation—Rose).

SALES.

☞ Notes must be sent on the Prepared Blanks.

Yellow River Joe—Yellow River Music whelps. Black, white, tan and ticked beagles, dog and bitch, whelped Aug. 16, 1889, by L. K. Avery, Bremen, Ind., to Wm. L. Ewing, Vincennes, Ind.

Romp and Rowett. White, black and tan, and black, white and tan beagle dogs, whelped Oct. 17, 1888, by Dan out of Weasel, by Blue Ridge Beagle Kennels, Denver, S. C., to Fred C. Cook, Chicago, Ill.

Harry Bird—Lady Vixen whelps. Pointers, whelped March 8, 1889, by F. R. Page, Orland, Me., a lemon and white dog to J. B. Baker, Manchester, Vt., and a liver, white and ticked bitch to Dr. L. M. Thompson, Mahanoy City, Pa.

Lord Chandler. Silver fawn pug dog, whelped Sept. 1, 1889, by Joe II. out of East Lake Virgie, by Eberhart Pug Kennels, Cincinnati, O., to Mrs. David Hope, West Bay City, Mich.

Parone. Silver fawn pug dog, whelped Sept. 1, 1889, by Joe II. out of East Lake Virgie, by Eberhart Pug Kennels, Cincinnati, O., to W. H. Blymyer, same place.

Ben Hill—Nora whelps. Black, white and tan English setter bitches, whelped March 13, 1889, by T. Norris Cochran, Philadelphia, Pa., one each to D. C. Jones, Memphis, Tenn., and W. A. Hinesley, Indianapolis, Ind.

KENNEL MANAGEMENT.

☞ No Notice Taken of Anonymous Correspondents.

L. J., Brooklyn.—I have a small King Charles spaniel, 5 years old, and I feed on bread and crackers soaked in tea, with sugar sprinkled over it, and very little meat. She is continually scratching herself and back seems to itch most, and her breath is very foul. Teeth are in fair condition, but front upper set is gone. Kindly advise me in one of your issues what can be done for her, and oblige subscriber. Ans. Give 5 drops of Fowler's solution of arsenic in the food daily. Give a 3-grain pill of quinine hidden in a morsel of meat each day.

J. E. V., New City, N. Y.—I have a pointer dog, 6 years old, weight 45lbs., that has been troubled for the last two years with sore feet. Sometimes they seem to be nearly well and then they break out again, and look as if they had been scalded between the toes and on the bottoms around the ball of the foot. I have used remedies recommended for mange. I think it must be his blood that is impure. Ans. Wash between toes and after drying dust on dry calomel powder. Do this night and morning. Fowler's solution, 5 drops daily in the food, is an excellent general tonic.

M. W., East Hampton.—My pointer dog has had sore eyes since last June; they run matter all the time. We have done all we can for him. He is 15mos. old; is dull and stupid; when I speak to him he hangs his head and seems frightened. When I got him he was all covered with small lumps, but I kept washing him with carbolic soap and they are all gone. There seems to be a skin growing over his eyes. Ans. Looks like distemper. Give 5 grains quinine night and morning in a pill concealed in a bit of meat. Also give 5 drops of Fowler's solution of arsenic in the food once daily. Feed very little or no meat. Keep the bowels open by giving one or two blue pills as seems necessary.

Rifle and Trap Shooting

RANGE AND GALLERY.

REGIMENT VS. STATE.

THE intimation that the 23d Regiment of this State would like to pit a team against a team from a Massachusetts regiment was not responded to, and now the following correspondence has passed in the endeavor of the Brooklyn boys to get on a match:

BROOKLYN, Sept. 25.

Col. H. T. Rockwell, Inspector-General of Rifle Practice, State of Massachusetts:

SIR—I have the honor to submit to you the following proposition: In order to test the relative merits of the Springfield 45cal. rifles and the Remington .50cal. rifles, the 23d Regiment, N. G., S. N. Y., would like to arrange two matches with the Massachusetts Rifle team under the following conditions: First match, the 23d Regiment to use the Remington .50cal. rifles and the Massachusetts team the Springfield rifles. Second match, to exchange rifles actually used in former competition, each team to furnish to the other the elevations used in former match. Considerations as to distance, number of shots, etc., to be mutually agreed upon hereafter. The 23d Regiment will furnish you 15 or 20 Remington .50cal. rifles to use in practice, you to provide the 23d Regiment team a like number of Springfield rifles. We desire a friendly contest to try and solve the vexed problem of the relative merits of guns and men.

The 23d Regiment will accept any Massachusetts man as referee and agree to terms that would be fair to all parties. We hope you will give this proposition favorable consideration, and advise us of your decision at an early date. Very respectfully, your obedient servant, HEYWOOD C. BROUN,

Capt. and Insp. Rifle Practice, 23d Regiment, N. G. S. N. Y.

To this challenge Col. Rockwell replied as follows:

BOSTON, Mass., Sept. 28, 1889.

Capt. H. C. Broun, I. R. P., 23d Regiment N. Y. S. N. G.:

SIR—The matches you propose would be interesting, whether successful in settling mooted points or not, I doubt, however, whether it would be practicable this season to get a team together. Our fall drills are yet to occur, and these, added to other State duties performed and rifle matches engaged in, will take all the time that some of the men can possibly spare. There might be a possibilty, however, of your getting on a competition through the inspector of the 2d Regiment. I would suggest that you address Lieut. S. S. Bumstead, I. R. P., 2d Regiment M. V. M., Springfield, Mass. He may be able to make up a team from the immediate neighborhood, with one or two additions from this part of the State, so as to meet you with 8 or 10 men. Permit me to add that whatever has appeared in the public press in the way of undue boastfulness about our Massachusetts team is not attributable to me or to any other representative of the State. We have for years recognized your New York troops as affording an example for emulation in rifle shooting, and it has been our ambition to put ourselves on your level. If we have the privilege and pleasure to meet your State team in future years we hope to come off with credit, whether winning or losing, but those who speak of any of the team habitually measuring strength at Creedmoor as "invincible" are badly advised. I am, very respectfully, your obedient servant. H. C. ROCKWELL,

Col. and Insp.-Gen. Rifle Practice, M. V. M.

ST. LOUIS, Mo., Sept. 21.—The second shoot of the St. Louis Pistol Club on its new tourney took place last Wednesday night at the Laclede Gallery. Although the attendance was rather light several good scores were made by those who participated in the shoot. At 20yds. Standard American target the following scores were made:

S G Dorman	10	7	10	10	10	8	9	10	5	9—87
M Summerfield	10	6	7	9	10	8	9	9	8	8—84
G W Alexander	9	8	9	7	8	8	9	9	10	6—83
W Bauer	5	5	8	7	10	8	9	8	10	10—80
W C Mackwitz	10	6	5	10	5	7	7	8	7	6—71
A E Bengel	8	7	9	6	8	6	5	5	5	6—68

Sept. 23.—Only six members of the St. Louis Pistol Club were present at the last medal shoot held on Wednesday night at the Laclede Gallery. An 86 by Mohrstadt proved high, and the medal will remain in his possession until next Wednesday. Following are the scores:

E Mohrstadt	10	10	6	9	10	7	9	8	10	7—86
W Bauer	8	10	8	10	10	8	5	10	4	10—83
M Summerfield	7	8	9	9	7	9	8	9	9	6—81
G W Alexander	8	8	6	8	6	9	7	8	9	9—79
W C Mackwitz	9	7	9	10	9	6	6	10	8	8—79
A E Bengel	8	7	7	8	9	0	10	8	7	6—70

The fourth friendly match with pistols between Summerfield and Mohrstadt took place the past week, and was won by the former with six points to spare. The latter is not satisfied with his score, and another match between the above gentlemen will be shot next week. Conditions were: 50 shots per man at a 12½yds. standard American target, with .22cal. Stevens pistols:

M Summerfield	8	10	7	9	8	6	9	10	8	8—83
	10	9	9	10	7	9	9	8	9	10—90
	6	8	7	10	8	9	10	5	10	7—80
	10	9	8	9	8	9	8	7	9	9—86
	7	9	9	8	9	8	8	8	10	7—81—420
E Mohrstadt	7	10	6	10	7	7	10	7	10	7—87
	10	8	8	8	9	8	7	7	8	9—83
	9	10	7	9	9	7	7	8	6	6—78
	7	10	7	9	9	10	10	7	6	9—84
	6	8	7	10	9	10	8	10	10	10—88—414

UTICA, N. Y., Sept. 23.—The contest between the Frankfort Rifle Club and the Fort Schuyler Rifle Association was held this afternoon at the range in Deerfield. The contest was spirited, and over 200 spectators enjoyed the sport. Although the visiting team made some good shots, the home club won by 39 points. The feature of the contest was the excellent record which F. Ferris made with his muzzleloading rifle, the only muzzleloading gun used. He easily won first place, while Mr. Stoddard of the Frankfort Club secured the second. Below is the official score, each marksman being allowed 10 shots at 200yds.:

Utica.

E Devine	4	8	3	8	4	7	6	4	4	10—58
A Ferris	0	2	2	2	1	5	8	6	4	3—33
F Ferris	10	7	7	8	4	5	7	10	6	6—70
Sieboth	3	5	7	9	6	6	5	5	6	8—60
Utter	4	4	6	4	6	5	5	6	8	7—55
Woodward	3	4	8	9	5	6	5	3	2	3—48
Kent	4	6	7	4	7	5	10	8	4	10—65
Symonds	2	9	4	9	4	6	5	4	5	7—55
Hendricks	2	4	9	8	3	4	4	4	4	5—47
Hoges	1	3	2	3	3	3	5	8	3	9—40—531

Frankfort.

Gray	6	3	2	4	6	6	8	7	9	7—58
Perkins	4	6	5	5	5	6	0	5	3	4—44
Rich	4	4	4	2	4	3	3	4	4	7—39
Dobson	3	4	3	2	5	10	5	3	6	8—49
Whitney	3	3	1	5	4	5	4	3	3	6—37
Tubbs	8	4	4	5	6	6	4	4	4	4—49
Stoddard	6	5	8	5	6	8	9	9	6	6—68
McMillan	1	4	6	4	7	4	5	3	8	2—44
Staring	3	3	2	8	7	7	4	7	5	10—56
Valentine	9	2	0	3	3	10	5	5	6	4—47—492

The visiting team was handsomely entertained by the Fort Schuyler Association.

MARION, N. J., Sept. 25.—At the weekly shoot of the Marion Rifle Club, which was held to-day, Mr. L. Varick, the youngest member of the club, and who may be termed an amateur alongside of the other crack marksmen comprising this organization, made the highest score that was ever shot on the club's range. He scored 210 points out of a possible 250,

FRAMINGHAM, Mass., Sept. 28.—The annual State shoot of the Massachusetts militia was held here to-day under rather unpleasant auspices. The rain which descended at intervals, and the cloudiness of the atmosphere, did not help the shooting, but some remarkable scores were made nevertheless. The general run of the shooting was considerably above that of last year, and without doubt the brilliant trip of the Massachusetts rifle team to England has inspired the younger members of the militia to take up rifle shooting. Each company in the State was represented by a team of seven men, who shot for the company prize. Company A, Sixth Regiment, was victorious, winning the first prize by a score of 201 out of a possible 245. The remainder of the matches were not finished, owing to the rain and darkness, and may possibly be shot at some later day. The scores in detail are as follows:

Company Match.

PHILADELPHIA, Sept. 30.—The annual shooting fest or prize shooting of the Philadelphia Schuetzen Verein was held on Thursday, Sept. 26, at their park on Queen Lane. Prizes for the ladies were also contested for in the ten pin alley, and were the cause of a great deal of enjoyment in this contest. Prizes on the honor target comprised a large amount of cash subscriptions and various articles of merchandise. Honor target, 25 center bull, 1in., ring 4½in., 200yds., off-hand, entry $1 for 3 shots:

First and last bullseye morning and afternoon, premium of $1 each: First bullseye morning, C. Molter; last, W. Stein, Jr. Afternoon, first, W. Wurfflein; last, W. Stein, Jr.

Point or bullseye target, 12in. bull, 4in. center only to count; 3,490 tickets sold; 287 bullseye; 24 cash premiums on best bullseye, won by the members: 1 W. Wurfflein. 2. C. Moulter. 3. G. Soeding. 4. J. M. Green. 5. W. Gelzer. 6. J. L. Wetherby. 7. E. F. Kolb. 8. E. Travis. 9. S. Watson. 10. J. J. Mountjoy. 11. F. Bernhardt. 12. A. Schauffen. 13. L. Thomas. 14. Dr. M. M. Pierce. 15. W. Stein, Jr. 16. E. Stecher. 17. J. Reist. 18. C. H. Wolf. 19. W. Stees, Jr. 20. F. Brehm. 21. T. Mayer. 22. G. F. Kolb. 23. C. H. Becler. 24. F. Balbram.

Premium on bullseyes of 55 cents each after all expenses of markers and warners were deducted.

Messrs. B. Voight and C. Notnagel of the Newark Shooting Society were the guests of the club, their visit was to complete arrangements for the proposed visit of that society to Philadelphia in October—they expected to bring about 250 members.

BOSTON, Sept. 28.—The weekly shoot of the Massachusetts Rifle Association was held at its range to-day. The conditions were good with a one point wind from 8 to 9 A. M. Mr. Lee won the champion gold medal and Mr. Francis won the gold medal in the 20 shot match. Following are the best scores made to-day:

20-Shot Rest.

J Francis	102	107	209	J N Eames	102	34—196
W P Thompson	99	100—199		J K Munroe	86	89—175

WIMBLEDON'S SECRETARY.—It is with very deep regret that we announce that Captain Mildmay has resigned the secretaryship of the National Rifle Association. It is now very nearly thirty years since he was appointed to that important office, the very onerous duties of which he has for that long period performed with the greatest conscientiousness and the highest ability. Of Captain Mildmay's unfailing kindness and courtesy we need not speak—they are well known to all who have had anything to do with "Wimbledon." He is, indeed, well entitled to his retirement after his long and arduous service, but we fear that the Council of the National Rifle Association will not have a very easy task to find a new secretary who will be as well qualified for the post as Captain Mildmay.—*Volunteer Service Gazette.* [We would heartily second the kind words of our English contemporary with remembrance of the most kindly attention shown us by the retiring secretary upon Wimbledon range.]

SAN FRANCISCO, Sept. 22.—Thirty-five members of the San Francisco Schuetzen Verein competed to-day at Shell Mound in the monthly medal shoot of the society. Ring-targets at 200yds. were used and the possible score for 20 shots was 500. F. Boeckman made 402, the highest in the first class. George A. Schultz scored 393, the top score in the second class. A. Morker scored 326, being the best of the third class, and Emil Ipsen made 345, the highest in the fourth class. In a special shoot between Philo Jacoby and A. Thierbach of the champion class, the former won with a score of 416 to 403 for his opponent.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

Secretaries of clubs and managers of tournaments are requested to keep us advised of the dates of their shoots, so that we may give due notice in our column of fixtures.

FIXTURES.

Oct. 1, 2, 3.—Linthicum's Keystone Tournament at Baltimore, Md.—Samuel J. Fort, Ellicott City, Md., Assistant Manager.

Oct. 8, 9, 10, 11.—Middlesex Gun Club Tournament, Dunellen, N. J. W. F. Force, Secretary, Plainfield, N. J.

Oct. 8, 9, 10, 11.—Fred A. Fodde's Second Annual Amateur Tournament, at St. Louis, Mo. Inanimate targets.

Oct. 15, 16, 17, 18.—Tournament at live birds and inanimate targets, Philadelphia. J. F. Kleinz, Secretary, 600 South Delaware avenue, Philadelphia.

Oct. 17, 18, 19.—West End Social Gun Club Tournament, Harrisburg, Pa.

Oct. 21, 22, 23, 24 and 25.—Second Tournament of the Mercer Gun Club, at Trenton, N. J. E. G. Updegrove, President.

AL. BANDLE'S SHOOT.

CINCINNATI, O., Sept. 24.—Al. Bandle's fifth annual shooting tournament opened here this morning to good business, and has every promise of being what its predecessors have been, in the front rank of the shooting events of the year. Mr. Bandle is unique in his ideas and his methods of running a trap tournament, but he never fails to interest sportsmen, always gets a crowd together, and always keeps the crowd busy and contented. He does not believe in any theory of classification or of handicapping, but insists that every tub must stand on its own bottom. He hangs out as his flag the announcement that there will be $1,000 cash guaranteed, which will be shot for with "no pro rata, no favorites, nobody barred, no handicap." This may not be quite up to the modern theory of trap shooting, but one must confess that viewed in the light of recent trap-shooting history this tournament is a success, no matter what its theory. It is a better shoot to-day than the American Association shoot was on its first day here last June, and is as fairly entitled to its claim as being a "world's tournament." The numbers of shooters, however, is not up to what it has formerly been, or to what it was hoped it would be, although there are about as many here as at any of the shoots. The manager who can show an entry of 30 as an average has no right to complain nowadays, for the trap-shooting interest is breaking up into such numbers of small local shoots that only a few shooters will travel any great distance to an event. Many of the old-timers of the West are here, and the shooting company is very strong. Budd, Heikes, Tucker and Ruble are here. W. Crosby, alias "Westfield," alias "Denver Pete," is here with his old hammer Parker, and looks as innocent as he did at the Denver shoot, where he came pretty near stealing the town site by virtue of guileless airs and old clothes. A. H. Elliott, a noted Kansas City shot, is on hand, and so is his running mate "D. A. Meade," of St. Louis, which the same name hides a professional with cotton in his ears. "Dayton," another prince traveling *incog.*, is looking as fat and happy as when he sat up all night and studied history at the Corry shoot. C. C. Hebbard is looking after the standard targets from Cleveland. "J. K. Keene" is one of the best live-bird shots in Kansas City. "Keene," Elliott and "Meade" will all doubtless be in the Missouri team if the Missouri-Illinois shoot at 1,000 live birds ever comes off. Wm. Horn is here from Zanesville, O.; S. P. Anthony comes from Muncie, Ind.; Dr. Vincent is from Guildford, Ind.; Drs. Richardson and Hibbard are from Athens, O., and J. E. Pumphrey comes from Columbus, O., and so does L. Fink; R. W. Bennett is from Jackson, O.; C. W. McPhee is from Bulletsville, Ky.; Martin O'Neil and a lot of others are expected from Lexington, Ky.; Dr. S. H. Moore and Geo. Beck are from Indianapolis, Ind.; and there are a lot from all over, with some "deestricks" yet to hear from. In a morning paper it is announced that McMurchy, Stice, Meaders and several other well-known shooters are here, as well as a number of others, imaginary or unknown. These are not here, nor are they likely to be. It is difficult to tell by what right any journal publishes or cares to publish such reckless and silly "news" as this. Among the absent ones are some who are missed. Frank Parmalee has not yet shown up, though he has telegraphed from Omaha, "I w-w-will b-b-b-be there."

The weather is exceptionally pleasant to-day. The grounds are in good order. The traps are arranged in three sets of five, squad shooting not being used. Everything has worked very smoothly, and it is a jolly, joking crowd, every man of which is able to hold his own anywhere you come at him. The live birds are about a Cincinnati lot, and therefore not extra. They are a trifle better than those used at the Association shoot here last summer. The same old cockroach is on the table that there was here then, and the same old cook is on hand who came so near killing the crowd then. He can make the coldest and poorest coffee on earth, bar nobody. Al. Bandle ought to kill him and hire somebody with a stove. But then Al. don't drink any coffee himself. A new and valuable discovery was made by some of the pilgrims to-night, which saved them an hour or two of riding on the one-armed grapevine street railway which runs past the tunnel mouth. By going up the hill one block the electric cars are reached, and these run down into the city much more rapidly.

The management hung up the following page in the regular programme pamphlet:

"Owing to the number of questions usually asked the management we have appointed Mr. Ed Taylor to answer the following. No other questions allowed: What's the next race? How many entries? What's the entrance? What kind of birds? How many birds? Where's the lunch counter? Where's the bar? Where's the ——? Do you think Budd or Stice, etc. will shoot me out if I get in a tie? How many will I break if I enter? What's first money? How many tie for second? What rules are you shooting under? Why don't you run a 'tourney' like we do? Why don't you hold it next month? If I get broke will you send me home? If I shoot in all the matches do you think I will get some surplus? Which is McMurchy? Is Carver here? Who is that at the score? Introduce me to Budd, Stice, Ruble, Penrose, etc. Where is Bandle? How many sets of traps have you? Say, mister, how do you load? Do you hold behind those quartering birds? Why did I not break that bird—I shot right at it? Do you shoot wood or Schultze? What's the round trip to Cincinnati? Where is the double bird champion? Is dis de place? Dis must pe de place, dere's no oder place around."

Following are the scores:

Match 1, 9 single bluerocks, entrance $2:

Budd	011111111—8	McPhee	111111011—8
Heikes	111111111—9	J E Miller	010011111—6
Pumphrey	011011110—5	Moore	010111111—7
Bandle	011111111—8	Anthony	101111001—6
"Dayton"	111011010—6	Richardson	101111101—7
"Westfield"	111111111—9	C A Smith	10000w.
"Keene"	111001111—7	Hibbard	111110110—7
"Cole"	101111111—8	Waddell	111011011—6
Elliot	111111101—8	Scrof	111101111—8
Roberts	100111001—5	O Hayes	111111101—8
Vincent	0010w.	Tittle	111101011—7
Haine	110111111—8	Tucker	111111101—8
"Meade"	111101111—8	Bob White	111111111—9
McVey	111111001—7	Girton	1101010w.
Taylor	010111111—7	See	011111111—8

First money div. by Heikes, White and Westfield; second div. by Budd, Bandle, Elliot, Haine, Scrof, Tucker, See with 6 each, others 0; McVey won tie of 7 with 3, Taylor and Tittle 1, others 0.

Match 2, 9 single Peoria blackbirds, entrance $2:

Budd	111111111—9	Keene	111111111—9
Heikes	111111011—8	Elliott	111110011—7
Dayton	101001111—6	Westfield	011111111—8
Horn	111110110—7	White	001011111—6
Cole	111111111—9	Girton	111111111—9
Mead	111111111—9	See	101111111—8
McVey	111111101—8	Bandle	110111111—8
Vincent	011111101—7	Taylor	011111111—8
Moore	110101111—7	O Hayes	011111111—8
Miller	101101101—6	Tittle	011011111—7

Richardson	101111010—6	Waddell	111111111—9
Anthony	111011101—7	McPhee	101101111—7
Smith	011110110—6	Stephenson	011111111—8
Hibbard	111111111—9	Roberts	000000010—1
Cargill	111010010—6	Pumphrey	111111111—9
Scrof	111110110—7		

Ties on 9 div. first. On 8, Heikes 4, McVey 0, See 5, Westfield, Bandle, Taylor, Hayes and Stephenson 6 and div. second. On 7, Horn and Anthony 4, Scrof 1, Elliott 0, Vincent, Moore, McPhee and Tittle 6 and div. third.

Match 3, Ed. Taylor's Favorite, 10 single champion clay birds, entrance $5, first, $40; second, $30; third, $20; fourth, $10:

Vincent	1111111101— 9	Taylor	1111101111— 9
Cole	1111010111— 8	Waddell	1111011011— 8
Moore	1000011111— 6	Bob White	1111011101— 8
Elliot	0111111111— 9	Dayton	1110103100— 5
Budd	1110111111— 9	Stevenson	1110111110— 8
Bandle	0011100111— 6	"N G"	0111111111— 9
Mead	1110111111— 9	O Hays	1111010011— 7
Haine	0101111110— 7	Pumphrey	1001111010— 6
Keene	1100010000— 3	Girton	1001011000— 4
Westfield	1111111111—10	Srof	0100110100— 4
McVey	1111101110— 8	Miller	1111011110— 8
Anthony	1001011111— 7	See	1110011101— 7
McPhee	1011110011— 6	Tittle	1101110110— 7
Hibbard	1100011011— 6	Richardson	1001100000— 3
Heikes	1111110101— 8	Fink	1111010110— 8

Westfield first; ties on 9 div. second, on 8, McVey 0, McPhee 1, Heikes 3, Waddell 3, Bob White 2, Stevenson 4, Fink 0; Miller and Cole 5 each and div. third; on 7, See 3, Tittle 2, Hayes 8, McVey 8, Haine 9.

Match 4, Blue Island's favorite, no medals, 7 single live birds, entrance $5.

Bandle	1112212—7	Elliot	0101111—5
Dayton	1211101—6	Bohemian	2010100—3
Vincent	1121212—7	Reif	1120111—6
Cole	1121212—7	Roberts	1122101—6
Horn	1222212—7	Hibbard	0122112—6
Tucker	0111101—5	Mead	1211112—7
Budd	1111111—7	Smith	1111100—5
McVey	2110121—5	Richardson	2101122—6
McPhee	1121122—7	Keene	1211111—7
Anthony	1001001—3	Westfield	2011112—6
Moose	0112100—4	Pumphrey	1112211—7
White	1112112—7	Fink	0202111—5
Heikes	1211112—7		

Bandle, Vincent, Cole, Horn, Budd, Heikes, White, Mead, Keene, and Pumphrey div. first; Dayton, Richardson, Westfield and Hibbard div. second; Tucker, Elliot and Fink div. fourth.

Ties on 7: Keen 2, Smith 0, Budd 5, Hampden 3, McPhee 3; Elliott, Westfield, Bandle and White 6 each and div. first. On 6: Cole 7, S. Vincent 1, Horn 10, Richardson 7, Anthony 2, G. O. P. 2, Bondurant 1, William 0, McVey 1, Willie 3; Meade and Heikes 11 and div. second. On 5: Bohemian 0, Bing 6; Dayton, Pumphrey, Miller, Early, Leedam 2 and div. third. Ties on 4 div. fourth.

Tie shooting again went on until night time. It may be seen that the entry on the second day ran above 30 in some shoots. More men are expected for to-morrow. The class of men who come to the Bandle shoots are those who shoot right on through the whole tournament, and that is what makes any tournament a success.

During the afternoon, after the close of the Bandle-"Meade" match, the latter, who is a mighty hard single-hand talker besides being a pretty hard shooter, was challenging the universe and the star-filled circumambient aether to shoot him a match at anything. He said something about 25 live birds, use of one barrel, at $25 a side, and Rolla Heikes called him down. Reluctantly he put up $10 forfeit to cover Rolla's $10, and the boys are looking for some more fun to-morrow. Two or three additional sweeps with good entries were shot to-day.

Third Day, Thursday, Sept. 26.—Good weather marked the day, and it will be seen that the crowd came to stay. The live birds in the afternoon shoot were more properly to be classed under the head of inanimate targets. They couldn't fly by themselves. Only once in a while did one go out of the trap at the pull. The live-bird shoots had taken so much time that the programme was running a little behind, four shoots remaining over from yesterday. Much interest was manifested in the single-barrel match between "Meade" and Heikes. Heikes had "Meade" beaten in his first four birds, three dead out of bounds. Score:

"Meade"—Heikes, 25 live birds, $25 a side, use of one barrel, 30yds. rise:	
"Meade"	0101111111101111111101111011—20
Heikes	1111111111101111111101111011—22

Match 13, C. E. Verges's favorite, 12 single bluerocks, $100 guaranteed, entrance $5; first $40, second $30, third $20, fourth $10:

Bandle	111111111111—12	White	111111111101—11

Tucker	2110111—6		

Ties on 7 shot off: Dayton 0, Bandle 7, Miller 1, McPhee 7, Early 7, Cole, Budd, White and Mead scored 9 and div. first; ties on 6 div. second; ties on 5 div. third; Bohemian took fourth.

This live bird shoot was the last of the day, and the ties might not have been divided had it not grown so dark. The programme is now five shoots behind, but everybody has been busy and happy.

In the live bird match of yesterday "Westfield" and "Keene" fell foul of each other, and "Westfield" wagered a pie that he would kill his next bird. The stake was doubled on the same basis until "Westfield" had won twenty-five fair round pies. These Mr. "Keene" produced upon the grounds this morning. Wick seized and ate twenty-four of them before he could be stopped. Therefore "Keene" offered to back Wick as champion double pie-eater. Charlie Budd took him up, and produced Al. Bandle as his man. A difficulty, however, arose, as Mr. Budd insisted that his man's hold was Bologna sausage, and not pie. In the argument about how to arrange for equal quantities of Bologna and pie the match fell through. Then the boys fell to pitching dollars at a stick, and "Keene" beat the "Chippie." The latter gentleman declares that he will not have the title, which Mr. Frank Kleinz has just conferred on him in the East, of "Captain" Budd, and says no title except "Chippie" goes.

After the dollar-pitching race there was some jumping, running, etc., and at any sport that came up "Meade" freely offered to back himself against the world and the general atmosphere. The crowd collected in the tent, and for half an hour there was the hardest line of bluff put up that probably ever was known at a tournament. Elliott bluffed Bob White, and Bob White bluffed Elliott, and "Meade" bluffed them both and ran off. "Westfield" refused to give up the stake money, and everybody was challenging the world. When the smoke cleared away it was discovered that Heikes and "Meade" had on a 100 birds single barrel race, $100 a side, to be shot Saturday; and that Elliott and Bandle had a 100 birds race for the same day. To-morrow, therefore, will not be last day of the shoot, and most of the crowd is likely to stay over to see what will really be the best part of the tournament.

Fourth Day, Friday, Sept. 27.—Weather clear and cool to-day. A good many of the boys have gone home, but the crowd remaining is a gritty one. Heikes and "Meade" have agreed to shoot their 100 live birds single-barrel race at Dayton tournament next month instead of here. The Bandle-Elliott 100 bird race has forfeit posted for to-morrow, and talk is made of a sweep at 25 live birds, $25 a corner. At the close of the shooting this evening Heikes and "Meade" fell to shooting one-hand races at targets, 15 birds, for amounts running up to $4 or $5, the crowd also betting freely. Heikes won two such races, "Meade" one. The programme is no longer followed. Score:

Match 21, 12 Peorias, entrance $2:			
Dayton	111111011011—10	See	111101111111—11

McPhee	111111111112—12	Adams	100110101111— 9

Ties on 12 div. first; ties on 11 shot off, Heikes 4, Horn 6, Vincent 17, Taylor 11, Early 10, Meade scored 18 straight and took second; ties on 10 div. third.

Extra Match, 5 pairs bluerocks, entrance $2: Dayton 4, Heikes 8, Murphy 9, Bandle 8, E. B. Vincent 7, Budd 8, D. R. 9, Bohemian 8, Anthony 7, "Meade" 6, Westfield 9, McPhee 9, Early 6, Keen 4. Ties on 9 div. first; ties on 8 div. second; ties on 7 div. third.

Extra Match, 12 standards, entrance $2: Bandle 9, Murphy 9, Heikes 11, "Meade" 10, Vincent 8, Tucker 12, Bohemian 10, D. R. 10, S. Vincent 9, Anthony 9, Adams 10, Keen 10, Dayton 11, Early 11, Frank 11, C. E. 9, Budd 11, Westfield 11, White 12. Ties on 12 div. first; ties on 11 shot off: Heikes 5, Early 2, Frank 2, Budd, Dayton and Westfield 6 each and div. second; ties on 10 shot off: Bohemian 1, D. R. 2, Adams 1, Keen 5, "Meade" scored 6 and took third.

Extra match, 10 single clay-birds, entrance $2: Heikes 7, Keen 8, Westfield 9, D. R. 8, Bandle 7, Girton 7, Randal 6, Budd 7, McPhee 10, Meade 8, Early 6, Elliot 9, Cole 8, Adams 7, Vincent 8, Taylor 5, Bob White 10, See 9, Murphy 8, Dayton 6, Frank 4, Horn and Bondurant withdrew. Ties on 10 div. first, ties on 9 div. second, ties on 8 shot off: Keen 3, D. R. 6, Cole 4, Murphy 3, Mead scored 10 and took third.

Extra match, 10 Ligowsky clay-birds: Cole 9, Mead 7, Budd 7, Horn 5, Bandle 10, Keen 7, Elliot 9, Heikes 7, Westfield 8, Frank 6, Bondurant 6, See 6, Adams 7, Bob White 7, McPhee 9, Girton 7, D. R. 9, Taylor 9, Vincent 5, Miller 5. Bandle scored 10 and took first; ties on 9 shot off: Bole 0, Elliot 0, McPhee 1, D. R. and Taylor scored 5 and div. second; Westfield scored 8 and took third.

Fifth Day, Saturday, Sept. 28.—The tournament proper closed yesterday, but most of the old crowd were on hand to-day to see the live-bird matches, and the largest number of spectators out on any day were present in the afternoon. The talk of the $25 sweep resulted in a $10 sweep, the shooting of which occupied most of the morning after a few small side matches had been shot. Extra sweep, 10 live birds, entrance $10. Score:

Elliot	1112011111— 9	Keene	2022101202— 7
Bandle	1111112201— 9	Westfield	1212221120— 9
Budd	1111111111—10	Heikes	1221121112—10

Ties on 10 div. first; ties on 9 shot off, Elliot 14, Westfield 3; Bandle scored 15 straight and took third.

The chief event of the whole shoot now transpired, the match between J. A. R. Elliott, of Kansas City, and Al Bandle, at 100 live birds, the former posting $100 to the latter's $125, on the ground that his gun was a new one to him. This match was one of the closest ever shot, and was singularly exciting from start to finish. Bandle shot an uphill race from his second 20 on, but in his last 20 Elliott dropped 3, and the men were tied on 94 at the end of the hundred. The men went in for the tie at 25 birds, and each dropped a bird. In the second tie at 25, however, Bandle's luck foresook him, and he lost three all in a bunch, missing one incomer that he could have killed with a rock. Al vows this bird winked at him as it came in, and broke him up. Elliott got 24 in good style, and won. He shot a great race. The birds outclassed those used earlier in the tournament, and were an exceptionally good lot for any town. Both men had to make kills that brought out applause. Elliott shot a 12-gauge Lefever and Bandle shot a 12-gauge L. C. Smith, and each gun made a record for the twelves against any heavier guns. This match was a sensational one, and a fitting close to the shoot. It will be repeated at Kansas City at Mr. Elliott's tournament this winter, when the latter gentleman will post $125 to his competitor's $100. Score:

Elliott-Bandle, 100 live birds, 28yds., 5 ground traps:

Elliott ($100)	2121110111212121111111211111o1121111111112101o1 1112111111122111211111112112101112101121o111—94

Elliott	1112111121121111222112—222—24
Bandle	2111212101122121212101221—24

Second tie of 25:

Elliott	1211121122211211111010111—24
Bandle	1112112o1o01221112o12111—21

o Dead out of bounds.

Elliott won with a total of 142 birds out of 150 to Bandle's 139 out of 150. C. W. Budd acted as referee, acceptably as usual.

The boys now separated for their homes or different journey-points. Budd goes to New York and Philadelphia, for his match with Frank Kleinz next Saturday. "Meade" and Heikes go to Dayton. Elliott, "Keene" and "Westfield" started for Kansas City and St. Louis. There is talk of a sweep, $100 a corner, to be shot at the latter city on Thanksgiving day between Elliott, Bandle, Budd, "Westfield," "Meade," and Heikes, and some such match will probably come off. The result will not be a sinch for anybody to name. At this tournament "Westfield" won first average in the competent shoots, $15 25 of the surplus money; Budd and Bob White div. second average, $12.20; "Meade" won third average, $10.98; Heikes won fourth average, $9.15; Vincent and Cole div. fifth average, $7.32; Bandle, McPhee and Miller div. sixth average honors, $6.10.

From the amounts of the surplus, it may be seen that the events did not fill strongly enough to make big Al. Bandle any big money, but such seems to be the history of trap shoots for this year. There has not been during the entire year, however, so thorough a shooters' tournament as this, nor one where the shooters have had a pleasanter time. Al. Bandle knows how to give a tournament and to make a success of it; and this thought, with many others of compliment and gratitude, was in the minds of all the boys as they bade their big and good-natured host good-bye.

E. HOUGH.

NEW JERSEY STATE SHOOT.

ON Tuesday of last week the fourth annual tournament of the New Jersey State Sportsmen's Association opened at Marion, N. J., under the auspices of the Jersey City Heights Gun Club.

For a number of years the Association has held no tournament, owing to the law which, until lately, existed in New Jersey making the shooting of live birds at the trap illegal. This law has been changed within a few months by the efforts of a number of the State gun clubs to allow live-bird shooting by regularly organized clubs. One effect of this legislation has been to revive an interest in the New Jersey Sportsmen's Association; hence the present shoot. A four-days' programme was arranged, allowing for two days at inanimate targets and two at live birds. The attendance was not very large on the opening days. In view of the execrable weather that prevailed this is not to be wondered at. Bluerock targets were used, from three sets of traps, under American Shooting Association rules. The management of the shoot was invested in the hands of the old reliable Al Heritage ("Old South Paw"), Milt. P. Lindsley and W. Fred Quimby, and under their active efforts everything passed off smoothly and rapidly. A novelty in the shape of a score book was shown by Mr. H. A. Penrose, of Corry, Pa. It is called the Keystone Score Book, and by the use of carbon paper it makes five separate scores. It will be an invaluable aid to clubs and tournament managers in preparing reports for the press. Eight regular events were shot the first day and a number of extra sweeps. Some remarkably good scores were made, and Justus von Lengerke opened the eyes of onlookers by his skill with a 5½-pound Francotti, proving that a light gun is capable of good, effective work.

Event No. 1, 10 bluerocks, entrance $1, 3 moneys:

Post	111111110010111—12	Lindsley	111111110101101—12

On Wednesday the rain poured down in torrents and the attendance was slim. The management had advertised to postpone the shoot in event of rainy weather, and this notice no doubt kept many away, but a postponement was not deemed advisable, as it was necessary to get rid of the inanimate events before commencing on live birds. Seven events were programmed, but only four of them were shot, including one guaranteed purse of $25, and the remainder of the time was filled in with extra sweeps.

Second Day.—Event No. 1, 10 singles, $1 entry, three moneys, A. S. A. rules:

Sigler	1011111111—9	C Smith	0111010111—7

Thursday's work was devoted entirely to live birds, of which a large number had been procured. The weather still continued unfavorable, but the number of contestants and spectators was largely increased. Among those present were Tony Kuser, A. Turford, Chas. Van Camp, Mahlon Fox and Ed Updegrove, of Mercer Gun Club at Trenton; Dr. Pendell, R. H. Brientnall, A. Hedden, Wm. Hayes, Asa Whitehead, Ed Carrington, J. R. Burnett and A. E. Hedden, of Essex Gun Club at Newark; F. Post, Wm. Ely, Ress Van Riper, J. A. Blauvelt and Wm. H. Jersey, of Bergen Gun Club at Cherry Hill; T. Compton, J. Van Brackle, Jas. Beddell, J. Lamberson, Dr. Taylor and J. L. Terhune, of Midway Gun Club at Matawan; C. M. Hedden, Sam Castle, John Erb, Frank Class, Chas. Heath, Wm. S. Green, Hugh Leddy and Jacob Pentz, of Newark Gun Club; E. D. Miller, E. Collins and W. H. Wolstencrost, of Union Gun Club at Springfield; S. G. Smith, W. L. Force, Chas. Smith, John Riggott, Emory Robinson and W. S. Cannon, of Middlesex Gun Club at Dunellen; Al Heritage, Fred Quimby, Milt. Lindsley, Wm. Hughes, Capt. Jones, Dr. Burdette, R. S. Payne, Geo. Eaton, Wm. Sigler and F. Payne, of Jersey City Heights Gun Club; Jas L. Smith, of Hackettstown Gun Club; Phil Daly, Jr., of North End Gun Club at Long Branch, and others. This large gathering of club members was due to the fact that the State Trophy, a cup, was to be contested for by teams of three men from any club belonging to the Association. This race was a very close and interesting one, and resulted in a tie between the Jersey City Heights Gun Club and the Newark Gun Club. The tie was postponed until Friday on account of darkness. The birds were a fair lot, but would have had more vim and go to them had the weather been clear.

Third Day.—Event No. 1, 10 live birds, entrance $5, 4 moneys:

W Sigler (30)	1111012111— 9	Miller (28)	1111112111—10

Friday was the first bright day of the week. The sun made an early appearance and a moderate wind served to quicken the flight of the birds. They were much more speedy than on Thursday, and in consequence some apparently poor scores were made by really good shots. All the live bird shooting was done under American Shooting Association rules, except the veterans' match. These rules make the boundary line 80yds. from shooter's score instead of from the trap, and this shortening of 30yds. allowed more chance for birds to drop out of bounds. In the veterans' match the conditions were that all contestants must be 55 years of age or over, that the gun must be held below the elbow until bird was on the wing, use of both barrels allowed, 25yds. rise and the fence inclosing the grounds as a boundary. This contest brought out 15 men, with ages ranging from 55 to 72, and the scores made will safely bear comparison with those made by much younger men. It was an interesting sight to watch some of the old veterans, whose years had made them gray of hair, but not dim of sight. They faced the score with looks of grim determination and grassed their birds in fine style. Uncle Billy Hughes, whose years number 67, did his work in a masterly way, making a clean score without once using his second barrel. J. D. Voorhees, "Uncle John" as he is affectionately called, was the oldest shooter on hand; 72 hard winters have passed over his head, but he succeeded in killing nine out of ten, while the other bird fell dead just out of the bounds. We have prepared a table of the guns used and methods of loading followed by these old-timers which will interest our readers. The first event of the day was an open sweep at five birds. Then followed the shoot off of the tie for the State cup. It was decided to shoot at three birds per man and the honors went to the Jersey City Heights Gun Club, their team making 9 straight, while Hedden of the Newark Club missed one bird. In the State badge shoot for individuals, the Jersey City Heights Club again were in luck, as one of their prominent members, W. Fred. Quimby, won it with the only clean score of 15. After the veterans' shoot, a sweep at 5 birds was run and then darkness ended the tournament. All ties were divided except when otherwise stated.

Ten live birds, $10 entry:

Penrose	0111122212— 9	Treblecock	2110102221— 8
C M Hedden	0112112110— 7	Lindsley	2122011111— 9
Williams	1222111102— 9	Class	1222122222—10
J Erb	2111221121—10	Cannon	1121112212—10

Dr Hudson (30)	0221011011—7	John Klein (30)	0011202112—7
Col J H Voss (32)	2101100012—6	T J Crystal (25)	2221001020—6
John Measel, Jr (30)	0210101021—6	Dr Liveredge (25)	1122012220—8
Philip Butz (30)	1202111012—8	T F Russell (21)	0011211101—7
M W Murphy (25)	2211000121—7	John McConnell (21)	0100000000—1

Tie on first prize, 30yds.: P. Butz 1, G. Remsen 0. Butz wins first prize, a gold medal, for first time; Dr. Liveredge wins second prize for second time; T. F. Russell wins third prize for first time. The weather was anything but pleasant, as it rained almost contually while the shooting was going on, and at times heavy rain drifted by a strong easterly wind, almost hid the birds from the shooters, making high scores almost impossible. The birds were a good strong lot of flyers, and were mostly left-quarterers and drivers; needless to say the drivers mostly got out of bounds safely, and some of the top-notch shooters got left.—T. P. M.

THE NEWARK GUN CLUB, of Newark, N. J., which has been organized less than a year, has a large number of crack live-bird shots in its membership, and wishes to cross swords, or rather guns, with some other club. They now issue two challenges, and will put up a team of three men, or one of ten men, against any three or ten men from any club in New Jersey, to shoot for any amount from $100 to $500. It is hoped that one or more clubs in the State will accept these challenges, or one of them, and there is certainly enough talent outside the Newark Club to make a close race.

ST. LOUIS, Mo., Sept. 23.—Since the appearance of ducks in this vicinity the gun clubs here are winding up the trap season, and the "mud saucers" are being shelved till next season. On last Monday the Empire Gun Club held its last shoot for this year, which had a large attendance. Live birds were used exclusively, and they were a remarkably lively lot. Several good scores were made, and all present expressed themselves thoroughly satisfied with the sport furnished. The birds were paid for out of the club treasury. The score is as follows. No. 1, 13 birds each, 5 ground traps, 30yds. rise, 12-gauges allowed 2yds. handicap, use of both barrels:

J E Hagerty	1212111212112—13	C Evarts	1201001100210— 7
F Stoll	1210111201220—10	P Burg	2121111112111—13
J Stussell	1221000211001— 8	J Steffen	1100121110002— 8
J Lenhardt	2122010111122—11	T White	1202212002212—10
C Jamison	1200212102211—10	H Nagel	1011101111011—10

B Westhus	0200221210011— 8		

Five moneys; all ties div.

The Diana Gun Club was fortunate enough to have a pleasant day for its wind-up shoot last Wednesday afternoon. There was a large crowd present, and the shooting was of a high grade. The score is as follows: Shoot No. 1, sweepstakes, 20 single Peoria blackbirds; B. Westhus 19, A. Junge 15, D. Weinheimer 15, H. Wilhelm 16, G. Walich 16, C. Kurtz 5, Quelinaltz 13, Schweigler 9, Metzger 14, M. Weinheimer 14, L. Weinheimer 5, C. Fricke 15, M. Reeg 11, P. Best 12, A. Elliot 9, J. Minck 8, C. Strich 6, Pole 18, A. Lefka 15, C. Billon 15, R. Dasch 12, O. Baer 13, L. Kaltwasser 11, H. Bachmann 8, T. Herold 15, H. Hasemann 13, J. Sauer 8, G. Bruggemann 7, J. Vogel 9, W. Heineman 16, C. Eilert 12, C. Eckert 9, C. Rambacher 5, F. Tremmel 2, Bosh 16, F. Herman 9, C. George 11, L. Sattel 10, Schewitz 12. B. Westhus first, Roy second, ties on 16 and 15 divided third and fourth respectively.

Yesterday afternoon at Compton avenvue Park Dr. M. C. Starkloff and Fred. Frescher shot a match at 50 live birds for $50 a side. A fine lot of birds were secured for the event, and they proved entirely too "frisky" for the contestants. Almost half of the number shot at went scot free. The weather was pleasant, a fair-sized crowd of enthusiasts were present to witness the affair. Frescher made a splendid stop on a right-quartering bird, and with his second barrel, for which the crowd applauded him lively. The score is as follows: The conditions of the match were 50 live pigeons per man, Hurlingham rules modified to use 10-gauge guns, for $50 a side:

Dr Starkloff	0122111211—9	Frescher	0101111011—7
	1111101202—8		1210010023—6
	0202120111—7		2100010222—5
	1000021021—5		0001100320—4
	0221012100—5—34		1001102201—6—27

DAYTON, Ohio, Sept. 21.—The Kennel Gun Club was out in force to-day at the Mile House for the September cup shoot.

First match, at 10 single inanimate targets:

Chas Whealen	8	Gus Sander	8
Ed Cooper	7	Chas Sander	5
Rolla Heikes	11	J C Porterfield	7
T B Hanna	6	Adolph Sander	12
C G Stoddard	19		

Club cup shoot, at 30 singles:

T B Hanna	22	Charles Wheeler	19
Gus Sander	23	Ed Cooper	22
R O Heikes	27	George Makley	24
Charles Sander	27	J C Porterfield	19
A Sander	24	C G Stoddard	20

Next was a sparrow match, 18 birds each, 3 ground traps, association rules:

Ed Pike	12	Gus Sander	13
Geo Makely	7	Ed Cooper	5
J C Porterfield	13	Chas Wheeler	12
Chas Sander	14	J B Hanna	10
Adolph Sander	11	Rolla O Heikes	13

WELLINGTON, Mass., Sept. 28.—At the regular Saturday shoot of the Wellington Club to-day, Perry won in the silver pitcher match with a clean score of 15. The other scores were: Lee 14, Chase, Melcher and Stone 12, Cowee and Bond 11, Field 10, Chapin and Webster 7. The merchandise match closed to-day with the following winners making the best 10 scores at 15 clay-pigeons: Sanborn 137, Warren 133, Schaefer 132, Snow, Field and Chapin each 131, Bond 130, Dill 128, Bradstreet and Chase each 127, Melcher 119, Stone 115, Cowee 107, Baxter 104. The first prize was an elegant gold badge, while the others were money prizes. The winners in the sweepstakes follow: 7 bluerocks, Perry; 8 clay-pigeons, Lee, Perry and Melcher; 6 bluerocks, Smith and Chapin; 5 bluerocks, Chase; 5 clay-pigeons, Chase, Cowee, Franklin and Webster; 5 bluerocks, Chase; 6 bluerocks, Field; 6 bluerocks, Dick; 10 bluerocks, Keystone match, Chapin and Dill; 5 bluerocks, Chapin; 5 clay-pigeons, Melcher; Lee 5 bluerocks, Stone, Field and Bradstreet; 5 clay-pigeons, Dill and Field; 5 clay-pigeons, Chapin, Bond and Bradstreet; 5 pairs bluerocks, Warren, Dick, Perry and Porter. A novel and somewhat absurd match will be shot next Saturday, at 20 birds, Keystone system, for an elegant medal. The conditions of the match are known only to the reporters, and the shooters will not know whether the best or poorest score wins. The match will begin at 3 o'clock.

NORTH BRANCH, N. J., Sept. 28.—The first of a series of matches between the North Branch Gun Club and the White House Gun Club, at 15 Lockport bats, one clay-pigeon trap, three angles, 18yds. rise, Keystone rules:

North Branch Gun Club.		White House Gun Club.	
F Kramer	1110111111111100—12	Sw'khamer	0001001011001100— 5
G Kramer	1110110101001101— 9	J H Davis	1011111111011110—12
T C Welsh	1010101011111101—11	B Pickel	0111110111111110—12
Duickinck	1011111111111010—12	Anderson	1110111111111101—13
Col Kline	1110111110000001— 9	H Bishop	0111010111100011— 9
Ed Lever	0111011110110111—11	C Abbott	0011011011100111— 9
Hoagland	0111000010010010— 6—70	L Woodin	0000011110111101— 8—68

Return shoot at White House station, Oct. 5.

TORONTO, Sept. 21.—The following are the scores to-day of the Stanley Gun Club for the McDowell & Co. gun. The weather was desperately cold, and considering the very stiff wind which blew across the traps, the scores are good. Mr. C. Charles took the gun for the second time with 22 out of 25 at 24yds. rise. The handicap in yards and scores are as follows: From 5 traps: C. Charles (24), 22; F. Emond (25), 21; N. Dick (25), 18; Geyser (19), 14; T. S. Bayles (18), 11; Sawden, Sr. (24), retired. First sweep, at 25 birds, 25yds. rise, from 5 traps: Charles 21, Sawden 20, McDowall 17, Power 14. Second sweep, 10 birds, 18yds. rise, from 5 traps: Charles 9, McDowall 7, Power 5, Dick 2.

ELIZABETHTOWN, Pa., Sept. 28.—The East End Gun Club had a shoot to-day for the gold medal; the wind was blowing a regular gale; and this accounts for some of the boys making poor scores. 25 bluerocks each man:

Lindemuth	1110100111000001111111010—15
Hergleroth	0000111111000000011001000— 9
Keller	0110001011000001011111111—14
Coble	0100100011110101110101101—13
Kersey	1111111111111101111111111—24
Westhafer	0100310111101110101110011—15

EMERALD GUN CLUB, Sept. 25.—The Emerald Gun Club held its regular club shoot at Sea View Park, New Dorp, to-day. The following are the prize winners: P. Butz won first prize for the first time, having killed 8 birds at 30yds. rise; Dr. Lineredge won second prize for the second time, having killed 8 birds at 25yds rise; T. F. Russell won third prize for the first time, having killed 7 birds at 21yds. rise. On Oct. 18, at Greenwald's Park, New Dorp, S. I., the last regular shoot for this season of the Jeannette Gun Club will be held.

CLASS VS. BREWER.—Frank Class, of Pine Brook, and Capt. John L. Brewer, of Philadelphia, have come to an agreement about their 100-bird matches for $250 a side, and the first will be shot at Erb's on Friday next, Oct. 4, under Hurlingham rules, at the best birds procurable. The second match will be shot at the Morristown Driving Park on the last week in October.

NEWARK, N. J., Sept. 28.—A 25-bird contest between Chris Reinhardt and C. M. Hedden took place at John Erb's this afternoon, Hedden winning by killing 23 to Reinhardt's 21. The match was for $25 a side, the loser to pay for the birds.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybilleus" and other competent authorities to be the best treatise on the subject extant.

Yachting.

"West India Hurricanes and the Great March Blizzard." By Everett Hayden, U. S. Hydrographic Office. Large quarto, with 23 lithographic plates. Price $1. Contains full history of the great storm of March, 1888, with practical information how to handle a vessel in a cyclone; use of oil at sea, etc.

LARCHMONT SPECIAL 40FT. RACE, SEPT. 28.

THE Larchmont Y. C., which opened the season of 1889 on May 30, also had the honor of seeing it out in a fitting manner on Sept. 28, with a very spirited race of the forties, the last regular event of the year. The entries were few in number, but such as to make a very important race, as the conditions were favorable for a fair test—a good sailing breeze, variable and puffy, but giving no chance for flukes. Up to the time of the New York Y. C. cruise there was not a new forty in the fleet that was in fair racing form, and the older boats had things to a great extent as they wished; but as the new boats have improved the old ones have dropped out, leaving the racing to the former. Gorilla has been doing better work ever since her July trip to Marblehead, and has done a good deal to reverse the unfavorable impression made by her spring races when just from the stocks; Liris has been greatly improved in rig, every part being strengthened, and has shown better in the past two races, in spite of a very bad mainsail; Maraquita has had a new mast and new sails, and as a result has come nearer to the top in the present race than ever before; and she has been persistently and pluckily raced all the year, with a record of sixteen starts, and deserves better luck than has befallen her. Tomahawk, though sailing but few races, has done better in the later ones, and has given evidence of speed, though her record, taken all through, is anything but brilliant and by no means shows what the boat is capable of if fully worked up. It has been evident to all who have watched the races of the last six weeks that the fleet is for the first time in fit condition for racing, and that the results of the last half dozen races sailed are of far more value as a basis of comparison than those of June and July.

The total number of races in the 40ft. class, including the runs of the New York and Eastern cruises, four each, and also the double race at Vineyard Haven, in which two separate prizes were sailed for, is 34; a total never before reached by any class of decked yachts in one season in America. A detailed table of the entries and places in each race affords a very interesting study in view of the present situation of the measurement question, but in order to form any accurate conclusions it is necessary to calculate the position of each boat under the different rules, a task of no small magnitude. The official record of each race gives the position of every boat according to the rule under which that race was sailed, New York, Seawanhaka, Larchmont, etc., and consequently is of little value as a test of the rules. To make the test complete it will be necessary to calculate the position of each yacht in every race she started in under the Larchmont, New York and Seawanhaka rules separately, comparing the winners under one rule with those under the others.

The four yachts which claim the first notice in the class are Minerva, Liris, Gorilla and Pappoose; the first on account of her uniform success, the second on account of her unquestioned speed when she has not broken down, the third by reason of the many races she has sailed during the season between Bar Harbor and New York, 22 starts in all, in which she has met every one of her classmates, and the fourth by reason of her small size and successful racing together. Though Gorilla has been unsuccessful in many races she is the best trial horse of the lot, and it must be said in her favor that in common with the other boats of heavy rig and power she has suffered from too light an outfit, losing four or five topmasts and being obliged to replace her mast; while, unlike some of her nearest sisters, she has not picked her races, going in for a record where there were few entries, but has started in every race open to her through the season. She also hurt her record by entering the first races when just off the stocks, being beaten every time she started up to the New York cruise.

In looking for the most desirable type of yacht it is necessary to take the record as it stands, including breakdowns, but an interesting question just now is that of the relative speed of the heavily rigged boats, regardless of all economic considerations, and to get at this it is necessary to confine the record of each yacht to those races that were sailed to a finish, omitting for the time the races in which yachts did not finish owing to some accident. According to this count Gorilla and Tomahawk have met twice, each winning one race; Gorilla and Liris have met eight times, each winning four; Gorilla and Chiquita have met four times, Chiquita winning three; Gorilla and Verena stand one and one; Gorilla and Nymph have met five times, Nymph winning three; Gorilla and Pappoose have met nine times, Pappoose winning six; while Minerva has beaten Gorilla seven times straight. From this it would appear that the boats which have beaten Gorilla worst are Minerva and Pappoose of the keels and Chiquita of the centerboards, and it is fair to assume that Gorilla and Chiquita are the best representatives of the centerboard type in the class; Verena never having beaten anything better than Helen and Alice in her five starts. In view of the record of Chiquita and the claims of Verena and Nymph, their presence in such a race of Saturday would have been most interesting, but the two former would not come around the Cape so late in the year for one race, while since her hollow victory in the American Y. C. race, and her defeat on one run of the cruise when both were in cruising trim, Nymph has refused to come to the line with Liris, either in the club races or a private match, consequently Gorilla was left almost alone to represent the centerboard division; her only ally being the new Broncho, built by Capt. Louis Tonns, of Staten Island, a dark horse of the forties, a shoal centerboard boat of moderate beam and small sail area.

Liris was ready at Piepgrass's yard on Friday, with a new mast of black spruce and new outfit of wire rigging from Low's loft. Her mainsail was as bad as usual and handicapped her on the windward work, never having recovered from the partial soaking that it received in the first race she started in. Maraquita was also ready to try her new spars. Nymph was under way, but did not start in the race. The race was for a special prize offered by the Larchmont Club, and also for the Thayer cup, one leg of which was held by Liris. Banshee was expected to start, an exception being made by the others in her favor, allowing her to carry her professional sailing master, but she did not show at the line. A match was also arranged between the thirties, Kathleen and Tom Boy, but the latter was not present, having gone on to New York. Capt. Sloan, who was to sail Kathleen, went on Gorilla to look after the head sheets, Mr. Carroll steering. Liris was steered on the first and fourth legs by Mr. Wetmore and on the windward work by Mr. Belmont. As the wind was about N.W., giving nothing but reaching over the regular courses, a new course was arranged on Friday night, starting from the regular line, off the harbor, and running W.¾N., 9 knots, to the black buoy off Centre Island; thence N.W.½W., 5¼ knots, to the markboat off Captain's Island, in its usual position, and thence over the regular course home, S.W.¾S., 6¾ knots to Hempstead markboat, and N.N.W. 3 knots, to the finish, 24 knots in all. Clubtopsails were not allowed, nor were they really wanted, as the wind was squally at times, being about N.W. at the start and backing to the westward during the latter half of the race.

The start was given at 11:36, Gorilla going over at once. Liris followed her, while Maraquita and Broncho hung back a little, the times being:

Gorilla	11 33 49	Maraquita	11 35 35
Liris	11 34 29	Broncho	11 35 37

Balloon jibtopsails were set, spinaker booms were dropped to port and the sails set in stops, but they were not broken out for a mile or so, the wind being puffy and well forward. Finally Maraquita and Liris broke out and Gorilla soon followed. The breeze was very uneven, first one and then another catching a streak of wind, but no one gained any material advantage in the end. Liris ranged up abeam of Gorilla to leeward, but failed in two or three attempts to get through her lee. She took in spinaker before Gorilla and dropped astern a little, making a couple of trials for a weather berth, but missing it until just at the buoy, when she cut in ahead of Gorilla and turned the mark 15s. ahead. Maraquita was some distance astern all the way across, picking up what the other two lost in their lulling matches. Broncho was practically out of it from the start. The times at the Center Island buoy were:

Liris	12 57 30	Maraquita	12 59 34
Gorilla	12 57 45	Broncho	1 15 15

Liris made the run in 1:23:01, Gorilla in 1:23:56, Maraquita 1:23:59 and Broncho 1:39:38. Liris came on the wind on port tack, but by the time that she was trimmed down a tug with a canal-boat in tow with a long hawser was directly in front of her. Instead of tacking she bore away to leeward to clear the tow, while Gorilla came up just in time to pass clear without any delay. This set Liris a hundred yards or so dead to leeward, and worse still, when on her course again she had all of the sulks and refused to go to windward. Gorilla was already ahead and to windward, while Liris seemed to slide off in a way that was new to her. As no change of trim or sheets seemed to help she tacked, Gorilla just crossing her bow, but when once down to work on the new tack everything was changed, the boat moved off to windward and very soon had Gorilla in her wake, the latter having tacked also. The leg was dead to windward, the breeze being very puffy and the boats sailing about rail to. Liris parted her topsail tack but soon repaired damages and continued to gain on both of the others, Broncho being so far astern as to be out of the race. Maraquita held further in shore off Greenwich than Liris with her draft considered prudent, but the three were badly broken off by the wind when near the mark, making several short tacks to round it. The times were:

Liris	2 07 15	Maraquita	2 15 27
Gorilla	2 12 04		

Liris had made the leg, 5¼ knots to windward, in 1:09:45, Gorilla in 1:14:19 and Maraquita in 1:15:53. The next leg was a close reach for the Hempstead mark, the wind constantly hauling ahead, so all held as far to windward as possible to be sure of fetching. Maraquita set a small jib topsail, which seemed to drive her to leeward, the others holding on better under plain sail. Liris gained over 2m. on each, the times being:

Liris	2 59 32	Maraquita	3 09 58
Gorilla	3 07 01		

On the next leg, close on the wind, Liris still gained a few seconds on Maraquita and a minute on Gorilla, the latter taking third place as in the following official summary:

	Start.	Finish.	Elapsed.	Corrected.
Liris	11 34 29	3 26 57	3 52 29	3 52 21
Maraquita	11 35 35	3 37 29	4 01 54	4 01 29
Gorilla	11 33 49	3 35 21	4 01 32	4 01 32
Broncho	11 35 37	Not timed.		

Liris beats Maraquita 9m. 8s., and Gorilla 9m. 1ls., winning the Thayer cup as well as the class prize. Her gain on every leg was a fair one, the only fluke of the day being against her, the loss through the tow at the first mark. Maraquita sailed the best race that she has yet made, beating Gorilla, but she was aided a little by the luffing matches of the latter with Liris on the first leg. Liris' best work was to windward, where she beat Gorilla almost a minute to the mile, also beating her on the long reach across the Sound on third leg. Taken in connection with their previous meeting the race show that Liris is a great deal better to windward than Gorilla, in spite of the latter's bound. Gorilla would undoubtedly have travelled faster with more wind, but Liris also did best with her when it was blowing hardest. Maraquita, though much improved since the Corinthian sweepstakes, is evidently nowhere near good enough for Liris, and the question of the fastest forty may be considered as narrowed down to three boats, Minerva, Liris and Pappoose, the extremes of the class.

The meetings between Liris and Pappoose have been few and indecisive, but they indicate strongly that the small boat has no business with the large one. A very fair trial was had in their first meeting, when in new hands and with wretched spars and sails Liris made her first race, beating Pappoose with ease. When they next met, in the Vineyard Haven sweepstakes, Pappoose gained a long lead at the start, partly by a fluke of the wind and partly by some very good pilotage and her light draft of water, nearly 3ft. less than Liris. On this occasion, however, she did some wonderful work to windward in a breeze, carrying sail and traveling very fast, a little too fast for Liris to catch her. In the Corinthian sweepstakes Liris sailed so badly that no fair comparison is possible, but in the final race for the Morgan cup at Newport she had saved all her time off Pappoose before she was disabled, and would have beaten the little boat easily in a heavy sea. Pappoose is certainly one of the best of the Burgess boats, but a part of her success must be looked for in the fact that she has been for two seasons in the same skillful hands, going into the races this spring in perfect form and being well handled and piloted all the year.

The real point of the forty foot racing, without which much of the work of this season must pass for nothing, is whether Minerva can beat Liris under either or both rules, New York and Seawanhaka. The two meetings that have taken place between them, each winning one, have proved little or nothing, but now a series of match races, determining the exact place of each, would be of the greatest value as a guide to legislation. Minerva's victories are by no means an unmixed good just now, as they are used as a basis for hasty and false conclusions. Most yachtsmen are willing to concede her superiority in speed to the rest of the class, and on the strength of this are inclined to drop the question of a revision of the rules, arguing that if Minerva can win with small sails from the monsters there is no necessity for a change. Such an argument does not recognize the fact that all of Minerva's races have been sailed under the Seawanhaka rule, and some under the very liberal allowances of the Eastern Y.C. in addition. Even if her work proves that the Seawanhaka rule is sufficiently heavy on sail, it does not follow that the same is true of the New York rule, or that such a rule as that of the Larchmont Y. C. is at all desirable.

We believe that, apart from Minerva, a correct record will show that even the boats of last year, with large rigs, have no further business with Liris, Gorilla or Tomahawk, with still larger rigs, now that the three are in some sort of form, and that if the sticks can be of the ratio arguing that if Minerva does pay under the present conditions, save in an exceptional case, such as Minerva. Further than this, the 40ft. class is not the only one to be considered, and Minerva's supremacy there, though fully proved, cannot offset the strong tendency to outrageous rigs in the 70ft. and the schooner classes. Minerva's work will have one good result in that it will lead to a more moderate type of boat next year; but if the matter is overdone, or managed by unskillful hands, we shall see the monsters ahead at the end of the season.

There is every prospect of a number of new yachts this winter, the 53ft. class in particular being promised an active revival, and the present is the most favorable opportunity for a thorough readjustment of the whole measurement question that has occurred or is likely to occur in a long time. There is certainly a great misunderstanding of the question than has before existed, while at the same time such moderate, but important reforms as were suggested last spring in the way of a classification on the basis of corrected instead of waterline length can be inaugurated with little friction and with no interference with vested interests or the rights of existing boats. Such being the case, it will be very unfortunate if the work is left undone through any false conclusions based on a hasty and incomplete survey of the season's racing record.

NEWARK BAY Y. C.—The annual fall regatta of the Newark Bay Y. C. was sailed over a 5 mile triangular course, 15 miles in all, on Newark Bay on Sept. 27, the wind being fresh at first but falling later on. Just Woke Up led for a time but finally capsized. The times were:

CLASS 2, JIB AND MAINSAIL BOATS, BETWEEN 20 AND 26FT.

	Length.	Elapsed.	Corrected.
Leader, Pavonia	22.04	1 33 49	1 30 44
Our Own, Newark Bay	23.10	1 46 09	1 44 31
Viola D, Newark	26.05	1 48 01	1 48 01
Just Woke Up, Newark Bay	21.11	Capsized.	

CLASS 3, OPEN CATBOATS, BETWEEN 20 AND 26FT.

Alida, Newark Bay	22.09	1 37 20	1 37 05
Vision, Essex	23.00	1 47 52	1 47 52
Terror, Newark	20.00	2 12 41	2 09 41
Smuggler, Newark Bay	24.06	Did not finish.	

CLASS 4, OPEN CATBOATS UNDER 20FT.

Mist, Essex	17.10	1 55 21	1 55 21
A. Forsythe, Jersey City	17.08	1 57 09	1 56 59
Addie, Newark Bay	15.00	2 06 51	2 04 01
Gallawater, Newark Bay	16.03	2 12 59	2 11 24
Petrel, Essex	15.08	2 13 52	2 11 42

ROYAL CANADIAN Y. C.—The last race of the season, a cruising race to Whitby, was sailed on Sept. 21 in a strong W.N.W. wind, the times being:

	Finish.	Elapsed	Corrected.
Verve No 2	5 54 40	2 54 40	3 54 40
Verve No 1	6 01 28	3 01 28	2 56 18
Condor	5 59 05	2 59 05	2 57 21
Rivet	6 01 45	3 01 45	2 58 53
Escape	6 30 45	3 30 45	2 58 57

Alexander Marshall, who rescued Mr. Postlethwaite in the late skiff race, was presented with a very handsome testimonial in the shape of a Maltese cross of solid gold in recognition of his bravery.

HAMILTON Y. C. SWEEPSTAKES RACE, SEPT. 21.—Course, triangular in Hamilton Bay. Distance, 14.8 nautical miles. Wind, strong northwest:

	Start.	1st Round.	Finish.	Elapsed.	Corrected.
Cyprus, Monck	2 00 00	3 57 55	4 43 11	2 43 11	2 38 34
Psyche, Kilvert	2 00 00	3 54 13	4 40 37	2 40 37	2 40 87
Alert, Milne	2 00 00	4 04 47	4 50 08	2 56 08	2 51 37
Deerhound, Lee	2 00 00	Withdrew.			
Echo, Smith	2 00 00	Withdrew.			
Coquette, Dunbar	2 00 00	Withdrew.			

Winner first prize, Cyprus; second, Psyche; third, Alert.

FREDONIA AND HESPER, SEPT. 26.

AFTER one postponement the match between the yacht-fisherman Fredonia and the pilot boat Hesper was successfully sailed on Sept. 26, resulting in a very easy victory for the fisherman. For some time opinion has been divided as to the probable winner, and a very close race was looked for, but on the contrary the pilot boat was beaten from the start, being badly outsailed to windward in a sea. The latter part of the race was marred by fog and a shift of wind, the rear boat being very badly left, but long before this happened she had been beaten on her merits. The boats were ready on Wednesday at an early hour, but after waiting until 11:30, with a foggy day and little wind, the postponement flag was hoisted. Next day the tug N. P. Doane, with Mr. W. S. Eaton, of the Eastern Y. C. regatta committee, on board, was off the starting line abreast of Boston Ledge by 9:30 with the signals flying for a course from the Ledge around the buoy on Davis Ledge, then around a mark boat off Eastern Point, near Gloucester, and home, 41½ knots. The wind was strong from S.E., making a dead beat to the first mark, 6⅛ knots, with a heavy sea, there being some fog before the start. Fredonia, with Capt. Harty in command, assisted by Capt. Terry, of the Grayling, in charge of the sheets, and with Messrs. Forbes and Burgess on board as well, was carrying lower sails, both working topsails and jibtopsail. Hesper, sailed by Capt. George Lawlor, was carrying the same canvas with the addition of a maintopmaststaysail.

After a false start by Fredonia, owing to the signals being obscured by fog, a second start was given at 10:30, Hesper being then hove-to on starboard tack near the line. Fredonia, better timed, came for the line just before gun-fire, with good way on and ran through Hesper's lee, crossing the weather end of the line at 10:31:13 on starboard tack. Hesper crossed a little later, 10:32:08, and stood in Fredonia's wake, pointing higher but not going so fast. Both were heading into the sea on this tack off shore, but Fredonia was sailed freer and traveled proportionately faster. After a little time, as Hesper was dropping steadily astern, her maintopmaststaysail was taken in, but still she could not hold the fisherman. The schooner Alert had crossed the line a couple of minutes after the racers, and was now doing very well with Fredonia, having left Hesper. The off shore tack was held until 10:56, when the leader tacked in for Nantasket Beach, getting the seas on her beam. She was steadily leaving Hesper, the latter being sailed very close, but failing to foot. The next off shore tack was made at 11:22, near Black Rock, and at 11:43 Fredonia made her final tack for the first mark, the times of the two being:

Fredonia.....11 50 32 Hesper 12 04 25

Alert did not turn the mark, but was still keeping close to the leader. Thus far, in a beat of 6⅛ knots, Fredonia had beaten Hesper 12m. 53s. With a strong breeze on the starboard quarter and her maintopmaststaysail now set, Fredonia started over the second leg to the markboat off Eastern Point, 17½ knots. Alert ran with her very evenly, while Hesper, though now far astern, ran as fast as the others, losing but 27s. to Fredonia on the leg. The times at the second mark were:

Fredonia.....1 35 50 Hesper.....1 49 10

The last leg, of 15½ knots, was a reach, with the wind just forward of the beam, Fredonia carrying small jibtopsail but no maintopmaststaysail. After the turn the racers ran into a dense fog and were lost to sight until well across the Graves. When near the buoy the wind headed Fredonia, coming out nearly S.W., making a beat home, at the same time falling much lighter. Fredonia was so near home that a couple of tacks took her over the line, but at the time the wind shifted Hesper was some three miles astern of Fredonia, giving her a beat of some six miles to the finish in a falling wind, so that her beating was much more than it should have been. The full times were:

	Start.	Finish.	Elapsed.	Corrected.
Fredonia	10 31 13	3 41 50	5 10 37	5 10 37
Hesper	10 32 08	4 24 46	5 52 38	5 49 16

The race was sailed under the conditions given last week, the stakes being $3,000 per side. Fredonia was the better handled and had better sails, using Puritan's mainsail. Each boat carried a spinaker and boom, but did not set them.

We quote from the Boston *Globe* the following careful analysis of the race, written by Mr. Geo. A. Stewart:

"The race between the Hesper and Fredonia has been one of the most significant features of the present season for the men of all classes who pass any portion of their time upon the sea. The difference in the type of the two vessels is nearly as great as that between the combatants in the recent international contests. Narrow beam and depth are the features of the Hesper's model, with easy bilge and a steep angle of dead rise, or, as it is otherwise termed, a 'sharp floor.' Her section is much like that of a cutter. In fact, she was likened to the Minerva in the dock, and her sharp entrance and clean run caused many enthusiasts to back her, to their sorrow.

"The Fredonia is built for the fishing trade, in which carrying power and the ability to stand up straight in order to facilitate the work of the men on deck are the chief factors to be considered. Consequently she is a 'full' vessel, with full bow, comparatively heavy quarters and a powerful, hard bilge. She is more of an American type of recent years in which power has been sought, rather at the expense of fine lines. A year ago it would have been thought that the Fredonia's model tended more in the direction whence speed should be sought, but the Minerva has proved that great power is not necessary to produce high speed.

"On the merits of the models, therefore, it was hard to found an opinion as to which would be the winner. It was suggested that the Hesper was too much cut away, and that power had been sacrificed which was not made up for by the easiness of lines obtained. Still, the merits of the models will not explain such a defeat as this, and the explanation must include the other things which help to bring the winner first home to the finish.

"Among yachtsmen is a well-recognized fact that the model of the vessel does not count for more than one-half the total which makes speed. A good model is a necessity, but beyond this there are an infinite number of things to be looked after in order to bring out the best speed of a vessel. Ballasting, rig, the sit of sails, handling, all bear an important part in the success or failure of a racing yacht, and of course the same features make or mar the fortunes of any vessel entered for a trial of speed.

"It was in these last-named elements that the pilot boat chiefly fell short. Of course, after the race is over it is easy enough to point out the defects. If the Hesper had won it would have been due to some cause, and the make-up of the Fredonia would have come in for its share of criticism. But the fact stands that the Fredonia won, and some of the causes for her success were plainly evident on the day of the race.

"To begin with, the handling of the Fredonia was of the very highest order, judged by the yachtsman's standard. Rarely is a schooner yacht handled as well as the Fredonia was in Thursday's race. The Grayling, the best handled schooner in America, is not usually handled so well, for in his own yacht Capt. Terry has to stand by the wheel, and he cannot give as close attention to the sails as he was able to in the Fredonia. Capt. Harty is naturally a fine helmsman, and his drill this year under such an experienced yachtsman as ex-Com. Forbes, combined with a racing experience in the New York Y. C. cruise, has been of great use to him. Forward everything was excellently managed. The right sails were set and the canvas was handled to the best advantage. All the little schemes for making leaches stand right, and such things drawn from yachting experience, were tried. These things count for minutes in the windward work.

"The Hesper was at a disadvantage in all these things. To begin with, her crew decided before the race that they had no chance against the Fredonia in a light breeze, so they put in additional ballast, hoping for a heavy wind. On the day of the race the wind, though strong, was not enough to warrant putting additional weight into a sea-going craft like Hesper. Then the pilot boat's sails were not up to the mark. She had a new suit of sails made expressly for this race, and had not time enough to get them into shape.

"Added to this, mistakes were made in the sails set. Yachting experience, the constant rubbing up against an opponent as fast as your own craft, has convinced yachtsmen that a maintopmast staysail and a jibtopsail as big as the Hesper's are a detriment in windward work, if there is at all a decent breeze. The boat will carry them all right, but they drag her to leeward and astern.

"Pilots are at the same disadvantage in racing that yachtsmen would be if you should put the latter out on the station in the depths of winter looking for steamers. Racing yachtsmen are continually studying out little contrivances by which a few seconds can be added to their vessel's speed. Pilots have no incentive to look after these minor points. It takes constant racing and constant defeat to spur an owner up to discover all the weak points of his yacht and rectify them.

"A good illustration of the importance of the little things was shown by the experience of the Sachem last year. She had a new suit of sails in the spring, and to the careless observer seemed to be fit to win all the mugs that could be offered. She went on to New York, and was beaten by the Grayling 25m. in a true breeze over the New York Yacht Club course. It seemed a hopeless task, but her owners, with rare pluck, went to work to do what could be done to rub out this tremendous lead. A month and a half of hard work, and the Sachem was ready for the New York Yacht Club cruise. On this cruise she met the Grayling repeatedly, divided the honors with her, and in the same breeze in which the Grayling beat her so badly in the spring she was now more than a match for her dangerous opponent.

"As far as Capt. Lawler's steering is concerned no amount of fine steering could have made up the difference between the two vessels. The Hesper being the narrower boat, with fine entrance, ought to point higher into a head sea than the Fredonia. Capt. Lawler at first tried her high, but later he let her off, but neither way could she hold the Fredonia. It turned out that she had not enough after sail for the best windward work.

"Some people have been misled by the time. The Fredonia beat the Hesper 42m. on the record, but half of this was due to the wind falling light, and heading the Hesper off at the finish. On the merits of the sailing the Fredonia beat the pilot boat about 20m. on the course.

"Some one said after the race. "Every old hooker will now think that she can beat the Hesper." Let no one be deceived. The Hesper is a very fast vessel as many a presumptuous craft will find out this winter. Pilot boat No. 5 goes on the station at Boston light, Monday noon, and in a week she will go on the station at Cape Cod."

The following rather cool proposal has been made to Mr. Forbes, but he has not accepted it:

To the Yachting Editor of the Boston Globe:

As we understand Com. Forbes has said he did not wish to make money by sailing, and as he has won $3,000 in the match race between the Fredonia and Hesper, and as he seems to be a great lover of testing the sailing qualities of the different types of boats, we think the public and all seafaring men would like to see Com. Forbes come out and offer the money in as many prizes as he saw fit, to be competed for by any fishing or pilot boat 80 to 100ft. l.w.l., under working sails, such as they use in their business, and to sail on time allowance, and not to sail under an 8-knot breeze, and Com. Forbes to make arrangements as he may see fit.

This, we think, will bring all such fast vessels as the Fredonia, Hesper, Carrie E. Phillips, Nellie Dixon, Susan R. Stone, Roulette, Lizzie Maud, Lillie Fernald, Elsie M. Smith, Julia Costa, I. J. Merritt, Jr., George F. Edmunds, Isaac Collins, Sylvester Whalen in competition. (Signed) Capt. N. F. Blake.
Capt. Alfred Sorensen,
Capt. John Cannon.

Boston, Sept. 28.

KATHLEEN AND SHONA.

TUESDAY last, the wind up of the racing for 1889, was utilized by the clerk of the weather as a sort of closing out sale of samples and remnants, to make room, let us hope, for an entirely new stock next season. Among the bargains that fell to the lot of Kathleen and Shona, the only contestants, were a nice whole-sail breeze with sheets well in, a pretty bit of light wind for a beat to the outer mark, a moderate breeze astern to test spinakers, and such a rattling squall as only the Staten Island bluffs can furnish. The race was in its way of the allegorical order, like the dear dull goody-goody stories of our childhood, a sort of "youth at the oar and pleasure at the helm" business at the start, with fair tide and topsails, a lazy run under spinaker in smooth water later on, and a wind up in the dark with a hard beat against tide, with two reefs down, to a lively accompaniment of thunder and lightning. The small band of pilgrims who finally reached shore in a damp and disgusted condition after a very hard day's work were bound on the path of progress toward higher and better things in the yacht racing line, the immediate object of the race being the collection of data that would throw a needed light on the much-disputed measurement question. There was no lack of data, it was lying all over the lower bay in chunks, but unfortunately it was all of a meteorological nature, such as might interest Sergt. Dunn or Ensign Hayden, but of which yachtsmen have had a great deal too much this season.

The match was arranged by the Corinthian Y. C., of New York, the owners of Kathleen and Shona kindly offering their boats for the purpose of a test race, the object being to learn how much the fat and overgrown American cutter could beat the lean and hungry offspring of the old tonnage rule. The former type was represented by Kathleen, designed by Mr. Gardner and owned by Mr. Whitlock, and the latter by Shona, designed by Mr. Watson and owned by Admiral Tweed, Corinthian Y. C. The two compare as follows:

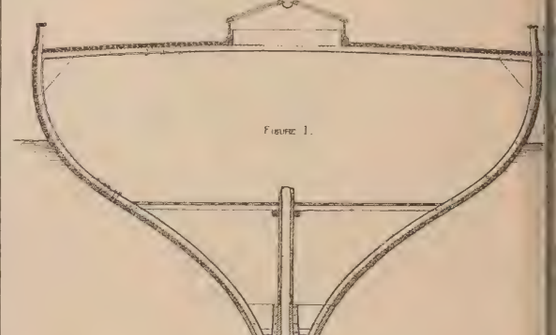
	L.W.L.	Beam.	Draft.	Sail area.	Cor. length.
Kathleen	30	10.6	7	2,036	37.56
Shona	32.5	5.9	6	1,500	34.25

Kathleen allows Shona about 3m.

The course was from Buoy 15, below the Narrows, past Buoy 9, then to Buoy 1 off Point Comfort, in Raritan Bay, thence past Buoy 10 on the South West Spit, and home to the start, 18½ knots. The morning was wet and cloudy, with stray bits of sunshine, the wind being S.W., but by 11 o'clock all was bright and clear. With one delay or another it was noon before the yachts left the Corinthian Basin at Tompkinsville in company with the naphtha launch Bertha, on which were Messrs. Schuyler, Clark and Porter, of the club, as well as Mr. Gardner and the representatives of the press. Kathleen left her topsail yards at her mooring, understanding that topsails were not to be carried, but as events proved Shona had hers in her main saloon in case of emergencies. On board of Kathleen was her owner, with Capt. Tom Sloan at the stick, while Shona was sailed by Capt. Little, with Capt. Charles Barr, her old skipper, as mate. Before leaving the moorings topmasts were housed on both, the wind being pretty heavy, having held so all night. Kathleen had come over from Bay Ridge under two reefs and kept them in, Shona carrying whole mainsail. On the way down, in spite of some heavy squalls off the hills, the wind dropped considerably, and topmasts were sent up, reefs shaken out and jib headers set.

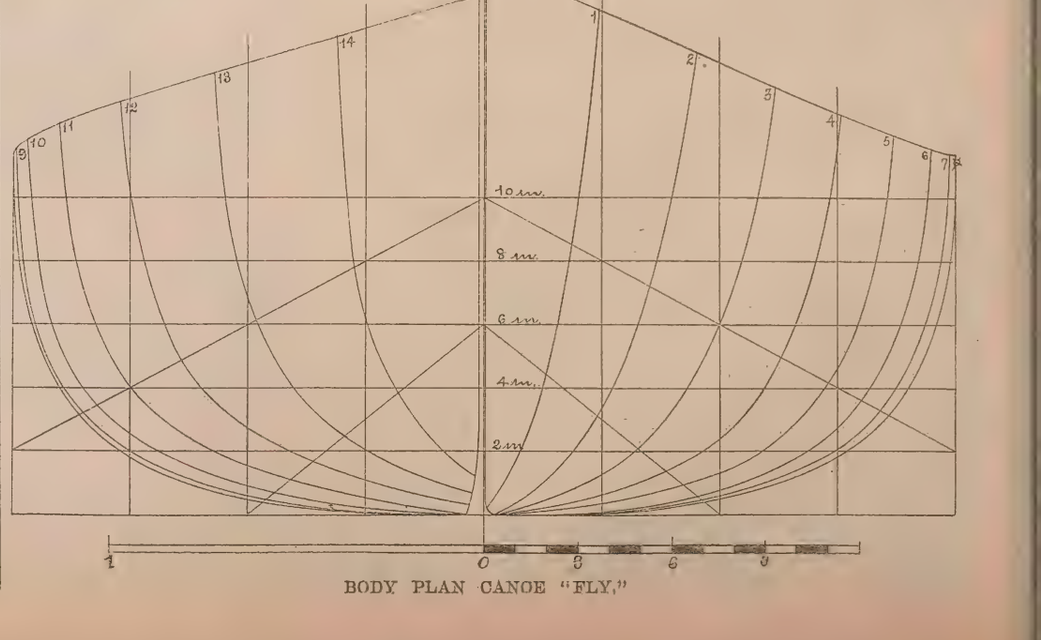
The start was given at 1:33:10, Kathleen going over to windward of Shona at 1:33:55, the latter being timed at 1:34:27. The wind was well ahead and puffy, while the tide was on the early ebb. Kathleen, with balloon foresail set, reached off for Buoy 9, gradually dropping her rival. At Buoy 11 the course hauled a little, and at Buoy 9 it became a dead beat of five miles to the outer mark. Kathleen had gained on the reaching, and went away still faster when on the wind, though Shona pointed very high. Kathleen was first to tack, standing in on port tack toward Staten Island when near the Quarantine ship, Shona holding her starboard tack until well down toward the Hook. As it proved, the latter was the better course, in spite of a stronger tide to leeward, as when the two finally neared, Shona had made up a great deal of her loss from the start to the time when they parted company.

The wind was now very light and to Kathleen's disgust Shona shifted to clubtopsail. Kathleen came about on the other's weather bow and soon began to walk away from her. When up Raritan Bay the wind strengthened a good deal, Shona finally dousing her clubtopsail. Kathleen gained until at the turn she was timed 4:00:35, with Shona 4:13:10, a lead of 12m., or over 9m. more than the allowance for the full course. Kathleen made a clean turn and set her spinaker smartly, running off very fast with boom to port. Shona made a wider sweep and had trouble with her spinaker, setting it for the third time before the stops finally broke. The turn at Buoy 10 was timed Kathleen 4:30:00, Shona 4:43:45, Kathleen had run the distance, a quarter under 4 knots, in less than 30m., gaining a little over a minute on Shona.



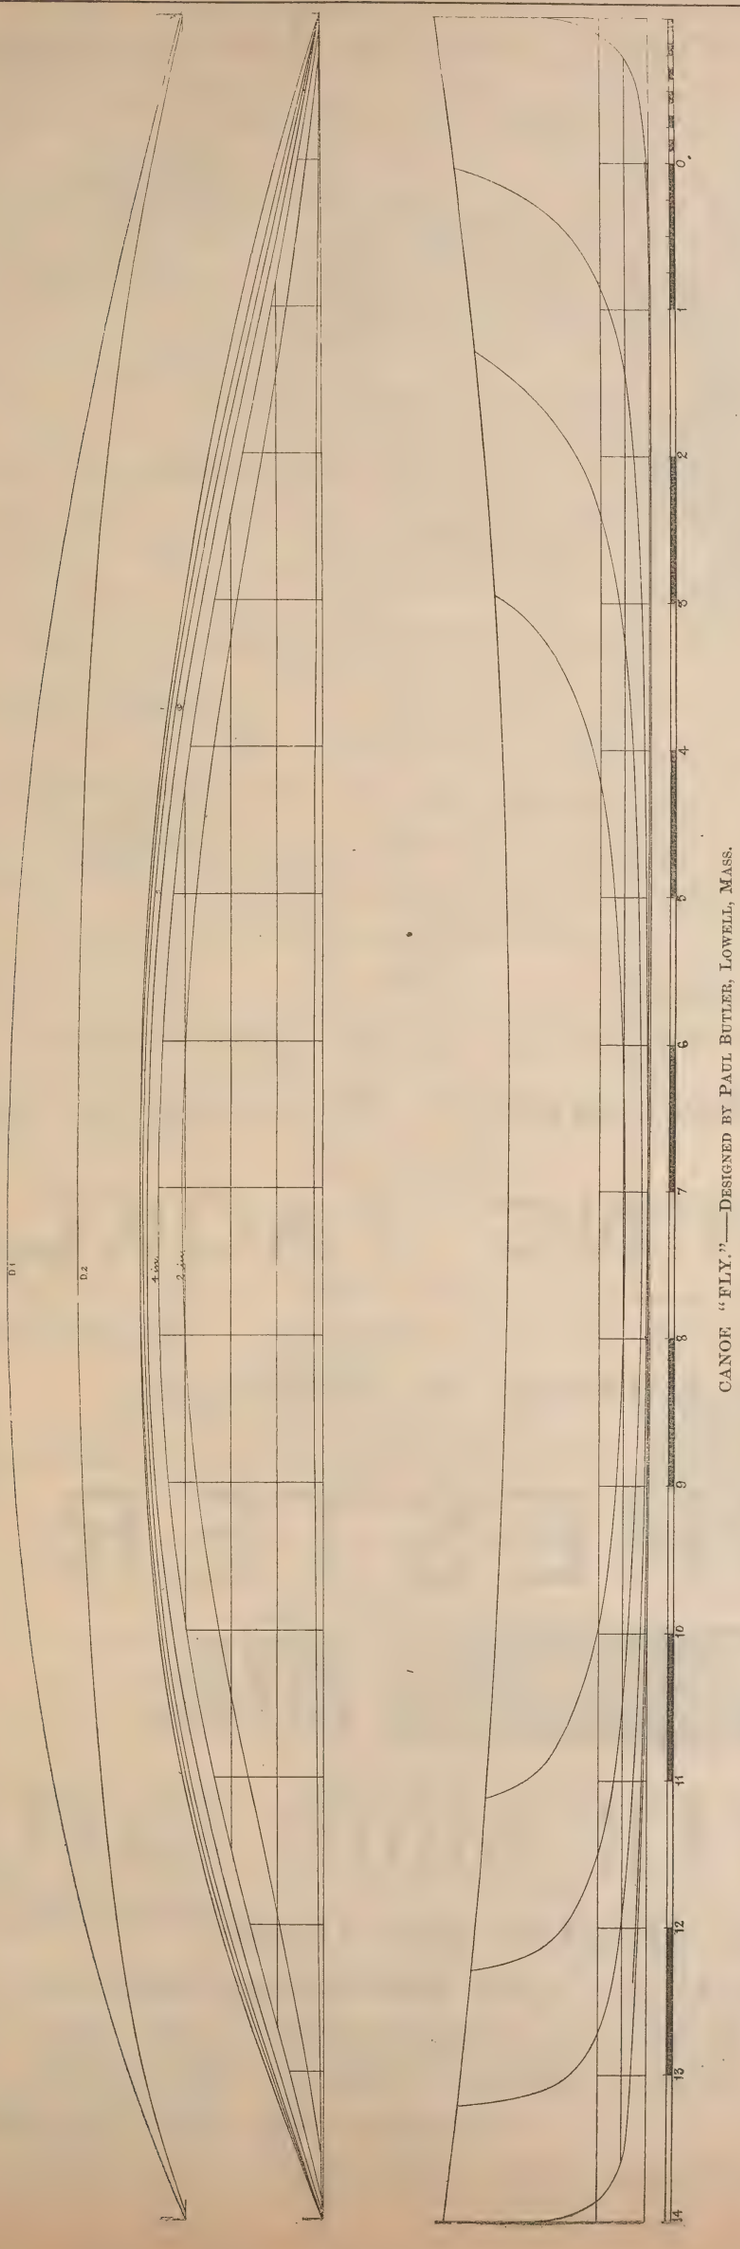
Thus far the day had been warm and bright enough for June, and with a good breeze on the port quarter, with jibtopsail set, the 6½ miles home promised to be as pleasant as the first part of the sail. The weather, however seemed anxious to keep up the reputation it made in the June regattas, every one of which was sailed partly in a squall, and when Kathleen was off Buoy 11, only a couple of miles from home, the wind chopped round into the northwest, with thunder in the distance, and by the time that jibheader, jibtopsail and foresail were off her she was in the midst of one of the wildest squalls of this squally season. When it struck she was under whole mainsail and No. 1 jib, close-hauled along the line of the West Bank. The squall laid her flat on the water for a time, and she refused to do her work until two reefs were tied in, when she looked up to windward and sailed off in fine shape through the gusts which struck her heavily at frequent intervals. Shona was far enough astern to profit a little by Kathleen's experience, and was snugged down in better shape before the squall reached her. It was now very dark, the sky a mass of inky clouds in all quarters, while the lightning had a peculiar rose tint. The tide was setting out very swiftly but the little ships had wind enough to breast it. Under two reefs in her mainsail and No. 1 jib Kathleen handled beautifully, and the beat up in the teeth of the squalls was the most exciting part of the day's work.

When near the finish the wind dropped and she was hardly able to make way against the tide, but with some light drafts of air from astern and with topsail and jibtopsail set and the reefs out of her mainsail she finally crossed the line at 6:26:18. Shona, after gaining a little before the squall struck, was now about as far astern as before, and with the light wind she worked up near to the finish, when she was becalmed, drifting down the bay. The launch took her in tow near the line, no time being taken. Kathleen managed to keep way on until under the fort, when the squalls struck in as heavily and suddenly as before. She was soon under snug canvas and worked through them all right, though on her beam ends at times. It was 8 P. M. before she reached her moorings off Tompkinsville.



Had the race finished without the squall she would have beaten Shona by about the lead she had at Buoy 10—12m. 15s. In connection with this, it is interesting to note that Liris and Kathleen sailed a scrub match of about twenty knots this week, Liris allowing 12m. under Seawanhaka rules, and beating Kathleen by 30m. Liris has shipped a cruising boom, bowsprit and topmast and winter sails, preparatory to cruise in the Chesapeake. Kathleen went out of commission on Wednesday, hauling out on Wintringham's ways for the winter. Captain Sloan sailed on the City of Paris for Queenstown, promising to try America again next season.

M'INTYRE'S COMPOSITE CONSTRUCTION.



MR. JAMES McINTYRE, a foreman in the City Point Iron Works of South Boston, and the inventor of the skylight and companion slide bearing his name, has lately patented a new method of constructing composite vessels, by which the wood keel is entirely dispensed with. The keel is a casting in the form of a trough, of any desirable thickness of iron, the sides and bottom being strengthened by cross bulkheads. The wooden stem and sternpost are bolted to the keel, fitting into suitable mortices cast to receive them, and the steel frames are riveted through

FIGURE 1.

the keel. A small yacht is now being built after this method from a design by Mr. J. Borden, of the Boston Yacht Agency. She is intended for the 16ft. class of the Pleon Y. C., and is 22ft. over all, 16ft. l.w.l., 1ft. 6in. fore overhang, 6ft. 5in. extreme beam, 6ft. 3in. l.w.l. beam, 11in. freeboard, 5ft. 3in. draft. Her mast will be 26ft., bowsprit 8ft. outboard, boom 22ft., gaff 14ft., hoist of mainsail 16ft. All the spars will be hollow, made by Mansfield. She will carry three sizes of jib, to set flying with clubs on the foot. Her sails of 8oz. duck, with silk spinaker, will be made by A. Wilson. The mainsail will have a reefing batten, as in a canoe

BODY PLAN CANOE "FLY,"

CANOE "FLY."—DESIGNED BY PAUL BUTLER, LOWELL, MASS.

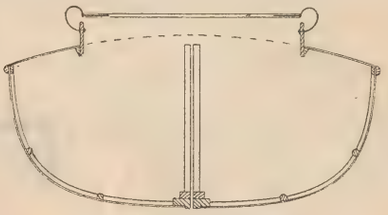
sail. The iron casting for the keel is 11ft. 6in. long and 1ft. 6in. deep, the sides being about 7/8in., and the total weight 700lbs. The steel angle frames, nine on each side, are 3/4×3/4×1/8in., and are all reverse frames, or with the rib inside. Each is backed on the outside by light ribs of hackmatack, 7/8×1in., riveted to the angle bar. By this means all beveling of the steel in addition to the bending is avoided, the wooden frames faying against the plank and taking the bevel. Between the composite frames are steamed oak ribs, 3/4×3/4in. The steel angles are riveted at the heels and steel floor plates, and these in turn are riveted to the sides of the keel, extending 4in. above it to the cabin floor. After the frames and floors are fitted and drilled they are galvanized. The planking of 5/8in. Spanish cedar in full lengths is riveted with copper nails to the frames. The deck beams are sided 3/4in., moulded 2in., with 5in. crown, and the plank sheer is of mahogany. The deck is of white pine, 3/4×3/4, blind-fastened. The lead ballast, 1,200lbs. in all, will be run into the trough keel. The frames and floors weigh but 57lbs. after galvanizing. The yacht will be fitted below with two sofa lockers, two hammock beds, and pantries, etc. The skylight and companion will be designed by Mr. McIntyre, a combination hatch that can be removed in racing. The Composite, as she is called, will make her trial trip next month. Mr. McIntyre is now busy with skylights for several Government vessels. The cut shows the framing of a centerboard boat on this system.

YACHTSMEN OF NEW ENGLAND.—Under this title Mr. W. H. Couillard has published in a very handsome volume a complete list of all the New England yacht clubs, with names and signals of the yachts and addresses of members, besides the tide tables of the year and other useful information. The book is very well illustrated with photogravure reproductions of photographs of the leading yachts, and is a very ornamental as well as useful addition to the yachtsman's library.

ALBANY Y. C.—The fall regatta of the Albany Y. C. will be sailed on Oct. 12, being open to both sailing and steam yachts of all organized yacht clubs between Poughkeepsie and Troy inclusive. The steam yachts will be divided into first class, 30ft. and under 56ft., and second class, under 30ft. There will be two prizes in each class, presented by Capt. Sanders. Entries close on Oct. 5.

THE LOSS OF THE LEO.—From all that we can learn of the steam yacht Leo, lately lost on Lake Erie, she was an old and poorly equipped boat, with a steam boiler, using kerosene for fuel, purchased at a very low price and run by incompetent help. She was not a naphtha launch. No further particulars of her loss are known, but it is supposed that her boiler exploded.

COLUMBIA Y. C.—The postponed regatta of Sept. 26 was a failure through a fog and calm, none of the 16 starters completing the course. The race will not be re-sailed.



GRAYLING.—The report that Grayling has been sold to go to Lake Erie is contradicted, but it is said now that Vice-Com. Fish will not race her next season.

ORIENTA, steam yacht, has been sold by J. A. Bostwick to E. R. & J. H. Ladew, of New York.

Canoeing.

FLY.

THE canoe Fly, whose lines are here given, is the best known of the famous Vesper canoes, the handsomest fleet of canoes that has ever been brought together. The boats are all of the same dimensions, 16×30, and of nearly the same model, all being built in the same way, ribband carvel, of Spanish cedar. Fly was designed by Mr. Paul Butler, of Lowell, Mass., in 1888, and was built under his direction by Mr. W. F. Stevens, of Portland, Me., the work being done in Lowell. She raced at the meet the same year with rather poor success, having a rather incomplete rig, but later in the season she defeated Eclipse at Springfield in the final race for the Springfield cup, and in the special races at New York at the time of the international races she won the two races of the morning and afternoon, beating the time of the Eclipse over the same course in each race, though of course not racing for the same prizes. As the latter canoe was not at the meet this year the two have never met since. Fly is built to the

MIDSHIP SECTION CANOE "FLY."

full limit of 16ft.×30in., but as we explained in connection with the limits of Charm, Oct. 11, 1888, the lines are reduced in length to 15ft. for the sake of uniformity with other designs. In building from the lines and the table of offsets it will be necessary, in order to build to 16ft., to space each station $12^{13}/_{16}$in. apart, in place of 12in. In any case, though the table of offsets is taken as carefully as possible from a drawing 1/2 full size, it will be necessary to lay off the design full size, as described in "Canoe and Boat-building for Amateurs," in order to make the moulds, and in doing this the lengthening is an easy matter by spacing each station as above. Wasp, one of the latest of Mr. Butler's canoes, is very similar to Fly, but her floor has a trifle less round in it. The deck, too, is different, there being hardly any coaming, but the deck itself is arched into a sort of turtle-back form about the well, in order to throw off the water, an object which it does not quite accomplish. an apron or higher coaming being needed. The dimensions of Fly are as follows, the fractions being eighths of an inch:

Length	16ft.	
Beam, extreme		30in.
l.w.l. 4in		27in.
Draft		4in.
Freeboard		7^3in.
Sheer, bow	1ft.	1^4in.
stern	1ft.	0^4in.

Stations.	Heights.		Half Breadths.							
	Deck.	Keel.	Deck	10in.	8in.	6in.	4in.	2in.	Rabbet.	Dia. 1	Dia. 2

NEW YORK ATHLETIC CLUB CANOE REGATTA.

THE canoe regatta of the New York Athletic Club was held on Saturday at Travers Island, the races being sailed in a very light breeze. The maneuvering race was first called, the starters being Wasp, Paul Butler; Eclipse, H. C. Ward; Alpha, Everett Masten; Vagabond, C. J. Stevens; Sea Urchin, B. H. Nadal; Cyrus, H. L. Quick. Cyrus was third to recover the paddle after it was thrown over, but came in ahead with Alpha second. The same canoes started in the unlimited sailing race over the course shown last week in the FOREST AND STREAM, one round only being sailed. Vagabond led on the first leg, but was passed by Wasp and Eclipse near the turn. On the next leg, to windward, she repassed Eclipse and Wasp, being first at the second mark, but the wind was very light and the tide running swiftly, so that in endeavoring to avoid a foul with Wasp, Vagabond fouled the buoy, immediately withdrawing from the race. Eclipse passed Wasp on the way in, and led at the end of the first round when the race was called, there being little wind, while the hour was quite late. The official times were as follows:

	Start.	Finish.	Elapsed.
Eclipse	4 17 18	5 25 53	1 08 35
Wasp	4 17 12	5 28 31	1 11 19
Tramp	Disqualified.		
Alpha	4 17 20	5 31 42	1 14 22
Cyrus	4 17 13	5 32 35	1 15 22
Sea Urchin	4 17 17	5 36 20	1 19 03

Robert W. Gibson acted as referee, and the judges were Henry Stanton, of the American Canoe Association, and A. H. Wheeler, of the New York Athletic Club. Messrs. W. G. Schuyler, R. B. Burchard, Dr. Ramon Guiteras and R. W. Rathbone composed the committee.

IANTHE C. C. FALL REGATTA.

THE fifth annual regatta of the Ianthe C. C. was held on the Passaic River on Saturday, and was a success in every way, the weather being all that could be desired.

The club house and the banks of the river surrounding it were crowded with friends of the club, while many were out in the boats and canoes on the water. There was a very large attendance of canoeists from other clubs, the Brooklyn, Bayonne, N. J. Athletic, Crescent, Arlington, Orange, Rutherford and Paterson all sending their share.

The races were all spirited and well contested, and the prizes, consisting chiefly of flags and banners, were of a very superior order. The paddling course was about half a mile and the sailing course about a mile, twice around the triangle.

The first event, Class I., paddling, for the Commodore's cup, went to the Arlington C. C., through C. V. Schuyler in the Redante; G. P. Douglass, Ianthe, in the Scoot, second; J. Duguid in the Clara R., third. Schuyler led from the start and won by a length.

Sailing and paddling combined was the second event, and again Mr. Schuyler in the Nipsie held the lead for the first round, but the pace was too fast on the last round, and he finally dropped back to last place and then gave up the race. G. P. Douglass finished first in the Nenemooska; R. Hobart second, in the Cyniska, and Geo. Baxter third, in the Mineola. All were Ianthe men.

The sailing seniors and juniors were started together, and was a close fight throughout, L. B. Palmer winning in the Ianthe, G. P. Douglass, Nenemooska, second; then came the first junior, W. J. Steward, in Wind; O. F. Coe, Cresent C. C., in Sybil, fourth; G. W. Baxter fifth, R. Hobart sixth, C. V. Schuyler seventh, H. S. Farmer eighth, G. Manley, Orange C. C., ninth.

The sailing upset was won by Nenemooska, G. P. Douglass; Wind, W. J. Stewart, second; Cyniska, R. Hobart, withdrew.

Paddling classes III. and IV. Seniors was won by G. P. Douglass, canoe Nenemooska; B. Frederick second, in Bachelor; W. M. Myers, Bayonne C. C., in Nahma, third; O. F. Coe, Crescent C. C., in Cybil, fourth.

The junior paddling brought out a large fleet, and was a good race. W. J. Stewart, in Wind, won after a hard fight, with J. Duguid, in Nilo, second; E. W. Edinger, of the Crescents, third; G. L. Metze, of the Hoboken C. C., fourth; Geo. Manley, of the Orange C. C., fifth; H. Morgan, of the Arlington C. C., sixth.

The hurry-scurry had but four entries on account of the cold water. E. W. Edinger finished first, with J. Stewart second. J. Duguid and G. R. Metze did not finish.

The tandem paddling was the most exciting event of the day. The Collins Bros., of Bayonne, have long been the champion tandem canoeists of the Passaic and had never been beaten on that stream. When the race was called they were the only crew entered, one of the Ianthe crew not having shown up, so Douglass and Stewart at the last minute, as well as Manly and Daly, of the Orange C. C., started. Though Douglass and Stewart were members of the same club they had never been in a canoe together before, but they fairly wrested the championship of the Passaic from the Collins Bros., leading at the finish by a length and a half. The Orange crew were at least twenty lengths behind and out of the race.

During the afternoon there was music in the club house, and between the events many availed themselves of the opportunity to dance. Mr. Irving V. Dorland, rear-commodore elect A. C. A., acted as referee, and Mr. Jas. Close as clerk of the course. After the races the prizes were distributed by Mr. F. L. Dunnell, secretary elect A. C. A. In the evening a collation was served, and more than fifty canoeists made merry until a late hour.

BRANTFORD C. C.—The fall regatta of the Brantford C. C. was held on Sept. 21, on Lovejoy's Pond, the races being as follows: One mile tandem (club)—Bloomfield and Boswell first, Fred. Frank and Chas. Frank second; time, 11.58. Ladies' half mile tandem (club)—Miss Helen Goold and Miss May Bennett first; Miss Katie Wilkes and Miss Ross second; time, 6.25. Half mile, single (open)—1, Harry MacKendrick, Galt; 2, Alex. McKenzie; 3, Harry Frank; time, 5.04¼. Hurry-scurry—1, John McWillie; 2, Charles Frank; 3, S. R. Potter. Half mile, passenger (club)—1, Harry Frank; 2, Bloomfield; time, 5.47. Lady and gentleman tandem (club)—1, Alex. McKenzie and Miss Frances McKenzie; 2, Bloomfield and Miss Helen Goold; time, 5.18. Tug of war, dead heat. The sides were: W. A. Wilkes, S. R. Potter, Salter and Spence, and Fred Frank, Chas. Frank, J. McWillie and P. B. Wallace. Two trials were made, but the ropes slipped from the canoes, and it was decided to contest it some other time. One mile tandem (open)—1, Alex. McKenzie and Harry Frank; 2, MacKendrick Bros.; time, 10.01.

NEWBURGH CANOE AND BOATING ASSOCIATION.—On Sept. 21 Newburgh Bay was the scene of one of the most enjoyable events of the season. The wind fresh from the northwest; one could not wish for a better day. The entries for the ten-mile race, mainsail yachts, were as follows: Flight, Dolphin, Annie, Nabob, Jennie, Jessie. Flight, owned and sailed by Wm. T. Hilton, won first prize, Dolphin second. The race for cruisers was won by Mabel, sailed by N. S. Smith, and the canoe race by Rat, Grant E. Edgar. Fred B. Smith won the half-mile paddling race, and the half-mile double scull race was won by Harry Shaw and Chas. Low. After the races a reception was held at the club house, and a very successful season was closed.

NEW YORK C. C.—The fall regatta of the New York C. C. will be held on Oct. 5, at the club house, off Stapleton, commencing at 2 P. M. The programme is as follows: 1. Unlimited sailing. 2. Sailing keel canoes. 3. Unclassified sailing. 4. Man overboard race. 5. Paddling race. 6. Tandem paddling race. 7. Live duck race. 8. Upset race (weather permitting). The races are open to all members of canoe clubs, and will be sailed under A.C.A. rules.

PHOTOS OF THE MEET.—Mr. R. W. Anderson of Anne street, Toronto, has now ready a good series of photos of the meet at Stave Island, including the A. C. A. group, the circus, the tents and the racing canoes. A list will be forwarded on request.

A. C. A. MEMBERSHIP.—Atlantic Division: F. D. Laughlin, New York.

Answers to Correspondents.

☞ No Notice Taken of Anonymous Correspondents.

E. B. M., Newark, N. J.—The English gunmaker is unknown to us.

W. J. S.—1. Are meadow-larks and reedbirds protected in New York State? 2. What size Tatham's shot compares with No 8 standard size, used in testing foreign guns? Ans. 1. Yes. 2. There is a difference of nearly one size in the numbering, our No. 6 corresponding very closely with the English No. 7 and so on.

BLUE RIDGE. Denver, S. C.—What is the correct name of our Southern "Bob White?" We call them partridges here, but I am not sure which they are, partridges, quail or grouse. Ans. "Bob White" is the bird usually spoken of in our columns as the quail. It is known to science as the *Colinus virginianus*; and is, strictly speaking, neither a quail nor partridge, which names are commonly applied to it, however.

NEW BOOKS RECEIVED.

EVERY DAY BUSINESS. Arranged for young people. By M. S. Emery. A book of useful information on business matters. Boston: Lee & Shepard.

WITIN THE LINES. A story of the Blue and Gray Series. By Oliver Optic. Boston: Lee & Shepard; $1.50.

TRAVELS AND ADVENTURES OF LITTLE BARON TRUMP AND HIS WONDERFUL DOG BULGER. By Ingersoll Lockwood. Illustrated by George Wharton Edward. A gorgeous story book. Boston: Lee & Shepard; $2.

NEW YACHTS.—There are already indications of plenty of work for the builders during the winter, and the classes below 60ft. are apt to be largely increased. Several new boats are promised in the 53ft. class to beat Clara, Mr. Gardner having an order for one now. The latest report is that Mr. Fife has an order for a new 40 for a Philadelphia owner. Mr. Burgess is working on a design 60ft. l.w.l., 15ft. beam and 11ft. draft, besides a cruising schooner. Mr. Gardner has an order for a 30 to beat Kathleen, for a Boston owner, and a 23ft. catboat. Mr. D. J. Lawlor, of Chelsea, Mass., has an order for a 30 footer and a steam yacht 100ft. long. The composite build is likely to be tried this year, after Mr. Gardner's success with the hull of Liris.

Now the small boy goes a gunning
In the woodland turning dun,
And he whistles loud and merry,
For his soul is full of fun;
But his whistle ends abruptly,
And he looks demure and glum
When he gazes on the mosses
At his sanguinary thumb.—*Puck.*

THE R. J. DOUGLAS CO., of Waukegan, Ill., whose name is so familiar to our readers from the fact that they are constant advertisers in our columns, are branching out and reaching for a larger portion of the Eastern trade. They have just completed arrangements with Merwin, Hulbert & Co., 26 West Twenty-third street, New York, to take the Eastern agency of their boats. The Douglas Co. build everything in the boat line, from a canoe to a steam launch. Merwin, Hulbert & Co. will carry a full line of the goods and invite general inspection.—*Adv.*

SPORTSMEN SMOKERS
SHOULD ALL SMOKE OUR CELEBRATED

Hand-Made Havana Cigars.
MADE IN TWO STYLES AND SIZES.
LONDRES PERFECTO, 5in. long @ $7.00 per 100
CONCHAS ESPECIALS, 4¼in. @ 6.00 "

The favorite cigar of Rod and Gun Clubs generally. These cigars are made of the choicest tobaccos grown, and selected with the greatest care. They cannot fail to suit the taste of all lovers of the fragrant weed. Each cigar has the brand impressed on it, and every box has a label, fac-simile of the title of the popular journal, and our firm's signature, without which none are genuine. We are the only authorized manufacturers of the above brand, and to insure the smoker of the genuine we would ask you to send us your orders direct. We will deliver, free of express charges, either size, on receipt of price.

A. W. FOOTE & CO., Sole Manufacturers,
125 Maiden Lane, New York.

No Chemicals.

W. BAKER & CO.'S
Breakfast
Cocoa
Is Absolutely Pure,
and it is Soluble.

To increase the solubility of the powdered cocoa, various expedients are employed, most of them being based upon the action of some alkali, potash, soda or even ammonia. Cocoa which has been prepared by one of these chemical processes, can usually be recognized at once by the distinct alkaline reaction of the infusion in water.

W. Baker & Co.'s Breakfast Cocoa

is manufactured from the first stage to the last by perfect mechanical processes, **no chemical being used in its preparation.** By one of the most ingenious of these mechanical processes the greatest degree of fineness is secured without the sacrifice of the attractive and beautiful red color which is characteristic of an absolutely pure and natural cocoa.

W. Baker & Co., Dorchester, Mass.

"WELL LATHERED IS HALF SHAVED."
Spanish Proverb.

That which distinguishes "SHAVING SOAP" from Toilet or Washing Soap is the LATHER.
What is lather *for?* What does it *do?* What *should* it do?
The use of Soap in Shaving is to penetrate, moisten and soften the beard that it may present the least possible resistance to the keen edge of the razor. Failing in this—it fails utterly!
But it has other uses!!
Shaving is naturally an irritating process to the skin. The soap applied should contain properties to soothe and allay irritation.
Many "*so-called*" Shaving Soaps have a very opposite effect. They *draw* and parch the skin, and after shaving impart to the face a feeling similar to that caused by the cutting of a sharp wind.
A TRUE Shaving Soap should contain *germicide* properties.
Gentlemen who are shaved by barbers are unconsciously exposed to the most distressing cutaneous diseases. For HALF A HUNDRED YEARS WILLIAMS' SHAVING SOAPS have ranked as the PUREST, RICHEST and BEST. Compare the lather with that of *any* other.
Mild and Delicate, it penetrates and softens the beard, and renders shaving a positive luxury. Unlike other Shaving Soaps, *the lather will not dry on the face while sharing.*
WILLIAMS' SHAVING SOAPS have a *Soothing effect* upon the Skin. Like rich cream, the lather cools, softens and heals.
GENTLEMEN WHO ARE SHAVED BY BARBERS should *insist upon it* that WILLIAMS' BARBERS' BAR SOAP is used. Rich and refreshing, it contains properties destructive to disease germs, and renders SAFE the luxury of *being* shaved.

"Genuine Yankee" Soap, UNSURPASSED for Use of Gentlemen who shave THEMSELVES. STANDARD for QUALITY in U. S. Navy. 15c.
Williams' Shaving Stick, EXCELLING all other Shaving Sticks in Richness of LATHER, Delicacy of Perfume, superior strength and Style of Package. 25c.
Williams' Barbers' Bar Soap, USED in THOUSANDS of FAMILIES AS A TOILET SOAP. ABSOLUTELY PURE! SURE Preventive of "Chapped Hands." A Perfect NURSERY SOAP. 6 cakes for 40c. 40c.

WILLIAMS' SHAVING SOAPS are SOLD by all DRUGGISTS.
For 75 cents we will mail, postpaid, a package of each of the three kinds.
Sample of any one kind mailed on receipt of price. Stamps or Currency.

GURDON TRUMBULL'S
Names and Portraits of Birds

Which Interest Gunners; with descriptions in language understanded of the people.

Practically speaking, this is the first popular volume of ornithology ever issued from the press; a work which goes far to demonstrate that scientific accuracy may be as easily maintained in English as in Greek or Latin. Follows the game birds all over the continent and gives a glossary of all the local names in popular use. Illustrated with admirable portraits from the pencil of Mr. Edwin Shepard of the Academy of Natural Sciences, Philadelphia, which, with the clear descriptions in the text, will enable any man who can read to identify the contents of his game bag.

OPINIONS OF THE PRESS:

It is the first, so far as we know, of books of which the need is felt in every department of natural history.—*Troy Press.*

The book should find its way to a choice place in every sportsman's library.—*Chicago Inter-Ocean.*

I would much rather know what this book tells me, the various names by which the people call a bird, than the Latin, Greek or Hebrew name which science gave him for the sake of cataloguing him. * * * It is more value to me to have a description of a bird in plain English which I understand than in scientific language which I do not understand.—*W., in Journal of Commerce.*

NOTICE TO FISHERMEN. CUT PRICES.

HERE I AM AGAIN AS USUAL, CUTTING THE PRICES OF FISHING TACKLE. IT WILL PAY YOU TO BUY YOUR TACKLE IN BROOKLYN.

PRICE.		PRICE.
$2.75	For Split Bamboo Salt-Water Bass Rod, 6 strip, 2 joints, 8ft., 20oz., Solid Reel Seat, Nickel Trimmings, Double Guides, Silk Wound Black Beaded Handle	$2.75
3.32	For Split Bamboo Black Bass Rod, 8½ft., 3 joints, 10 or 12oz., Solid Reel Seat, Nickel Trimmings, Raised Tie Guides, Extra Tip, Silk Wound, Wood Form	3.32
3.32	For Trout or Black Bass Fly Rod, same finish as above, 10½ft., 7 to 9oz., complete in wood form	3.32
.90	For Ash and Lancewood Weakfish or Striped Bass Rod, Hollow Butt, Extra Tip, Swelled Ferrules	.90
1.50	For Fine No. 00 Brass Multiplying Reel, Balance Handle, Screw Oil Cup, holds 600ft. 18-thread Linen Line, diameter 3½in. Also Nos. 0, 1, 2, 3, same price. See catalogue	1.50
3.75	For Hard Rubber and Nickel Multiplying Reel, with Drag, Raised Pillars, holds 600ft. 15-thread Linen Line	3.75

Hooks. Down go the prices. My best quality all kinds snelled on single gut, 10cts. per doz.; double, 15cts.; treble, 20cts.; in ½ doz. packages. Leaders: Treble gut Weakfish and Striped Bass Leaders, three length, 5cts.; four length, 7cts., five length, 9cts.; all best quality. Reel Lines on Blocks of 300ft., 9 thread, 38cts.; 12 thread, 43cts.; 15 thread, 46cts.; 18 thread 53cts. 300ft. Braided Linen Reel Lines on Blocks, 41cts. Broken lots of Hooks from best manufacture, all kinds and sizes, 2cts. per dozen. SEND FOR CATALOGUE.

Open Evenings. J. F. MARSTERS, 51, 53 & 55 Court St., Brooklyn, N. Y.

Sam Lovel's Camps;

Uncle Lisha's Friends Under Bark and Canvas.

A SEQUEL TO "UNCLE LISHA'S SHOP."

By ROWLAND E. ROBINSON.

The two series of papers published in FOREST AND STREAM, with added chapters. An nimitable portraying of the woods and village life of Danvis folks. Cloth, 253 pp. Price $1.

FOREST AND STREAM PUBLISHING COMPANY,
318 Broadway, New York.

PREMIERE QUALITÉ,

Our New Cigarette.

As the result of long labor and careful study we have this superb Cigarette to offer. It cannot be surpassed in purity or excellence; and is a novelty, unique, chaste and dainty. It is from the highest cost Virginia and North Carolina leaf.

The finest Smoking Mixtures are of our Manufacture.

Fifteen First Prize Medals.

LOG CABINS

AND

HOW TO BUILD THEM.

By WILLIAM S. WICKS.

This is a complete exposition of the art and method of building log cabins from the simplest dog kennel to highly artistic dwellings. Everyone going into the woods and designing to construct his shelter with the materials at hand, should procure "Log Cabins," for in its pages he will find a variety of designs, simple and ornate, adapted to temporary shelter or to permanent homes, with full and clear instruction and illustration in every matter of detail. Sent, post free, for $1.50.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, OCTOBER 10, 1889.

VOL. XXXIII.—No. 12 No 318 BROADWAY, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

ANSWERS TO CORRESPONDENTS.

"YO'S" PAWNEE BOOK.

IT is often interesting to know the motives which have prompted the writing of a book. The circumstances which led to the preparation of "Yo's" volume of Pawnee stories were such as, we are confident, should add to an appreciation of what he has done.

Years ago, when the Pawnees lived in Nebraska, "Yo" camped and hunted with the tribe, and joined in their skirmishes with the Sioux. The evenings were given up to story telling; the Pawnees, like most Indian tribes, had a vast fund of stories; and some of these tales were written down by the fire light in "Yo's" note book, for he recognized in them many things that were worthy of preservation.

Last winter, when the story of the "Dun Horse" was written out for FOREST AND STREAM'S readers, conversation turned one day to the Pawnees and their native literature, the stories which had been transmitted from generation to generation, handed down from father to son, but which now, with the diminishing numbers of the tribe and its changed conditions of life, were destined to be forgotten. "Those stories should not be permitted to perish," said "Yo," "they form the distinct, unique, characteristic literature of the Pawnee people, and they should be rescued from oblivion."

The suggestion led to a plan, which has since then been executed. Last March "Yo" made a literary pilgrimage to the Pawnee reservation in the Indian Territory, renewed his acquaintance with Eagle Chief and other ancient men of the tribe, and spent a month in patiently recording the tales and traditions of the tribe. He brought back a rich store of veritable treasure—tales of daring and adventure, weird accounts of magic and mystery and the supernatural, relations of the ways of life in the old, wild days, stories of war and the craft of war parties, the history of the tribe as treasured by the very old men and in short a fund of good things, so fresh and ingenuous—for that is the only word that will express it—that the book into which he has put them will be a genuine surprise.

Better than all else, the book is a faithful delineation of the Pawnee as he is; it presents a picture of Indian human nature, which is recognized as after all very much like human nature all the world over. It would be a mistake to regard this collection of "Pawnee Hero Stories and Folk-Tales" purely as a book for entertainment, however charming may be its pages; the higher value of Mr. Grinnell's work lies in its true portraiture of the Indian as a human being, moved by the same impulses, swayed by the same passions, as other men.

The chapter recounting a buffalo hunt with the Pawnees, printed in our columns to-day, will be recognized by some of our readers as based on an account published in this journal some years ago. In our issue of Oct. 23 we shall give one of the hero stories, "Comanche Chief."

TO RESTRICT THE NUMBER.

VARIOUS are the schemes to restrict the killing of game. Ten years ago in these columns we discussed the proposition some one made to impose a tax on shotguns. That was a newly discovered panacea. Tax a man so much for every gun he owned; that would be to discourage the possession and use of firearms. Just a grain of sense in that project theoretically, but it is not a plan that commends itself, nor would it accomplish the desired end. It is safe to say that the question of taxing firearms may safely be put to sleep, to slumber until all the guns of the present day have been handed down to succeeding generations.

There is, however, a scheme of restricting the destruction of game which has worked well in several places where fairly tested. That is the limiting of the amount of game that an individual may kill in a season. Several of the States have placed such limitations on big game and feathered game destruction, and it has accomplished good results. To aver that these laws are not violated would be saying too much; they are no doubt set at naught in scores of cases, but in general they are observed, and their effect is good. Public sentiment approves of them. Take it in the Adirondacks, where the number of deer one person may kill is limited to three. This number is undoubtedly exceeded in many instances, but the law has struck at the very root of one abuse which had grown up, the senseless killing merely for count. Men no longer brag of the number they have killed; and deer slaughterers like Mr. Polhemus, of Brooklyn, who used to hire retinues of guides and dogs and strive to score the highest number of deer killed in a season, have perforce given over their campaigns. When mere magnitude of success is no longer recognized as the test of a sportsman's achievements, the incentive to reckless, wasteful and senseless butchery has been removed.

That a better sentiment prevails is demonstrated among club members, on the large preserves where game is abundant, but where only that is killed which can be utilized. Sport like all other interests is so much governed by the dictates of fashion, that to make anything unfashionable is to discountenance it with a large class. To frown down as unfashionable the wasteful slaying of big game is, in the Adirondacks at least, equivalent to putting an end to such killing, except of course among market hunters and others who have a purely mercenary interest in venison and antlers.

It would be wise to extend this principle of restriction to the killing of small game. In scores and scores of villages it is known that one or two gunners, who shoot for market, kill most of the game. They are at it from morning to night, week in and week out, shooting and shipping the game, while other gunners must need stick to business, blessing their stars for an occasional day in the field, and with equal warmth cursing the pot-hunters who have been ahead of them. It is manifestly unfair that the few should have all the benefits of the game supply, while the many are thus deprived of everything except liberty to tramp through depleted covers.

Now, if in the localities thus afflicted with market hunters laws were enacted restricting the number of quail and grouse any one person might lawfully kill in a season, it would put an end to one agency of game depletion. There is little fear that such a law would not be enforced. Among sportsmen who have been thus deprived of their legitimate sport year after year there would be no hesitation about bringing to book the market hunters; and we might look for something approaching enthusiasm in the congenial task of saving the game to be shared by all.

We commend this method of game preservation to the careful consideration of those who dwell in pot-hunter infested regions. It is, as we see it, a just, practicable and efficacious system of enforcing equal rights and privileges for all. The man who hunts for market is all right in his place. His place is in a country where he can hunt without robbing others of what belongs to them. In all other districts, where his persistent warfare deprives others of their reasonable and fair share in the bounties of nature, he should be suppressed. The game is for the public, and the public ought not to be deprived of it. Restrict the number of birds to be killed by any one shooter and the supply will go around. If this is not a common-sense method of game protection, where are its weak points?

THE HUMAN EYE.

IT is a popular belief, more or less loosely formulated, that there is something so terrible and majestic in the human eye that man has only to fix his gaze on the most terrific denizens of the forest to inspire them with awe. Numerous and some well authenticated instances are on record of unarmed men, who have met the lion or the tiger in his native jungles, fixed their eyes on his and compelled him to turn tail. There is then some foundation for the popular belief, but if a man having unquestioned faith in the awe-inspiring power of the human eye proposes to put it to the test in his own person, considerable discretion is to be recommended, not only in the selection of his beast, but also in the selection of his locality. For example, he should not make his first experiment with a rampagious bull in a ten-acre inclosure, at any considerable distance from the fence, nor would we strongly recommend a trip to the Rocky Mountains, with the object of experimenting with a full-grown grizzly, for both bulls and bears are fighting animals, have the habit of meeting their foes face to face.

The measure is successful only with the cat family—lions, tigers, etc., and by no means to be relied upon with them. Hope of success depends upon the fact that the members of the cat family are not to any extent fighting animals; they do not hunt in packs and quarrel over their prey; they very rarely quarrel with each other over the females at mating season, and in striking their prey they never attack in front. It is a beautiful provision of nature that the lion, the tiger, the panther, the leopards, and the whole family of *Felidæ*, are prompted by irresistible instinct to seize their prey from behind, springing on it with their whole weight, closing their powerful jaws on the neck of their victim, and dislocating it with one wrench, while their fierce claws penetrate the flesh and paralyze the muscular powers. The tiger pursues the same method whether his prey is a full grown buffalo or a timid fawn. The slender doe, with her fawn at her heels, goes into cover for her mid-day siesta, and confronts the lurking tiger; she barks, stamps her foot, and endeavors to bounce him; the tiger fixing his eyes on hers, crawls a little nearer; paralyzed with terror the poor beast is incapable of flight, but unable to sustain the basilisk glance any longer; she turns, as if to essay retreat. At that instant the tiger springs, grasps her neck in his vise-like jaws, and the victim dies without a pang.

If the tiger comes unexpectedly on a powerful animal like a wild buffalo and it offers battle, the tiger declines it, but if hungry he will take advantage of what cover there is and maneuver to get at the tail end of the buffalo and make his fatal spring.

With civilized men the tiger is more wary, for he stands in more awe of their appliances than of the brute strength of the buffalo. Many a hunter going through the jungles has passed within an easy spring of the tiger lying in wait for him, and before he has gone another two hundred yards the same tiger has again been in position, and yet has wanted the courage to spring; even a man-eatiug tiger, if familiar with firearms, might hesitate to spring on a man that had the courage to confront him. In the jungle he would not attempt it; if brought face to face with a man he would crouch, and if the man did not turn to flee the tiger would disappear as suddenly as if the earth had swallowed him, but in a very few minutes he would have secured the desired vantage ground and made his fatal spring.

This is not because the tiger is a coward, nor because the human eye is capable of dominating him. When it becomes a question of fighting there is no sign of quailing in lion or tiger, but when it is a mere question of taking their prey, the destructive instinct is a purely pleasurable one, the enjoyment of which would be marred if they attacked in front, and provoked their prey to battle; and it is a merciful provision of nature that they show no such tendency.

The Sportsman Tourist.

A SUMMER HUNT WITH THE PAWNEES.

From a forthcoming volume of "Pawnee Hero Stories and Folk-Tales."

BY GEO. BIRD GRINNELL ("YO").

I.

IT was in the month of July, 1872. The Pawnees were preparing to start on their semi-annual buffalo hunt, and only the last religious rites remained to be performed before the nation should leave the village for the buffalo range.

"*Eh, idadi, whoop,*" came from without the lodge; and as I replied, "*Ehya, whoop,*" the sturdy figure of *Le-ta-kats-ta'-ka* appeared in the doorway,

"*Lau, idad, tût-tu-ta-rik ti-rah-rēk*—Come, brother, they are going to dance." he said, and then he turned and went out.

I rose from the pile of robes on which I had been dozing, and, after rolling them up, strolled out after him. The village seemed deserted, but off toward the medicine lodge, which stood upon its outskirts, I could see a throng of Indians; and a low murmur of voices and of footsteps, the hum which always accompanies any large assemblage, was borne to my ears on the evening breeze. The ceremonies, which comprised the consecration of the buffalo staves and the buffalo dance, were about to begin. The great dirt lodge was crowded. I pushed my way through the throng of women and boys, who made up the outer circle of spectators, and soon found myself among the men, who made way for me, until I reached a position from which I could see all that was going on within the circle about which they stood.

For several days the priests and the doctors had been preparing for this solemn religious ceremonial. They had fasted long; earnest prayers had been made to *Ti-ra'-wa*, and sacrifices had been offered. Now the twelve buffalo skulls had been arranged on the ground in a half-circle, and near them stood the chiefs and doctors, reverently holding in their hands the buffalo staves and sacred bows and arrows, and other implements of the chase. For a little while they stood silent, with bowed heads, but presently one and then another began to murmur their petitions to *A-ti-us Ti-ra'-wa*, the Spirit Father. At first their voices were low and mumbling, but gradually they became more earnest and lifted their eyes toward heaven. It was impossible to distinguish what each one said, but now and then disjointed sentences reached me. "Father, you are the Ruler—We are poor—Take pity on us—Send us plenty of buffalo, plenty of fat cows—Father, we are your children—help the people—send us plenty of meat, so that we may be strong, and our bodies may increase and our flesh grow hard—Father, you see us, listen." As they prayed they moved their hands backward and forward over the implements which they held, and at length reverently deposited them on the ground within the line of buffalo skulls, and then stepped back, still continuing their prayers.

It was a touching sight to witness these men calling upon their God for help. All of them had passed middle life, and some were gray-haired, blind and tottering; but they prayed with a fervor and earnestness that compelled respect. They threw their souls into their prayers, and as a son might entreat his earthly father for some great gift, so they pleaded with *Ti-ra'-wa*. Their bodies quivered with emotion, and great drops of perspiration stood upon their brows. They were thoroughly sincere.

After the last of the articles had been placed upon the ground, their voices grew lower and at length died away. A moment later a drum sounded, and a dozen or twenty young warriors sprang into the circle and began the buffalo dance. This was kept up without intermission for three days, and as soon as it was over, the tribe moved out of the village on the hunt.

From the village on the Loup, we traveled southward; for in those days the region between the Platte and the Smoky rivers swarmed with buffalo. With the Pawnees were a few Poncas, Omahas and Otoes, so that there were about four thousand Indians in the camp. It was the summer hunt of the tribe. Twice each year the agent permitted them to visit the buffalo range. The meat which they killed and dried on these hunts, the corn and squashes which they grew on their farms, and the small annuities received from the Government, were all they had to subsist on from season to season. Thus the occasion was one of importance to the Indians. Perhaps only the older heads among them fully appreciated its economic interest; but for all it was a holiday time; a temporary escape from confinement. Life on the reservation was monotonous. There was nothing to do except to sit in the sun and smoke, and tell stories of the former glories of the nation; of successful fights with the Sioux and Cheyennes, and of horse stealing expeditions, from which the heroes had returned with great herds of ponies and much glory. Now, for a little while, they returned to the old free life of earlier years, when the land had been all their own, and they had wandered at will over the broad expanse of the rolling prairie. Now, for a time, it was as it had been before the cornfields of the white man had begun to dot the river bottoms, before the sound of his rifle had made wild their game, before the locomotive's whistle had shrieked through the still, hot summer air. Half a year's provision was now to be secured. The comfort—almost the existence—of the tribe for the next six months depended on the accumulation of an abundant supply of dried buffalo meat, and no precaution was omitted to make the hunt successful. It would not do to permit each individual to hunt independently. Indiscriminate buffalo running by six or eight hundred men scattered over the prairie, each one working for himself alone, would result in the killing of some few buffalo, but would terrify and drive away all the others in the neighborhood. This matter was too important to be trusted to chance. The hunting was systematized.

The government of the hunt was intrusted to the Pawnee soldiers. These were twenty-four warriors of mature age, not so old as to be unfitted for active work, yet with the fires of early youth somewhat tempered by years of experience; men whose judgment and discretion could at all times be relied on. These soldiers acted under the chiefs, but the practical guidance of the hunt was wholly in their hands. They determined the direction and length of each day's march, and the spot for camping. They selected the young men who should act as scouts, and arranged all the details of approach and the charge when a herd of buffalo was discovered large enough to call for a general surround. All the men were under their control, and amenable to their discipline. They did not hesitate to exercise their authority, nor to severely punish any one who committed an act by which the success of the hunt might be imperilled.

The scouts sent out by the soldiers were chosen from among the younger men. They acted merely as spies, their office was to find the buffalo. They moved rapidly along, far in advance of the marching column, and from the tops of the highest hills carefully scanned the country before them in search of buffalo. If a herd was discerned they were not to show themselves, nor in any way to alarm it. Having found the game, their duty was to observe its movement, learn where it was likely to be for the next few hours, and then to report as quickly as possible to the camp. The soldiers then determined what action should be taken. If the news was received late in the day, and the buffalo were at some distance, the camp would probably be moved as near as practicable to where the herd was feeding, and the chase would take place in the early morning. If, on the other hand, the scouts found the herd in the morning, the men would start off at once for the surround, leaving the women to follow and make camp as near as possible to where the dead buffalo lay.

Day after day we traveled southward, crossing the Platte River, and then the Republican about due south of the present flourishing town of Kearney. South of the Platte a few scattering buffalo were found, but no large herds had been met with—nothing that called for a surround. At length we camped one night on the Beaver, a small affluent of the Republican, emptying into it from the south.

II.

With the gray dawn of morning, the camp, as usual, is astir. By the time our little party have turned out of our blankets some of the Indians have already finished eating, and are catching up their horses and preparing to ride off over the bluffs, leaving the squaws to take down the lodges, pack the ponies, and pursue the designated line of march. Before we are ready to "pull out," most of the ponies have been packed, and a long, irregular line of Indians is creeping across the level valley, and beginning to wind up the face of the bluffs. The procession moves slowly, proceeding at a walk. Most of those who remain with the column are on foot, the squaws leading the ponies, and many of the men, wrapped in their blankets, and with only their bows and arrows on their backs, walking briskly over the prairie, a little to one side. These last are the poorer Indians—those who have but few horses. They travel on foot, letting their horses run without burdens, so that they may be fresh and strong, whenever they shall be needed for running the buffalo.

Side by side, at the head of the column, walk eight men who carry the buffalo staves. These are slender spruce poles, like a short lodge-pole, wrapped with blue and red cloth, and elaborately ornamented with bead work, and with the feathers of hawks and of the war eagle. These sticks are carried by men selected by the chiefs and doctors in private council, and are religiously guarded. Upon the care of these emblems, and the respect paid to them, depends, in a great measure, the success of the hunt. While borne before the moving column, no one is permitted to cross the line of march in front of them.

Close behind the staff bearers follow a number of the principal men of the tribe; the head chief, old *Pi'ta Le-shar*, and a dozen or fifteen sub-chiefs or head men, all mounted on superb horses. Behind them comes the camp at large, a fantastically mingled multitude, marching without any appearance of order. Here most of the individuals are women, young girls and children, for the men who accompany the camp usually march singly, or by twos and threes, a little apart from the mob. Most of those rich enough in horses to be able to ride at all times, are scattered over the prairie for miles in every direction, picking up the small bands of buffalo, which have been passed by the scouts as not large enough to call for a general surround. The hunters are careful, however, not to follow too close upon the advance line, whose movements they can readily observe upon the bare bluffs far ahead of them.

At the time of which I am writing the Pawnees had no wagons, all their possessions being transported on pack horses. The Indian pack pony is apt to be old and sedate, requiring no special guidance nor control. A strip of rawhide, knotted about the lower jaw, serves as a bridle, and is either tied up to the saddle or held in the rider's hand. In packing the animals a bundle of lodge-poles is tied on either side of the saddle, one end projecting forward toward the horse's head, the other dragging on the ground behind. This is the *travois*. Cross poles are often tied between these two dragging bundles, and on these are carried packages of meat and robes. Often, too, on a robe stretched between them, a sick or wounded Indian, unable to ride, is transported. The lodge-poles having been fastened to the saddle, the lodge is folded up and placed on it between them, and blankets, robes, and other articles are piled on top of this until the old horse has on its back what appears to be about as much as it can carry. The pack is then lashed firmly in position, and pots, buckets and other utensils are tied about wherever there is room.

On top of the load so arranged one or two women, or three or four children, clamber and settle themselves comfortably there, and the old horse is turned loose. Each rider carries in her hand a whip, with which she strikes the horse at every step, not cruelly at all, but just from force of habit. If the pack is low, so that her feet reach down to the animal's sides, she keeps up also a constant drumming on his ribs with her heels. The old horse pays not the slightest attention to any of these demonstrations of impatience, but plods steadily along at a quiet walk, his eyes half closed and his ears nodding at each step. If the riders are women, each one holds a child or two in her arms, or on her back, or perhaps the baby board is hung over the end of a lodge-pole, and swings free. If the living load consists of children, they have in their arms a lot of puppies; for puppies occupy with relation to the small Indian girls the place which dolls hold among the white children. Many of the pack animals are mares with young colts, and these last, instead of following quietly at their mothers' heels, range here and there, sometimes before and sometimes behind their dams. They are thus constantly getting lost in the crowd, and then they charge backward and forward in wild affright, neighing shrilly, until they have again found their place in the line of march. Many of the yearling colts have very small and light packs tied on their backs, while the two-year-olds are often ridden by the tiniest of the Indian boys, who are now giving them their first lesson in weight-carrying. Loose horses of all ages roam about at will, and their continual cries mingle with the barking of dogs, the calling of women and the yells of boys, and make an unceasing noise.

The boys are boiling over with animal spirits, and like their civilized brothers of the same age, are continually running about, chasing each other, wrestling, shooting arrows and playing games, of which the familiar stick game seems the favorite.

Whenever the column draws near any cover, which may shelter game, such as a few bushes in a ravine, or the fringe of low willows along some little watercourse, the younger men and boys scatter out and surround it. They beat it in the most thorough manner, and any game which it contains is driven out on the prairie, surrounded and killed. The appearance even of a jackass rabbit throws the boys into a fever of excitement, and causes them to shriek and yell as if in a frenzy.

All the morning I rode with the Indians, either at the head of the column, chatting as best I could with *Pi'ta Le-shar* and other chiefs, or falling back and riding among the women and children, whom I never tired of watching. Frequently during the day I saw at a distance, on the prairie, small bunches of buffalo in full flight, hotly pursued by dark-skinned riders, and occasionally two or three men would ride up to the marching columns with heavy loads of freshly-killed meat. The quick-heaving, wet flanks of the ponies told a story of sharp, rapid chases, and their tossing heads and eager, excited looks showed how much interest they took in the hunt.

The report of firearms was seldom heard. Most of the Indians hunted with the primitive weapon of their forefathers—the bow and arrow. For buffalo running an arrow is nearly as effective as lead. The power of the bow in expert hands is tremendous. Riding within half a dozen yards of the victim's side, the practiced bowman will drive the dart so far through the body of the buffalo that its shaft may project a foot or more from the opposite side—sometimes, indeed, may pass quite through. Besides, the bow can be used very rapidly and accurately. I have seen an Indian take a sheaf of six arrows in his hand, and discharge them at a mark more rapidly and with more certainty of hitting his target than I could fire the six barrels of a revolver.

III.

It was nearly noon, and I was riding along at the head of the column. I had but one horse, and did not care to wear him out by chasing around over the prairie, preferring to save him for some great effort. We were traveling along a smooth divide between two sets of ravines, which ran off, one to the east and the other to the west. *Pi'ta Le-shar* had just informed me by signs that we should make camp about two miles further on, by a stream whose course we could trace from where we then were. Suddenly, without the slightest warning, the huge dark bodies of half a dozen buffalo sprang into view, rising out of a ravine on our left not a hundred yards distant. When they saw the multitude before them, they stopped and stared at us.

They were too close for me to resist the temptation to pursue. As I lifted the reins from my pony's neck and bent forward, the little animal sprang into a sharp gallop toward the game, and as he did so I saw half a dozen Indians shoot out from the column and follow me. The buffalo wheeled, and in an instant were out of sight, but when I reached the edge of the bank down which they had plunged, I could see through the cloud of dust, which they left behind them, their uncouth forms dashing down the ravine. My nimble pony, as eager for the race as his rider, hurled himself down the deep pitch, and sped along the narrow broken bed of the gully. I could feel that sometimes he would lengthen his stride to leap wide ditches, where the water from some side ravine had cut away the ground, but I never knew of these until they were passed. My eyes were fixed on the fleeing herd; my ears were intent on the pursuing horsemen. Close behind me I could hear the quick pounding of many hoofs, and could feel that one of the horses, nearer than the rest, was steadily drawing up to me—but I was gaining on the buffalo. Already the confused rumble of their hoof-beats almost drowned those of the horses behind me, and the air was full of the dust and small pebbles thrown up by their hurrying feet. But they were still ahead of me, and the gulch was so narrow that I could not shoot. The leading horseman drew nearer and nearer, and was now almost at my side. I could see the lean head and long, slim neck of his pony under my right arm, and could hear the rider speak to his horse and urge him forward in the race. My horse did his best, but the other had the most speed. He shot by me, and a moment later was alongside the last buffalo.

As he passed me the young Indian made a laughing gesture of triumph, slipped an arrow on his bowstring, and drew it to its head; but just as he was about to let it fly, his horse, which was but a colt, took fright at the huge animal which it had overtaken, and shied violently to the right, almost unseating its rider. At the same moment the buffalo swerved a little to the left, and thus lost a few feet. Truly, the race is not always to the swift. As I passed the Indian, I could not restrain a little whoop of satisfaction, and then swinging my rifle around, I fired. The buffalo fell in its stride, tossing up a mighty cloud of the soft yellow earth, and my pony ran by him fifty yards before he could be checked. Then I turned and rode back to look at the game. The other Indians had passed me like a whirlwind, and, close at the heels of the herd, had swept around a point of bluff and out of sight. Only my rival remained, and he was excitedly arguing with his horse. The logic of a whip-handle, applied with vigor about the creature's ears, convinced it that it must approach the dead buffalo; and then the rider dismounting, and passing his lariat about the animal's horns, drew the pony's head to within a few feet of the terrifying mass, and fastened the rope. When he had accomplished this, he grinned pleasantly at me, and I responded in kind, and in dumb show transferred to him all my right and title in the dead buffalo. At this he

smiled still more cheerfully, and set to work "butchering."

The animal was a superb specimen, just entering his prime, and was fat, round and sleek. His horns were symmetrically curved and beautifully polished. Not a scratch marred their shining surfaces, nor a splinter was frayed from their sharp points. The sweeping black beard was long and full, and the thick curls upon his hump and massive shoulders were soft and deep, while the short hair of his sides and hips was smooth as the coat of a horse. His size was enormous. It seemed that he would have turned the scale at quite two thousand pounds. Certainly his weight exceeded that of both the fifteen-hand ponies that stood beside him.

A few moments later, I was again in the saddle, and riding on along the course taken by the remaining buffalo, for I was anxious to see what had become of them. On rounding the point of the bluff, where I had last seen them, my curiosity was satisfied. The valley here widened out until it was perhaps sixty yards across, and on either side rose vertical bluffs of yellow chalk to a height of forty feet. Scattered about over the little plain, lay half a dozen buffalo, over each of which bent one or two Indians busily plying the knife. At the foot of the bluff at one side of the valley stood four or five others, looking at a cow, perched on a narrow shelf ten feet below the top. I shall never understand how that animal reached the position it occupied. There was evidently no way of getting to it except by jumping up from below, which was obviously impossible—or down from above, which seemed out of the question. The shelf was so short that the animal could move neither backward nor forward, and was just wide enough for it to stand on. As I rode up and joined the little group above it, the head and shoulders of a middle-aged Indian appeared over the top of the bluff, above the cow. He lay down flat on his breast, and holding in both hands an old-fashioned muzzle-loading pistol, attempted to shoot the cow from above, but his old arm would not go off. He snapped it half a dozen times, and then, discouraged, called out something to us below. One of the boys turned to me, and said very slowly and distinctly, "He say, you shoot." I therefore dismounted, and fired at the cow, which responded by shaking her head angrily, and whisking her short tail. Another call came from the old fellow on top of the bluff, and the young man said to me, "He say, you hit her; right spot." A moment later, the cow bent forward and fell on her knees, and the Indian above dropped down on her back.

Turning my horse's head in the direction from which I had come, I rode up through a side ravine on to the high prairie. A mile away I could see the column of marching Indians, plodding along at their old slow pace. Here and there, over the rolling hills, dark forms were visible, some of them in rapid motion, others apparently stationary. Often it was impossible to determine whether these figures were horsemen or buffalo, but sometimes, far away, I could see a mimic chase in which pursuer and pursued appeared no larger than ants.

As I came up with the Indians, they were just descending into the stream bottom, where camp was to be made. The small boys had, as usual, dispersed themselves over the valley and among the underbrush. Many of the squaws, leaving the ponies and packs to their sister-wives or children, were hurrying up or down the stream to gather wood. Already the leading ponies were being relieved of their loads. Suddenly, from the mouth of a little ravine coming down into the stream bottom, rose a chorus of shrill yelps and shrieks from childish throats, and a gang of wild turkeys were seen, running rapidly through the high grass toward the hills. A moment later, with a loud *quit-quit* of alarm, they took wing, but not before several of their number had fallen before the missiles of the boys. Most of them went up or down the creek, but one inexperienced bird took its course directly over our heads.

Those who have seen the Indian only on dress parade, talk of his stolidity, impassiveness, and his marvelous control over his countenance and his emotions. This demeanor he can and does assume, and when he is with white men, or among strangers, he is usually all that he has been pictured; but take him by himself, and he expresses his feelings with as little restraint as a child. So it was now. No grave chief, no battle-scarred warrior, nor mighty worker of *ti-war'-uks-ti* (magic) was too dignified to express his interest at the appearance of this great bird sailing laboriously along, thirty or forty feet above him. It was as if the turkey had flown over a great company of schoolboys, and the utter abandonment of the excited multitude, the entire absence of restraint, the perfect naturalness of the expression of feeling, had in them something very delightful and infectious. Every Indian, who held in his hand anything that was light enough to throw, hurled it at the bird, and a crowd of whips, sticks, hatchets, fleshers, and arrows, rose to meet it as it passed along. One missile knocked from its tail a few long feathers, which drifted slowly down on the heads of the people. It kept on, but before it had passed beyond the long line of Indians extending back over the plain, its strength became exhausted, it came to the ground, and was at once dispatched by those nearest to it.

Almost before the turkey's fate had been decided, many of the lodges had been pitched, and now the slender gray columns from a hundred camp-fires began to climb up through the still air toward the blue above. The women were hard at work cooking, or spreading out freshly killed robes, or putting up drying scaffolds, while the men lounged in the shade and smoked or chatted. Our wagon was halted at one side of the camp, and the tired horses and mules were stripped of saddles and harness, and picketed near at hand. The Indian pack ponies were collected and driven off on the upland in charge of several boys.

IV.

We had invitations to eat meat at several lodges that day. Usually we did not accept these freely proffered hospitalities, because we had no means of returning them, but one of these invitations came from a particular friend, and to-day we broke through our rule. We feasted on roast ribs, *ka'wis*, and dried meat, and really had a delightful time. It was about three o'clock when we finished the meal, and we were lounging about the lodge, smoking and chatting, in lazy after-dinner fashion, when we were startled by a series of yells and shouts, among which I distinguished the words "*Cha'-ra-rat wata'*—The Sioux are coming." Our Indian companions snatched up their arms, and rushed out of the lodge, and we were not slow in following. "*Sāks-e-kitta-wit wiskūts*—Get on your horses quick," shouted our host. The camp was in a state of wild excitement. Naked men were running to their horses, and jerking their lariats from the picket pins, sprang on their backs and rode hard for the hills; while women and boys rushed about, catching horses, and bringing them in among the lodges, where they were securely fastened. Less than a mile away, we saw the horse herd dashing along at top speed, and a little to one side of it a horseman riding in circles, and waving his blanket before him. It was evident that the Sioux were trying to run off the herd. We ran as hard as we could to the wagon, caught up rifles and cartridge belts, and buckling on the latter as we ran, kept on to the horses. There was no time to saddle up. We looped the ropes around their jaws, sprang on their naked backs, and were off. As we rode up on the prairie, the herd of ponies thundered by, and swept down the bluffs to the camp. The rolling expanse before us was dotted with Indians, each one urging forward his horse to its speed. Many of them were already a long way in advance, and were passing over the furthest high bluff, which seemed to rise up and meet the sky. Hard as we might push our ponies, there was little hope that we would be in time to have any hand in the encounter—if one took place—between the Pawnees and their hereditary foes.

We kept on until we reached the crest of the high bluff. From here we could see far off over the plain, dozens of black dots strung out after one another. Nearer at hand, other Indians, whose steeds, like ours, had proved too slow for the swift pursuit, were riding back toward us, showing in their faces the disappointment which they felt at being left behind. With these we turned about, and rode toward the camp. Among them was one of the herd boys, for the moment a hero, who had to repeat his story again and again. He had been sitting on top of a hill, not far from the horses, when he discovered several Sioux stealing toward them through a ravine. Signaling his comrades, they succeeded in getting the herd in motion before the robbers had approached very close to them. Eight of the slowest horses had dropped behind during the flight, and had no doubt fallen into the hands of the enemy.

One by one, the Indians came straggling back to camp during the afternoon and evening, but it was not until late that night that the main body of the pursuers came in. They had ten extra horses, two of which they had taken in turn from the Sioux. They had no scalps, however, for they had been unable to overtake the enemy.

Long we sat that night by the fire in *Pi'ta Le-shar's* lodge, talking over the exciting events of the afternoon; and as we rose to go to our wagons, and said good-night, the old man, who had been silently gazing into the coals for some time, looked up at me and smiled, saying, "*Wa-ti-hes ti-kŏt-it ti-ra-hah*—To-morrow we will kill buffalo."

V.

When we turned out of our blankets the next morning, a heavy mist hung over the prairie. This was unfortunate, for so long as the fog lasted it would be impossible for the scouts to see far enough to discover the buffalo. The first few hours of the march were uneventful. Once or twice the huge bodies of a small band of buffalo loomed up through the white mist about us, their size and shape greatly exaggerated and distorted by its deceptive effect. As the sun climbed toward the zenith, the air grew brighter, and by mid-day the fog had risen from the ground, and though still clinging in white cottony wreaths about the tops of the higher bluffs near us, we now could see for quite a long distance over the prairie. A little latter the sun burst forth, and the sky became clear. Soon after noon we went into camp.

We had just begun our dinner, when a runner was seen coming at full gallop down the bluff. It was one of the scouts. He dashed through the village, and did not check his pony's speed until he had reached old *Pi'ta Le-shar's* lodge. Here he stopped, and bending from his horse spoke a few words very earnestly, gesticulating and pointing back over the prairie in the direction whence he had come. As he rode on and past us, he called out, "*Te co' di tŭt-tu-ta-rik ti-ra-hah*—I saw many buffalo," and we shouted back to him, "*Tū-ra-heh*—It is good."

At once the women began to take down the lodges and pack the ponies. Buffalo had been discovered about fifteen miles to the southwest, and orders had been issued to remove the village to the creek on which they were feeding, while the men should go on at once and make the surround. Our teamster, to whom the Indians had already, from his occupation, given the name "Jackass Chief," was directed to move with the camp; and leaving everything save guns and ammunition belts in the wagons, we joined the crowd of men who were riding out of the village.

The scene that we now beheld was such as might have been witnessed here a hundred years ago. It is one that can never be seen again. Here were eight hundred warriors, stark naked, and mounted on naked animals. A strip of rawhide, or a lariat, knotted about the lower jaw, was all their horses' furniture. Among all these men there was not a gun nor pistol, nor any indication that they had ever met with the white men. For the moment they had put aside whatever they had learned of civilization. Their bows and arrows they held in their hands. Armed with these ancestral weapons, they had become once more the simple children of the plains, about to slay the wild cattle that *Ti-ra'-wa* had given them for food. Here was barbarism pure and simple. Here was nature.

A brief halt was made on the upper prairie, until all the riders had come up, and then, at a moderate gallop, we set off. A few yards in advance rode the twenty-four soldiers, at first curbing in their spirited little steeds, till the horses' chins almost touched their chests, and occasionally, by a simple motion of the hand, waving back some impetuous boy, who pressed too close upon them. Many of the Indians led a spare horse, still riding the one that had carried them through the day. Often two men would be seen mounted on the same animal, the one behind having the lariats of two led horses wound about his arm. Here and there a man, with his arm over the horse's neck, would run along on foot by the side of the animal which was to serve him in the charge.

As we proceeded, the pace became gradually a little more rapid. The horses went along easily and without effort. Each naked Indian seemed a part of his steed, and rose and fell with it in the rhythmic swing of its stride. The plain was peopled with Centaurs. Out over each horse's croup floated the long black hair of his rider, spread out on the wings of the breeze. Gradually the slow gallop became a fast one. The flanks of the horses showed here and there patches of wet, which glistened in the slanting rays of the westering sun. Eight, ten, a dozen miles had been left behind us, and we were approaching the top of a high bluff, when the signal was given to halt. In a moment every man was off his horse, but not a pony of them all showed any sign of distress, nor gave any evidence of the work he had done, except by his wet flanks and his highly accelerated breathing. Two or three of the soldiers rode up nearly to the top of the hill, dismounted and then peered over, and a moment later, at another signal, all mounted and the swift gallop began again. Over the ridge we passed, down the smooth slope, and across a wide level plain, where the prairie dogs and the owls and the rattlesnakes had their home. Through the dog town we hurried on thundering hoofs, no doubt amazing the dogs, and perhaps even arousing some slight interest in the sluggish, stupid snakes. Bad places these to ride through at such a pace, for a little carelessness on your horse's part might cost him a broken leg and you an ugly tumble. But no one took much thought of dog town or horse or possible accident, for the minds of all were upon the next high ridge, behind which we felt sure that the buffalo would be found.

And so it proved. Just before reaching it we were again halted. Two of the soldiers reconnoitered, and then signaled that the buffalo were in sight. The tired horses were now turned loose and the extra ones mounted. As we rode slowly up over the ridge, we saw spread out before us a wide valley black with buffalo. Two miles away, on the other side, rose steep ragged bluffs, up which the clumsy buffalo would make but slow progress, while the ponies could run there nearly as fast as on level ground. It was the very place that would have been chosen for a surround.

At least a thousand buffalo were lying down in the midst of this amphitheater. Here and there, away from the main herd on the lower hills, were old bulls, singly and in twos and threes, some of them quietly chewing the cud, others sullenly pawing up the dust, or grinding their battered horns into the yellow dirt of the hillsides. Not the slightest notice was taken of us as we rode down the slope at a pace that was almost a run, but still held in check by the soldiers. The orders for the charge had not yet been given. Our line was now much more extended than it had been; each man pressing as far forward as he dared, and those on either flank being so far ahead of the center that they were almost on a line with the soldiers. We had covered perhaps half the distance between the hilltop and the buffalo, when some of the outlying bulls seemed to observe us, and after looking for a moment or two, these started in rapid flight. This attracted the attention of the herd, and when we were yet half a mile from them, they took the alarm. At once all were on their feet. For a moment they gazed bewildered at the dark line that was sweeping toward them, and then down went every huge head and up flew every little tail, and the herd was off in a headlong stampede for the opposite hills. As they sprang to their feet, the oldest man of the soldiers, who was riding in the center of the line, turned back toward us and uttered a shrill *Loo'-ah!* It was the word we had waited for.

Like an arrow from a bow each horse darted forward. Now all restraint was removed, and each man might do his best. What had been only a wild gallop became a mad race. Each rider hoped to be the first to reach the top of the opposite ridge, and to turn the buffalo back into the valley, so that the surround might be completely successful. How swift those little ponies were, and how admirably the Indians managed to get out of them all their speed! I had not gone much more than half way across the valley when I saw the leading Indians pass the head of the herd, and begin to turn the buffalo. This was the first object of the chase, for in a stampede the cows and young are always in the lead, the bulls bringing up the rear. This position is not taken from chivalric motives on the part of the males, but simply because they cannot run so fast as their wives and children. Bulls are never killed when cows and heifers can be had.

Back came the herd, and I soon found myself in the midst of a throng of buffalo, horses and Indians. There was no yelling nor shouting on the part of the men, but their stern set faces, and the fierce gleam of their eyes, told of the fires of excitement that were burning within them. Three or four times my rifle spoke out, and to some purpose; and one shot, placed too far back, drew on me a quick, savage charge from a vicious young cow. My pony, while a good cattle horse, was new at buffalo running, and his deliberation in the matter of dodging caused me an anxious second or two, as I saw the cow's head sweep close to his flank. It was far more interesting to watch the scene than to take part in it, and I soon rode to a little knoll from which I could overlook the whole plain. Many brown bodies lay stretched upon the ground, and many more were dashing here and there, closely attended by reluctant pursuers. It was sad to see so much death, but the people must have food, and none of this meat would be wasted.

Before I turned my horse's head toward the camp, the broad disc of the setting sun had rested on the tops of the western bluffs, and tipped their crests with fire. His horizontal beams lit up with a picturesque redness the dusky forms which moved about over the valley. Up the ravines and over the hills were stringing long lines of squaws, leading patient ponies, whose backs were piled high with dark, dripping meat, and with soft, shaggy skins. Late into the night the work continued and the loads kept coming into the camp. About the flickering fires in and before the lodges there was feasting an merriment. Marrow bones were tossed among the red embers, calf's head was baked in the hot earth, fat *ka'-wis* boiled, and *boudins* eaten raw. With laughter and singing and story telling and dance the night wore away.

Over the plain where the buffalo had fallen, the gray wolf was prowling, and, with the coyote, the fox and the badger, tore at the bones of the slain. When day came, the golden eagle and the buzzard perched upon the naked red skeletons, and took their toll. And far away to the southward, a few frightened buffalo, some of which had arrows sticking in their sore sides, were cropping the short grass of the prairie.

Natural History.

OUT-OF-DOOR PAPERS.

I.—IN A GARDEN.

LIFE first began, the record tells us, in a garden, and ever since, gardens have had a charm for humans. A town garden is an especial delight, affording rest in the midst of restlessness, and being the fairest resort in all the world for birds. My Lord St. Albans setteth out the requirements of a garden in what shape it seemeth to him most pleasurable, and he fails not to instruct us that it should be some green, some heath, and some devoted to both flowers and fruits. Such an one is surely most pleasing to the birds, which being small themselves, usually enjoy the world *in parvo*, and like not to seek far for their variety. If now there be provided for them in the space of a quarter acre, both trees and shrubs, in due proportion with flowers and waste ground, the owner may become a White of Selborne, if he only will, and write an edifying book on what he sees from his window.

First, if it is an ideal garden—and all my ideal gardens are modeled after one which existed so long since Queen Anne's day, that I can remember it distinctly—there must be berry-yielding shrubbery and small fruits, apple and plum trees, not too trim to afford a supply of worms and insects, strawberries for the robins, flowers for the humming birds, shade trees for nesting, viburnum bushes and mountain ashes to furnish food for the winter comers, and in one corner a sheaf of weeds for the finches to revel in.

If such a garden lacks regularity and spruceness, are these matters of importance, when every year the robin turns mason there, and plasters an adobe hut in the crotch of the maple tree; when later on the pewee saddles her shallow nest on some convenient limb in the leafy hermitage of the upper branches, and the yellow warbler, in building her domicile, samples all the cottony materials within reach—fern silk, milkweed down, thistle down, cotton grass threads, the wool of willow catkins, even to robbing the cotton clothesline of all the lint she can pull off; while, best of all, the dear old "chippy" comes back year after year to build in the bush honeysuckle a nest woven of roots and horsehair, as neat and clean as herself; the bright-eyed, contented little housekeeper that she is. No comer is as welcome as the "chippy," who knows us all, and trusts us wholly.

Of course, every spring there is the usual battle concerning the ownership of the martin house over the way, in which the purple martins send the English sparrows packing with little ceremony, and verify the maxim that possession is nine points in the law. Then follows much twittering and talking over of plans on the part of the victorious pair, who never fall out with each other, although either would defy the world in arms—

> "The bravest are the tenderest,
> The loving are the daring."

And now the female flies back and forth, gathering straws for her nest. The strawberry bed, from which the covering has now been removed, presents excellent "terminal facilities," which she is not slow in perceiving. Whether it is an individual peculiarity or a feature in the domestic economy of the species is not for us to determine, but here at least the lady chooses her own straws, and flies with them—two or three in a fagot held firmly in her tiny bill—to her house, her spouse accompanying her, himself unladen, but gallantly offering praise, encouragement and protection. Considering the excellent name which this couple bears, it is at least charitable to suppose that the arrangement is mutually agreeable, and that the lady prefers to see to the management of her own affairs.

On their first arrival the cherry or cedar birds are welcome, their trim figures and tailor-made clothes attracting attention. Their voices, which are politely soft and monotonous, and their limp way of sitting around doing nothing, would seem to indicate that they had been "fitted" to shine in bird society. Perhaps they do; but, like many other brainless society lights, they soon wear out their welcome, develop gourmandizing tendencies and shameless impudence in helping themselves to what they want. In cherry time they are insufferable, not only stealing from you, but adding insult to injury by raising their voices to inform you that you can't help yourself. Earlier in the season they do eat canker worms, and in the spring they have a pretty way of feeding each other to any particular choice morsel. Even the bitter mountain-ash becomes a pledge of affection; nor is this pretty custom confined to mates alone, for Nuttall tells us that an eye-witness assured him that "he has seen one, among a row of these birds seated upon a branch, dart after an insect, and offer it when caught to his associate, who very disinterestedly passed it to the next; and each declining the offer the morsel has proceeded backward and forward before it was appropriated."

In the spring the juncos, or blue-backed snowbirds, come in flocks, and are abundant for many days, flitting about in the shrubbery, conspicuous by their parti-colored tails, and their grasshopper-like way of rising only when forced to do so, and after a demi-flight dropping to the ground near at hand. At this time of the year they are unusually busy, examining the frost-bleached patches of chickweed, rustling through the dead pea vines and shaking the dry stalks of the annuals in the flower garden as they search for seeds. It is their Lenten season; but although the fare must be scanty, they accept it with pleasant chirrups and an attempt at song. No bird seems to enjoy a bath more, and even in chilly March mornings they will dip and splash in any open pool, apparently quite careless of taking cold or getting the rheumatism.

The robins are there at all times. How they degenerate as the year rolls on, at least in our estimation. From the glorious scarlet-breasted creature who sits high up among the bare limbs in March and April, and pours out rich full-throated music, to the midsummer poacher of our choicest berries, with a faded cinnamon waistcoat and an unmelodious voice, not inaptly called a "yaup," what a decline! Then, when the nests blossom with golden mouths, what a quadrupling and quintupling of this inharmonious *aubade*, which, whether you rise with the lark or not, makes you, perforce, wake with the robin. And later the trials you have to undergo with these same spotted-breasted changelings that make haste to tumble out of the nest before they can fly, get horsehairs down their throats and strings around their legs, or sit yellow-mouthed and sleepy-eyed, happy in their ignorance, in the most dangerous places, to whom you have to be a beneficent Providence, rescuing them against their wills from dangers they are unaware of—the cat, the dog, the small boy, the "adversary" in all the various forms under which he preys upon birds.

It would take too long to mention all the pleasant acquaintances one makes in a garden. They are so numerous and so diversified—some, like the people you pass in the street, whom you know only to nod to; others a little better, yet not intimately known; some with whom you may claim a calling acquaintance; others dear and familiar friends, whose failure to return would be lamented and whose presence never becomes wearisome.

Life in a garden is, I suspect, for birds as well as men, a sort of revival of the Eden experiment—delightful to the imagination, but with serious drawbacks of a practical nature. The cares of housekeeping are no less there, and as the year rolls on, the birds may be seen changed from enraptured lovers into hard worked providers, and scheming parents. Parental affection seems sometimes to supplant all the other virtues; care induces nervousness, and nervousness exhibits itself in a bad temper, from which not even birds are exempt. Nor are the birds without temptations. My currant bushes become a tree of knowledge to them, where they learn good and evil, and become initiated into the arts of dissimulation, stoutly averring before the tell-tale juice is dried on their beaks, that they never touched my currants. Ought I to put such temptations in their way? Or ought I to drive the birds out? The latter, fortunately, cannot be done. They will still rob me, and defy me, and demand the whole for an imaginary tithe of worms, and I shall allow it this year as heretofore.

FANNIE PEARSON HARDY.

THE HAWK AND THE SQUIRREL.

DRIVING down the gentle slopes of Sonoma Mountain yesterday—the mountain is 2,340ft. high—we observed a very large hawk—the largest of the hawks, a large brown-spotted fellow, perhaps rightly an eagle—perched on the fence by the roadside. As we approached, he flew quartering toward us, dove down at the foot of a rocky hill and arose in the air carrying a full-grown gray ground squirrel in his talons. This squirrel is nearly the size of the timber gray squirrel of the East, and looks very much like it, except that it usually has several light-colored bars on its sides, and old specimens are of a lighter earthy gray. It lives in holes in the ground, usually in dry, rocky places.

The hawk flew about 50yds., when the squirrel reached up and bit him on the leg. This squirrel has a very tough hide, sharp, strong teeth, and is a fighter from away back. The hawk at once released his talons, but the squirrel hung on with his teeth quite a little time, and then dropped to the ground and started for his rocky home. The hawk flew down 100yds. further and alighted on the fence. The squirrel was injured somewhat, but made very good time back. The hawk waited until he was within a few yards of home, when he darted for him again and arose with him. This last flight of the hawk showed with what wonderful velocity the great bird could pass through the air. The hawk had flown only two or three rods when the squirrel bit him again, and he dropped it. The poor squirrel was now badly used up, but he did his best to get under cover. The hawk again perched on the fence. The squirrel had reached within a few feet of its burrow when the hawk started for him again. This time he seized the now well nigh helpless squirrel securely with both feet and sat down on his tail—the hawk's tail—stretched out his legs to their fullest extent and stretched his head and neck away back out of danger, and so held his victim until his struggles were over, and then he flew up on an old tree to enjoy his dinner; and the show was over.

This gray ground squirrel is one of the very worst nuisances of the foothills and dry plains, because of his injury to the farmer's crops. They have become so destructive in places that farmers have had to organize and pass stringent regulations for their destruction. I have been in places in Alameda county where it was not uncommon to see a hundred of them in sight at once. They are very swift of foot and usually run with their great bushy tail erect. They look very pretty scudding across the smooth sward. The California pocket gopher, a rat-like rodent with a large pocket in each cheek, which lives entirely under ground, on the roots of trees and plants, is often fearfully destructive on trees and bulbs, and is a great nuisance. It is ubiquitous everywhere, in hill, mountain and valley, even in towns and cities. It is a very hard critter to dispose of. They often destroy fruit trees several inches in diameter, and eat up crops of potatoes and other tubers and bulbs.

We have in these two rodents a good lesson in the action of species upon other species. They were held in check, before the State was settled, by the larger hawks, eagles, coyotes and snakes; the gopher especially by the gopher snake, a large, active, harmless constrictor snake, like the bull snake and black snake of the Eastern States. All of these creatures it was the first hard work of the early settlers and all the settlers since to kill at every opportunity, with the result that the rodents have scarcely a natural enemy left, and have nothing to do in life but to grow fat and breed like rats and mice, and they attend faithfully to business. Coyote and man, it is true, could not get along very pleasantly together, but the other enemies of these squirrels should have been protected.

A long, long time ago, in some unknown region, the larger hawks, after destroying all their natural food—the rodents—rather than starve caught and ate a measly spring chicken; and at once the edict went forth to kill every large hawk or eagle on sight. I wish that every one would read the reports of the Ornithologist and Mammologist of the U. S. Department of Agriculture, and they would not be so fond of destroying hawks and owls. Of 983 stomachs examined only 57 had fed on poultry, and this mostly in old settled regions where poultry was of all things the most plentiful and easiest food obtainable. The average man, woman and child will kill snakes on sight, and I suppose there is little use in any one trying to combat such a silly habit. There seems to be an uncontrollable antipathy and enmity in mankind to all snakes, be the majority of them ever so harmless and useful. Because one small family of snakes, now very scarce in all the northern part of this continent, have a dangerous bite, all the snakes must go. Nevertheless, two or three large healthy gopher snakes to the acre in this State left undisturbed would prove a grand blessing.

Again the jack rabbit; the self same enemies held him very carefully in check. Now, his enemies being gone, he is having things very much his own way in the great interior valleys. For a time he was "the boss." But by making great "drives" of a township at a time, the jacks can be driven into a pen like a flock of sheep, and thousands of them killed at one fell swoop. I think this same jack rabbit the most ridiculous looking an-i-mule on earth, as he goes scudding over the plain with his small head, immense ears, both erect, pressed close together and pointed forward, and what little tail he has tucked carefully between his hindlegs. He goes like the wind. He can outrun the coyote in a fair race, but the little wolf circumnavigates him and eventually brings him to grief. But he cannot outrun the eagles and great hawks.

Several letters have come here lately addressed to the postmaster, with the request to hand them to "Byrne." This is unnecessary, for if they are simply addressed "Byrne" I will get them. The sportsmen here are now having lovely sport after deer and quail. A friend has just come in from the Red Woods in the north part of this county, where he and his chum bagged eight fine deer in three days. He brought me a "hunk" of jerked venison, which is tender and delicious. The coast or red wood region of this county and to the north is certainly as fine a place for the sportsman's autumn outing with gun, rifle or line, as can be found on this earth. Deer, bear, grouse, quail, squirrels and rabbits are more than plenty; gamy mountain trout are in all the mountain streams, and the climate is so perfect that one is at home wherever his blankets are, with no storms or rain to seek shelter from. I will be pleased to give sportsmen any desired information about this or any other part of the State.

BYRNE.

PETALUMA, California.

RHINOCEROS HORNBILL.

A HIGHLY interesting and remarkable case of birds has recently been put on exhibition in the National Museum at Washington. The group represents a breeding pair of Bornean rhinoceros hornbills (*Buceros rhinoceroides*), and shows in addition to the birds themselves a section of a large tree, in a cavity of which the female has her nest. The female is on her nest, with only the tips of her bill exposed to view, having been plastered in by the male, according to the universal and altogether peculiar habit of members of this family of birds. The male is perched upon a branch slightly above the level of the entrance to the nest and is in the attitude of reaching down to the female with a fruit in his beak with which to feed her. The accessories to the birds are made in papier maché in very exact imitation of a forest tree trunk with vines and foliage; and the group is upon the whole a very striking and interesting one. The species represented is with one exception perhaps the largest and most conspicuous of the family. The specimens were collected by the taxidermist, Mr. Chas. F. Adams, of Champaign, Illinois, who designed and prepared the group, and who on account of his familiarity with their native haunts is especially well qualified to transfer from the wilderness to the museum one of the most remarkable scenes in the domestic affairs of wild nature known upon the earth. As stated above this remarkable habit is entirely peculiar to the hornbills. The reason for it is not certainly known; some observers state that the plastering is done by the male, others maintain that the female incarcerates herself. If the male does it, his object is doubtless to prevent the female from leaving her nest before the eggs are hatched. If the female does it, it is probable that protection from enemies is her object. The female is fed by her mate during her incarceration, and should anything happen to him during her imprisonment her life would necessarily be sacrificed.

A SKUNK IN THE TRAIL.—*Editor Forest and Stream:* Mr. Hough's recent account of a family of "Skunks on Dress Parade" reminds me of a meeting with one of these loud-breathed varmints I met in the Big Hole Basin, Montana, last fall. I was riding a sleepy little cayuse through a creek bottom in the foothills, when I saw a skunk in the trail about 20yds. ahead. I supposed the cayuse saw him too and paid no attention to him. It seems, however, that he had not, for when we came within about 4ft. of the skunk, he suddenly realized that we were there, got his back up like an indignant Maria cat, whisked his big bushy tail up over spine and the cayuse made one of the allfiredest jumps that ever a scared horse made, I reckon. He went about 20ft. square sideways, and when he did strike the earth he drove my spine clear up into my hat. Fortunately I was prepared for some little disturbance and had a good seat, so he didn't get out from under me, but after that when I saw a skunk ahead of me I always rode round through the next school district that the cayuse might not see him.—G. O. SHIELDS.

BIRDS OF PLUME.—According to the Mobile *Register*, Emile Scheuermann of that city has since June 1 shipped 10,000 terns and other birds of plume to the New York markets. They were killed on Sand and Pettibois islands. Commenting on the bird plume industry the *Southern Lumberman* of Oct. 1 says: "There is one flourishing Southern industry that is not at all pleasant to contemplate. We allude to the indiscriminate slaughter of birds for their plumage. But it is the decree of fashion—the cruelest and most senseless of tyrants, a tyrant that drives its votaries to some curiously inconsistent acts. They kneel with devout fervor at the throne of divine mercy, solicit with charming eloquence funds to educate, civilize and Christianize the benighted heathen of foreign lands, carry flowers and gushing sympathy to the cells of the most infamous and atrocious criminal in the jails, and offer money inducements for the cold-blooded slaughter of the few plumage birds that remain on this continent."

HOMING SWALLOWS.—Considerable success has attended experiments at the Paris Exposition with swallows as substitutes for homing pigeons. The originator of the idea, one M. Desbouverie, of Roubaix, sent up two young swallows about two months old from a pavilion on the Esplanade, which arrived at their distant aviary in an hour and a quarter.

HAWK MIGRATION.—London, Ont., Oct. 2.—On Friday, Sept. 30, an immense flight of hawks passed south over Port Stanley, Elgin county, Ont. The flight continued all day. Numbers flew quite low while the others circled round as high as the eye could discern them.—R. G. M. [Hawks have recently appeared in unusual numbers in Connecticut; one town has paid out $49.25 bounty on them at 25 cents per head.]

RECENT ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN.—Purchased—Nine hedgehogs (*Erinaceus europeus*), three Richardson's spermophiles (*Spermophilus richardsoni*), one collared peccary (*Dicotyles torquatus*), two cuckoos (*Cuculus canorum*), one hoopoe (*Upupa epops*), two Swainson's lorikeets (*Tricoglossus novæhollandiæ*), three great eagle owls (*Bubo ignavus*), one wood owl (*Syrnium aluco*), two green lizards (*Lacerta viridis*), four basilisk chamæleons (*Chamæleon basiliscus*), one European glass snake (*Pseudopus pallasii*), two common European snakes (*Tropidonotus natrix*), one Æsculapian snake (*Coluber æsculapii*), one four-rayed snake (*Elaphis quaterradiatus*), six ring-necked snakes (*Diadophis punctatus*), three hog-nosed snakes (*Heterodon platyrhinus*), two water snakes (*Tropidonotus sipedon*), one Cyclop's water snake (*Tropidonotus cyclopeum*), one green snake (*Cyclophis æstivus*), one Osceola's snake (*Osceola elapsoidea*), one water moccasin (*Ancistrodon piscivorus*), one coach-whip snake (*Bascanium flagelliforme*), eight common iguanas (*Iguana tuberculata*), one royal python (*Python regius*), three banded rattlesnakes (*Crotalus horridus*), twenty-seven spotted salamanders (*Salamander maculosa*), eleven spotted salamanders (*Diemyctylus miniatus*) and six black salamanders (*Desmognathus niger*). Presented—One gray fox (*Canis virginianus*), two raccoons (*Procyon lotor*), two great blue herons (*Ardea herodias*), one night heron (*Nycticorax grisens navius*), one common bittern (*Botaurus minor*), one turtle dove (*Turtur risorius*), four alligators (*Alligator mississippiensis*), five musk terrapin (*Aromochelys odoratus*), one banded rattlesnake (*Crotalus horridus*), two pine snakes (*Pitophis melanoleucus*), one hog-nosed snake (*Heterodon platyrhinus*), fifteen wave-lined lizards (*Sceloporus undulatus*), two chameleons (*Anolis principalis*), three Arizona diamond rattlesnakes (*Crotalus adamanteus atrox*), one water snake (*Tropidonotus sipedon*) and three Gila monsters (*Heloderma suspectum*).

Game Bag and Gun.

OPEN SEASONS.

West Virginia.

Deer, Sept. 15 to Dec. 15; no hounding season. Quail, Virginia partridge, Oct. 10 to Dec. 1. Wild turkey, Sept. 15 to Jan. 1. Ruffed grouse, pheasant, Oct. 1 to Jan. 1. Wildfowl, Oct. 1 to April 1.

Texas.

BELTON, Tex., Sept. 23.—*Editor Forest and Stream:* Referring to "Guadalupe's" letter in issue of 12th, let me say that our open seasons are: Deer, Aug. 1 to Jan. 20 (Act of April 11, 1883, which was amended April 4, 1883, to exempt 116 counties). Pinnated grouse, prairie chicken, Aug. 1 to March 1 (Act March 15, 1881, with the 116 counties exempt). Quail, partridge, Oct. 1 to April 1 (Act March 25, 1887, amended April 4, 1889, to exempt 126 counties). Wild turkey, Sept. 1 to May 15 (Act amended April 4, 1889, to exempt 133 counties).

A WEEK IN NEBRASKA.

THE russet year brings back the whir of the partridge, the piping of the quail and the chatter of the great gray squirrel. In this region it would be more in accordance with fact to speak of the flight of the ducks and of the flushing of chickens. September has come with a rare combination for the sportsman—ducks, chickens and snipe. Those who have not the fear of the law before their eyes add quail to this list. Hot days and cold nights has been the rule, and this is as the hunter would have it.

The open season commences Sept. 1, but ever since the first of August chickens have been shot without attempt at concealment of the fact. As a result shooting was reported very poor when fall opened. Hunters would take long trips to the northwest or go among the sandhills south of the Platte and return with empty bags. The knowing ones shook their heads, laughed in their sleeves and declared that they would have better luck within five miles of town.

So it proved. On the afternoon of Sept. 2 a party of five of us started to investigate on our own account—three men, two ladies, who enjoyed the sport as well as we did, and two dogs, one a young Llewellin which was broken last season on quail, the other a six months old pup that owned old Count Rapier as his grand sire. Scarcely had we got outside the city limits, when a young bird flew across the road. This was taken as an indication that we were near a covey, and at the first stubble field we alighted. The older dog knew instinctively what was wanted of her, and the yard-broken pup was not slow in showing the result of his breeding. We had not gone 50yds. from the wagon, when Sid came to a stand, and we flushed three young birds that dropped before they were fairly under way. Three coveys were flushed in that stubble and then we drove on to the next, keeping up the work until the last ray of daylight was gone and raising chickens in every field where we alighted. When we arrived home and the birds were dressed the veteran of the party proposed that the next day he and I should make a thirty-mile trip up Wood River and try the wheat stubble near the Loup. I did not need a second invitation.

Early Tuesday morning we set out, the faithful Sid resting in the bottom of the buggy. The day was extremely hot and not a feather did we see except in the copses near Wood River, where young quail were abundant. About 5 o'clock we reached our destination, McDonald's ranch. It was still too hot to look for chickens but the prospect was inviting. Far away as eye could see were quarter-sections and half-sections of wheat and oat stubble, checkered with fields of ripening corn. An hour passed and then we donned hunting coats and boots; McDonald brought out his muzzleloader and his red Irish setter and off we went. Why it is I do not know but the old sportsmen would not touch a field of oat stubble. They said that chickens would not go into it when they could get wheat. At first we had no luck, but as twilight fell, the birds came from the shelter of the corn to their feeding grounds. Webster and I took one stubble field with Sid, McDonald took another with Frank, whom I despised as a very lazy "purp." But first appearances were deceitful. We wandered about for fifteen minutes not getting a shot nor did we hear a sound from our partner. At length a break in the intervening cornfield disclosed him, gun poised and that dog Frank standing as prettily as ever a dog could, and he held his birds there for full ten minutes until we came up. Then the guns cracked and kept cracking, for chickens rose in front, to right and to left, until our ambition was fully satisfied, and in the cool of the evening we went back to a splendid supper.

The next morning was cold and cloudy. We were up at gray dawn and out in the stubble, but the chickens were very wild and but one fell before Webster's gun. After breakfast we started homeward, intending to hunt most of the way. The day was so cold that the birds would not seek the corn. Every field yielded its quota of game, though the birds were found only in twos and threes. At high noon we were at an oat stubble, and I proposed that Webster get out and go across it. He did not believe in oat stubble, nevertheless he went. I held the horse and watched the fun. Sid ranged freely for a few minutes and then—bang! and a single young bird went into the bag. He was going over the hill and Sid was sneaking along as though on a fresh scent. I lit my pipe and stood on the seat in time to see two more birds fall. I longed for a fence-post, a tree, or anything to which I could tie the fractious steed, but fate was against me, and there I had to stay while five coveys rose right in front of my friend's gun.

However, I had my revenge. We were far away from any road, and decided to push eastward until we struck one. In going over a hill we saw just ahead an immense cornfield, and in the middle of it a lagoon. Above a pair of mallards were circling, and then the appearance of a hawk caused a large flock of small waterfowl to rise and fly impatiently from one pond to another. At the distance we took them for teal, and we cautiously approached until within a quarter of a mile, then the Colonel drew on his wading boots and disappeared down the corn rows. In about ten minutes firing began, and kept up with such rapidity that I thought a heavy wagon would be needed for the game. By and by Webster appeared plowing slowly through the mud, and in his hand were a couple of little yellowlegs. That was all. The next lagoon gave us a young widgeon, and then we drove home perfectly satisfied with the day's work.

I was taking a week's vacation, and so could not afford to lay aside my gun for a single day. After breakfast the next morning Ben Marston, a most genial sportsman, and I, with the afore-mentioned pup, Dude by name, took a buggy for the county poor farm, nine miles northeast of town. The country in the immediate vicinity of the farm promised good shooting for ducks and chickens. About it are corn and stubble fields, and within a half mile on either side are "draws," or canyons, and old buffalo wallows that, at this season, are full of water. We put out the horse at the nearest ranch, and after Ben had finished his business we rambled out on the hills without a sight of fur or feather. At length a flight of ducks appeared, and though we could not mark them down we decided to try the lagoons. Before we reached the water two other sportsmen appeared over the hill, and as they drew nearer we recognized the colonel, my old companion, and his chum Johnson. Well we amused ourselves shooting at kildeers until dinner time, and then Ben and Webster returned to the ranch through the draw, while Johnson and I took an upland trail. The other pair brought in a teal and a mallard.

After dinner Johnson and I determined to distinguish ourselves, so we stole away and went to another draw. No matter how cautiously we stole along the bank, the ducks would rise ahead of us, just out of range. At length we got upon a pair of teal, winged them both and they dropped into the water. What a time we had to get them. They dove and hid and it took four shots to kill them. Then we pursued a big mallard that seemed bound to elude us. Finally as we were about to give up the sport, Johnson fell flat and pulled me with him. A tremendous flock of teal were coming toward us. Overhead and around us they circled and finally dropped in a buffalo wallow 300yds. away. The grass was light and short and the ground was damp, but we managed to flatten ourselves sufficiently to get within 82 steps of them. (We paced the distance afterward). Then we arose and they arose; four shots and eight teal. We went back to the house and found that Ben and the Colonel had left, but a shot let us know that they were not far away. When we reached them Dude was getting his first lesson in standing quail.

The homeward ride was broken every few minutes by the sight of ducks, that one by one found a resting place beneath the buggy seat. At length in a pasture near the woodside we saw a small lagoon that was perfectly black with ducks. The buggies were driven by and the horses tied. Three of us lay in the grass waiting for the ducks to fly over, while Johnson repeated the crawl act. He bagged seven ducks as they rose, but the rest of us were doomed to disappointment, for the Colonel's hunting coat was in the buggy and his white shirt sleeves were a warning to the flock.

One day more brought the sport of the week to a close, and it came about in this way: During the duck flight last spring a couple of boys left town every afternoon about 6 o'clock. They would return about 10 o'clock just loaded down with ducks. They went invariably in one direction, but told very contradictory stories as to the location of their ground. This fall the old sportsmen were on the lookout, and finally their resort was discovered. It was a marsh four miles west of Kearney. There were several small ponds on the forty-acre tract, the rest of the piece was deep bog covered with tall rushes and cat-tails that afforded the best of cover. It was just the spot that the ducks chose for passing the night when they came in from the lakes and rivers.

I went out early on Saturday morning, but the ducks had about all left. I saw one flock of mallards and secured a fine young bird. But here were what I had not seen before in Nebraska, jack snipe in abundance. And rare sport I had with them, though among the reeds scarcely half the birds that fell could be recovered. With them were kildeer, yellowlegs, avocets and soras. In the afternoon I returned to the same spot and was surprised to find five buggies fastened about the field and eight sportsmen in the marsh. I thought it would be useless to stay, but still would not go off defeated. I would wait as long as any one. About six o'clock the first ducks put in an appearance, but they were frightened away long before they were within range. It was very cold and very wet. Just as darkness fell there was a whir of wings close by and the guns flashed into the dark mass. Before we could hunt the slain another flock came down, and so it went on for an hour, firing almost as fast as we could load. In the darkness it was impossible to take aim, and yet we were very successful. Probably a number of ducks were killed that were never secured, but we had load enough of mallards, teal, widgeon and a shoveler.

While at McDonald's ranch on Tuesday night I learned that five years ago the prairie sharp-tailed grouse was very abundant. The cold weather made the birds very tame and they refused to be flushed. Since that time few have been seen.

Quail are abundant. Every park in Kearney, even the grounds around the school buildings, boasts its covey, and as firearms cannot be discharged within city limits, the birds are safe.

There was a time when Nebraska did not seem to me much of a State for game, but I am more than satisfied to carry a gun through a thickly settled farming country and close to a city of 12,000 inhabitants. And from every sportsman's door the latch string hangs out to our Eastern confreres. SHOSHONE.

KEARNEY, Neb., September.

LIGHT-WEIGHT OR SMALL-BORE GUNS.

Editor Forest and Stream:

I want to say a few words in favor of the small-bore gun. There is an old maxim, "where ignorance is bliss 'tis folly to be wise," which some people stick to as long as they live. It seems to me that gunners are particularly prone to follow it. I know it is good in its place, but if we wish to advance we must drop it; also the old flint lock and Queen's arm. Why not as well the heavy 10 and 12-gauge guns? They are (for the field) entirely out of place, and in a few more years will be considered as relics of the past. Can a man convince himself, or any one else, that he goes out for sport and enjoyment when he tramps ten or more miles carrying a small cannon, which uses up 4 or 5drs. of powder and 1¼ to 2oz. of shot? What must a bird think that gets through such a charge, and is not scared to death by the noise? For the benefit of any brother sportsman who is about to buy a gun, and does not already "know it all," I will advise him, by all means (if you are going for sport, and not the market), to get a 16 or 20-gauge gun. This may be too light for a heavy man, who could handle a light 12-gauge better.

I thought ten years ago that it was fun to lug a 9½lbs. gun through the brush all day, and have a lame shoulder for a week after into the bargain; but now I am perfectly satisfied that a 6lbs. gun weighs more at night than it did when I started in the morning. Ten years ago I lived in the city of Taunton, Mass. At that time there was not a gun smaller than 12-bore in the city, as far as I was able to find out. Now the gun dealer keeps a good assortment of 16-bores, and the number used in proportion to the larger bores is increasing every day.

A sportsman goes into the woods for pleasure, and if he shoots, to use his nerve and show his skill. He wants to act as little fatigued as possible, consequently he dresses light, reckons close on shells and lunch, and carries the lightest gun that he believes will be effectual. It is difficult to make a man believe that a small-bore gun will kill as well and sure as a large one, although he knows that rifles are small bore, and that a small-bore rifle is preferable to a large. For proof we have but to look abroad. Foreign nations are adopting the small-bore rifle for their armies, while we are content to use a rubber pad to keep our shoulder blade in place and use the old "back number." If the 16 and 20-gauge are not powerful enough, how is it that such scores are made with them? For instance: Miss Oakley, at Gloucester, N. J., used a 20-gauge with a charge of ⅞oz. of shot, weight of gun 5½lbs., and killed 49 out of 50 live birds. Was it accident? No. They get there every time. I have owned a good many guns and of all weights and gauges, and the most satisfactory gun I ever owned was a 16-bore 6lb. W. & C. Scott gun. Do not think from this statement that I favor the English guns, for I do not. I believe that the American-made gun is a better gun today, and base my opinion on a considerable experience. I have to-day a 16-gauge gun with 24in. barrels, and only 5lbs. in weight, that will make as nice a pattern at 35yds. as any large bore used for the same purpose, and it kills every time it is held right. Two of my friends (both collectors) have Parker guns. One, a light 12-gauge, has been used from Florida to Maine, and has been shot until its barrels are as thin as paper at the muzzles. The locks and breech mechanism are just as good as new. This gun has been under salt water nearly a week while lost on a gunning bar. The other, a 16-bore, was made to order and has been from Newfoundland to Mexico, and has been shot many thousand times. It is in use to-day, apparently as good as ever. I do not wish to discriminate in favor of the Parker, as I believe that any of the regular $80 grade guns of Parker, Colt, Smith or Lefever will last any ordinary man a life time. And also that a Davis gun will give any of them a good battle. Almost any of these dealers will supply you with a fine, light-weight gun to suit.

Here in southern New England the small-bore has come to stay and is gaining rapidly in favor. Every known advantage but one (heavy charge) is in its favor. Quick aim, short barrels, light weight, little smoke and not much recoil, economy, etc. All favor the little gun. It will fill the bill on every thing but wildfowl. To my certain knowledge nothing will stop a deer so quick as a charge of buckshot from a small-bore shotgun. If a man goes after wildfowl, or guns for the market, he takes every chance and wants a big gun with all the load that he can stand behind. To such I have nothing to say, but as I remain devoutly thankful to the man who first influenced me in favor of a light gun, I take it upon myself as a sort of missionary work, to try to convince others that their pleasure afield depends largely on the weight and size of their gun. No doubt some who read this will call me a crank, but if they will go out with me here for a day, they can have one of my heavy guns to use, and if they can honestly say (toward night) that they would as soon carry it home, as to exchange for a while and carry mine, then they can have it and welcome.

COHANNET.

QUAIL IN SOUTH CAROLINA.—A correspondent highly recommends Rocky Hill, South Carolina, as a stamping ground for quail shooters. One person who spent sixty days there bagged in that time 495 quail, with a good score of woodcock, snipe and rabbits in addition. Howell Cobb, of the Carolina Hotel, controls 12,000 acres of shooting ground for his guests. Snipe and duck shooting may be found in the vicinity.

THE HUNTING RIFLE.

Editor Forest and Stream:

To one who has kept track to some extent of the progress that has been made in the construction of military rifles it seems strange that the ideas most approved in military circles regarding what constitutes an efficient weapon have not yet been adopted in the construction of sporting rifles. For example, several of the leading European powers have adopted rifles with calibers ranging from .30 to .32, and having a strong twist, instead of those of larger caliber and less twist; and for ammunition they have adopted long shells loaded with plenty of powder, and very long conical-pointed, steel or copper-jacketed bullets. The advantages claimed for the new guns over those of the older models are: (1) The recoil is less with small than with large calibers even when the same amount of powder is used in both instances. (2) By jacketing the bullet with steel or copper the barrel can have the twist considerably increased without stripping the bullet, and the increased twist will give a very long bullet steadiness in the air. (3) A long bullet will have greater penetration than a shorter one, and by using heavy charges of powder it may be given a high rate of speed, higher than would be possible with a larger caliber owing to the severity of the recoil. (4) Such a ball moving at a high speed will have not only a longer range but a flatter trajectory than those of the ordinary rifle, and (5) the gun itself and ammunition are not so heavy to carry.

Another thing that military authorities have almost unanimously condemned is the under-barrel magazine of the repeating rifle, which is the most commonly used of all by sportsmen, and they have almost as unanimously pronounced in favor of the sub-breech box, such as that of the Lee.

Now, it has not been without a great deal of careful experimentation by men scientifically trained in the science and art of gunnery that the governments of England, Germany, France, Switzerland, Austria and Italy have been led to adopt the small-bore, strong twist guns, and it would seem that they have been proved beyond a peradventure to be better guns for military use than such guns as the Winchester, Marlin, Ballard and others which are the favorites with sportsmen. The advantages claimed for the new guns should, it would seem, commend them to sportsmen as well as to soldiers. Can the editor of FOREST AND STREAM or any of his correspondents give a good reason why the American manufacturers of sporting rifles should fail to keep abreast of the times? Or is game so rapidly disappearing by aid of the relatively inefficient weapons still in use that it is inexpedient to hasten its departure by introducing any new improvements?

The writer has tried in vain to find out from leading gun dealers where, if anywhere in this country, guns of the Lee, Mannlicher or Vetterli types could be procured, or whether any sporting rifles embodying the principles of their construction could be had, but their ignorance of the whole matter has been of the densest kind. He has also searched the price lists of numerous tradesmen to find whether these guns were on the market, but in vain. Could you, Mr. Editor, inform one through your journal whether these arms are to be had in this country, and if so, where?

E. S.

CHICAGO, Ill.

Editor Forest and Stream:

In reference to the articles by "Senex" in your issue of Sept. 12 and 26, the new .25cal. is about midway between the .22 and .32cal., and will undoubtedly become a popular weapon in the near future. As a hunting arm its killing power is far greater than the .22, and as a target weapon its accuracy is superior to the deservedly popular .32-20-115 Winchester.

The sharp twist used in the majority of modern rifles is not intended to give greater killing power, but greater accuracy.

The trajectory of a rifle may be lowered by decreasing the weight of the bullet and increasing the powder charge, but after you pass certain limits in this reduction of the trajectory curve, accuracy is sacrificed, and other bad results follow, such as the excessive fouling of the bore, requiring frequent wiping out if anything like steady shooting is to be maintained.

In regard to the old-style .22cal. long cartridge, I stated that the 16-inch twist of the Maynard rifle kept them point on, and I am still of that opinion. I am not a gunsmith, and cannot explain why the bullets from these cartridges will wabble and keyhole when fired from a rifle or pistol rifled with a long twist. In regard to the Lebel rifle, I am quite willing to admit that it has a comparatively low trajectory at 1,000yds., but I have failed to discover one iota of evidence of its accuracy at any distance. When the proof of its accuracy shall appear, I shall be anxious to know what kind of powder and bullet is used. The chemists must give us a better powder before we shall have approached the millennium of rifle shooting, and the bullet makers must give us something better than a leaden pellet encased in a flimsy paper patch.

In regard to the allowance to be made for side winds, "Senex" probably makes too large a claim for his muzzle-loader shooting a bullet weighing 162grs. He has omitted a very important factor in this connection, viz., the caliber of the rifle. If the rifle is .32cal. or over, then he would be badly beaten by the .45cal. using a 550-grain bullet; but if his rifle is smaller than .32cal., he may have some grounds for his claim. The allowance for side winds depends mainly upon the comparative length and width of the bullet, and very little upon the amount of powder used. The short bullet will float off to leeward in spite of any amount of powder that may be put behind it; while the long, narrow bullet cleaves the air like an arrow, and often reaches the bullseye when the other goes wide of it, in spite of the best human skill that can be placed behind the gun. From the standpoint of the target-shooter, as a general rule, the accuracy of any rifle of first-class manufacture may be very nearly determined by comparing the caliber with the length of the bullet. A bullet two calibers in length would be beaten by one three calibers in length, and this latter would be beaten by one four calibers in length. If you wished to go beyond four calibers, your gunsmith would probably refuse to build the gun for reasons best known to himself.

For hunting purposes a short bullet is often preferable, on account of its flatter trajectory at short range and lighter recoil, and for thickly wooded districts, where nearly all of the shots are made within 75yds. range, a light powder charge is generally the best, as the trajectory is of small consequence; and you have the great advantage of being able to use a repeating rifle, and may fire rapidly without regard to the dryness of the atmosphere, and after a day's shooting the rifle will be found in good condition. For these reasons and others, the Winchester cartridges, .32-20-115, .38-40-180 and .44-40 200, are still the most popular cartridges used in repeating rifles, although others have been put on the market giving a flatter trajectory, greater killing power and kicking much harder. The express rifles require nursing, as do the fine shooting target rifles.

E. A. LEOPOLD.

NORRISTOWN, Pa.

WILD RICE.

WE received from Mr. Frank Pidgeon some specimens of the grass growing in the Hudson River, near Saugerties. Mr. Pidgeon wrote:

"I beg to say that I am perfectly familiar with every foot of each Hudson River locality which your correspondent "S." names, having shot ducks and rail upon them for twenty years and more. The "Vly" was owned by my father for many years; I am therefore well acquainted with that section. The grass, the seeds of which furnish food to the aquatic birds in the places named, we have known as wild oats or teal grass; if it is "wild rice" I wish you would kindly say so through your columns, for if it is we do not want to buy any wild rice to sow; if it is not, we want to buy a quantity. I send you a few seeds of the grass in question, which certainly resemble oats more than they do rice."

The specimens sent were insufficient to base an opinion on, but they appeared to us to be wild rice. We sent them on to Mr. Charles Gilchrist, of Rice Lake, Ont., who replied that the specimen was not wild rice, but a wild grass which was familiar to him.

From Mr. Charles L. Flint's work, "Grasses and Forage Plants," published by Messrs. Lee & Shepard, Boston, 1888, we take by permission of the publishers, the following description, with illustration, of wild rice:

WILD RICE.

Indian rice, wild rice, or water oats (*Zizania aquatica*), Fig. 12, is found in swampy borders of streams, in shallow water, and is common. It grows from 3 to 9ft. in height, with flat, long, lanceolate leaves. Panicle large, pyramidal; lower branches sterile, spreading; upper, pistillate or fertile, erect. Flowers in July and August, and drops its seed, when ripe, at the slightest touch, and this furnishes food for water fowls. It is also used for food by the aborigines. North America.

This plant is the *folle avoine* of the early settlers of Louisiana. It is exceedingly prolific, growing wild in all the Southern States, where it is said to produce two crops in a year of good hay, of which stock of every kind are very fond. It is greedily eaten when green.

In the Western States, where it is also common in the shallow water on the swampy margins of streams, it forms an important food for the Indians, who paddle a canoe among the rice, bend it over the sides, and beat out the grains with a stick.

In Fig. 13, the staminate flowers are seen as they appear at the end of a branch of the natural size. Fig. 14 represents a staminate flower, magnified; Fig. 15, the germ and stigmas; Fig. 16, a fertile or pistillate flower; Fig. 17, the same, ripe; Fig. 18 the seed. Contrary to the usual arrangement, the fertile or pistillate flowers are above the sterile or staminate ones, while the minute grains of pollen, being lighter than the atmosphere, rise when they leave the anther, and thus come in contact with the stigmas. In Indian corn, on the other hand, the grains of pollen are heavier than the surrounding air, and so fall from the sterile flowers of the "tassel" upon the styles or "silks," and thus fertilize them.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price $2.50. For sale by FOREST AND STREAM.

THE GAME SEASON.

Editor Forest and Stream:

It is surprising, wonderful, that so great a number of deer are killed in the St. Regis district south of here this season. Hardly a train comes down on the Northern Adirondack Railroad that does not bring from one to half a dozen. I was at the station yesterday when the 3 o'clock train came in; two parties of Boston sportsmen came down on it, bringing with them three very large bucks entire, and the saddles of three other deer; and this has been common ever since the hounding season opened. Last Tuesday a party of four went up to Deer River, intending to have a week's hunting. Wednesday morning they put out their dogs, and during that day one of the party shot and killed five deer on one runway; the other three members of the party did not happen to get a shot, and having all the venison they wanted, they came out Thursday morning, bringing four of the deer with them. The engineer of the passenger train on the Adirondack Railroad has killed three deer since Sept. 1, and an old bear and cub half grown. He killed all in the vicinity of Brandon (or Paul Smith's station, as it is called) while waiting there with his engine, between train times.

Bears have been plenty this season, more so than common, all through that region, and quite a number have been killed; but what is strange to me is, that with all the deer hunting that has been done in that region for the past twenty years, especially for the last six, and the great numbers that have been killed every season, the deer should still continue to be as plentiful there as ever.

When the lumber companies first began operations there and the railroad was building, I with others here predicted that, while the trout fishing would probably remain good for some years to come, the deer hunting would soon be a thing of the past. But it has turned out to be exactly the reverse: the deer are as plentiful here as ever, while the trout fishing has been nearly ruined in those waters that are in the vicinity of the railroad and the lumbering camps. But if nothing is done to stop the great slaughter of the deer that has been going on for the past five years, the end must soon come. Even if all the deer there are in the whole Adirondack region congregate here, it will be impossible for them to hold out much longer if the slaughter is allowed to continue at this rate.

The Santa Clara Lumber Co. is a stockholder to the amount of $100,000 in the syndicate that has lately purchased the great tract of land in the Adirondacks of W. W. Durant. The president of the Santa Clara Lumber Co. is also president of the Northern Adirondacks Railroad; and this means that this great tract of the wilderness will too soon be despoiled by the lumbermen, the more especially that charcoal burning has now become an established business in the region about Spring Cove Station, on the Northern Adirondack Railroad. A. C.

MOIRA, Franklin County, N. Y., Sept. 30.

Editor Forest and Stream:

The inclosed "clip" sizes up the situation very nicely. It is from the Hartford *Courant* of Oct. 2, and reads:

Yesterday furnished a gratifying sight, not only to Hartford but to Connecticut. For the last ten years the Hartford markets have been, the first day the law was off, stuffed with birds. Two years ago 1,500 birds were on sale in Hartford the morning the law was off. Of necessity they must have been shot during the closed season. Yesterday not a bird was on sale in the whole city in any market up to 12 o'clock noon, and only seven birds were offered for sale up to dark. Mr. A. C. Collins, the efficient game warden of Hartford county, was seen by a *Courant* reporter during the afternoon. He said that, to the best of his knowledge, the game laws this year had been observed. The efforts which had been made all over the State to bring about a rigid enforcement of the laws had proved effective. The pot-hunters were frightened all over Connecticut. The principal reason for this undoubtedly was that a law was passed during the last session of the Legislature which enabled game wardens to search the refrigerators and ice boxes of dealers in game. The result was that dealers were afraid to sell and so the demand was lessened.

The opinion of the various dealers in game in the city makes interesting reading. A *Courant* reporter visited a number of the most prominent yesterday and asked their opinion of the working of the game law. One man was found who said that he thought it a failure. He thought that it did not diminish the shooting of game at all, but resulted merely in sending the birds that were shot out of Connecticut for sale.

The opinion of all the rest was, however, that the game laws had been well enforced. They expressed themselves as being thoroughly in sympathy with Mr. Collins and the work he is doing. One man said: "I have only had two birds offered to me this season. The birds haven't been shot. Hunters are frightened all over the State. I am informed that the shipping of birds to New York, which used to go on heavily in the eastern part of the State, has almost entirely ceased. I am glad this condition of things exists. As far as Hartford is concerned there have been no birds sold to speak of this season. The restaurants have, I suspect, served a few, but the number has been very small."

From inquiries made in various directions in the city yesterday, from conversation with dealers in game, and from the actual conduction of the markets, it seems to be established beyond a doubt that the statement made by Mr. Collins is true that "the game laws have been observed this year better than at any time during the last ten years." Credit to whom credit is due is always a good motto, and this excellent state of things is due largely to the efforts of the Connecticut Association of Farmers and Sportsmen for the Protection of Game and Fish, and especially to the work of the faithful president of the society, Mr. A. C. Collins.

The Connecticut Association of Farmers and Sportsmen for the Protection of Game and Fish does not have any clam chowder nor shooting tournament attachments.

A. C. COLLINS.

HARTFORD, Conn., Oct. 3.

Editor Forest and Stream:

I was out in the country with Mr. James Dupuy last week looking over his old camp ground; found game plenty, quail, squirrels and quite a number of young wild turkeys. The indications are that fall shooting will be good. Mr. R. S. Dupuy is going South to hunt in November. Jim intended going along, but the cards are out for his wedding with Miss Sallie, a daughter of Mr. George Howland, who has figured as George in some of the contributions James has sent you. W.

IRONTON, Ohio, Oct. 1.

Editor Forest and Stream:

Our grouse season opened Sept. 1, but owing to the almost continual rain little shooting has been done, and that has been confined to places near by. The foliage is unusually dense, and but little shooting can be done until the leaves fall. We have already had one or two light frosts, and the hills are dressed in their autumn colors, presenting a beautiful sight. Squirrel and rabbit prospects are good in Rutland county. This locality is very favorable for grouse, and they were formerly very plenty, but though constantly hunted and sadly thinned out

now, they cannot be exterminated owing to the nature of the country and the fact that they seek almost inaccessible places. However, we sometimes find them in fair numbers, and from outside reports as well as those from our local sportsmen, I think the birds are more numerous this fall than for many seasons, and we may expect fair shooting later, when the cover is not so thick.

The duck shooting on Lake Champlain is reported very good, and Burlington sportsmen, as well as others along the shore, are making great bags. A Burlington paper reports that three Burlington shooters while at the sandbar grounds near that city, killed in the morning shooting of two days eighty-four ducks—mostly black ducks—and fifty-seven plover. Ducks, plover and other birds are reported there in great abundance, heavy flights now coming from the north.

Our fishermen were forced to lay aside their rods some time ago, as the heavy rains have put an end to the bass fishing. F. E. A.

WATERBURY, Vermont, Oct. 3.

Editor Forest and Stream:

The delta extending back 50 miles or more from the Gulf, north and west of here, abounds in sloughs and lagoons, and about these white egrets are plentiful at this season of the year. A great many of them are being killed simply for the plumes. One soulless wretch who lives about 14 miles from the city has a cow skin that he throws over himself, and then by crawling on his hands and knees is enabled to approach within easy shooting distance of the unsuspecting birds. He is slaughtering hundreds of them and shipping the plumes to France where, it is said, he gets much higher prices for them than can be had here.

Sickle bill curlews are also abundant on these marshes and afford fine sport to lovers of wing shooting. I have lately traversed the State twice, from north to south on different lines of road, and have found quail in great numbers everywhere. Coveys of 15 to 25 birds are found in almost every bunch of cover or on nearly every feeding ground, and grand sport may be enjoyed by any one who will come here for it. G. O. SHIELDS.

GALVESTON, Texas, Sept. 24.

Editor Forest and Stream:

Ducks are now coming in to our lake. Teal have been here for some time. The prospect for fall shooting is very good. I expect to go on my regular fall hunt about Oct. 15 or 20, and will try and send you a few camp notes. Our game law, as amended by the last Legislature, Sec. 3 of Chap. XLV. provides: That no person shall kill, wound, ensnare or trap any bison or buffalo for ten years, mountain sheep for eight years, any ibex or mountain goat for ten years, any deer, elk, fawn or antelope within this State for any purpose whatever at any time; except that those which have horns may be killed between July 1 and Dec. 1 for food purposes, as provided in Sec. 4, Chap. XLV. (*i. e.* immediate use). No protection to ducks and geese, except as to nets, which are prohibited. They might as well make open season all summer. This horn business won't work, for every deer killed is sure to have horns, but they will, of course, be small, broken or not good in some way and left in the hills too rough to pack out, etc. A. A. K.

BERTHOUD, Colorado, Oct. 1.

Editor Forest and Stream:

The hunting season in the Adirondacks is now at its height. Many sportsmen from the city still linger among the grand old hills, and the resident or native hunters are fully awake to the opportunities which are presented each day. Many guides and hunters say that there are not as many partridges and squirrels in the woods as there were at this time last year. However, those who go out for partridges have fair success. But the deer hunters are having the most fun, and have thus far been quite successful. At least twenty deer have been killed in Elizabethtown thus far, and the hunters are confident that many more will fall before the season closes. The greatest enthusiasm prevails, and the hills and valleys are lined with hunters almost every day. OBSERVER.

ELIZABETHTOWN, N. Y., Oct. 5.

Editor Forest and Stream:

This is the time when the hunters of the peninsula begin to stop the war on the shore birds, and to look for likely coveys of partridges on which to make a descent on opening day. Partridges are more plentiful than usual this year and good bags are expected. All of the shore birds have left except the willets, which are beginning to flock, and by the time this reaches you will be on their way south. Willets are becoming scarce of late, being shot all through the breeding season when they are tame and decoy well. Squirrels are not very plentiful this year. I saw to-day two flocks of ducks, vanguards of the multitudes soon to follow. B. W. L.

EASTVILLE, Virginia, Sept. 28.

Editor Forest and Stream:

I was out Sept. 28 to try a new canvas boat in a pond near here, and found, to my surprise, that the ducks had begun to arrive. I would not venture to say where they came from, but I got a widgeon, three shovelers and a blue-winged teal in the course of a few hours. I found a number of snipe, and had a happy time till I exhausted my shells. Not expecting such game I had taken only a few. I was decidedly pleased with my Acme folding boat. It is a real piece of mechanism, and promises to be handy and serviceable. But where did those ducks come from? AZTEC.

SAN LUIS POTOSI, Mexico, Oct. 2.

Editor Forest and Stream:

The gunners have been out the last week and the game has come in. There are plenty of fine partridges in the market windows, with a few woodcock. The partridges seem to be mostly old birds and are in fine condition, while the woodcock all seem to be rather poor. It is reported that quail are being shot already, but if so the shooters keep out of sight. COHANNET.

PROVIDENCE, R. I., Oct. 3.

Mr. E. B. Nicewaner, of Baltimore, sends us these extracts from a letter received from his son, E. G. Nicewaner, C. E., who is with a Pennsylvania Railroad Co. survey party in the Alleghany Mountains, near Johnstown, Pa. The letter was written Sept. 27: "There has not been a day that I have not wished to have you along since we have been in camp. Yesterday we ran across fresh signs of bear droppings and footprints; to-day we not only saw bear tracks, but deer and otters. I inclose quill from a little porcupine we ran across. Every day I see trout. There is a pool in the creek alongside of camp that has some 12 and 14-inch ones in it. The water is so clear that they can be seen darting from rock to rock. We have for an axman a young fellow who hunts most of his time, and he told me to-day that one day last spring he caught 360 trout from 8 to 16in. long. How would you like to get a whack at them? Pheasants are as thick as sparrows. Every half hour we flush from one to six. I know where a dozen are feeding already, and if I only had the proper sort of gun I would have good sport. It is a common occurrence to see one running along the road. Another of our axmen, who lives about 300yds. from camp, told me where a flock of turkeys use every day. I am going up there to-morrow evening: his little boy saw them to-day. If you could only slip up here and be with us for a week, what a time you would have."

Deer hunting on Long Island has been great this year. The season down there is for the first ten days of October, Sundays excepted. The game has an area of 300 square miles to roam over. Points of attack are from Ronkonkomo, Sayville and Smithtown. The deer are dogged. The law has been generally well observed. The only instance of its infraction coming to our notice was in the case of a man who appeared before a Sayville justice and informed on himself. He had killed a deer before the time was up, said he had to in self-defense, the varmint raided his cabbages and ate up his vegetables.

From many localities in New England ruffed grouse are reported plenty, the broods large and the birds well grown. Woodcock are also fairly plenty, but not up to last year's shooting. A good flight, which should have already begun at this writing, has been predicted by all the knowing ones.

The rail have "struck on" in the marshes of Long Island and Connecticut, and some big bags of plump birds have been scored. On the Hackensack, N. J., marshes, by the way, the credit of being high boat has been won by a Hackensack lady.

ON GALLATIN RIVER, MONTANA.

ON the 4th of September my brother and I started out from Bozeman, Mont., for a hunt in the Rockies. We left after dinner, with seven pack and five saddle horses and team and wagon. Our guides were Ira Dodge and John Kirby, the cook, Blackstone. Our course was almost south. The wagon left us at Squaw Creek, about thirty miles from Bozeman. Here we packed the horses preparatory for starting over the mountain trail. This Gallatin trail is one of the roughest in the Rockies, and we found it a "holy terror." I had seen rough roads, but never thought a horse could go over such a trail as this proved to be. The first eight miles is fearfully rough, but after that it is a fair mountain path.

We got to the hunting grounds in two days after leaving Squaw Creek, having caught fish and shot grouse en route. With a .22cal. rifle one can get all the camp meat they need, and with a rod and line and grasshopper, or most any kind of fly, all the mountain trout, whitefish and grayling. We saw lots of elk and mule deer, and two grizzlies and a lynx. We succeeded in getting some venison, and it proved an agreeable change to fish and grouse. I was fortunate enough to make the acquaintance of two grizzlies; broke a front leg of the first one, but he got into the timber before I could get in a second shot. The second bear I succeeded in killing. My guide and I were riding along on top of a high mountain about sunset, looking for game, when we saw the bear crossing an open park about two hundred yards off. We rolled off our horses, leaving them to take care of themselves (which they did by galloping off in the opposite direction) and stalked to about 75yds. of him. He was moving slowly and swaying his body from side to side. The first shot struck him in back of shoulder and went through him. He uttered a fearful growl and reared on his hindlegs for an instant, then coming down on all fours he struck the ground a fearful blow with his paw, making the dust fly in fine style. Then wheeling he came for me at a gallop, growling all the while. Shot No. 2 struck him in the shoulder and went half his length in a longitudinal direction, coming out near his spine. This brought him on his knees; but recovering himself he came for me again; but No. 3 fixed him and he fell dead about 20yds. off. He proved to be a 700lbs. bear, fat and fur in fine condition. The hide measured 6ft. 8in. It is now being mounted as a rug. I have also the head of a mule deer, which I hope soon to add to my other trophies of the chase.

I met my wife at Cinnabar and went on to the Mammoth Hot Springs Hotel. The next day my brother and guides with extra man and teamster (Charlie Tommond) and outfit met us there and we started out for a seven-days' trip through the National Park, making the trip on horseback and camping at nights. The Park well deserves the interest the FOREST AND STREAM has taken in it, for it embraces both grand scenery and the most wonderful natural curiosities in the world.

This trip, combining as it did the hunting on Gallatin and the sight-seeing in the Park, is one of the most enjoyable of the many similar ones I have taken. The Gallatin is a rough country to hunt over, but to sportsmen who are willing to climb and rustle a little, it is worth a visit. The scenery is grand, water fine, grass good, and fish, fowl and mammal fairly plentiful. In conclusion I would like to say that sportsmen desiring good reliable guides and hunters will find them in Ira Dodge and John Kirby, of Bozeman, Montana. They combine both the hunter and the genial camp companion. H. W. H.

HOHOKUS, N. J.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

CHICAGO AND THE WEST.

Editor Forest and Stream:

There seems to be a great abundance of small game this fall in this State, and others to the south of it. At Jerseyville the quail are more abundant than they have been for years. The town was full of them when I was there, and two were caught in a drug store, into which they had wandered. They could be heard whistling all about. They had begun the movement which in that country is regular with them every fall, a sort of migration from the fields to a warmer and better cover. Mr. Guinnotte, of Kansas City, says the northern Missouri quail nearly all migrate to the South and West in cold weather. Mr. C. W. Parent, whose name will be familiar to many Chicago shooters, now lives at Marshall, Mo., and he tells me there are more quail about that place than he ever saw. He says if any of the Chicago boys will come down he can assure them of all the shooting they can ask. The vegetation is too high for quail shooting until after heavy frosts have cut it down. The best season, therefore, is late November or December. From what I learned in Jerseyville, I should think one need ask no better shooting at quail than can be had right near there. The whole country is full of quail there. That bird is reported unusually plentiful in the Indian Territory and in Kansas this fall.

Mr. Al. Bandle, of Cincinnati, called my attention to an error in the open season dates published in another sporting paper. The open date there is given, "Quail and ruffed grouse, Oct. 1 to March 1." It should be Oct. 20 to March 1. We telephoned across the river and confirmed this.

I learn from the West that Messrs. J. A. Ricker and a friend from Evanston, Wyoming Territory, in company with others from Laramie City, Denver and Kansas, have left for a big-game hunt in Idaho. I do not know any of the party except Mr. Ricker, my old friend and business partner. He is about the most consistently enthusiastic sportsman I ever knew, and about the best and biggest-hearted fellow on earth, I expect. I hope he will find that bear he lost long years ago.

Nothing much is doing right now in shooting circles in Chicago. We must have rain or our duck shooting will suffer. Mr. E. C. Cook and Mr. Montgomery Ward were lately down on their marsh at the De Golyer Club, and got a nice lot of snipe. They report their local mallard supply as very satisfactory.

I have not heard of any more prosecutions under the game laws as yet in this State. Over in Wisconsin, N. O. Hanson, a pound-net fisherman of Oshkosh, who was netting in Lake Winnebago, got caught for $97 and lost his nets, worth $1,000. That's the way to snake 'em. Now let the Wisconsin wardens watch Lake Koshkenong and see that the canvasback shooters this fall keep their sneakboxes "inside the natural cover of the rushes." That part of the law has been violated on that lake openly enough already. E. HOUGH.

ON A STAND.

I HAD been on several deer hunts and had always been very unsuccessful, not even catching sight of a deer on any occasion, but decided to try my luck once more. On a very cold and wet morning at 5 o'clock I was aroused from my peaceful slumbers by a very unpeaceful noise at my door, and with the greatest trouble having gotten a piece of stale bread about the size of my hand and a microscopic piece of half-cooked ham I started out into the cold, wet morning feeling rather the reverse of an enthusiastic deer hunter. After a walk (or rather a swim) of two miles through the drizzling rain and through mud up to my knees we came to the river, where I was placed on a stand by the driver and told to wait there till he returned. I tried first to sit down, but stuck in the mud, and so had to get up again. I next tried leaning against a tree, but the mosquitoes which are in millions by the river, having in the meantime collected their forces, attacked me. At first I stood on the defensive, pulled my coat over my head and smoked for all I was worth, but it was of no avail, the smoke instead of driving them away seemed rather to attract them, and at last my patience being exhausted I attacked them and slew about five hundred in five minutes, at the cost, however of making my hands so sore I could hardly hold my gun. At last I gave it up and let them do their worst; and they did it, too, for in about three or four minutes I was bitten completely beyond recognition. About this time, the rain, which had been drizzling till then, came down in earnest, and in spite of all my exertions to keep a little dry I was soaked to the skin and remained in that state for the rest of the time. After I had stood there about six hours, the driver arrived and said he had started two deer, but they had gone in the wrong direction (as they always do). I had not heard nor seen a sight of dogs or deer the whole time, nor had most of the others. When the driver arrived I started for home, and in about an hour and a half arrived dreadfully hungry, wet and tired, and registering oaths that I would go on no more deer hunts in Bath county, which oaths I certainly for the future intend to keep. C. H. R.

THE PEND D'OREILLE COUNTRY.

COLVILLE, Wyoming, Sept. 9.—*Editor Forest and Stream:* I left here on the first of August, 1888, and went about twenty miles up the Pend d'Oreille River from the mouth. There we made a log house and stayed for the winter, and did not get back till last April. The country is full of black-tail deer, white-tail deer, caribou, black and silver gray wolves, beaver, otter, mink, fisher, black, brown, and silver-tip bears, besides any amount of salmon and mountain trout. When we first got there we put in all of our time catching fish and salting them; we caught 1,200lbs. and put in brine for market, and as soon as the fur got good we commenced hunting. I killed three silver-tips, nine black, thirteen brown, and one bear about the color of slate, that weighed 208lbs. dressed. I showed the skin to the Indians and old hunters, but they had never seen one like it. Besides I killed and trapped seventeen caribou, twenty-one wolves, fifty-two beaver, nineteen otter, twenty-seven fishers. I never kill deer except when I need meat, so that we did not bother them. My partner got seven silver-tips, fourteen black and five brown bears, eight caribou, nineteen wolves, thirty-six beaver, twenty otter, twenty-three fishers and three mountain sheep. There

are a good many sheep here, but they are in such a rough country they are not worth trying to get. I shot a deer which I think is a curiosity. It was pure white, 7ft. long from tip to tip, and 3ft. high; its hoofs were like a white-tail's, and its tail was small like a black-tail. I shot it through the butt of the ear, so that the skin is not hurt. I fleshed the skin and and set the hair with alum. I would like to have you tell me if you ever heard of any such deer before, and where I can send it to be stuffed; then it will be for sale. Any one wanting to know anything about this country can do so by writing to me.

N. C. LINSLEY.

PATTERN AND PENETRATION TESTS.

L. C. SMITH 12-GAUGE GUN.

WHILE the trial of the Folsom cheap gun was in progress at the range on Sept. 19, and the shooting was about to wind up at 40yds., two gentlemen bearing each a gun came upon the scene. One was a well-known New York lawyer, who was about to purchase several arms. He had gone into the New York agency of the L. C. Smith shotgun, and had picked out a beauty from the stock on hand. "How does she shoot?" was his query. "Take a run down to Claremont and have Supt. Moss fire a few shots with it at the FOREST AND STREAM screen," was the very natural response. Hence the visit of lawyer Mead to the range, and while down he brought along also a Greener which he thought of buying. It so happened that he caught the testing ma-

L. C. SMITH GUN, 12-GAUGE, LEFT BARREL, 40YDS., 312 PELLETS.

chinery in full run, and the proffer was at once made and accepted that the L. C. Smith arm should be put through the regulation test for pattern and penetration. Along with the gun the New York agent had sent down a box of loaded shells. The weather was good enough to give the arm a fair showing, and so the fine product of the Syracuse shop took its place beside the cheap output of the Belgian factories, and the day's trial, instead of being at two cheap guns, became a trial as well of a crack American and a first-class English shotgun. Intending as he did to use the Greener only at long distances against duck, etc., the trial was made only at 60yds. with this weapon and with a box of cartridges taken from the

L. C. SMITH GUN, 12-GAUGE, RIGHT BARREL, 40YDS., 305 PELLETS.

stock in the Claremont cartridge closets. They were the largest sized shot in stock, and proved to be No. 7.

How well this L. C. Smith arm acquitted itself may be seen by a study of the annexed tabular record of its doings. It would seem that the wood powder with which the cartridges were loaded was not calculated to bring out the best effort of the gun. Certainly it is fair to assume that such a fine-appearing arm as this hammerless weapon was ought to have made a better percentage of results, while in penetration the falling off, especially at the long distance, was something out of the common. It was a good holding gun, as a glance at the following showing of each shot fired both for the aimed circle and the selected circle will show. In some instances any change of center intended to improve the pattern only served to reduce the count of pellets:

L. C. SMITH GUN—40YDS.

Av... 65	80	8	62	80	7

Subsequent trials are promised for Smith guns under conditions better calculated to bring out their merits. The defection in this case may perhaps best be explained by the fact that the cartridges were not adapted to the gun. They seemed to be in good order when analyzed, and how they weighed up the record will show. During the day a few shots were fired from the Smith gun with the cartridges remaining over from the test of the Greener 12-gauge sent over from England. Their showing in the American gun will be given in a later issue along with other comparative data.

The record of the Smith gun shows:

CLAREMONT, N. J., Sept. 19, 1889.

TEST MADE AT FOREST AND STREAM GUN-TESTING SCREEN.

Gun—L. C. Smith hammerless. Cost, $—. No. of gun, 22,251. Weight, 7⅞lbs. Length of barrels, 30in. Gauge, 12. Right barrel, full choke. Left barrel, full choke.
Weather—Clear. Direction of wind, 12 o'clock. Force of wind, 15 miles per hour. Thermometer, dry, 61°. Do., wet, 54°. Humidity, 63°. Barometer, 29.7in.
Charge, as given by holder of gun:

The Greener gun which was brought down for trial came on for trial when the 60yds. firing point was reached. It was a fine hammer, 10-gauge weapon, weighing 8 5/16lbs., with both of its 30in. barrels full choke. Its shop number was 24,494. The charges used in it were as stated of Chamberlin make, marked with 4drs. of Hazard and 1¼oz. Tatham's No. 7 Trap shot, in Club shells. They were quality C, and the catalogue load No. 354. When opened they were found to have a thin B. E. card wad over the shot, and a felt with a thin P. E. wad and a card over the powder. The analysis of three showed:

	1	2	3	Average.
Powder, weight	122grs.	122grs.	121grs.	122grs.
Shot "	595grs.	596grs.	597grs.	596grs.
" count	458 pel.	460 pel.	463 pel.	460 pel.

The record of the gun at the distance tested is shown in brief as follows:

WISCONSIN EXPORT LAW.—Albion, Wis., Sept. 30.—*Editor Forest and Stream:* In issue of Sept. 26, in Answers to Correspondents, you inform "B. A. J., Syracuse," that the shipping of ducks out of Wisconsin is not forbidden. Section 87, Chapter 374, Laws of 1887, is as follows: "It shall be unlawful to kill, take, wound or pursue, purchase or have in possession when so killed or taken, any of the birds or animals mentioned in the first six sections of this act [these sections include all our game birds and animals] with intent to export, carry or convey the same, or any part or portion of such bird or animal, beyond the boundaries of this State." Violation of above section is a misdemeanor punished by fine of not less than $5 and not exceeding $25, or by imprisonment in the county jail for not more than sixty days, or by both such fine and imprisonment.—A. A. BINGHAM, Deputy Game Warden.

Camp-Fire Flickerings.

"That reminds me."

281.

FOUR or five of us were in the pool at the Warm Springs, Virginia, bathing, several weeks ago, when the following was told by a gentleman of electric light fame from Ohio: "We were driving along the road this afternoon to Jackson's River, when my attention was attracted to a pheasant on the roadside, just ahead of us, which seemed perfectly oblivious to our approach. On nearing him I determined he should be my meat if possible. I stopped the horse a few paces from him, and with whip in hand, jumped from the buggy, went toward him and struck at him with my whip. The lash caught him by the neck, and I managed to draw him to me, and in a short time he was lying lifeless in the bottom of the buggy." An old Southern from the same State, who was standing on the platform, and had been listening attentively leaned forward and said, "I know the reason he did not fly, it was because he had been used to the *Brush* all his life." NORFOLK.

282.

No doubt many others besides the writer have taken much pleasure in reading the chronicles of the exploits of the Kingfishers at Echo Lake, but there is one thing I think old Kingfisher owes the fraternity an apology for, and that is the frequent mention of Knots's catfish story without once giving the story. Mayhap he takes it for granted that every one has heard the tale. Now he is wrong, for the writer had not, and he has had especial advantages that many of the other readers of the FOREST AND STREAM have not enjoyed, having been afishing with old Knots several times, and also enjoyed many quiet chats with the charter members of the Kingfishers at various other times. Can it be that Jeems Mackerel imbibed so greatly of that pure, cold, crystal spring water, taken from that only spring, that the number of times that fish story was told were multiplied in his fertile brain? Can it be that after all old Knots did not relate the tale at all? However, for the benefit of the man that did not get there, through no fault of his, and the many who did not expect to get there, it may not be amiss to tell the catfish story, and as Jeems Mackerel does not seem to be inclined that way, the writer will give the tale as written him by particular request, by old Knots himself:

An old darky fishing on a warm day had caught quite a large catfish, which he laid aside on the bank; rebaiting his hook for another bite. Not meeting with immediate success he presently fell asleep. Another darky came along with a much smaller catfish, and observing that his brother of the rod was sound asleep, he quietly exchanged fish and wended his way stealthily from the scene. When darky No. 1 awakened, and looked about him for his catfish, he espied the little one where he had deposited the big fellow, and with horror depicted on his sable countenance exclaimed, "Gor a mity! how dat fish am shrunk!" P. D.

DETROIT, Mich.

Sea and River Fishing.

ON THE BAY.

ALONG the prow the tender wavelets lapping,
Sang of content through all the dreamy day;
And softly hung the autumn hazes, wrapping
The low blue hills that bounded Sodus Bay.

My silver hook in gleaming spirals whirling,
Like a lost sunbeam chased me on my way,
While from my pipe the pale clouds softly curling,
Join the faint mist enfolding bluff and bay.

My shining oar blades in the sunlight dripping,
Shed opal dews like drops of bright Tokay;
And now and then a darting swallow dipping,
Grazed his swift shadow in the dimpled bay.

A thrill, a shock, a rush at sudden angles;
A gleam of broken circles far away;
Alas! a fractured pipe, a line in tangles,
But one less spotted beauty in the bay.

"Content, content," the lapping wavelets whisper;
"What more hath life?" their rhythmic murmurs say.
Aye me, what more? Yet in reproachful answer
Come gleams of towered cities far away—

Come sweet blue eyes, a sudden longing bringing.
Content? Ah yes, were she but here to-day
To hold the line and join me softly singing,
While twilight faded down our sky and bay.

M. M. CASS, JR.

MINNOW BAIT.—Some weeks ago you printed some of my notes on the care of live bait. Perhaps I should have said that when the temperature of the atmosphere is higher than that of the water from which the live bait is taken, the more air forced into the minnow pail, the more ice must be put into the pail. For the atmosphere of 80° is a heater of the water which is about 66°, and must be kept with the ice at a uniform temperature of 66° or the minnows will die. I find it better when in a boat angling on a hot day to change the water rather than force in too much hot air.—J. W. T.

THE STREAMS OF ALASKA.

SITKA, Alaska, Sept. 12.—I have spent a year now in southeastern Alaska, which in that designation embraces the narrow belt and the adjacent archipelago, extending from the Portland Canal, which separates Alaska from British Columbia on the south, to Mt. St. Elias. In that period I have made considerable study of the fish of these waters, both salt and fresh; and as I receive many letters from my sporting friends in the States regarding the opportunities for such amusement here, some of my observations and experiences may interest others.

It is becoming quite generally known that few of the fresh-water streams of southeastern Alaska extend far into the interior. All of them, both on the mainland and in the numerous islands off the coast, originate only a few miles from the shores of the bays and inlets in the melting glaciers and snows which fill the cañons and clothe the high mountains in winter and throughout a great part of the summer. These streams, which seldom contain a greater volume of water than an ordinary mill stream, reach the sea in a succession of cascades, some of them with a fall of 100ft., but the most of them not more than 30ft., the last of the series generally not more than a few rods from the beach. The streams are so walled in with rock that it is impossible, in most instances, to go above these falls, though in the case of half a dozen of them, which our party explored, we succeeded in getting two miles from the point where they entered the sea. Where there is any margin to the stream the ground is covered with an almost impenetrable jungle composed of thickets of alder, salmonberry bushes, and a sort of a stinging cactus called the devil's club. Here and there in this jungle stand giant spruce, fir and yellow cedar trees, and occasionally a slender silver birch.

In the upper pools, at the foot of the cascades, are thousands of small mountain trout. Few of them are more than six inches long. They are almost black in color and have a few brownish spots on their sides. They never take the fly, and utterly refuse to pay any attention to it, but readily take the hook when baited with salmon roe, or small pieces of fresh venison, or halibut. They are not gamy in the slightest degree, and when once hooked lie still until dragged out of the water and are disengaged. The average length is about four inches, and I have known local fishermen to take two hundred in a single pool of an area of an eighth of an acre in three hours' fishing. When cooked as a pan fish, to a crisp, they have quite a good flavor, but are somewhat disappointing in that respect.

The only zest there is in this kind of fishing here is in overcoming the difficulties of getting up to the pools where the trout congregate. The extreme danger in climbing along the faces of rocks almost perpendicular, in the attempt to get above the falls, with the constant peril of missing one's foot-hold and being hurled against the dashing and roaring water, and being thrown fifty feet into an icy cold pool of unknown depth, are some of the sources of excitement in making the attempt to capture mountain trout in Alaska. It requires abundance of nerve to attempt it, and no "tenderfoot," whose experience in trout fishing has been confined to whipping meadow streams and brooks in the States, should try it, unless, at considerable hazard, he is resolved to acquire a new and an exciting experience.

The salmon trout, another sportsman's fresh-water fish, are beginning to ascend these streams from the bays and inlets in great numbers. They find their first resting places in the pools at the foot of the falls nearest the sea. As they are now taken from the streams they resemble the common brook trout of the States in shape, their sides are of a silver color, while the back and part way down the side is of a very light green. When first taken from the water faint green and brown spots ⅛in. in diameter are observable on the sides, but these almost totally disappear in a few hours. The latter part of May the salmon trout appeared in the deeper places in the sea, near the beach, and within a mile of the mouths of the fresh-water streams. For several weeks while they were in this position the natives, the Russians, and others either went out in canoes or walked into the water to the depth almost of the highest rubber boot tops and fished for salmon trout with hook and line. At first the bait used was a small slender fish called the "needle" or "sandfish," which is caught in great numbers in the sands on the beach when the tide goes out. After a few days this bait ceased to be tempting to the salmon trout. About the middle of June salmon begin to make their appearance in small schools among the inlets and are captured with seines, the fresh roe being used for bait for salmon trout fishing. At the same time the latter fish begin to ascend the streams to the first pools. The first run of salmon trout is of very small fish, the longest of them not being more than a foot long. Neither have they any gamy qualities, and they utterly refuse to take the most skillfully thrown fly, but jump voraciously at a hook baited with either salmon roe, pieces of halibut or bait prepared by cutting salmon trout themselves.

In July three of us visited one of these large streams southeast of Sitka about six miles, going in a boat. The first falls, about forty feet in height, had once been utilized by the Russian-American Company to drive a saw mill, which has now nearly all disappeared. The pool below the old dam and waterfall has an area of about the sixteenth of an acre. It is very deep, and simply a boiling, foaming caldron. The roar of the water can be heard for more than a mile. The foot of the fall is less than forty rods from where the tide enters the mouth of the stream. On the north side of the pool a perpendicular rock a thousand feet high rises out of the water. On the south side the remains of an old flume, over the few planks of which a torrent of water rushes at a fearful rate, is the only place where there is access to the pool to fish. Perched on one of the high logs thirty feet above the surface of the pool, with this torrent over the flume at our backs, we sat for five hours, afraid to move, lest by losing our balance one of us would be carried off by the rush of water immediately behind us, or dashed into the pool beneath. It was an intensely exciting position to be in; but the fishing was of vastly more interest. In five hours' fishing we took from that pool 283 salmon trout, averaging 8in. in length. The day before our visit to that stream a naval officer and his companion took 205 salmon trout from the same pool.

Later in July, when the larger of the salmon trout were beginning to ascend the streams, I went with a party of Indians to Katalanskie Bay, fourteen miles around the northeastern side of this island, Basanoff, to quite a large river which enters the head of the bay. Fifteen days of clear, warm weather had melted the snows, and began to make some impression upon the glaciers among the mountains which constitute the interior of the island, and the snow and icewater were flowing in great torrents, so wildly and swiftly that it was impossible to ford the stream at any point for two miles from its mouth. The water which at ordinary stages is as clear as crystal, was almost the color of milk. The Indians caught a dozen of salmon trout, each weighing about a pound, in a small pool half a mile from the mouth of the river, but the water was too turbulent and murky to induce many of the fish to ascend in great numbers. In coming out of the bay, in a canoe, we found them congregated in large schools about the mouth of the stream, in sea water, awaiting the subsidence of the stream to go to their old haunts miles above. August is the favorite month for the taking of these large salmon trout in this and other similar streams along this coast.

As we were coming out of the bay we encountered a school of more than one hundred porpoises chasing and feeding on the salmon and salmon trout, off the mouths of the fresh-water streams, where they lie in deep water waiting the proper moment to ascend and spawn. Hundreds of thousands of salmon and salmon trout are destroyed every year by the three or four large schools of porpoises which have their haunts at the upper and lower ends of Sitka Bay. The same is true of points all along this coast. When the porpoises start out to feed they move in quite a straight line stretching across the bay, with the salmon, the salmon trout or the great herring school before them. Their appearance as they leap out of the water and then sink again out of sight, to reappear a few rods further on, is that of being at play, but in fact is the most serious business of their lives—getting food. In their dash under water they never miss their prey, and thus devour several tons of their victims in an evening meal, and traversing several miles of water before their appetites are satisfied.

I had intended speaking of some of the sea fishing in these waters with hook and line, but I find that I have taken up so much space already that I must desist. There is no fresh-water fishing in southeastern Alaska with hook and line, except for mountain trout and salmon trout. It is impossible to capture salmon by that means. The streams are too wild, short and rapid to become the habitat of any other fish which resort to fresh water, or which live in it, than the mountain trout and the salmon trout, which I have named. J. H. K.

BLACK BASS IN MAINE.

I HAVE just returned from my vacation in Mount Vernon, Maine. This beautifully situated village is upon the shores of two ponds. One of these is among the finest ponds of the State famous for lakes and streams. It has rocky shores, deep, clear water, shoals, and a great amount of food for the larger fish. Not many years since it was as well stocked with speckled trout as now are the lakes on the northern border of the Pine Tree State. Even now in the springtime it supplies yearly some of the "speckled beauties," as do all of the many clear water ponds in this vicinity. This pond we began to stock with black bass about seven or eight years ago. Now it is fairly well stocked, much to the satisfaction of the people in the vicinity.

The other pond of the village I think is not of a character to be the home of black bass, though it has many pickerel. Just above this Mill Pond is Flying Pond, a large sheet of water dotted with many islands. It was once the favorite home of large trout, only a few now remain to tell the tale. But black bass are fast repopulating their haunts.

Two or three miles from here is the well known Parker's Pond. For more than half a century I have admired it as a resort of legions of pickerel and white perch. Hundreds of barrels of pickerel from this pond have been sent to the Boston market in years past. The ever active Fish and Game Commissioners last spring caused thousands of landlocked salmon fry to be put into these waters. In good time they will be heard from.

If we go down stream from the village two miles we come to Crotched Pond, and a little below the series of Wayne Ponds. This line of ponds, I am told, have large numbers of pickerel and white perch. Indeed when a boy I took fish from nearly all these ponds, and then they were homes of very large trout.

Maranacook Lake is at the head of another line of lakes, all now well filled with black bass, pickerel and I think all have the favorite white perch. Certainly some of the Winthrop and Monmouth ponds have. Maranacook has become a great resort for taking the black bass, and with its elegant accommodations, row, sail and steamboats, I fear is giving the fish the worst of it. Not far east of Maranacook is deservedly, perhaps, the favorite lake for black bass in my native State. I refer to Cobbosseconttee. It is large, has many islands, points, rocky shores and bottoms, and clear water, with plenty of food for black bass. It was stocked about twenty years ago, and has some "old settlers" to delight the enthusiastic angler for this prince of gamy fish. I have never fished here, but in August I visited its shores and saw a fine village of cottages on its banks built by devotees of the dusky finny tribe, and these devotees are from the large cities of New England.

Another cluster of lakelets has in its number "The Great Pond" of Belgrade and is also in Kennebec. Nature stocked it with pickerel, trout and white perch, and many years since man stocked it with black bass and landlocked salmon. Thousands angle there every season with great success.

Not far from this, with its east shore in Belgrade and its west in Mt. Vernon, is Long Pond. Nature was as generous to this as to its larger neighbor, while man added only the black bass. The conditions of this almost spring-like cool, clear water are most propitious for the Trojan fish, and here he has flourished for about fifteen years. His reputation for fighting and for flavor have drawn large numbers of sportsmen from different sections of the State and many large cities elsewhere. This now is my favorite angling place. Here I met from day to day in August and early in September representatives from some of the largest mercantile houses in Boston and other cities. Are the fish gamy? Just like a black bass, full of intelligent fight. Are they good for the table? When from these sparkling waters they have no superior among fresh-water fish, unless salmon or trout. Are they popular as a game fish? Five or eight years ago they were not; those having caught trout and pickerel for years got their tackle smashed and could not catch them, and with an emphasis said "sour grapes!" To-day the young men of the present generation think it the supreme point of angling. Are they liked upon the table? Five or eight years ago they did not know how to cook them and the natives sighed for the white perch, their sweetest morsel. To-day they know how to cook them, and the multitude cannot tell which is black bass and which perch when placed upon the same plate and taken from the same pool. But as I have indicated scores of fishermen are on these waters each suitable day, and as on the northern lakes of Maine rowboats, canoes and sailboats are on every shoal and reef and by every island seeking this fish. For next year a steamboat is threatened. And unless the Commissioners call a halt it is likely these grand resorts of the black bass will become abattoirs as have been the trout lakes. I have not forgotten what I have said in the past in praise of trout when enjoying him on the artificial fly or on the table. I deplore the destruction of the trout, yet since his glory has departed I join with two men I met on Long Pond (one from Connecticut and one from Boston) in saying it is a world better for me to take a 3-pound black bass with a minnow (and we take many larger ones) than a dozen 6in. trout on a fly. These two men have recently come from the trout regions of northern Maine.

My wish is that the good days of trout fishing may be restored, and that bass may still be increased, and that both these fish may in the future be sources of joy to sportsmen and of revenue to the good old Pine Tree State.

J. W. T.

BOSTON, Sept. 28.

A MONTANA BIG ONE.

I HAD been told that there were trout in Big Spring Creek "that long" (indicating something less than a yard), and so, having no fish line, I twisted a formidable cable of black linen thread, and for some hours I patiently waded the icy stream, and tried to convince the fish that my ponderous tackle was not so bad as it looked; still, they wouldn't even consider the matter. I had my doubts as to there being any fish there after all, but I threw a grasshopper on the surface of the current, and as I watched it drift down over a deep green pool under a ledge of rock, an enormous trout rose majestically, much as I have seen porpoises roll, and gathered in the grasshopper, thereby putting an end to my doubts at once.

Well, thinks I to myself, that's a little the biggest trout I ever saw or heard of, and I must certainly make another effort. So with many misgivings I set about twisting another line of white thread, when suddenly it occurred to me that if I could make him jump like that again, so coolly and easily, I would have time enough to put a rifle bullet mighty close to him before he could settle back to the safety of deep waters. Shooting trout on the rise, too, would certainly be original if not exactly lawful.

So I threw away the thread and hooks, and taking my rifle along, caught another grasshopper. This I threw just as I had thrown the other, and the moment it struck the water I sighted it and followed it along as it drifted over the same pool. As before, there was a gleam of scarlet and olive-green, the hopper was gone, and before I knew it I had discharged the rifle into the mighty swirl. No results at first, and I thought what a fool I was to suppose I could shoot a jumping fish with a rifle; but presently a huge pink belly made its appearance, coming to the surface, and there floated my fish, larger even than he had appeared before. I rushed in on a shallow riffle and seized him as he came floating down. Oh! such a beauty, and not a bruise on him; he must have been entirely under water before the bullet got there, but he had received such a shock that he hardly moved after it. I had no means of weighing him, but his length was 20½in.

DEERFIELD, Montana. IPSARRAKA.

GENTLE ANGLERS.—Some young ladies, friends of mine, went camping this summer, that is, they stopped for a couple of weeks in a cottage five miles from civilization. One day when they were out fishing they were in luck to the extent of a gigantic bullpout. They started for the cottage with their hearts set on fried bull pout for breakfast next morning. Then the question of dressing his bullpoutship arose. Of course, dressing him before he was dead was out of the question, so after pounding him on the head some little time with a stick with no other effect than causing him to flop most viciously, they held a council of war. They decided to stab him. The most hard-hearted girl in the crowd now stepped to the front provided with the sharpest knife in camp. She put the point to the victim's throat—the bullpout flopped. Her maidenly heart failed her, the murderous weapon dropped from her nerveless grasp, and the bullpout was saved. After the scheme of putting him on ice and freezing him to death had been suggested, and brought to a termination by the discovery that there was no ice in the chest, it was resolved that the bullpout should be put in a bucket of water, and in the morning turned loose in the lake.—DARBY (Brockton, Mass.).

HICKORY SHAD FISHING AT PROVIDENCE.—Providence, R. I., Oct. 1.—We have had sport for two weeks with the "skipjacks" and hickory shad. There were about thirty fishermen on Red Bridge last Sunday, and they caught over 120 shad. It is great sport. The shad weigh from 1 to 3lbs. and are caught in the swift current under the drawbridge. Probably three fish are lost to every one caught, as their mouths are so tender that a hook will often tear out from the weight of the fish alone. They are being caught nearly every tide now. The menhaden are schooling here in the river almost in the center of the city. Fly rods and live bait are mostly used for shad. —H. B. SOULE.

OSAKIS, Minn., Oct. 4.—Messrs. J. D. Knight, John McManigal and D. R. Sizer of Lincoln, Neb., have been fishing in the lakes near here for the last four days, during which time they have taken 156 black bass, ranging in weight from 2 to 4½lbs. They shipped home 300lbs. yesterday, besides having supplied their table ever since they came. Other parties who are fishing here are equally successful.—G. O. SHIELDS.

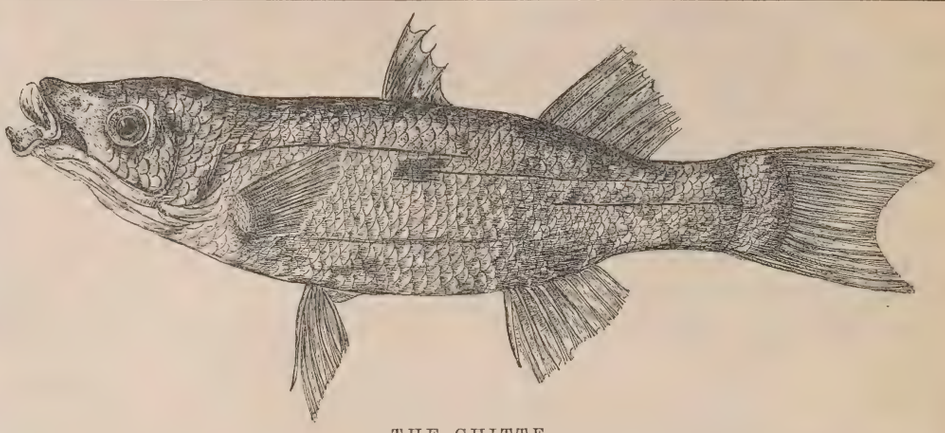
CHITTE* FISHING IN MAURITIUS.

Editor Forest and Stream:

Doubtless both you and your readers are well up in the art of catching the finny tribes from a shark to a trout, yet I think I have had experience with one species of game fish which perhaps no other one of your readers has ever brought to grass. During my long residence in Mauritius, that little island in the Indian Ocean, so famed from early times for its icthyological treasures, I had opportunities of being in at the death of most of the game fish of both the salt and fresh waters of the region.

Mauritius has many small rivers emptying into the sea, and some of these contain fine fish, among them are two species of *Agonostoma* (Nestis) the *A. telfairi*, and the *A. dobuloides* of Gunther. The former is native in Mauritius and the Comoro Islands, but the latter is indigenous to the one island only. The two fish look somewhat alike, but the *dobuloides* has thick lips, and a spine more in the anal fin. Its habits are similar to those of our trout, and it is one of the quickest fish known in its movements, requiring great skill to hook and land it safely. Some of these rivers run through the large sugar plantations, and the Black River is especially noted for its chitte. These fish are preserved by the proprietors of the estates, and no one is allowed to take them except at certain seasons of the year, prescribed by law, and then only by permission of the owner.

Once a year parties of ten or twelve gentlemen are invited for a week's fishing, and these piscatorial receptions are always looked forward to with pleasure by the disciples of Izaak Walton. A day is fixed for the gathering and the rendezvous announced. Few but expert fishermen are invited, for if a man cannot handle his rod and reel adroitly and cast his fly in the exact spot every time, he had better stay at home, as he will not capture a fish. In many places the banks of the river are shaded by overhanging branches, under which the fish are fond of lying in wait for any unwary fly that touches the water. Now an old hand with the rod will bring out a chitte every time from just such a place where a novice would only entangle his line and scare the fish.



I was many times invited to these parties, and always accepted, and I can truly say that the times I have passed with the sportsmen I met at these gatherings were among the pleasantest of my life. We had English officers and French gentlemen of leisure, all men of cultivated tastes and delightful companions, and bent on having a good time. The meeting generally takes place soon after daylight, as the early morning is considered the best time to fish. We assembled usually down stream, it being regarded as more sportsmanlike, and requiring more skill to fish up stream, especially where the current is rapid, with numerous cascades. Our *haugar*, or permanent rendezvous for the week, was some miles from our starting point, and there we were to eat, relate the incidents of the day and sleep as best we might, and thither our traps were forwarded on the heads of coolie servants.

When our work fairly began, some of us took to the shallow stream and others to the banks of the tributaries, where deep holes and cascades were numerous. My companion was a jolly Scotchman and expert with rod and reel, and he and I took to the water together, cautiously casting our lines into every cascade and over the deep holes. The second cast my friend made he captured a fish weighing 1½lbs. It requires great skill to hold your fish after he has taken the fly, for his jaws are very tender, and he is much more active than a trout. He darts about with great force and energy to free himself, and to reel quickly would be disastrous. You must give line and play with him sometimes for minutes till he is exhausted, when he is easily taken from the hook. I very soon found I was not casting my line properly; I did not cast far enough; but when I reached 50ft., if the cast was a good and clean one, without splashing when touching the water, I always captured my fish.

The chitte, like trout and other fish, is easily frightened, and great care must be observed in this respect. for if scared, he is off under the nearest boulder or hiding place under the bank, and you see him no more. We fished up stream for six or eight miles, and every careful cast of the line was successful.

At one spot we halted to light our pipes, and it was proposed that we should see who could cast the furthest when we resumed work. To my surprise the distance was nearly equal, our lines were cast side by side fully 55ft., striking the water together, and, still more singular, each hook soon had a fish attached, and a beauty, too. We went on up stream, fishing as we felt inclined, till we had nearly reached the *haugar*, and the sun was high in the heavens. By this time the fish were shy and scarce, but as we had nearly 30lbs. between us, we felt satisfied with our morning's work. When the sun grows hot the chitte hides away and refuses the most tempting bait. He dives into deep, shady holes, and under the banks of the stream. Near the *haugar* was a very deep hole by the side of an immense boulder, and it was full of fish that had left the sunny stream for their noontide rest. We tried for an hour, but could not induce one to rise; but the experience and practice I gained in casting repaid me for the trouble, and we reeled up, and proceeded to our home for the ensuing week.

Some of our party had preceded us, and their catch was already in the hands of a French cook when we arrived at the *haugar*, and better still, we found a huge bowl of champagne punch resting in a block of ice. Strange as it may seem, ice is now extensively made in Mauritius by a French process, and our good host had sent some over in a mule cart, for which we were duly thankful. While waiting for our breakfast and resting after our labors, a Creole asked permission to show us how his people caught chitte when they would not take the fly. Our curiosity was aroused, for we did not think it possible for such an active fish to be captured without hook, line or net. One of the most expert men was chosen, and he soon stripped, and having procured a large pole was fully equipped for work. Placing one end of the pole on the bottom of a pool, while two men held the other end from the top of a boulder, under which the hole was nearly ten feet deep, he then placed a split bamboo over his nose and down he went hand over hand on the pole. When well down he drove the fish under the boulder, and actually caught them with his hands in the crevices where they had sought shelter. As he caught one he killed it by a nip with his teeth, and it was certainly a most successful but very unsportsmanlike way of fishing. We forebade any further work of the kind, and our host gave them warning of dire consequences should they be found poaching.

THE CHITTE.

Our appetites were well sharpened by the time our *chef* announced breakfast, and we were greatly surprised to find that a sumptuous repast of native and imported delicacies awaited us, with the choicest wines of France and Germany at command. Most noticeable were the dishes of chitte cooked in various ways. My beau-ideal of a pan fish had always been a fresh, well-cooked English sole, but when I tasted the chitte I awarded it the palm before any fish I am acquainted with. As the sole is a salt-water fish, perhaps the comparison is not fair, but I do not hesitate to aver that the chitte is superior to our trout. Both alike must be cooked as soon as caught to be perfection, as they soon soften, but when taken from a cold mountain stream both are delicious eating. I say the chitte is superior from its peculiar flavor, and I have heard the question discussed by Scotch and English sportsmen, and they usually gave the chitte the preference.

After our sumptuous repast was over I was curious to know how the fish I had eaten were cooked. M. Jean Louis, our *chef*, informed me of several ways of serving them, but the one I liked best was as follows: After the fish was cleaned it was carefully wrapped in white paper with a strip of bacon, and broiled to a turn, over a quick fire. I heard many encomiums on the fish, but certainly did not expect my Scotch friend to pronounce so emphatically that "it beat Sprey trout."

Our *haugar* was a building about 20ft. square, one story, open at the sides, with two long tables in the middle which were used as dining tables by day and served for the "downy" couch of the poor tired fishermen at night. The situation was most romantic, as it was in a grand gorge of the Black River Mountains. The valley we were in was once a living, very active crater, but the revolutions of ages have partially filled it up with detached rocks and debris. When not inclined for fishing, we were tempted to ramble through the lovely scenery. We were not far from some giant cascades, and nature had covered every rocky ridge with a vesture of luxuriant vegetation. Ferns, orchids and other varieties dear to the botanist, were to be had for the hunting, so little of our time was unoccupied. Near by was a coffee plantation, in full bloom, filling the air with fragrance, and as the proprietor had planted rows of lime trees to screen the delicate plants from the prevailing winds, we had abundance of this most refreshing fruit. There were tall trees in our neighborhood, inhabited by a small species of monkey, so disgusted that their haunts should be invaded by the footsteps of man, that we were often startled by what we took to be shrieks of defiance. At night our slumbers were at times disturbed by the peculiar cries of the flying foxes (*Pteropus edulis*), which resemble the yelp of a lap dog. We killed one that measured 3ft. 4in. from tip to tip of his wings. He was soon converted into curry by our Creole servants, who preferred it to fish. After a week of unalloyed pleasure in this invigorating mountain air, with companions all we could wish, we returned, far better able to bear the discomforts of the heated city of Port Louis than when we left it.

NICHOLAS PIKE.

* Pronounced *sheat*.

THE WATERPROOF MYTH.—Most men believe that there exists a kind of leather which either is or may be made to be impermeable to water. Clad in these waterproof boots the sanguine man dreams that he would be able to stand for hours in a trout stream, or to walk miles over a road ankle-deep with mud, or even to get on or off a street railway car in winter and still keep his feet dry. From time to time he buys a pair of boots which he thinks are waterproof, and when he finds that they admit water almost as freely as if they were made of paper he always imputes the fact to some alleged oversight of the bootmaker in leaving a small hole through which the water enters, and his faith in the existence of waterproof boots remains unshaken. There are very many men, especially among those whose regard for veracity has been weakened by habitual fishing, who will claim to have owned at some remote period a pair of waterproof boots. A man of this kind is not infrequently heard to say, "I had a pair of boots about ten years ago that you couldn't wet through. Why! I've stood for six or eight hours up to the tops of these boots in water and never had a drop come through them." It is a curious fact that assertions of this kind, if examined, are uniformly found to be wholly false. The tendency to make them, while almost invariably found among fishermen, is not confined exclusively to that class, and it is not easily explicable by experts in ethics. It is, perhaps, worth noticing that the story is always the same. The teller never claims to have owned more than one pair of waterproof boots, and he never takes the trouble to explain why he has not always bought boots of the same quality and from the same maker. He must know that scarcely any one believes his marvelous tale, and yet some strange impulse urges him on to repeat it, and so blacken his soul with useless and aimless perjury.—*Funny Man of the New York Times.*

GALVESTON, Tex., Sept. 24.—*Editor Forest and Stream:* Fishing in the Gulf waters here is excellent at this season of the year. Large catches of sheepshead, Spanish mackerel, channel bass and sea trout especially, are being made, and red snapper and grouper can be had on the banks, a few miles out, by any who see fit to go after them. The great silver king, the tarpon, is also plentiful in Galveston Bay, though, so far as I can learn, no one has ever taken one here on a rod and reel or even attempted to do so. Lines are often lost to them, however, by persons angling for the smaller species, and the market fishermen occasionally get them in their nets. The uninitiated have a good deal of fun with the tarpon in these waters by baiting shark tackle with live mullet, attaching it to a cask and setting it afloat. Sometimes a number of these floats are put out at once and it is said to be no uncommon thing to see three or four of them sailing round the bay at once. A boat follows them up and when the tarpon or shark, as the case may be, tires himself out he is hauled up to the boat by main force and slaughtered. The tarpon will, no doubt, soon be proceeded against by some of our Western and Southwestern sportsmen, for this point is nearer to many of them than the Florida ports which have heretofore been the field for this class of sport. I sorely regret that I did not bring my tackle with me and devote a day or two to the tarpon while here, but shall see them later.—G. O. SHIELDS.

PUMPKIN SEEDS.—The Washington *Post* pokes a bit of fun in this wise: "A private letter from Peoria, Ill., informs us that Mr. Eugene Baldwin, the gifted editor of the *Journal*, while fishing in Spoon River recently, caught forty eight pumpkin seeds in less than thirty minutes. We deem it to be our patriotic duty to inform the esteemed Secretary of Agriculture of this wonderful catch. We know very little about pumpkins, but we should think that a river which yields this remarkable number of seeds might be cultivated with profit. We leave the matter in Secretary Rusk's hands, quite assured that he will know what action is wisest to take in the matter." "Pumpkin seeds" are to be found in large numbers in most of our eastern rivers and ponds. They are the small boy's delight, and have proved a source of enjoyment for years to the older boys as well as the younger. Drs. Gill, Jordan and Gilbert and other writers tell us that the pumpkin seeds found in the waters build nests which they defend with great courage, and that they are carnivorous, voracious, gamy, and are valued as food.

A CHANNEL BASS AT FIRE ISLAND.—New York, Oct. 7.—One of our customers, and in fact a personal friend of mine, Mr. H. C. Wilson, of 28 Beekman street, and an enthusiastic angler, was fishing Saturday for bluefish outside of Fire Island with a light bait-rod and about 150yds. of our No. 9 Cuttyhunk line, when he struck a very heavy fish. The catboat was pitching heavily and it was quite a task to play the fish; in fact part of the time he had to be held from falling overboard. After a stubborn fight of three-quarters of an hour he managed to get him near enough to the boat to see that it was a large channel bass, or spot, a stray wanderer from the south. Not having a landing net or gaff, it was a difficult matter to land him, but Capt. Phelps, by lying at full length on the deck, managed to get his hands in the gills, and with the assistance of all hands lifted him into the boat. It was in fine condition and weighed 35¼lbs. Mr. Wilson says the fish attracted a great crowd when he got back to the hotel, and he felt that he had a very exciting time.—W. HOLBERTON.

THE FISHERMAN'S JUG.—"G. A. L." sends us a copy of the child's paper *Little Helpers*, which is published by the Women's Baptist Foreign Missionary Society at Boston. It has a very pretty little story of a New Jersey Sunday school's "missionary jug," which was decoratad with a speckled trout rising to a fly; and was left for the season at Edington Park, in the Adirondacks, where visiting anglers were invited to drop into it their contributions. The jug took in $58 the first season, and was bid off by one of the fishermen for $10.25; the second year it took in $100 and was again sold, this time for $100 the total earned being $268.25. It is needless to add that the New Jersey Sunday school scholars have an exalted opinion of Adirondack fishermen.

A LARGE LAFAYETTE FISH.—New York, Oct. 1.—I found a few days ago at my fishmonger's a Lafayette fish of such extraordinary size that I think it worthy of record. I neglected to have it weighed before it was cleaned, but the next morning the weight, dressed, was 13oz., so that the fish when whole and fresh from the water must have weighed very nearly, if not quite, a pound. Prof. Baird, as quoted in Goode's "American Fishes," says "the usual size in New Jersey is about 6in., although occasionally measuring 10in." I have never caught any larger than 7in., nor do I remember seeing any in the markets longer than that. These nice little fish have been very scarce this season in New York.—E. TITUS, JR.

ATHENS, Pa., Oct. 2.—*Editor Forest and Stream:* Yesterday Chief of Police Bennet of this place arrested John L. Russell, C. F. Hiney and Wayne Towner, of Athens, and brought them before Justice Lamberson, charged with taking fish with fyke-net attached to wings or walls. The net was set in "Hotaling riffs," about two miles above here on the Susquehanna River. They were released on bail to appear the 12th inst.—W. K. P.

Fisheulture.

MISSOURI FISH COMMISSION.

WE have before us the fifth biennial report of the Fish Commission of the State of Missouri for the year 1887-88. The present members of this Commission are: H. M. Garlichs, St. Joseph, Mo., chairman; Gen. J. L. Smith, Jefferson City, Mo.; Capt. H. C. West, St. Louis, Mo., and A. P. Campbell, St. Joseph, Mo., secretary.

The Commissioners report that they are gratified with the results obtained, and say, "We think we have not only made a good showing, but elegant results for the future supply in Missouri." The annual appropriation for the maintenance of this Commission is but $3,000, and the Commissioners complain that the uncertainty and backward appropriations work serious injury to future operations. They say it is their desire to expand the work, and to do so their ponds must be increased for breeding purposes. "We have now on hand in ponds spawning fish of the following variety: Bass, crappie, California trout and German carp enough to produce four times the number of fish we turned out last year, but the appropriation is wholly inadequate to make the fish industry a perfect success. To operate on a broader scale it requires more money than the appropriation for the past two years." The railroad companies, with one exception, have given free transportation for messengers and their tubs and cans, as well as for the State aquarium car. This car was built in 1885 at a cost of $2,000, and has been of great service in transporting fish to all parts of the State. It has a carrying capacity of from 10,000 to 25,000 young fish. The Commissioners ask for a larger appropriation. They say: "As we have an aquarium car, and had we ample means, we could supply all demands for native fish by seining the bayous and shoal ponds along our border rivers. These shoal places are formed by the filling up of the old river beds and small depressions during the spring freshets, and on the receding of the waters leave many spawners of different varieties imprisoned. These ponds are good breeding grounds, and the fall finds them alive with small fry that must surely perish before spring. Our sister State, Illinois, does a large amount of such work, and finds excellent results."

The State has a hatchery at St. Joseph. There is ten acres of ground here owned by the State. The ponds are fed by two springs and a large windmill. This establishment is superintended by Capt. Jas. W. Day. It is located within one-half mile of five lines of railroads, affording good facilities for shipping fish.

Forest Park Ponds, under the personal supervision of Capt. H. C. West, with Philip Kopplin, Jr., in charge of the ponds, has proven a success for the culture of crappie and carp.

With reference to carp and carp culture the Commissioners say: "There seems to be quite a difference of opinion as to the value of the carp as a food fish, even among those who have spent much time and money in their culture. We are of the opinion that we have fish of a better quality among our native fish in Missouri, but the rapid growth and apparent hardiness under conditions fatal to many of our natives, commend the carp to all people embarking in fishculture. With but few exceptions under our observations in our State they are raised in ponds of sluggish, impure water, and any person expecting to get fine-flavored, firm-fleshed fish from such waters will continue to be disappointed as to their edible qualities. Simply because they are of a hardy nature, and will thrive and multiply in such waters, it does not follow that such ponds are necessary for successful carp culture. The idea so prevalent throughout the country that carp can be raised in any sort of a pond is a mistaken one, and many people have been deluded by this notion, and have made application for and received the necessary supply of carp for a fair start in the business, deposited them in their supposed model ponds, never to gaze upon them again."

The crappie is mentioned as an elegant pan fish, and one that affords fine sport for the angler; 1,200 spawners were obtained from Lake Contrary and placed in the Forest Park Ponds, and from this stock young fish have been distributed to all parts of the State and there still remain thousands to distribute. It is the purpose of the Commission to propagate the crappie to as large an extent as possible.

The black bass is also receiving much attention. These, like the crappie, are obtained from Lake Contrary.

The California rainbow trout (*Salmo irideus*) has been planted in the Ozark Mountain region, where it is expected to thrive.

In reference to the use of dynamite in killing fishes the report states that the killing of fish by the use of dynamite is perhaps the most wanton destruction ever known. In the dry season, when the streams are but a succession of pools, malicious persons follow up and down the streams exploding dynamite cartridgss in the deep pools, killing everything. The fish of a marketable size are used, while the myriads of young fish are left to decay upon the banks. Illegal seining also causes much destruction among the fishes of the State. More stringent laws are asked for, calling for heavier punishment, especially in the case of the dynamiters.

An annual appropriation of $5,000 is asked for, besides an appropriation of $1,000 to repair the aquarium car and erect a building to protect it from the weather. A table is given showing the number of ponds and streams stocked in the State to date. Number of ponds stocked with carp previous to 1887, 4,117, and during 1887-8, 701 additional ponds were stocked with this species. The total number of carp distributed to public and private waters is 595,785. Number of black bass and crappie planted in public and private waters to date, 273,957; of this number 133,836 were distributed to public waters during 1887-8, and 14,005 to private ponds during the same year. The number of California trout planted previous to 1887 was 51,400, and during 1887-8 there were 10,000 distributed. These were planted in public waters.

The Commissioners having received numerous letters asking for information concerning methods of fishculture, how to construct ponds, etc., have appended as a part of their report a revised edition of "Carp and Carp Culture in Missouri," with appendix on native fish. This treatise upon the carp was prepared by Dr. I. G. W. Steedman, of St. Louis. It covers 57 pages, and is of much value to those about to undertake the raising of carp.

TROUT IN NEBRASKA.—Considerable numbers of brook and California trout have been taken in Long Pine Creek, Shadron Creek, and various other streams of Nebraska during the season of 1889. Trout seem to find suitable conditions in this State as, from reports, they are increasing in numbers very fast, and brook trout (*S. fontinalis*) are found weighing over 2lbs. each. We saw a specimen last winter, which measured 17in., and weighed a trifle over 2lbs. This fish was sent on by Mr. W. L. May, fish commissioner, and was a genuine brook trout. The trout, both species, were introduced into Nebraska several years ago, and were raised from the eggs in the State hatcheries, the eggs being obtained from the U. S. Fish Commission. At present the State has a large number of stock fish, or breeders, and thousands of trout fry are distributed each year. At the time of the commencement of this work Mr. M. E. O'Brien, superintendent of fish hatcheries, Nebraska, said, "If the trout streams of Nebraska are stocked as they should be it would not be long until there would be as good trout fishing in Nebraska waters as there is now in many of the older States." It would now seem that this has been accomplished, and that the brook trout is finding suitable conditions for thriving in Nebraska cannot be disputed.

The Kennel.

FIXTURES.

DOG SHOWS.

Oct. 8 to 12.—Eighth Annual Dog Show of the Danbury Agricultural Society, at Danbury, Conn. B. C. Lynes, Secretary. Entries close Sept. 28.

Nov. 14 to 16.—First Dog Show of the Continental Kennel Club, at Denver, Col. Claude King, Secretary.

Jan. 13 to 18, 1890.—First Annual Dog Show of the Georgia Pet Stock and Bench Show Association, at Augusta, Ga. A. H. Vonderleith, Secretary.

Jan. 27 to Feb. 1, 1890.—Dog Show of the Colorado Poultry and Pet Stock Association, at Denver, Col.

Feb. 18 to 21, 1890.—Fourteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.

March 11 to 14, 1890.—Second Annual Dog Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

March 25 to 28, 1890.—Second Annual Dog Show of the Mass. Kennel Club, Lynn, Mass. D. A. Williams, Secretary.

April 1 to 4, 1890.—Sixth Annual Dog Show of the New England Kennel Club, at Boston, Mass. J. W. Newman, Secretary.

April 15 to 18, 1890.—Second Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Secretary.

FIELD TRIALS.

Nov. 4.—Third Annual Field Trials of the Indiana Kennel Club. P. T. Madison, Secretary, Indianapolis, Ind.

Nov. 11.—Inaugural Field Trials of the Canadian Kennel Club, at Chatham, Ont. C. A. Stone, Secretary, London, Ont.

Nov. 18.—Eleventh Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Saratoga Springs, N. Y.

Dec. 2.—Inaugural Field Trials of the Central Field Trial Club, at Lexington, N. C. C. H. Odell, Secretary, Mill's Building, New York, N. Y.

Dec. 16.—Second Annual Field Trials of the Southern Field Trial Club, at Amory, Miss. T. M. Brumby, Secretary, Marietta, Ga.

Jan. 20, 1890.—Seventh Annual Field Trials of the Pacific Coast Field Trial Club at Bakersfield, Cal. H. H. Briggs, Secretary, 313 Bush street, San Francisco, Cal.

Feb. 11, 1890.—Fourth Annual Field Trials of the Texas Field Trial Club, at Marshall, Tex. W. L. Thomas, Secretary.

COURSING.

Oct. 9 to 12.—Fall meet of the National Coursing Club at Hutchinson, Kan. M. E. Allison, Manager.

Oct. 24.—Annual Meet of the American Coursing Club, at Great Bend, Kan. F. K. Doan, Secretary, St. Louis, Mo.

AMERICAN GORDON SETTER CLUB.

EditorForest and Stream:

In your issue of Oct. 3 appears a communication signed by J. Whitaker, M.D., in which he pretends to criticise my open letter, dated two weeks previously. It seems to me that his criticisms are simply a wholesale apology for the shortcomings of the committee or clique who are now running the American Gordon Setter Club.

The first section of the Constitution of the club states its object to be to promote the breeding of Gordon setters, to develop and bring to perfection the natural high qualities of the same for field use. Now, this being the object, one would naturally think that the officers of the club should endeavor by all possible and proper means to impress the public generally, and the buyers of sporting dogs in particular, that the Gordon setter is the equal, if not the superior, of any other field dog. To do this it becomes necessary that the Gordon setter should enter into such competitions with dogs of other breeds as will fully demonstrate this; yet the president of our club has advised all owners of Gordon setters not to run their dogs in field trials as at present managed. This would impute to the field trials clubs either inability or dishonesty. Certainly this is a most inconsistent reason. The judges selected are men of ability, and the large number of entries is in itself an indorsement of the judges by owners generally. It is simply nonsense that Gordon setters will not receive justice at the hands of these gentlemen. I have made an entry and wish I had more dogs fit to run.

The fact that Mr. Malcolm has done all he could to discourage entries at field trials, I consider a sufficient reason, if none other existed, that a change of officers in the club would be beneficial. I am not alone in this opinion, a number of members fully agreeing with me, and as evidence that even St. Louis contributes her quota to the dissatisfied, the following extract from a letter received by me will show: "St. Louis, Sept. 29.—Your article of Sept. 21 meets my views; and I hereby authorize you to use my name in order to have the election of officers postponed for sixty days, so that all members may be consulted and have a chance to select officers who will do more for the Gordon setter than the present ones have done. I am not at all satisfied with the present management, etc." Thus you perceive that Dr. Whitaker, when he speaks for all the Gordon men of St. Louis as indorsing the faked ticket, evidently labors under a delusion. The doctor's communication throughout is one of apology as well as an indorsement of the president's action. If he is satisfied with the course pursued by the club, it is no reason why I should'nt take exception to it, especially as I am deeply interested in the future of the Gordon setters, and am willing to do my utmost to have them attain that degree of popularity to which their good field qualities entitle them.

Too much of your valuable space would be occupied were I to dissect the constitution and expose its irregularities. The probabilities are that it was gotten up hurriedly, and no attention has been paid to it since. A committee should be appointed to amend and revise it, then the officers and governing committee should be elected annually at a regular date. The last election took place in July, 1888. The meeting now called for an election of officers is fixed for Oct. 9, after a lapse of about fifteen months. This cannot be an annual election, and should it take place on the date mentioned would certainly be invalid, as the constitution makes no provision for it. Section 9 says that a general meeting of members shall take place at least once a year for the election of five members of the committee, yet in face of this provision we are sent a blank proxy with a list of nine names for the committee attached and asked to sign it for an election that should have taken place last July. Perhaps if this matter were carefully considered by the members of the club they might see that such a meeting as proposed by the star-chamber committee would be in violation of our constitution or fundamental law. It would be the best for all concerned to move in accordance with the constitution as it now exists. This would be best done by calling a meeting for the reconstruction of the constitution, that would correct the errors the club has fallen into, and we could then proceed in a legitimate way to the election of officers and other business.

In regard to secrecy, referred to in Dr. Whitaker's letter, there is a wide difference of opinion. Many will assert that the more publicity given the proceedings the better it will be for all concerned. The leading organization, the American Kennel Club, publishes everything that occurs monthly, and it seems proper to me that this should be done in our case also. Should all concerned in this matter get an opportunity to consult with each other and offer their suggestions, the probability is great that the conclusions arrived at would be for the best interests of all and it might succeed in uniting all the Gordon men to work as a unit to popularize their favorite breed. JOHN H. MEYER.

169 WEST THIRTY-FOURTH STREET, New York City.

COURSING NOTES.

CHICAGO, Ill., Oct. 1.—In a late visit to St. Louis, I found Mr. Frank K. Doan, secretary of the American Coursing Club, very busy in getting out illustrated matter for the October meet at Great Bend, Kas., and vowing he never, never would be secretary again. On this latter point I trust Mr. Doan to be misinformed, for he has been so efficient that the club can do no better than elect him again. Already there is proof of the good year's work in the show of hands of those who have said they will be present at the meet. Beyond doubt this will be the greatest affair of the kind ever seen in this country, and it will be well worth anybody's time to come out and see it. It is thought that nearly a car load of visitors will go on from St. Louis, and other points have promised a good attendance, including this city, although I can not get folks here to half understand me when I tell of the sport to be witnessed at these occasions. Now is the time for New York men and men all over the East to head West, and those who do will not be disappointed in what Great Bend has in store for them The meet is set to begin Oct. 24. That is rather too late, for the weather will be coolish, but not too much for a big crowd and a big time. There will probably be 4,000 people in line.

The dogs at this fall's meet will be the best ever seen there. Mr. Luse's Dick's Darling should run, and so should one of the Waterloo Kennels, Glendyne, and Dr. Royce's Handmaiden, a very good-looking little bitch. The Snow bitch from Louisville is to be on hand, and is thought exceptionally dangerous company. Mr. Burgess has promised to bring on his St. Louis winner, Spring, and Mr. Doan, allied with old Uncle Bobby Smart, of Ellinwood, is sure to have a blue honey or so which will make grief for somebody. Denver should send down Young Gold Dust and others, and Kansas and Nebraska will be on hand with a lot of sturdy and tough ones. Mr. H. C. Lowe is reported to have spent much care in fitting White Lips, last year's runner-up, and Mr. Allison can always go out into his kennel of a dark night and find a puppy that hasn't so much style about him, but someway will run disgustingly far down in the stakes. And lastly, when I was in Cincinnati I found the following in the *Commercial-Gazette*, of that city, in regard to another lot of dogs whose owners, Mr. Roger D. Williams, of Lexington, Ky., and Dr. Van Hummel, are well known to all who follow coursing, although not all may know them as joint owners of the Rookwood-Landseer Kennels.

"The Rookwood-Landseer Kennels of Lexington, Ky., last week purchased of Mr. M. Phister, of this city, one of his recently-imported English greyhounds, Peveril. This dog, a great prize winner in England and a courser of note, is built upon excellent speed lines, and great thing are expected of him by the Rookwood people. He will be sent to Colorado immediately to be trained by Dr. G. Van Hummel for the October annual meet of the American Coursing Club, at Great Bend, Kas. The price paid for Peveril was what is termed "fancy," and as the dog cost Mr. Phister a good round sum in England, it is safe to presume that he received dollars instead of cents in return. The Rookwood-Landseer Kennels have sent six coursers, four imported, to Colorado, to be trained for the event mentioned, Peveril now making the seventh dog and fifth imported flyer of the little band. As he has had great experience against the English hares, he will give the Western jack rabbits some work, with all their show of heels, if they elude him."

Five imported dogs in one lot isn't bad. There will be nearly a dozen imported ones in all. I hope Mr. Phister (who is dramatic editor on the *Commercial-Gazette*) will be able to come out and see his former property do up the field, or get done up, as the case may be. He can be assured a rousing time, and so can everybody.

Mr. Wm. Green, of Colorado, will judge at this meet. Then later follows at a distance of a little over a week the meet of the National Association at Hutchinson, Kan. This also will be a big affair, the best of the kind at inclosed coursing in this country, and it is to be hoped it will have a rattling good attendance. Mr. Allison's patient pluck and the hard work of his assistants deserve it. The National will give a good exhibition, and those that can visit Hutchinson and Great Bend both for this fall's meetings are among the truly fortunate of earth. E. HOUGH.

THE CANADIAN FIELD TRIALS.

Editor Forest and Stream:

The inaugural field trials of the Canadian Kennel Club will be held at Chatham, Ont., on Nov. 11 and succeeding days. Mr. John Davidson, of Monroe, Mich., has kindly consented to act as judge.

There will be an all-aged stake for setters and pointers for a purse of $135; $75 to first, $35 to second, $15 to third, and $10 for the best pointer.

The club has decided in addition to the above to allow all entries over 20 to be made into a sweepstakes and divide 50, 30, 20 per cent. The Dominion Cartridge Co. and the Hamilton Powder Co. have donated specials in the above stakes. The entrance is $5 to enter, $5 to fill. Besides the all-aged stakes there will be a derby for all setters and pointers whelped on and after Jan. 1, 1888, for a purse of $50; $25 to first, $15 to second, $10 to third. All entries over 10 to be divided in 50, 30, 20 per cent., $2.50 to enter, $2.50 to fill. These trials should draw largely both from Canada and the United States, as all the other field trials are held so far south tha it debars the majority from seeing as the distance is so great while Chatham is so centrally located, being only some 4 miles from Detroit, Mich., and 160 from Buffalo, N. Y. The best of accommodation can be had, and special arrangements have been made with the hotels and liveries.

Entries close Nov. 1. Rules and entry blanks can be had by applying to me. C. A. STONE, Secretary.

LONDON, Ont.

"THE 'STOCK-KEEPER' AND ITS ASSAILANTS."—*Editor Forest and Stream:* Permit me to correct one slight error in Mr. Krehl's article on the above subject, which I am sure was an oversight of his. Mr. Krehl says it was the design of him and his coadjutors in the *Stock-Keeper* to "create" a journal of higher tone in kennel journalism. Unquestionably the *Stock-Keeper*, since Mr. Krehl and his associates undertook the management of it, has vastly increased in power, enterprise and value, but I do not think that Mr. Krehl meant that there was opening for a higher tone in any paper than Mr. Broomhead gave the *Stock-Keeper* while he was the editor. As Mr. Wynn headed his mastiff article in Webb, this is "*defensio, non offensio.*"—W. WADE (Hulton, Pa., Oct. 4).

THE A. K. C. FINANCES.

Editor Forest and Stream:

In the January, 1889, issue and first number of the *American Kennel Gazette*, as part of an editorial, is the following: "The unflinching purpose of your officers is to administer the affairs of the American Kennel Club with the strictest impartiality, and for the benefit of one and all of its members, both active and associate, whether far or near. It is the active support and unbiased criticism of the breeders, owners, exhibitors and lovers of the dog in the United States, which alone can make the good influence and usefulness of the American Kennel Club possible. Both are earnestly invited, and in return the management of the American Kennel Club offer their very best efforts in serving them."

After what has been published lately in the several papers devoted to kennel and other interests anent the Stud Book and *Gazette*, I fully expected that the officers of the American Kennel Club would submit a complete statement of the financial affairs to its members at the meeting held Sept. 19 last. In the report of that meeting appearing in the several papers, I see that a complete statement of the club's financial affairs was not submitted, but simply a report, which, while much longer than the preceding one, amounts to practically the same thing, the receipts from all sources between two given dates and the expenses for the same period, as follows:

TREASURER'S REPORT.

New York, Sept. 18, 1889.

The Treasurer begs to report as follows: Receipts from all sources:

From Jan. 11 to date	$6,002.81
Expenses for same period	5,173.11
Balance on hand	$829.70
BILLS RECEIVABLE.	
Due for advertisements *Gazette*	$637.37
Due for advertisements Stud Book	32.00
Due for petty accounts	92.25
	$761.62
Accounts not good	71.00
	$690.62
BILLS PAYABLE.	
Rogers & Sherwood, printing account	$135.75
Balance due club	$554.87
STOCK ON HAND.	
Books bound in cloth:	
Vol. I. 141 copies at $2.00	$288.00
Vol. II. 15 copies at $3.00	45.00
Vol. III. 10 copies at $3.00	30.00
Vol. IV. 13 copies at $3.00	39.00
Books bound in paper:	
Vol. II. 100 copies at $2.00	200.00
Vol. III. 78 copies at $2.00	156.00
Quarterly parts bound in paper:	
Vol. IV. Part I. 326 copies	
Part II. 134 copies	
Part III. 153 copies	
Part IV. 90 copies	
703 copies at 50cts.	351.50
Vol. V. Part I. 36 copies	
Part II. 165 copies	
Part III. 163 copies	
Part IV. 134 copies	
498 copies at 50cts.	249.00
	$1,558.50
American Kennel Gazettes on hand:	
2,410 copies of the full issue at 20cts.	482.00
	$1,840.50

A. P. VREDENBURGH, Treasurer.

That the officers of such an important body as the A. K.C. should furnish such a meagre and unsatisfactory financial report to its members, is to me a matter of surprise. If the last item under the heading "Stock on Hand," part of the last report, is as it should be, I would say, increase the price of the *Gazette*; and if it is not as it should be, yet put forward in good faith, I would suggest to the bench show committees of local clubs, when ordering their printing, to provide for an extra supply of catalogues, and not to dispose of the unsold ones as has been the practice heretofore, but to hold them as assets. Further, if all the items in "Stock on Hand" are as they should be, it appears to me that each associate member entails a loss on the A. K. C. of $1 annually, and more if they each register two dogs free.

The American Kennel Club is composed of four component parts: (1) the local clubs, (2) the Stud Book, (3) the associate membership scheme and (4) the *Kennel Gazette*.

The Stud Book Committee of the A. K. C., in their recently published card say, "When the present volume is published and paid for, the result will be that it has been published at a loss of over thirty-one cents on each and every entry that the book contains;" which statement, I think, is contradicted by the officials of the A. K. C. in a recent issue of the *American Kennel Gazette*. And in the same card they say that "the income and expense of the Stud Book are kept entirely separate and distinct from the other departments of the American Kennel Club." If the Stud Book account is kept separately, why is it that it, together with the accounts of the other departments of the A. K. C., are, before they are submitted to the members of the A. K. C., put into a something resembling a milk shake machine, from which they are taken in such a thoroughly mixed condition that it is impossible to separate the one from the other?

At the beginning of this year the Stud Book was in a pretty healthy condition, and had entered in it about 6,660 dogs. How many were transfers from the *A.K.R.* does not appear. From Jan. 1 to Oct. 1 of this year the Stud Book has, as per Stud Book Committee, entailed a loss of about $660. Now I fail to see wherein and how the expenses of the Stud Book have become so different since Jan. 1, 1889, from what they were before that date, as to entail any such loss. During the meeting of the A. K. C., on Sept. 19 last, a matter came up before the delegates present which I think was worth more attention than it received, namely, Mr. Peshall's communication. During two or three minutes discussion of the matter the secretary of the A. K. C. remarked that "we had to destroy some eight pages of the manuscript," referring to the stenographer's transcript. Now I say that the A. K. C. had not, nor has now, the official minutes of that meeting, of the reports of which eight pages were destroyed by "we," and I think that Mr. Peshall's communication was very summarily disposed of. Come, Messrs. "We," let the breeders, owners, exhibitors and lovers of the dog in the United States know exactly where the A. K. C. stands, and whether it is up in the clouds or on *terra firma*.

In the September, 1889, issue, and last number of the *American Kennel Gazette*, as part of an editorial, is the following: "Some critics, both press and personal, have croaked about the rocks the American Kennel Club was nearing in the shape of decreased receipts for the Stud Book, the overwhelming burden of conducting the *Kennel Gazette*, failure of the associate membership to properly fill its rôle, damage to the specialty clubs from it, etc., etc., all of which the last meeting of the delegates of the American Kennel Club, and the treasurer's report, showed did not exist at all in some cases, and in others the rocks were small and quite deep enough to permit our ship to pass over them in absolute safety. These critics, if with this name we really should dignify them, one and all, assumed the garb of anxious friends of the American Kennel Club devoted to its brilliant future. Since the meeting they have shown the cloven foot by the bitter, and in some cases unconcealed, disappointment at the really prosperous and satisfactory state of affairs in all the departments of the club. To such we can only say that the American Kennel Club can but benefit by such badly concealed hypocrisy and selfishly founded enmity."

Whither are we drifting?

I write the above as a criticism of the A.K.C., in compliance with the invitation held out by the officials of the American Kennel Club, as appeared in their "Greeting" of January, 1889. Had I seen the last number of their *American Kennel Gazette* before I began to write this, it would never have been undertaken.

L. LIVESEY.

JERSEY CITY, N. J., Oct. 5.

CRITICS AND CROAKERS.

Editor Forest and Stream:

I supposed that I would not be surprised at anything the present rulers of the A. K. C. might do. I thought that *nil admirari* would be my chronic condition after that intolerably insolent editorial in the *Kennel Gazette* for June, wherein *Turf, Field and Farm* was so scored for daring to have an opinion of its own as to the wisdom of the proposal to require reports from judges to "pad" the *Gazette*, which proposal had not even been considered by the A. K. C., but was merely the proposal of one of its officers. But the presumptous, brazen folly and assurance of the editorial in the September number passes all comprehension. Has it come to such a pass that when any one differs from action of the A. K. C., either proposed or executed, he is to be blackguarded by the official organ of the club? Are we to understand that all the press and public have to do is to sit still, nay, vociferously applaud anything the A. K. C. enacts? and that any comments, suggestions or censures are treason foul? Is there no possibility of honest criticism of the A. K. C., or is all criticism hypocrisy?

As to whether I am overstating the case I ask any fair-minded man to study this astonishing editorial; it looks as though it were intended for a defense from unjust criticism and malignant attack from some parties, and the honesty of these is directly impugned by such choice gutterisms as, "These critics, if with this name we really should dignify them, one and all assumed the garb of anxious friends of the A. K. C. * * * Since the meeting they have shown the cloven foot * * * to all such we can only say that the American Kennel Club can but benefit by such badly concealed hypocrisy and selfishly founded enmity * * * vaporing of our friends (?)" etc., etc.

Now, in considering the above delicacies, so strongly savoring of the *Eatansville Gazette*, remember that the only criticism of the A.K.C. to which this stuff could possibly apply have been those of FOREST AND STREAM, *Turf, Field and Farm, Fanciers' Journal*, and Messrs. Peshall, Hopf and Shotwell, and I defy the production of a single sentence in either of the named journals or written by one of the above named gentlemen that warrants the disgraceful charge of hypocrisy that the editorial makes. *Turf, Field and Farm* remained quiet under a supercilious attack on its right of criticism, which I suppose proceeded from an unwillingness to damage the club for the presumption of the attack, and everything that it published as editorial was strictly within the bounds of fair, honest, open criticism; FOREST AND STREAM and the *Fanciers' Journal* have been studiously careful to avoid anything like attacking the A.K.C., and the gentlemen I have named stated their objections to the action of the A.K.C. and gave their reasons in a perfectly honest manner, and the only lesson to be learned from this most astonishing editorial is that no differing from the ruling powers of the A.K.C. is to be tolerated. Mind you, it is not offensive criticism, malignant strictures or virulent animosity that is objected to, it is simply disputing what the A.K.C. (or its officers) do, and this disputing is to be "hypocrisy" *per se*, without any qualification.

Now I would earnestly ask the attention of the many honorable gentlemen I know to be delegates to the A. K. C. to ponder over what this last performance is and say whether they will allow their official organ to abuse its position to so insult such journals and gentlemen as I have named? Was it ever heard of before that the official journal of a ruling body was used for purposes of personal attack on those differing from it? Of all journals the official one should be particularly dignified and only resort to personalities under the pressure of overwhelming necessity. I would particularly commend to Messrs. Perry, Moore, Huntington, Wise, Kelly, Collins, Leslie, Fay, Wilmerding, Winslow, Seabury, etc., the consideration of whether they propose to allow this abuse of official position to pass without censure? Remember that the greatest stumbling block of the A.K.C. has been senseless fulsome flattery and flunky-like suppression of honest criticism. Whether it is worth while to discuss the composition of this remarkable editorial and its vacuous conclusions and unfounded assumptions, I really do not know, I would like editorial opinion thereon, but I think I may point out that it cannot be said that I write this from feeling hurt myself, for my hostility to the A. K. C. as at present managed has been too open and well known for a charge of hypocrisy to lie against me, and I cannot remember of ever writing as a "friend (?)."

W. WADE.

HULTON, Pa., Oct. 5.

"PODGERS" TALKS DOG AGAIN.

WHEN one starts in on dog talk it is a good deal like talking horse—no end to it. As I heard a lady say after listening to her husband and myself all one evening, "Don't let me ever hear you say women talk about dress until men go wild. I never heard in half a lifetime as much about dress as I have heard about dogs this evening." And I suspect she was right, for we did get deep into dog lore.

You see there are a good many kinds of dogs to talk about, and the subject is a wide one, a deep one and a broad one. Every man has his particular and peculiar views about them and his favorite breed, which he advocates on all occasions. With one it is the Llewellin (we are talking of sportsmen now), another the blue belton, the red Irish or the Gordon, and there is where your humble servant comes in and raises his voice in pæans of praise, for he has eaten and drank, slept and lived with the Gordon for more years than it ought to take to build several expositions; and he has ever found the Gordon a gentleman. At the risk of having a sharp rejoinder from some other kind of a thinker I will say, and do say, that the Gordon setter is of the nobility, the true aristocratic. These are my sentiments after associations with dogs of every degree for years. There are noble and high-toned characteristics in the breed. He looks the gentleman and his looks do not deceive. I have seen more gentlemanly acts on the part of the Gordon setters that I have owned and been acquainted with than one is liable to see among the same number of presumed gentlemen on two legs.

The stories I could tell of dogs, things coming under my own observation, would swamp the dog department of the FOREST AND STREAM every week for twelve months. The last one I must relate. I owned a fine large specimen of the Gordon that went about with me a good deal. One day we stumbled over a litter of puppies astray from their kennel. They had crawled under the fence and the mother was bewailing on the other side. Rex stopped and took in the situation at once. I never said a word nor did Rex, but he picked up a pup in his mouth, jumped the fence with it, laid it down in front of the mother, returned and did the same thing for the four others; and I have no doubt declined all thanks. Doubtless he suggested that she had better close that hole under the fence if she wished to raise her family. I said, "Rex, that was very gallant of you, considering that you had not the least idea whether the mother was good looking or otherwise. If you were a man now you would have contrived to ascertain that important fact beforehand." Rex answered with a faint wag of his tail and a look which plainly said, "I hope you don't think a dog would be so mean as that." Now, here was an instance, not of instinct, except a gentlemanly instinct, perhaps. It was simply intelligence. I am weary of those people who are ever quoting instinct when an example is given of the knowingness of an animal.

Dogs must do a good deal of thinking about us and be greatly puzzled over some of our ways; and no doubt discuss us at times in an uncomplimentary way.

While I boast of the intelligence and gentlemanly qualities of the Gordon setter, I do not wish it understood that I would detract from the qualities and qualifications of other breeds. There are a good many other dogs that are very high-toned and belong to the 400. Especially the beltons, Llewellins, Laveracks—all nice dogs, all dogs I am proud to know and rank among my friends. There are but two or three kinds of dogs that I do not like. Firstly, I am not favorable to bulldogs. They rank low in the scale, and what their associations are we all know. They run to low pursuits, prize fighting, pig retrieving and equally ungenteel game: and yet I have seen men, gentlemen, very much infatuated with them.

We see gentlemen infatuated with a good many other things that we don't all want, fortunately. If we all had the same tastes and preferences it would lead to trouble. If all men pinned their faith on Gordon setters there would be a corner in the market at the expense of every other breed. So it is all right as it is. "Many men of many minds."

There is one breed of small white bulls that are a degree more respectable. I am acquainted with one, one up in the country, and in spite of my prejudice Bob rather won me over to liking him very much, as he was playful, bright and as full of fun and humor as any dog could well be. I make an exception in favor of Bob.

The next most undesirable dog to own is a black and tan terrier, for he is an ungrateful little scamp, has no loyalty nor love of home, and will run away from the best one every time he can get a chance. He is a vexation and a worry, to say nothing of expense.

As a house dog of the most intense respectability the pug is preëminently the dog. He has a proper respect for himself and the family, and no matter how often he may have the opportunity he will seldom leave the front steps to go down into the street to make the acquaintance of any cur of low degree. He knows his position in society, and never lowers himself nor loses his dignity of character. Then Puggy is an amiable fellow, good tempered, and never resents teasing, therefore safe for children. He is not so very playful, is too dignified for that; but will occasionally, surreptitiously as it were, slyly indulge in a little private frolic with an old slipper, but at once recovers his dignity if observed. There is a degree, a point where ugliness becomes beauty, and the pug has got there. His gravity is comical and his proverbial good nature makes him many friends.

The Yorkshire is a nice dog, too, but he is a spunky little chap and plucky, not afraid of anybody's dog, imagines himself a Sullivan, and when a big dog with the magnanimity of such quietly ignores the fierce growls and threats of this twelve inches of small dog and trots off, the little chap firmly believes the hundred-pounder was afraid and ran away to avoid a good licking. Then to see him scratch grass, growl fiercely and wonder at his own forbearance in not following up that big fellow and giving him a lesson. A great dog is little Yorkshire.

But the dog for all wear and weathers is the fox-terrier. There is a dog now nobody can find fault with, gamy, plucky, bright, smart, sharp, wiry, hung on steel springs; and lowers his tail to no man's dog. Then he is so clean and neat, so full of life and energy. He is a condensation of all the cardinal virtues in small space; a jolly, companionable little chap outdoors, a terror to rats and itinerant cats indoors, the children's pet and man's delight—but I am taking too much space in the dog columns for this week. See you later.

PODGERS.

THAT LAD OF BOW PRIZE.

CINCINNATI, O., Oct. 5.—*Editor Forest and Stream:* At a meeting of the Board of Control of the American Field Trial Club, held July 3, 1889, the committee appointed for that purpose made the following report, which was unanimously adopted by the Board:

"Your committee to whom was referred communication from J. L. Anthony, relative to prize awarded to Lad of Bow, find that the treasurer of this club made a legal tender to the said Anthony of the amount claimed at the time said prize was won, and the said Anthony refused to accept it, averring that he made no claim against the club and would never accept its money and directed the treasurer to return such money to the treasury for the benefit of the club. We further find that the American Field Trial Club is not legally indebted to the said Anthony for any account whatsoever. The committee further finds that the said Anthony now desires to claim said money and to revoke his refusal thereof; the committee therefore unanimously recommends that the treasurer be instructed to forward to the said Anthony without delay the Lad of Bow prize, as in their opinion the club should promptly avail itself of such a desirable opportunity to surrender the said money to the repentant contributor. We further recommend that a committee of three be appointed to review all the correspondence in relation to this matter, as well as correspondence between the said Anthony and the judges who made the award to Lad of Bow, as well as correspondence in regard to the appeals referred to and present their findings to the club at its next meeting, with such recommendations as they may think proper to make."

The Advisory Committee of the American Kennel Club, had no right to consider the appeal at all as it had no jurisdiction, and in so doing they exceeded their authority. The meeting of the board held July 3 was the first one held after the "contributor" named indicated that he had changed his mind, and it promptly gave the money back to him. The Advisory Committee of the American Kennel Club rendered its decision before the American Field Trial Club had considered the case at all, a very arbitrary and uncalled for proceeding. Had the club declined to pay the prize, which they might properly have done, action (then) by the Advisory Committee might have been in order, though if the ruling was contrary to the findings of the Board of Control they would have made a mistake. One understanding the situation, does not wonder at the *Stock-Keeper*, when it said in a recent issue that "For an institution in a republican country we must say the American Kennel Club is an extraordinary autocratic body." The *Stock-Keeper* evidently did not know that we had a "King Jim" in this "republican country." A "king" usually has his way or there is a disturbance. The history of our "king" as a kicker is well understood.

I. SMILE.

GORDON SETTER STOLEN.—Baltimore, Oct. 7.—*Editor Forest and Stream:* My Gordon setter bitch Mistletoe, about 22½in. high, racy built, weight about 37lbs., was stolen from my yard with chain and collar on. She has been taken out of this city. I will thank any brother sportsman who may find her if they will address me.—W. P. ZOLLINGER (P. O. Box 326).

THE IRISH RED SETTER CLUB FIELD TRIALS.

THE field trials of the Irish Red Setter Club were run near Omagh, Ireland, terminating Sept. 19. The London *Field* states that the trials were very successful, and that some excellent work was done, although birds were scarce and wild. Seven stakes were run, for which there were fifty-two nominations. Following is a list of the winners in each stake:

IRISH SETTER PUPPY STAKES—For Irish setter puppies whelped in 1888.—First, W. H. Cooper's bitch Henmore Sure Death, 18mos. (Muskerry—Avoca). Second, W. H. Cooper's bitch Henmore Shotover, 14mos. (Hector—Henmore Refind). Third, G. H. Loftus's dog Sam II., 20mos. Sam—Psyche).

IRISH SETTER ALL-AGED STAKES.—First, C. C. Ellis's bitch Mac's Little Nell, 5yrs. 8mos. (Cocksure—Graunuaile). Second, W. H. Cooper's bitch Henmore Shotover, winner of second in the Puppy Stakes. Third, W. H. Cooper's bitch Henmore Snow, 3yrs. 2mos. (Count—Loo VII.).

IRISH SETTER BRACE STAKES.—First, C. C. Ellis's bitches Mac's Little Nell, winner of the All-Aged Stake, and Little Pixie, 2yrs. 4mos. (Moonlighter—Lalla Rookh). Second, W. H. Cooper's bitches Henmore Snow and Henmore Shotover, winners of second and third in the All-Aged Stakes. Third, G. H. Loftus's dog Sam II., winner of third in the Puppy Stakes, and bitch Wirreen, 2yrs. 8mos. (Sam—Norah).

DERBY STAKES—For pointers and setters whelped in 1888.—Pointers: First, J. L. Bulled and W. A. Bruette's liver and white ticked bitch Devonshire Sall, 20mos. (Molton Baron—The Village Star). Second, same owner's liver and white dog Devonshire Nero, litter brother to winner of first. Third, G. Pilkington's liver and white bitch Woolton Gem, 15mos. (Gough—Larkspar). Setters: First, A. P. H. Lonsdale's liver and white English setter bitch Ightfield Rosa, 18mos. (Ross—Pitti Sing). Second, W. H. Cooper's Irish setter bitch Henmore Sure Death, winner of the Puppy Stake. Absolute winner. Devonshire Sall.

GRAND ALL-AGED STAKES—For all setters and pointers.—First and second, W. H. Cooper's Irish setter bitches Henmore Sure Death, winner of first in the puppy stakes, and Woodbine, 2yrs. 5mos. (Muskerry—Floss). Third, Bulled & Bruettes's liver and white pointer dog Devonshire Jack, 20mos. (Molton Baron—The Village Star).

GRAND BRACE STAKES—For all setters and pointers.—First, A. P. H. Lonsdale's liver and white pointer bitches Perdita and Mopsa, 2yrs. 2mos. (Dancer—Peach). Second, Bulled & Bruette's liver and white pointer bitches Devonshire Sal, winner of the Derby, and her litter sister Devonshire Lady. Third, W. H. Cooper's Irish setter bitches Henmore Sure Death and Woodbine, winners of first and second in the Grand All-Aged Stakes.

SPECIAL PRIZE—The Irish Red Setter Club's Field Trial Championship Cup for best pointer or setter in all the stakes.—Won by A. P. H. Lonsdale's pointer bitch Mopsa, winner with Perdita of the Grand Brace Stakes.

THE FOX-TERRIER.

MR. RAWDON B. LEE, kennel editor of the London *Field*, has published a monograph of the fox-terrier. The book is very pleasantly written and contains a vast amount of useful information regarding the history and characteristics of the breed, useful not only to the new beginner but to the most experienced fancier as well. Mr. Lee has collected from the writings of both ancient and modern authorities upon the subject, all of the most important matter, and it is presented to the reader in a form commendably terse while at the same time it is sufficiently comprehensive.

The experience of the author in forming his kennel is most instructive for the new beginner, while his pleasant gossip about celebrated dogs of the past and present cannot fail to deeply interest every fancier of the breed. Mr. Lee ably advocates the maintenance of the form of the gamy little dog that is best adapted for the work that legitimately belongs to him, and he has little sympathy with those who would prostitute his favorite to base uses by sacrificing working points for so-called beauty for the purpose of winning prizes on the bench. He is especially severe on the practice of rabbit-baiting, and the following which we quote is most conclusive evidence that aside from the principle of humanity involved the practice is most reprehensible. The author says:

"Not content with him as a companion, either in town or country, some of his ill-advised admirers have endangered his good name by endeavoring to place him on a par with the 'whippet' and utilizing him for the chasing of rabbits in an inclosure. Nature never intended the fox-terrier for a rabbit courser. Had she done so his form would have been much more slim than it actually is, and his lines built upon those of a greyhound in miniature rather than upon those of a sturdy terrier. Still this somewhat plebian diversion appears to have taken a great hold of a certain section of the community, the members of which on Saturday afternoons especially, and upon other holidays, too, hie to some field or other, and enjoy themselves by letting a rabbit out of a hamper, and after allowing bunny a certain start, unslip a couple of terriers, who run after and in ninety-nine times out of a hundred kill it. Had the rabbits a fair chance in regaining their liberty, as is the case with the pigeon when liberated from a trap, or with the hare when coursed at the new-fangled inclosed meetings, this fox-terrier coursing would be legitimate sport. As the rabbits have not an ordinary chance of escape, and preparatory to their being set down in front of the terrier, have been confined, since their capture, in a hamper or some similar receptacle, I must look upon the thing with disfavor, and altogether fail to acknowledge it as in any way likely to improve the fox-terrier as he is, and as all his admirers would wish him to remain.

"Although under these circumstances the rabbits have little opportunity to regain their liberty, their chances of so doing are greater than that which was afforded by the individual who possessed a terrier and a wild rabbit, which he coursed in his cellar. The rabbit was given a start of once across the floor, and Jack, failing to recognize that spirit of fair play his owner possessed, seized poor bunny at the first rush. He got a good kick in the ribs for his pains, instead of the praise he might fairly, conscientiously think was his due, while the proprietor of the terrier heaved a deep sigh, and meditated upon the unfairness of the world generally, and of dogs in particular.

"This modern mode of coursing does give the rabits a better chance of his life than 'Jack' did. Still, for many reasons it is not recommended; and it is gratifying to note that it is not recognized by the Fox-Terrier Club or any of the leading clubs either. In America, a few weeks ago, a prosecution was instituted against a number of gentlemen who had been engaged in the sport; but after a lengthened hearing, which caused no inconsiderable interest throughout that country, no conviction was obtained, and similar prosecutions in this country have, so far, had a like result.

"In sundry instances I have already noticed an inclination to produce fox-terriers with larger legs, less compact bodies, and with an appearance of an ability to gallop more defined than should be the case. This is, of course, done to enable them to prove more successful at coursing meetings, and a continuance thereof would, in a few years, entirely change the character of the modern fox-terrier. * * * An ordinary fox-terrier has not pace to compete successfully with a rabbit on its own ground, nor until the present time has any attempt been made to breed him for speed alone."

The comments of the author upon judges and judging are well worth perusal by fanciers in this country, as are his remarks upon trimming and faking. Not the least valuable portion of the work is the criticism and correction of some of the pedigrees of noted dogs, together with points and information that have not previously been published. The chapter upon breeding and rearing puppies while not so complete in detail, perhaps, as the new begginer would like, is still of great value and may be studied to advantage by fanciers of other breeds. The work is invaluable to lovers of the handsome gamy little dog whose cause it champions, and we predict for it a wide circulation.

THE SOONER DOG.

Editor Forest and Stream:

I have always regarded the word "sooner" in the light of a slur when applied to dogs, and have often wondered where it originated and whether it had any local meaning at all. Possibly professional dog fanciers have been better informed than myself, but I have not yet heard one of them attempt to explain. However, I think I have now ascertained its true significance and traced it to its derivation, and I discover that in its primitive application it was indicative of merit rather than demerit, and that it referred especially to pace in field work, which we all know counts high in the scale of points in judging. "Soon," as a qualifying adverb, is used in a peculiar way all through the South as the equivalent of the New England words quick, prompt, early, etc., so that we almost universally hear that a person "came soon" or "got up soon" or was "overtaken soon." It is easy to conceive that if one person got somewhere sooner than another, he must be a "sooner" person; and consequently that any quick-gaited animal, horse or dog, must become a "sooner" horse or dog. So here we have it! but my impression is that, used in this sense, it is strictly local to the mountainous region which comprises the contiguous counties of western Virginia, North Carolina and West Tennessee. Out there a clever, active person is always "sooner," just as in the West he is a "hustler," and I readily remember that while I was serving in a semi-official capacity in the district with Major Wagner of the U. S. Mounted Revenue Police, in 1867, I frequently heard my horse mentioned as a "soon-footed" horse and a "sooner" horse. I do not recollect that I heard the term applied to a dog, for there are few hunting dogs in those ridges, and the native hunters are especially averse to hounds and hounding. But used in this sense the word is just as appropriate to the dog as to the horse, and I reckon is more familiar to most of us.

Hereafter I shall have more consideration for that popular combination of "sooner" and "courtyard" dog, as representative strictly of speed and endurance, of activity and timber; and I trust that such of your readers as may regard my conclusions as logical will withdraw their disparagement and contempt of the Sooner Dog.

CHARLES HALLOCK.

PLAINFIELD, Mass., Sept. 30.

[With all due respect to Mr. Hallock's erudition we venture to question the correctness of his theory. As everybody knows the sooner dog is an animal which it takes a lot of rest to tire out; he would sooner sleep than run, and sooner eat than hunt; and from these sooner proclivities his name was derived. There is an old story to this effect, published years ago in the old *Spirit*.]

DOG TALK.

THE seventh annual meeting of the American Coursing Club at Great Bend, Kan., Oct. 24 to 28, is attracting considerable attention, and it promises to be the best meeting yet held. $1,200 is offered in prizes for the two events. All intending to enter should at once address for particulars Mr. Frank K. Doan, Secretary, St. Louis, Mo.

Entries for the All-Aged Stakes of the Southern Field Trial Club close Nov. 1. This is the last public meeting of the year, and we shall expect to see it well supported. The grounds are all that could be wished for, birds are reported plentiful, and we have no doubt that the meeting will be a most interesting one. The address of the secretary is Mr. T. M. Brumby, Marietta, Ga.

The Pacific Kennel Club has issued a circular to its members which states that an assessment of $20 on each member has been levied by the executive committee, to place the club upon a sound financial basis. The club is a live one and is doing good work, and we have no doubt that the appeal will meet with prompt response.

At the dog show recently held at Edinburgh, Scotland, some miscreant threw vitriol over two collies, probably permanently disfiguring them. The club offer a reward of £25 for information that will lead to conviction of the guilty parties, and it is to be hoped that they will be found and severely punished.

Mr. Charles N. Symonds, of Salem, Mass., a well-known exhibitor of Yorkshires, has recently purchased in England several of the breed that are noted winners, and he expects to sweep the deck with his kennel at the spring shows.

The cropping question in England has been taken in hand by the authorities and two men were recently fined in the Thames police court, under the cruelty to animals act, for cropping the ears of some great Dane puppies.

The list of winners at the field trials of the Irish Red Setter Club of Ireland will be found in another column. Next week we shall publish the comments of the London *Field* upon the trials and the work of the dogs.

The Skye terrier fanciers of Scotland have formed a special club for the improvement of the breed with the Right Honorable Viscount Melville President, and the Rev. David Dobbie Secretary.

The tenth annual dog show at Edinburgh, Scotland, held Sept. 18 to 20, was the largest ever held there. Over 1,300 entries were made and the show was a very successful one.

We have received from Mr. R. F. Mayhew a communication in reply to the article of Mr. Geo. R. Krehl, published in our last issue, which will appear next week.

There are 58 entries in the All-Aged Stakes of the Eastern Field Trial Club, 35 setters and 23 pointers. The list will be published next week.

Mr. C. J. Peshall has sold the pointer dog Nick of Naso, A.K.C.S.B. 5,553, to Mr. John N. Lewis, of Mahwah, N. J., for $1,000.

We understand that the proposed field trials in Ohio have been abandoned.

Dogs: Their Management and Treatment in Disease. By Ashmont. Price $2. Kennel Record and Account Book. Price $3. Training vs. Breaking. By S. T. Hammond. Price $1. First Lessons in Dog Training, with Points of all Breeds, Price 50 cents.

THE ALL-ROUND DOG.—Mount Vernon, N.Y.—*Editor Forest and Stream:* In reply to "Osceola" and "Novice" on the question of an all-round dog, I think it should be a cross-bred. The finest all-round bird dog I ever knew was a cross between a spaniel and a retriever, and he was backed to find fur or feather under adverse circumstances. He was a thick-set, dark liver, and a good one. His best point was steadiness. I have had the luck to come across such a dog as "Osceola" mentioned. If ever I came across one of those dogs so much talked about as worth their weight in gold he was one. If I were to tell of some of the wonders this dog was capable of (according to his master, a regular old hunter, up to all the tricks of the trade and of course a good shot), my readers would think me romancing. He was, nevertheless, a paragon, and I think the best all-round dog I have seen as yet. I have shot over him and can vouch for him. As to pedigree, he was between a fox-terrier and a spaniel. But my beau ideal of a dog is between a beagle and a spaniel. They will, as a friend remarked, "rip through anything" and never tire.—CROSS-BRED.

DEATH OF A PROMISING PUPPY.—*Editor Forest and Stream:* It grieves me to announce the death of the most promising St. Bernard puppy I ever bred, Prince Ormonde, by my Marquis of Stafford and out of my Lady Rosalind. He died Sept. 27, at the age of three months and one week, from worms. His measurement at three months old were as follows: Height at shoulders, 21in.; skull, 17½in.; muzzle, 11½in.; chest, 29in.; loin, 24½in.; nose to stop, 3½in.; stop to occiput, 4½in.; length of tail, 20in.; from nose to set on of tail, 38in.; weight (thin), 64lbs. He had a perfectly marked head of rich orange tawny, with several large patches of same color on body.—JAMES F. HALL (Philadelphia, Pa.).

ST. BERNARD IMPORTATION.—Melrose, Mass., Oct. 6.—*Editor Forest and Stream:* I have imported the rough St. Bernard bitch Lady Miles, by champion Plinlimmon out of Leonora (champion Leonard—Pastime). She is heavy in whelp to Keeper. I imported her from J. F. Smith, Sheffield.—E. H. MOORE.

DESDEMONA II.—Montreal, Oct. 4.—*Editor Forest and Stream:* Will you kindly make the following correction in your next issue. The black and tan terrier bitch that won second prize at the Ottawa bench show was Desdemona II., and not Desdemona, as previously published.—J. F. CAMPBELL.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Fleet View Judge, Fleet View Doctor, Fleet View Graphic, Fleet View Mars, Fleet View Lord, Fleet View Nell and Fleet View Beezy. By Fleet View & Reading Pointer Kennels, Lynn and Reading, Mass., for white and liver pointers, five dogs and two bitches, whelped May 30, 1889, by champion Graphic out of Say (imported Bang—Belle Reta).

Rach. By T. B. Beach, Catskill, N. Y., for red Irish setter dog, whelped July 5, 1889, by Sarsfield (Garryowen—Currer Belle II.) out of Coe F. (champion Chief—Gypsey Maid).

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Say—Spot Dash. Fleet View & Reading Pointer Kennels' (Lynn and Reading, Mass.) pointer bitch Say (imported Bang—Belle Reta) to their Spot Dash (Sir Philip Sydney—Topsy), Sept. 30.

Bertha—Marquis of Stafford. Weisbrod & Hess's (Philadelphia, Pa.) St. Bernard bitch Bertha to Jas. F. Hall's Marquis of Stafford (Save—Miss Plinlimmon), July 29.

Bell—Beaumont. A. W. Harrington, Jr.'s (Troy, N. Y.) Gordon setter bitch Bell (Chut—Bell) to John H. Meyer's champion Beaumont (Ronald II.—champion Floss), Sept. 30.

Whisper—Bradford Harry. M. H. Daly's (Bangor, Me.) Yorkshire terrier bitch Whisper (Bradford Harry—Belva) to P. H. Coombs's Bradford Harry (Crawshaw's Bruce—Beal's Lady), Sept. 28.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Belle Randolph. Fleet View & Reading Pointer Kennels' (Lynn and Reading, Mass.) pointer bitch Belle Randolph (Sam—Juno), Sept. 24, eight (three dogs), by Naso Kennels' champion Nick of Naso (Naso II.—Pettigo).

Hecla. Mrs. F. Smyth's (Germantown, Pa.) St. Bernard bitch Hecla, Aug. 17, ten (three dogs), by Jas. F. Hall's Marquis of Stafford (Save—Miss Plinlimmon).

High Rock Jet. High Rock Cocker Kennels' (Lynn, Mass.) cocker spaniel bitch High Rock Jet (Pearl Lake Obo—Black Flash), Oct. 1, seven (four dogs), by Black Duck (Obo II.—Althea); four dogs and two bitches since dead.

Lillie Belmont. Jas. E. Unks's (Muncie, Ind.) fox-terrier bitch Lillie Belmont (Earl Leycester—Coquette), Aug. 18, four bitches, by his Beverwyck Trap (Dusky Trape—Daze).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Spark. White and liver pointer dog, whelped July 24, 1889, by Spot Dash out of Beauty, by Fleet View & Reading Pointer Kennels, Lynn and Reading, Mass., to Wm. E. Evans, Jamaica Plain, Mass.

Max. White and liver pointer dog, whelped July 24, 1889, by Spot Dash out of Beauty, by Fleet View & Reading Pointer Kennels, Lynn and Reading, Mass., to B. F. Thompson, Winchester, Mass.

Dime. White and liver pointer dog, age not given, by Count out of Say, by Fleet View & Reading Pointer Kennels, Lynn and Reading, Mass., to H. G. Plummer, Boston, Mass.

Sancho. Liver and white pointer dog, whelped July 24, 1889, by Spot Dash out of Beauty, by Fleet View & Reading Pointer Kennels, Lynn and Reading, Mass., to Mr. Willis, Reading, Mass.

Prima. White and orange St. Bernard bitch, whelped June 30, 1889, by Marquis of Stafford out of Lady Rosalind, by Jas. F. Hall, Philadelphia, Pa., to Dr. Kern, Hustisford, Wis.

Rosa Costello. White and orange St. Bernard bitch, whelped June 20, 1889, by Marquis of Stafford out of Lady Rosalind, by Jas. F. Hall, Philadelphia, Pa., to Jas. Costello, same place.

Bob Ingersoll. White, with ticked ears, St. Bernard dog, whelped June 20, 1889, by Marquis of Stafford out of Lady Rosalind, by Jas. F. Hall, Philadelphia, Pa., to Dr. J. A. Schimneller, Brooklyn, N. Y.

Don Leo. Orange and white St. Bernard dog, whelped June 20, 1889, by Marquis of Stafford out of Lady Rosalind, by Jas. F. Hall, Philadelphia, Pa., to Richard B. Hewitt, same place.

Ardmore Chief. Orange and white St. Bernard dog, whelped June 20, 1889, by Marquis of Stafford out of Lady Rosalind, by Jas. F. Hall, Philadelphia, Pa., to Allen B. Rorke, Ardmore, Pa.

Prince Louis. Orange and white St. Bernard dog, whelped June 20, 1889, by Marquis of Stafford out of Lady Rosalind, by Jas. F. Hall, Philadelphia, Pa., to Louis Janda, Mankato, Minn.

Lynn. Black cocker spaniel dog, whelped July 28, 1889, by Black Duck out of Sis F., by High Rock Cocker Kennels, Lynn, Mass., to Geo. H Page, same place.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

J. R. T.—I have a Gordon setter dog, two years old; his eyes are filled with thick white matter nearly every morning; I always wipe it out when I find it; has been so for some months; had the distemper last spring. Ans. Wash eyes once or twice daily with borax and warm water, teaspoonful to the tea cup. Give 5 grains of quinine night and morning for three days. Give 5 drops of Fowler's solution of arsenic in the food once daily for three weeks.

Rifle and Trap Shooting

RANGE AND GALLERY.

BARREL REFLECTORS.

THE two figures, A and B, illustrate various forms of reflectors or inspection glasses intended to enable the rifleman to take a quick and ready view of the interior of his rifle barrel. Fig. A is the invention of Capt. Russell, U.S.A., and is intended for use with the U. S. Army Springfield arm. The brass frame, *L*, outlined, shaped to fit the receiver, holds an inclined mirror, *M*. The bar, *B*, across the front of the frame, holds the breech block open. The mirror is backed by a wooden plug, *D*, set inside the brass shell. The projections, *t*, hold the mirror in place. For muzzle inspection the glass may be used to throw light into the barrel.

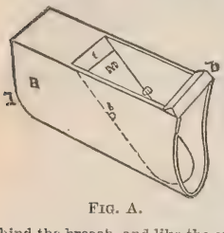


FIG. A.

Fig. B is a device placed on the English market for use by holders of Martini-Henry rifles. It slips diagonally into the open recess behind the breech, and like the other is very handy for use by inspecting officers. Baxendale & Co., of Manchester, the patentees, claim for it "extreme simplicity and durability, combined with moderate price. Can be instantly attached and as speedily detached without the least injury to the rifle. It shows at a glance and throughout the entire length the exact state of the interior of the barrel and chamber, and affords one of the best safeguards to assist officers in command in their inspection of rifles."

FIG. B.

SMOKELESS POWDER.

THE wrangle over the question who invented smokeless powder promises to take its place with the query about the authorship of "Beautiful Snow" or that other unsettled matter of the assault on Billy Patterson. Anyhow, the Berlin *Post* has published an explanation, as it is termed, with the object of putting an end to the controversy. The journal is "authorized to state" that the compound was invented by Major General Kuester, director of the powder mills at Spandau. It is further announced that the officer received from the Emperor in person, upon the ground where his Majesty had just witnessed the tests of the powder, an order for 50,000 marks as a recognition of the value of his invention. The *Deutsche Heeres-Zeitung* says that the Nobel Dynamite Company has signed an agreement with the German Government for the supply of a large quantity of smokeless powder. At a meeting held recently at Hamburg the directors of the companies forming part of the association discussed the questions of contracts and choice of firms for manufacturing the said powder. Those of Hamburg, Opladen and Dresden have been selected.

The London *Globe* finds in the *Militärische Zeitung* a high flown article pointing out many disadvantages which will attend the use of the new smokeless powder, which was tried at the recent review at Spandau. The duties of the guard and the patrol will be made immeasurably more difficult by the absence of the smoke and noise, which, in the case of the employment of ordinary powder, attracted their attention to, and pointed out the position of the enemy. On the other hand, it will render capital service to the Franc-tireurs, whose object it is to escape from and confuse the guard. Sudden attacks and surprises will become matters of such daily occurrence that outposts and patrols will have to be immensely strengthened and kept at the utmost tension of watchfulness. Firing drill and discipline must necessarily be made much stricter than at present. The most important fault of the smokeless powder is, however, the terrible clearness, the overwhelming distinctness with which, when it is used in battle, every man will be able to see the carnage and slaughter around him. Hitherto, the heavy roll of the firing has mercifully smothered the cries and shrieks of the wounded; the cloud of powder smoke has veiled the horrible sight of men piled in heaps, dying and dead, their dreadful sufferings, their agonized end. Each man, fighting behind a thick fog of smoke, which was only wafted aside now and then by a gust of wind, or lightened by a pause in the firing, felt a certain sense of screened security, mistaken, indeed, but none the less reassuring, until he himself was struck by the fatal bullet. How will it be in the future? The fall of each man who is shot down will be clearly seen by his comrades; every cry of anguish will be heard by half the company; the least hesitation, the least vacillation which, through the rapid change of commander that a death or a severe wound often renders necessary, will be immediately observed by the men and rob them of that feeling of perfect confidence they ought to have in their officers.

All this building casties upon a smokeless foundation is very pretty, but there comes a report that the new powder does not wear well in loaded cartridges. That it deteriorates when kept, and if this be so its use must be very slight in real warfare. After all it may turn out that the new chemical explosive is a pretty toy for the government, profitable only to the officers who manipulated its sale to the German authorities.

PHOTOGRAPHING A FLYING RIFLE BULLET BY ELECTRICITY.—Photographs of the interior of the gun are taken by means of the electric light, and the information obtained by these means is most valuable, and is manifestly more satisfactory than that given by the method of taking impressions of the bore in soft rubber. Photography has also been made use of in studying the motion of the projectile. In the case of large guns instantaneous views of the shot during its flight have been successfully taken by means of the camera provided with a quick-acting shutter. This method is not applicable, however, to small arms. A rifle bullet is a very small object, and the camera must be set very near its path in order to obtain a picture of sufficient size to be of use; but the nearer the instrument is placed to the moving object to be photographed the more rapid is the motion of the image over the plate, and no "instantaneous" or quick-acting shutter could possibly be made to operate with sufficient rapidity, or at the proper instant, to give a sharply defined picture. The desired end is accomplished, however, by the aid of electricity. The camera is provided with an extremely sensitive plate and placed in a dark room, through which the bullet is made to pass. The instant the bullet is in front of the camera it breaks an electric circuit, producing a spark which illuminates the bullet for an instant, and its image is impressed upon the sensitive plate. The duration of the electric spark is almost infinitesimal, and since the plate is affected only during the continuance of the spark, a well-defined photograph of an object moving at a greater velocity than that of sound is obtained. Such pictures show the condensation of the air in front of the bullet, the vacuum behind it, and the eddies and currents produced in the surrounding atmosphere by its motion; and they afford information which is of value in determining the best shape to be given to the projectile in order to reduce to a minimum the resistance which the air opposes to its flight, and so increase its range and effect.—*Lieut. John Millis, in Scribner.*

VILLISCA, Iowa, Oct. 1.—A match was shot here to-day by the Villisca Special Rifle Team. Being a nice day, there was a good crowd of spectators who watched very closely the indicator as it would show the result of each man's shot; .32cal. Winchester, Ballard and Marlin rifles were used. There were three matches, $1 to enter, divided 50, 30 and 20 per cent. One gun with peep sight was handicapped at the rate of 3 points for every 10 shots. Creedmoor targets, 50, 100 and 200yds., 5 shots at each match, 11 o'clock wind, 5 miles per hour. First match, 50yds.:

W B Arbuckle	43534—19	T Bradfield	44243—17
A P West	42223—13	Lee Harris, handicap'd	45445—22

Second match, 100yds.:

Arbuckle	42453—18	Bevans	33540—15
Dunn	44455—17	Harris, handicapped	35144—20

Third match, 200yds.:

Arbuckle	34434—18	Bevans	44544—21
Dunn	44455—22	Harris, handicapped	54454—22

L. M. H.

BOSTON, Oct. 5.—The regular shoot of the Massachusetts Rifle Association was held at its range to-day, with a good number in attendance. The weather conditions were very fine, with a light wind from 2 to 4 o'clock. Mr. Clarke won the champion gold medal. Mr. Eames won the gold medal in the 20-shot rest match, and Mr. Bond won the bronze military medal. Mr. Frye made a fine record of 50 shots off-hand. Following are the best scores finished to-day:

20-Shot Rest Match.

J N Eames	104 102—206	W Thomas	96 98—194
J R Munroe	97 106—203	G Warren	92 63—155

Champion Medal—200yds.

C C Clarke	74 L Langley 56

Bronze Military Medal.
Won on 10 scores of 36 or better.

T Bond	40 41 37 41 39 42 41 40 41 44

50-Shot Off-Hand—200yds.

J A Frye	5 10 9 8 9 9 9 8 7 6—80 9 9 9 7 6 10 9 10 9 10—88 4 10 10 8 10 10 10 7 8 7—84 9 8 5 9 9 9 9 10 10 6—84 8 9 8 8 7 7 10 10 5 10—82—418

L Ames	72 67		

REVOLVER MATCH, Cincinnati, Oct. 1.—The revolver match between Messrs. J. B. Copeland, of Dayton, Ky., and B. J. Robertson, of Covington, Ky., for the championship of Ohio, Indiana and Kentucky, which was to have taken place on the range of the Kentucky Rifle Association, Sept. 15, and which was postponed successively from the 15th to the 22d, and from the 22d to the 29th, because of the failure of Mr. Robertson to put in an appearance, much to the disappointment of many who were present to witness the contest, was shot by Mr. Copeland on the 29th at the time and place appointed, being witnessed by several disinterested parties. If Mr. Robertson fails to participate in his part of the match inside of two weeks from the 29th of September, at the place and under the conditions specified in the terms of the match, Mr. Copeland will rightfully lay claim to the championship title above referred to. Appended are Copeland's scores, which were shot in a drizzling rain from start to finish, and which had the effect of making the shooting somewhat unpleasant. Conditions, 100 shots at 50yds., with Smith & Wesson .44cal. Russian model revolver, factory ammunition, standard target, under the rules of the Massachusetts Rifle Association governing revolver shooting; possible 1,000. Time of score:

6 minutes	7	6	7	7	10	8	6	7	6	8—72
7 minutes	9	8	9	8	7	8	7	10	6	5—77
6 minutes	9	10	8	7	10	7	10	9	8	6—84
6 minutes	8	6	6	9	5	8	9	9	10	9—79
6½ minutes	8	10	8	10	8	6	7	9	8	6—80
5 minutes	7	6	7	6	5	6	9	8	8	9—71
6½ minutes	9	9	6	9	9	10	8	10	6	8—84
5 minutes	7	8	10	9	8	10	10	9	10	7—88
6 minutes	5	7	9	10	8	8	8	9	6	6—76
5 minutes	9	8	10	8	7	8	7	7	7	5—76—787

WORCESTER, Oct. 4.—At the annual target shoot this week of the Worcester City Guards, Co. A, 2d Regiment Massachusetts Volunteer Militia, the shoot was off-hand and governed by Wingate's Manual. The work in detail follows:

Honorables.

Maj E R Shumway	54444—23	A E Brown	33333—15
Capt J P Willard	24333—15	Capt W D Preston	42460—13

NEW YORK, Oct. 7.—The marksman's badge and sharpshooter's matches were shot at Creedmoor, on Saturday, Oct. 5. The attendance was very large and the scores made were very good. The day was fine, and conditions for shooting were good. Following were the winners of cash prizes and medals:

	200yds.	500yds.	Total.
J C Abrams, Co G, 7th Regt	23	24	47
R Oliver, Staff, 23d Regt	23	23	46
Jas Duane, N G A	22	23	45
H C Brown, Staff, 23d Regt	22	23	45
Edw Duffy, Field, 69th Regt	20	24	44
S C Pirie, Co I, 23d Regt	22	22	44
R Darling, Co A, 7th Regt	19	24	43

Medal Winners.

F A Wells, Co B, 23d Regt	23	24	47
T J Dolan, N C S, 12th Regt	23	23	46
Geo Shorkley, N R A	21	24	45
G F Hamlin, Co I, 23d Regt	20	24	44
A G Scranton, Co F, 7th Regt	22	21	43

Last matches this season: Saturdays, Oct. 12 and 26, and election day, Tuesday, Nov. 5.—J. MANZ, Jr., Asst. Sec'y N. R. A.

ST. LOUIS, Mo., Oct. 5.—Alexander won the St. Louis Pistol Club's medal at the last shoot. The attendance was light. Standard American 20yds. target:

G Alexander	6 10 10 10 9 8 10 8 9 10—90
E Mohrstadt	10 9 6 6 9 7 9 9 9 9—83
M Summerfield	8 7 8 7 10 10 10 8 8 5—81

W J Lard	7 4 4 7 4 7 8 7 8 8—64
A E Bengel	5 5 7 5 4 10 8 9 6 5—64

NEWARK, N. J., Oct. 3.—To-day the members of the Newark Shooting Society met at the Schuetzen Society's grounds in South Orange. Among the rifle shots present were delegations from all the neighboring cities. New York sent among others Barney Walthers. Barney's coadjutors were C. G. Zettler, H. Holzer, Geo. Joiner and G. W. Downs, all of the Zettler Rifle Club. The Philadelphia Rifle Club was represented by Messrs. Wm. Wurfflein, E. T. Travis and J. M. Green; the New York Rifle Club by Wm. P. Uhler. The home club—Newark Shooting Society—was represented by the great champion of 200yds. shots, Wm. Hayes, and Messrs. Freche, Bergerow, Seitz, Felzberg, Cleveland, Egger, and a dozen others. The light was anything but favorable, with dense clouds flying across the face of a bright sun. Mrs. G. W. Downs accompanied her husband to the grounds and took much interest in the shooting. The little lady is about 5ft. 3in. tall, stoutly built, has blue eyes of most pleasing expression, and handles a 10lbs. Ballard rifle as if its weight was but that of a feather. The shooting began promptly at 2 P. M., and continued without intermission until it was too dark to sight the bullseyes. The scores: Honor target—F. A. Trenzenhauer 46, G. D. Bergerow 51, G. L. Freche 43, T. Felzberg 24, W. Cleveland 54, C. R. Townsend 58, S. Seitz 58, P. Bell 56, L. Sante 33, J. T. B. Collins 60, I. Coppersmith 64, J. Bandie 55, W. Hayes 56, G. Georke 56, F. C. Watts 57, A. Bergerow 60, F. W. Egner 19, I. Baylen 67, I. P. Watts 59, C. E. Overbaugh 38. American champion target—H. Hodges 69, J. Coppersmith 68, C. Zettler 66, B. Walthers 65, Dr. Boyken 63, Geo. Joiner 63, J. T. B. Collins 60, A. Bergerow 58, C. B. Townsend 52, F. W. Campbell 47. These numbers out of a possible 75. The prizes were rich and numerous, the handsomest being a two-karat diamond pin for the club president, Egner.

LORD.—Frank Lord, the well-known pistol shot of this city, is in Paris viewing the Exposition, and treating the appreciative Frenchmen to some fine shooting.

PHILADELPHIA, Pa.—General Snowden, of the First Brigade, has issued orders announcing that the annual rifle contest for the Potter trophy, presented by Colonel Thomas Potter, Jr., and badges presented by Mr. William M. Singerly, will take place at the Hartranft range, Bridesburg, on Saturdays, Oct. 19 and 26, commencing at 9:30 A. M., as follows: Oct. 19—For company teams of four, for marksmen who have qualified this year. Members of previous winning teams (in brigade or State contests) barred. To shoot five shots each at 200 and 500yds. First prize, four gold collar badges; second prize, four silver collar badges; third prize, four bronze collar badges. Oct. 26, A. M.—Second-class regimental contests; for teams of four, from regiments, battalions or independent companies. To shoot seven shots each at 200 and 500yds. Those who have been members of previous winning regimental or brigade teams, in brigade or State contests, barred. First prize, four gold collar badges, with diamond bullseye. First-class regimental contests, Oct. 26, P. M.—For teams of four, for regiments, battalions or independent companies, to shoot seven shots each at 200, 500 and 600yds. Prize, the Potter trophy, a bronze group, "The Last Cartridge," to become the property of the organization winning it three times, and four gold collar badges, with ruby bullseye, the property of the team.

HARTFORD, Conn., Sept. 28.—The annual prize shoot of the Franklin Rifle Club was held at their range this afternoon. The scores made out of a possible 75 at 200yds., Standard American target, off-hand, were: C. E. Watkins 65, S. J. Lyon 60, E. C. Hewit 37, H. Andrews 55, E. H. Williams 54, H. Williams 53, D. J. Jordan 49, C. A. Terry 49, F. B. Colville 47, H. O. Whitney 47, F. K. Rand 47, L. A. Robertson 46, H. M. Jacobs 46, H. M. Pope 46, E. J. Hale 46, D. S. Seymour 45, H. Hurlbut 44, W. W. Tucker 42, Otto Klett 41, W. S. Loveland 40, George Bliss 40, J. C. Kinney 38, J. C. Wiseman 37, Gen. J. R. Hawley 37, J. W. Fay 36, J. C. Naedle 34, G. H. Britain 32, Allen Willey 31, F. Tucker 31, John S. Russell 30, H. B. Wood 30, W. R. Hopkins 29, E. P. Whitney 29, G. A. Faxon 29, W. H. McLean 28, Cuno Helfricht 26, C. H. Burbridge 24, W. B. Davison 23, H. Lloyd 19, R. P. Kenyon 16, E. E. Beach 14, E. R. Faxon 13, Asa Cook 13, C. H. Case 6, J. Stadley 6.

NATIONAL RIFLE ASSOCIATION.—At the regular monthly meeting of the National Rifle Association on the 1st, Gen. Wingate reported that as president of the Association he had submitted the deed and abstract of title of Creedmoor to the Attorney General, and it was probable that the transfer of the range to the ownership of the State would be effected within a few weeks at the latest. Resolutions commemorative of the late Gen. Rodney C. Ward, Treasurer of the Association, offered by Secretary John S. Shepherd were adopted. The financial statement of the recent prize meeting held at Creedmoor has not yet been made up, but sufficient data were reported to be on hand to show that the Association, as the result of the storm, would be called upon to meet a deficit of close upon $1 000.

MARION, N. J., Oct. 1.—Cool and shifting winds were of no advantage to the members of the Marion Rifle Club this afternoon, when they held their weekly competition on the club grounds at Marion, and consequently the scores were very poor, as can be seen by the record of the leading marksmen: William Weber 193, John Rebhan 188, L. P. Hansen 169, H. Hoersch 169, G. C. Varick 160, C. Bauchle 152 and Thomas Stiff 150. These weekly competitions were begun the first week in April, and will terminate on Thanksgiving day. The main object of holding the weekly shoots is to decide the championship of the club for each year, the winner receiving a gold badge valued at $50. Up to date Messrs. John Rebhan and L. P. Hansen are in the lead, with the others closely upon them.

PROVIDENCE, R. I.—The funeral of Chevalier Ira Paine, the world's crack rifle shot, took place from his late home, on Delane street, at 2 o'clock to-day, his body having arrived here Thursday from Paris. Rev. Thomas H. Cocroft, of the Church of the Messiah, performed the Episcopal service. The body was buried at Swan Point. The floral tributes included a cross from Buffalo Bill, a broken lyre from Nate Saulsbury and other pieces from members of Buffalo Bill's company, all of which accompanied the remains from Paris. There was also a reproduction in flowers of the emblems worn by the Chevalier, from Miss Jennie M. Paine, and other pieces from prominent theatrical people.

HOBOKEN RIFLEMEN.—The annual fall shoot of the Hoboken Independent Schuetzen Corps was held at Kroeble's Park, Jersey City Heights, on Oct. 2. The shooting was mostly of pool events, and Messrs. Baeman, Meyers and Behn had their pockets well filled with shekels when darkness set in. The officers for the year were as follows: Capt., August Bewig; Lieut., John Lehmer; First Shooting Master, H. Leith; Second Shooting Master, John Meyer; Sec'y, N. Stonden.

AT CONLIN'S.—Proprietor Conlin has a curiosity that excites the interest of Gotham marksmen. It is a genuine old-fashioned Kentucky squirrel rifle. It is nearly 6ft. long and very heavy. Five shots were fired recently from a self-cocking revolver in three-quarters of a second at 20yds. distance by A. A. Cohen and William Kent, each of which would have been fatal if fired at a living man instead of the target figure.

MERIDEN, Conn.—The first annual rifle match of the Citizens Rifle Club, of Meriden, Conn., will be held at their new rifle range, Oct. 15 and 16.

NEW MILFORD, Conn.—The third annual fall prize shoot of the New Milford Rifle Club will be held on Wednesday and Thursday, Oct. 16 and 17.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

Secretaries of clubs and managers of tournaments are requested to keep us advised of the dates of their shoots, so that we may give due notice in our column of fixtures.

FIXTURES.

Oct. 8, 9, 10, 11.—Middlesex Gun Club Tournament, Dunellen, N. J. W. F. Force, Secretary, Plainfield, N. J.

Oct. 8, 9, 10, 11.—Fred A. Fodde's Second Annual Amateur Tournament, at St. Louis, Mo. Inanimate targets.

Oct. 15, 16, 17, 18.—Tournament at live birds and inanimate targets, Philadelphia. J. F. Kleinz, Secretary, 600 South Delaware avenue, Philadelphia.

Oct. 17, 18, 19.—West End Social Gun Club Tournament, Harrisburg, Pa.

Oct. 21, 22, 23, 24 and 25.—Second Tournament of the Mercer Gun Club, at Trenton, N. J. E. G. Updegrove, President.

ELM CITY GUN CLUB SHOOT.

NEW HAVEN, Conn., Sept. 27.—The Elm City Gun Club of this place held an all day shoot on their grounds to-day, and had a fair attendance. Although the shooters did not turn out quite as well as we expected we had a general good time. No one got very rich out of it as you will see by the scores. Ties were div. unless otherwise stated. Match at 6 Keystones:

Gould	111111—6	Tyler	111101—5
Bristol	111111—6	Beers	111011—5

Ties on 8 div. by Longden and Gould with 3.

Miss and out: Widman 12, Gould 11, Merriman 11, Albee 6, Longden 6, Bates 3, Bristol 1, Allen 1, Savage 0, Pomeroy 1.

ELM CITY.

THE BALTIMORE TOURNAMENT.

W. H. LINTHICUM'S shoot at Baltimore on the 1st, 2d and 3d insts. was not a pronounced success in point of numbers, as not more than twelve men entered in any event. This was due partly to the fact that the law on partridges in the State was off Oct. 1, and most of the Baltimore shooters preferred to spend what spare time they could in the field rather than at the traps. Only a few visitors were on hand, among them Lieut. George E. Albee, of the Winchester Arms Co., W. Fred Quimby and W. E. Cannon, of New Jersey; E. L. Mills, of Washington, and H. A. Penrose, of Keystone Manufacturing Co. Two days were devoted to Keystone targets under Keystone rules, and on Thursday, the last day, wild birds were flown. These were supplied by W. Fields & Brother, of Christiana, Pa., and they were good strong flyers. The tournament was held at Acton's Park, just across the Charles River, in Brooklyn, Md. This park is a popular summer resort, and is well patronized by Baltimorians during the warm weather. Its proprietor, Sam Acton, knows how to serve a Maryland shore dinner in first-class style, and the first day those present at the shoot reveled in fish, crabs and chicken cooked to suit the most fastidious taste. One of Baltimore's best shots, Fred Hefline, has a boy thirteen year old whom he is training in the way he should go. The youngster entered in several events, and on one occasion shot his paternal ancestor clean out, making the only straight score of 15 in the event and won first money alone. If the boy keeps on in this way he will make some one hustle before many years pass.

The tournament was given by W. H. Linthicum, aided by Dr. Sam'l J. Fort, "Picus," and H. A. Penrose, of Keystone Co., added his efficient service in properly running the events. Two team races were down to be shot by ten men from the Baltimore Gun Club against similar teams from the North End Gun Club, of Philadelphia, and the Wawasett Club of Wilmington, Del., but as the Philadelphians and Wilmingtons did not appear, they had to be postponed. The scores as shot follow, all ties were divided unless otherwise stated:

First Day.—First event, 10 single Keystones, $1 entrance, classes A, B, C:

Franklin	1111111111—10	Brown	1010111111— 8
Albee	0101100110— 5	Cantlin	1010011111— 7
Grove	1110011000— 5	Krueger	1011111110— 8
Williar	1101011101— 7	Penrose	1111110111— 9

Second event, Classes B and C, 10 singles, entrance $1:

Krueger	0111101010— 7	Albee	0111111111— 9
Grover	0111111111— 9	Brown	1111100111— 8
Williar	1111111111—10	Jury	0101101111— 7

Event No. 4, Class C, 15 singles, entrance $1.50:

Grover	000101111011111—10	Brown	111110111111111—14
Williar	011111110010111—11	Jury	010011010111111—10
Beagle	110111110111111—13	Cantlin	111000111101110—10
Albee	110110111111111—13		

Contest No. 4, at 10 singles, entrance $1:

Albee	1110111001— 7	Brown	1001001111— 6
Courtney	1111111101—10	Jury	0001111000— 5
Krueger	1111111111—10	Heflin	1101111111— 9
Williar	1111111010— 8	Evens	1011010101— 6

Fifth event, at 20 singles, classes A, B and C, entrance $2:

Heflin	01111111101111111111—18	Williar	11111101011101111101—16
Albee	11111010101010111111—15	Brown	11110111110111111111—18
Courtney	10010110011100111101—12	Bond	01110011111011111101—15
Krueger	11111111111111111101—19	Cantlin	11111111001100011111—15

Sixth event, at 10 singles, entrance $1:

Heflin	1111110011— 8	Albee	1111111111—10
Courtney	1101011010— 6	Williar	0111111111— 9

NORWOOD GUN CLUB TOURNAMENT.

FLORENCE, Mass.—*Editor Forest and Stream:* The annual fall tournament of the Norwood Gun Club was held Thursday, Oct 3. The day was all that could be desired for shooting. Some of the best trap shots in New England were present, and some good shooting was done. The club having met with such success will in the spring hold a two-day tournament and put up some good prizes. Five Keystone traps were used and Keystone targets, American Shooting Association rules. The following are the scores:

First event, 10 birds:

H Leroy	1111111111—10	Nuttleman	1111101100—7
"Joe"	1111111110— 9	Gaylor	1011000110—5
Yerrington	0111111110— 8	Russell	1000010100—3
Harris	1111011110— 8		

Ties div.

Second event, 5 pairs:

E A Folsom	11 11 11 11 11—10	Whittlesey	10 11 10 10 11—7
Quinton	10 11 11 11 11— 9	Besserer	10 11 00 11 10—6
Yerrington	11 10 11 10 11— 8	"Joe"	11 01 10 01 10—6
H Lorey	11 01 11 01 10—7	Harris	11 11 10 10 00—6
Russell	10 11 00 11 11— 7	Dr Herrick	10 10 00 11 10—5
Burbridge	10 10 11 10 11— 7	Gaylor	10 11 00 00 10—4
Willey	11 10 10 11 10— 7		

Ties on 7 for fourth money: Leroy 10 11, Russell 10, Burbridge 00, Whittlesoy 10 11, Willey 10 10; Leroy, Whittlesey and Willey div.

Third event, 15 straightaway:

Quinton	111111111111111—15	Cowee	100111111111100—11
Leroy	111111110111111—14	Cobb	111110101010101—10

ALLENTOWN, Pa., Oct. 3.—To-day was an off day for all the shooters, due partially to the very unfavorable wind prevailing, but notwithstanding that, our club came out victorious by a small margin. The occasion was a return shoot with Mahanoy City Gun Club, first match won by us, 76 to 65. After the match several minor sweepstakes were shot off. The visitors expressed themselves highly pleased with our grounds and were loud in praise of it. Lehigh Gun Club vs. Mahanoy City, return shoot to one at Mahanoy City, Aug. 15, 10 Standard bluerocks, 16 and 18yds. rise, Chamberlin Cartridge Company's rules, friendly shoot.

Lehigh Gun Club.		Mahanoy City Gun Club.

On Nov. 12, the Fourth Ward Guards of Newark, N. J., will have target practice on our grounds, and will come 150 strong. The Jawalchen Club, also of Newark, will be here for targ-t practice on Nov. 21, with 200 or more men.—A. B. J. FRANTZ, Sec'y.

TRENTON TOURNAMENT.—The programme for the tournament at Trenton, Oct. 21, 22, 23, 24 and 25 presents an attractive array of events. On the first three days targets and live birds both will be used, and on Thursday and Friday nothing but live birds; $565 in guaranteed purses is distributed through the four days, the largest purse being a $300 one at 20 live birds. The management announces a championship match at 100 live birds for $250 aside between C. W. Budd and J. Frank Kleintz to come off on the first day. Just how accurate this is, in view of the fact that the match was shot by these men at Gloucester on Saturday last and another proposed for Reading in two weeks, we cannot say, but in any event enough of interest appears in the programme to draw shooters even without that.

BUDD VS. KLEINTZ.

ON Saturday, Oct. 5, Charles W. Budd, of Des Moines, Ia., and Capt. J. Frank Kleintz, of Philadelphia, met in a match at live birds. It will be remembered by our readers that in June last these two men shot a match at Chicago for the championship cup, which Budd holds and which Kleintz had challenged for. On that occasion Budd won with a score of 98 to 94. Kleintz still thought he had a chance to beat the champion, and arrangements were made for another race when Budd should come East for the Eastern tournaments. The champion arrived in Philadelphia on Friday night, and on learning that Kleintz had been sick for several days, immediately offered to let him down on the amount of the stake. A forfeit of $50 each had been posted toward the $250, which was the original sum agreed upon, but in view of Kleintz's condition he availed himself of Budd's kindness, and another $50 was added to the forfeit, making the stake $100 a side. The race was shot at the baseball park in Gloucester, N. J., just across the river from Philadelphia. About 300 spectators were present and witnessed a very close contest. The birds were supplied and trapped by Miles Johnson, and were way above the average. Very few of them refused to fly when liberated, and the great majority started off at lightning speed. Many of them were so strong that unless a wing was broken they were able to carry both charges outside the bounds, there to fall victims to the scouters, those ever present attendants of a live-bird shoot. The boundary was supposed to be 80yds., but in some places it fell as far short as 65yds. Few birds were lost on this account, however, as their flight was mostly in the other direction. A recapitulation is given below, showing the direction of flight, but fully two-thirds of the birds might be called towerers, as they rose straight from the trap before starting off. This seemed to be due to the high fence around the grounds, close to the boundary lines—it served to make the birds rise to clear it. Both contestants used 12-gauge guns, standing at 30yds. rise. Budd started in with a new gun which he had never shot before, and this he used up to the 23d round. He was apparently getting under his birds, and had lost 5 out of 22; so changed to his old gun, an L. C. Smith, weighing 7lbs. 7oz., full choke. His cartridges were loaded with 3¼drs. American wood powder and 1¼oz. trap sevens shot. Kleintz used a Greener, full choke, weighing 7lbs. 13oz., and shot 3¼drs. Schultze powder and 1¼oz. trap sevens shot in both barrels.

Notwithstanding Kleintz's condition, and he really looked out of trim, he shot a game race, and finished only one bird behind. Both men have made better scores, but it is doubtful if birds of the same quality were used. Before the race Miles Johnson offered to bet any amount that 90 would not be killed, and the sequel proved his faith to be well founded. Each man had 5 birds fall dead just beyond the boundary. Kleintz seemed to have the luck of the birds early in the match, but Budd's luck commenced toward the latter part. Kleintz's 49th bird was a clipping blue-rock, that dodged both barrels and got away clean; his 50th was another hummer, and only succumbed to a rattling good shot with the second barrel; his 62d was a strong incomer that was dropped two feet from the score. Budd's 23d bird was a right-quartering, incoming bluerock that vanished in the distance; his 54 h was also a bluerock to which he had to say "good by;" his 54th was hit in the leg and circled three times around inside the bounds, every one expecting him to drop, but he at last slowly sailed over the fence. Below is the score in full, the figure 2 denoting second barrel kills and o dead out of bounds:

Chas W Budd	o2o2121153o2212101211012
	21222211111020211111321111
	21202011210221102121011
	22112122211222o2012202112—85
Capt J Frank Kleintz	12212112121101212122121
	212212o1022101o202210101220
	21221222012212161222202
	0o2212111222022221212112—84

Recapitulation—Budd had 14 right-quarterers, 27 left-quarterers, 24 drivers, 10 towerers, 7 right-quartering incomers, 5 left-quartering incomers and 3 twisters. He used his second barrel 41 times and his longest run was 17. Kleintz had 18 right-quarterers, 36 left-quarterers, 23 drivers, 10 towerers, 4 right-quartering incomers, 7 left-quartering incomers and 2 twisters. He used the second barrel 48 times and his longest run was 15. Kleintz is not yet satisfied, and in all probability another match will be shot at Reading, Pa., during the tournament which commences there Oct. 15, though nothing definite is now known. FRANK MASON.

ST. LOUIS, Mo., Oct. 5.—Monday morning at 8 o'clock twenty-one trap-shooting enthusiasts assembled at the grounds of the Compton Hill Gun Club, to contest for the Rawlings Bros. medal. The day was a miserable one and the greater part of the shooting had to be done in the rain. It was a close contest between the winner, Sieminski, Field and Prendergast, and not till the last round of 5 had been shot was there any certainty which of the three would capture the trophy. It is a very handsome medal, and is representative of the individual inanimate target championship of this city and county. The score, 50 singles and 25 pairs of doubles:

Jule Sieminskie.

Sieminskie medal and first money, Field second, Prendergast third.

The Carondelet Gun Club closed its trap season with a grand prize shoot last Wednesday. There was a large crowd of the members present and several good scores were made. Every body who took part received a prize of some kind. The score is as follows. Shoot No. 1, sweepstakes for prizes, 25 Star targets: J. Brown 11, B. O'Reilly 16, F. Ahrens 15, G. Lay 21, A. Paule 21, F. Ulrich 16, C. Groffman 12, W. Krueger 16, H. Harris 22, V. Shremp 13, J. Yockey 14, G. Stueckel 11, G. Hill 24, J. Greene 16, A. Ulrich 10, A. Messer 19, Dr. M. Rice 8, A. C. Gould 15, R. Schlegel 15, D. Ray 14, Dr. Wills 14, E. Meyer 23, J. Meyer 19, F. Coney 13, F. Mohrslin 4, L. Schremp 11, L. Lap 20, S. Simon 3, F. Vallet 14, F. Jackson 16, J. Smith 12, G. Heinrich 15, H. Khnorr 11, F. Bowman 12.

DAYTON, O., Oct. 2.—Those who attended the Gem City Club tournament met as fine sport as the shooters ever struck, cracks being present from all the leading clubs of southwestern Ohio. The traps were set on the club range at Shorty's Inn. All matches were under American Association rules. To-day's scores ran:

First match, 12 single targets:

Ruble	111111111111—12	Taylor	111101111101—10
Heikes	111111111111—12	Bruce	111101101111—10
Bacon	111111110111—11	Mumms	100101001011— 6
Tippy	111111111001—10	Angel	111111110011—10

Ruble and Heikes div. first, Bacon second, Tippy third.

Second match, 15 single targets:

Taylor	111101111101111—13	Ruble	111111111111110—14
Mumms	000110111111111—11	Heikes	101111111111111—14
Bruce	101101111111111—13	Tippy	111011111111111—14
Dayton	111111111111111—15	Bacon	110111111111111—14

Dayton first, Ruble and Heikes div. second, Taylor and Tippy div. third.

Third match, 7 live pigeons:

Dayton	1111111—7	Ruble	1111101—6
Mumms	1101110—5	Angel	1110110—5
Taylor	1011011—5	Bacon	1111111—7
Heikes	1111111—7		

Dayton, Heikes and Bacon div. first, Ruble second, Mumms third.

Fourth match, 12 single targets:

Taylor	111111111111—12	Bruce	111111111010—10
Mumms	111010111111— 9	Ruble	111111111111—12
Heikes	111111111111—12	Tippy	111011111111—11
Dayton	111111111090— 9	Bacon	001111111111—10

Taylor and Heikes div. first, Ruble second, Bacon third in the shoot off.

Fifth match, 10 live pigeons, entrance $10:

Dayton	1111111119—9	Mumms	1111111116—9
Heikes	1011111111—9	Angel	1011101110—7
Ruble	1110111110—8	Bacon	1011111101—8

Dayton, Heikes and Mumms div. first, Ruble and Bacon second, Angel third.

Sixth match, 9 single targets:

Taylor	111111101—8	Dayton	101111111—8
Heikes	111110011—7	Breene	111111010—7
Bruce	111101111—8	Ruble	011110111—7
Mumms	101100111—6	C Sander	001111110—6
Rudolph	101111101—7	G Sander	011010110—5
Makley	111000111—7	Turner	000101011—4
Cain	111111101—8	Bacon	111111111—9
Tippy	100111111—7		

Bacon took first money, Taylor, Bruce, Cain and Dayton div. second; Heikes and Ruble third, C. Sander and Mumms fourth.

Seventh match, 10 sparrows, 5 traps, 30yds., entrance $4:

Dayton	1111101101— 8	Taylor	1110111111— 9
Cain	1111111110	Bacon	1111111110
Ruble	1111110111— 9	G Sander	0001010101— 4
Heikes	0111111111— 9	Mumms	0111100011— 7

Cain and Bacon div. first, Heikes and Taylor div. second, Dayton took third.

TORONTO, Oct. 2.—The annual tournament of the Toronto Gun Club commenced to-day at Woodbine Park. There was a very large turnout, and the shooting, which was at live birds, was exceptionally good, considering that while the light was fair the wind was strong. It was noticeable that whereas the majority of the competitors shot with 10-bore guns, J. Townson used a 12-bore, according to English rules, and killed his whole 15 straight with one barrel. Following is the score so as the competition has gone. 15 birds:

First Class—First Squad.

J Townson	111111111111111—15	C Wilmott	111101101101101—10
J Blong	111011111111111—14	P Pearsall	111110000101001— 8
C Small	010111111111011—12	J Chambers	110011000100100— 7

Artificial bird shoot; 9 birds at 18yds.: C. H. Riggs 9, W. McDowall 9, T. Sawdon, Sr. 8, Dr. Pearson 8, P. Wakefield 8, H. Kipp 8, W. Felstead 8, J. R. Wells 8, W. H. Pearson 8, A. Elliott 7, C. Wilmott 7, C. Sinclair 7, J. W. Sinclair 7.

Oct. 3.—The Toronto Gun Club's tournament, for a big list of valuable prizes, was continued at Woodbine to-day. The weather was thick and "muggy," and the rain prevented a start until nearly noon, the result being that the third and fourth classes and the ties at 12 and 11 in the first class have yet to be disposed of. Shooting will be resumed next week. To-day's results were:

At 15 birds each, 20yds., H and T traps:

Fourth Squad.

S Staneland	13	E Martin, Sr	12
J Foreman	13	E T Jackson	10
C Redder	11	A Elliott	13
W H Pearson	10	J James	11
G T Smith	12	J B Armstrong	12
G Taylor	6		

Fifth Squad.

F E LeRoy	13	C Sinclair	11
G R Wells	15	W G Sinclair, Jr	12
H M Kipp	6	T Sawden, Sr	13
F Quarrie	11	Dr Pears	13

Sixth Squad.

T Loudon	15	J Worden	12
W Bugg	14	W Villiers	12

Shooting off the ties in the first class, J. Townson, C. H. Riggs and B. Pearsall, 15 each, shot 5 birds from the 29yds. mark. Townson and Riggs killed all their birds, but Pearsall missed one. Going back 3yds. further, Townson again had a clean score of 5, while Biggs missed his fifth. Prizes in the first class went as follows: First, John Townson; second, C. H. Riggs; third, B. Pearsall; fourth, D. Blea; fifth, W. A. Clarke; sixth, G. H. Briggs; seventh, John Bell; eighth, W. Bugg; ninth, J. Blong; tenth, A. Elliott; eleventh, D. L. Van Vlack; twelfth, D. Beldam; thirteenth, S. Staneland. In shooting off the ties in the second class the results were: First, J. R. Wells; second, T. Loudan; third, J. Barrett; fourth, J. C. Foreman; fifth, C. Ayre; sixth, P. Wakefield; seventh, Dr. Pears; eighth, C. Sinclair; ninth, W. Felstead; tenth, T. Sawden, Sr.; eleventh, J. B. Armstrong; twelfth, F. E. LeRoy.

WHITE HOUSE, N. J., Oct. 5.—Return shoot between the North Branch Gun Club and the White House Gun Club. The day was perfect, and a large number of spectators witnessed the match, which proved to be a very close and interesting shoot. The White House club took the lead, but finally got rattled and lost the match by 1 bird. The scorers, too, lost their heads in the excitement, and announced that the White House club had beaten by 3 birds, but when their brains cleared the corrected score stood 43 to 44 in favor of North Branch. 15 Keystons, 1 Keystone trap, 3 angles, 18yds. rise, Keystone rules:

White House Gun Club.		North Branch Gun Club.	
H Bishop	101111111111101—13	Ed Lever	010111101001011— 9
Anderson	011111110000111—10	G Kramer	101011111101110—11
J H Davis	001001101101100 — 7	Col Kline	101100010100010— 6
B Piehle	110111110000000— 7	T Welsh	101010101011101—10
C Abbott	010000001011011— 6—43	Duickinck	000100101111110— 8—44

At the close of the shoot an amusing incident occurred. When some members went to retrieve the unbroken birds in the field a rabbit sprang from a bunch of grass and bounded across the smooth pasture right before the shooters. Instantly a dozen guns were leveled at him, but no one pulled a trigger, and he bounded away unharmed. It was evident that if the quickness and precision had been shown at the trap which were manifest when the rabbit showed itself, much better scores would have been made. Two gray snipe were also flushed from the same bog, and were killed with one shot by Mr. J. V. Voorhees, an old-time sportsman and an excellent shot. The third shoot between these clubs will take place Oct. 19 at North Branch.

SING SING, N. Y., Oct. 2.—A lively series of sweepstakes at Keystone targets and live-pigeons was held on the grounds of the Sing Sing Gun Club to-day. There was a good attendance of well-known shooters who kept the traps throwing quoits almost continuously during the day, besides the events at live birds. The shooting averaged 80 and 90 per cent. The money in the principal events was div. by Gettle, Raymond, Lindsley, Collins, Rohr, Cave, Edsall, Pierce, Paul Aker, Hitchcock and Pringle. Fred Mead was referee in the Keystone shoots, and Oscar Haines in the live bird contests.

CINCINNATI, Oct. 3.—The fine weather of to-day swelled the entrance for the Independent Gun Club's Muldoon medal to 11. The shooting, with the exception of that of the winner, was poor, and that, too, with the weather and the flight of the birds being perfect. Twenty single champion clay birds from 5 traps, American Association rules:

Sport	01100011011101001101—11	Schaffer	10001110100001000010— 7
Gibson	10001010000001100001— 6	Dewald	10101110010011011112—12
Metcalf	10011010010001000000— 7	Wenning	11010000110001111110—11
Frank	11001101101111011111—15	Bauer	10111000110001111010—11
Wick	11110111111111111101—18	Becker	00011001101110001110—10
Snider	10011011101111010010—12		

Match No. 2 at 10 singles: Wells 4, Schaffer scored none in 5 and withdrew. Dewald 6, Wenning 6, Becker 5, Bauer 5, Gibson 2, Metcalf 3, Frank 6, Wick 7. Match No. 2 same: Wells 6, Frank 7, Wick 6, Metcalf 3, Gibson 4, Sport 4, Bauer 5, Becker 5, Wenning 6, Dewald 8, Schaffer scored none in 5 and withdrew.

BROOKLYN VS. NEWARK.—At the grounds of the Newark Gun Club, in Newark, N. J., on the 2d, one of the most interesting shooting matches of the season was decided when the Brooklyn Rod and Gun Club contested a match with the Newark Rod and Gun Club. The conditions of the contest were: Five traps to be used, 1¼oz. shot, the boundary flags to be placed at 80yds. on the front and on the right and left sides of the field, and 32yds. on the back:

Brooklyn Gun Club.		Newark Gun Club.

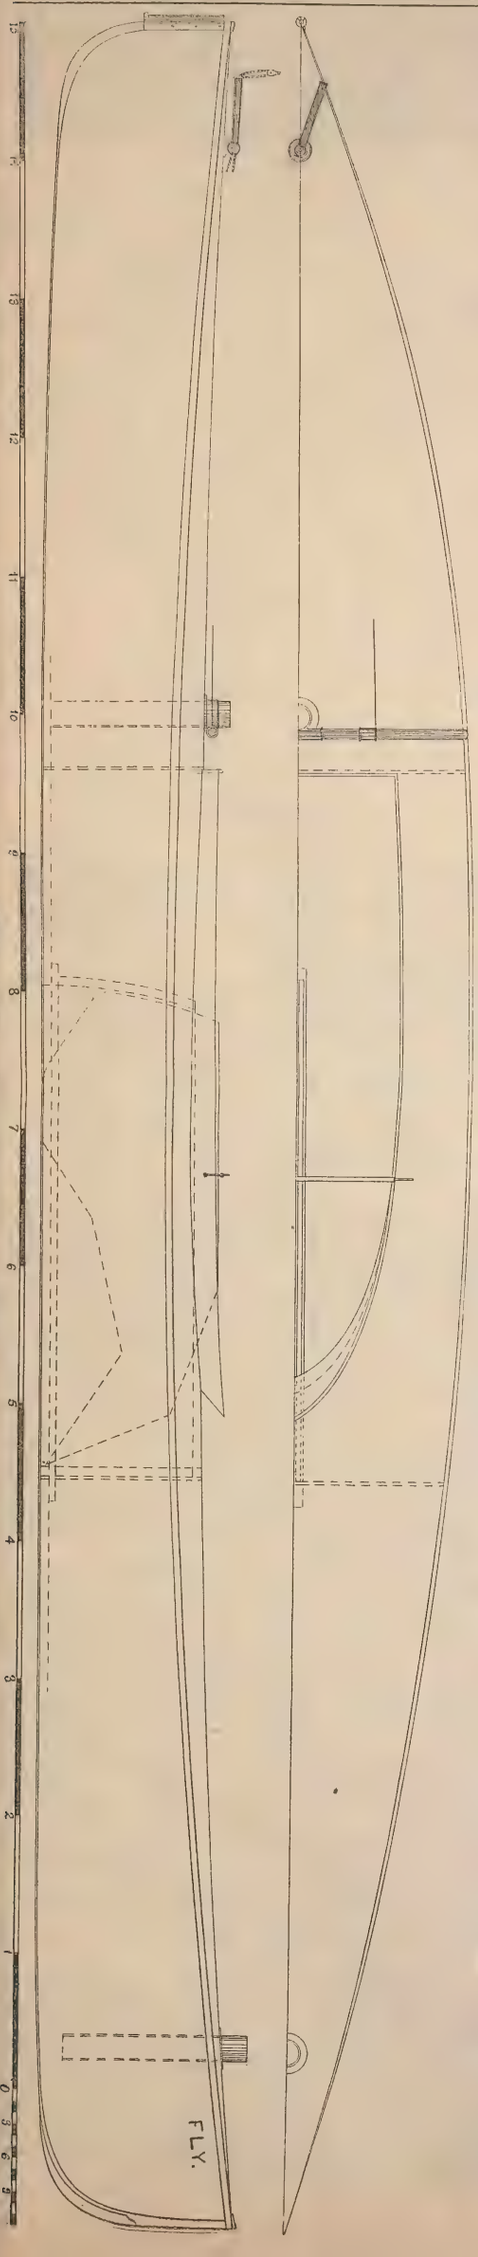
	56		49

NEWARK, N. J., Oct. 4.—The much-talked-of match between Class and Brewer failed to materialize this afternoon. 200 persons put in an appearance at Erb's Park only to be disappointed. Class was on hand, but Capt. John Brewer failed to come to the mark. Not a line came from him regarding the cause of his absence, and he lost his $50 forfeit. Frank Class shot in a series of sweepstakes, as he said he wished to make a record for himself, and his magnificent form in this shooting did somewhat to make amends for the lack of a contest between him and Brewer. His score was one or 50 straight kills. The birds were a grand lot, and, helped by the northwest wind, which blew strongly across the traps, were off like a rocket, and puzzled the very best shots present to make scores. Frank Class is a finely formed man of about 30 and of sturdy physique. He stands about 5ft. 10in., and is broad of shoulder and muscular of arm and leg. He is dark-eyed and dark-haired, and possesses withal a most pleasing expression. He handles his gun with wonderful celerity, and no shooter of the country can equal him in the quickness with which the second barrel follows the first if the latter fails to grass the bird. The feature of the day was the retrieving of the black setter dog Lem. He was quick as a flash, and cunning as a fox. If the bird was likely to fly, he sneaked up to it with the stillness of a weasel. Did it require dash, he was equal to the occasion and bounded in with the jump of a panther. The only time Lem ever forgot his duties was a short time ago, when, sent to gather a far-away killed bird, he put up a full-grown rabbit on his way. The temptation was great. He forgot his training in nature's law and dashed madly after bunny, leaving the bird to the care of itself. After a mad chase, he came back looking as shamefaced as a corrected schoolboy. First sweep, 9 entries at $5: Class, Riggott, Erb and Leddy tied for first, and divided with 5 straight kills; Geoffrey and Cavanagh divided second; Heath and Parment third. Second sweep: Class, Riggott and Erb again divided first with a clean score; Parment, Leddy, Freche and Geoffrey captured second, while third money went to Heath and Cavanagh. Third sweep: Riggott, Class, Leddy, Heath and Freche divided first, Erb taking second, third being added to first. The fourth and fifth sweep were exactly similar. Sixth sweep: Class, Heath, Green, Cockefair and Siglow divided first with straight kills; second money went to Riggott and Leddy, third to Erb, Freche and Reinhardt. Seventh and last sweep: Chris. Reinhardt captured first money all by himself; second event to Erb and Cockefair, third to Francis, Hollis and Siglow, all the rest out in the cold. Had Capt. Brewer come to time the day would have been one to be long remembered.



WELLINGTON, Mass., Oct. 4.—There was a fair attendance at the grounds of the Wellington Club to-day, and the weather conditions were favorable. In the silver pitcher match, at 8 clay-pigeons and 7 bluerocks, Chase and Melcher tied with 13 each, and in the shoot-off Melcher won with 3 straight. The other scores in this match were: Perry, Bond and White, 12; Cowee and Bradstreet, 10; Baxter 8, Moore 7, Bradbury 6, Needham 5. In the booby medal match the following scores were made at 20 bluerocks: Chase, 17; Bond, Perry and Stone, 15; Warren, White and Bradstreet, 14; Baxter, Cowee and Moore, 13. In the above match the medal was to be awarded to the man making the most consecutive misses. Bradstreet and Moore tied with 3 each, and in the shoot-off Moore was awarded the prize for breaking 5 straight, the conditions having been reversed without the shooters knowing it. The winners in the sweepstake follow: Six bluerocks, White, Cowee, Chase, White; 7 bluerocks, Melcher and Bradstreet; 8 pigeons, Melcher, Chase and White; 5 bluerocks, Moore and Cowee; 6 bluerocks, Moore; 5 pigeons, Perry, Moore, White and Melcher; 10 bluerocks, Chase, Moore, Warren; 5 pigeons, Stone and Bond; 6 bluerocks, Moore and Bond; 5 pigeons, Warren, Needham, Stone and Cowee; 6 bluerocks, Bradstreet; 5 pairs pigeons, White; 5 bluerocks, 24yds., both barrels, Warren; 20 bluerocks, Keystone target, Chase 17, Bond, Perry and Stone 15, Warren, Bradstreet and White 14, Baxter, Cowee and Moore 13; 30 bluerocks, Keystone target, Warren 24, Bond, White and Stone 23 each, Perry 22, Moore and Bradstreet 21 each, Cowee 19, Baxter 18.

MIDDLESEX SHOOT.—The fifth annual tournament of the Middlesex Gun Club commenced on Tuesday of this week at Dunellen, N. J. The attendance the first day was much smaller than on previous occasions when this popular club has given tournaments. In one event 33 men came to the score; but taking all events together, an average of about 20 was all that could be mustered. This, too, on one of the most beautiful days that a shoot could be favored with. Just what the reason is for this light attendance it is impossible to say. Perhaps it may improve before the week ends, as many who have promised to be here have not yet made their appearance. Among those now here are C. W. Budd, of Des Moines, Ia.; Rolla O. Heikes, of Dayton, O.; H. A. Penrose, of Corry, Pa.; A. G. Courtney, of Syracuse, N. Y.; A. R. Bowdish, of Oxford, Mass.; W. Wolstencroft, of Philadelphia, Pa.; John A. Ruble, Beloit, Wis., and such local talent as Milt. Lindsley, W. Fred Quimby, Wm. Sigler, Ed. Collins, Charles Smith and S. G. Smith. Bright sunshine accompanied the early morning events, and though later clouds appeared and the air grew cooler, it was still possible to keep comfortable while in motion. Nine regular events were shot and thirteen extra sweeps. Wednesday's programme calls for eight regular events, all at inanimate targets, and on Thursday and Friday live-bird contests will surely draw good entry lists. Full scores will be given in our next issue —FRANK MASON.

CRESCENT GUN CLUB, Oct. 2.—The members of the Crescent Gun Club of Brooklyn enjoyed a bird dinner to-night. About forty covers were laid, and President Walter H. Fitz Gerald presided. Representatives from the Unknown, Brooklyn, Coney Island, Glenmore, Duana, Falcon, and many other of the prominent gun clubs were present, and enjoyed an excellent repast and listened to speeches until a late hour. The Crescent Gun Club medal, designed by Mr. Burkee, of the Crescent Watch Case Company, and presented to the Crescent Gun Club by the donor, was on view during the evening. The trophy was won by Dr. H. L. O'Brien at the last shoot of the club. The next shoot of this organization will be held at Miller's Dexter Park, on the Jamaica Plank road, on Saturday, Oct. 26, when the classified shoots for the club medal will be decided, in addition to which several sweepstakes at clay-birds will be shot.

RED BANK, N. J., Oct. 4.—The Riverside Gun Club held its weekly shoot this afternoon on the grounds on the Middletown shore. The weather was perfect. Clay-birds were the targets. The first event was a match at 10 singles: E. M. Cooper, A. Whaymer and John Cooper 8, and W. G. Conover, the only other contestant 6. The first three div. the prize. The second event was at 5 pairs: W. S. Conover won by a score of 8, and John Cooper 7, A. Whaymer and Edwin Cooper 6. Third event at 10 singles: Jas. and Edward Cooper 10, A. Whaymer 7, W. G. Conover 5. A few small matches by outsiders followed. The live bird shoot of the club will take place on Oct. 18.

PHILADELPHIA, Oct. 1.—Mr. Ed. Holske was a passenger on the Chicago limited which passed through Philadelphia this morning. He is now on his way to Australia with Capt. Brewer, the celebrated pigeon shot. Holske intends backing Brewer against any one in the Antipodes.

CANOE "FLY."—DESIGNED BY MR. PAUL BUTLER.

SUFFERNS, N. Y., Oct. 1.—Close to the foot of the Ramapo Mountains, in a little level spot of half a dozen acres belted in with shrub and timber, are the shooting grounds of this part of Rockland county. To-day a shoot was held. The day opened with a heavy shower. It cleared off by noon, and those few who reached the shooting grounds represented the Harverstraw, Bergen County and Newark Gun clubs. The master of ceremonies was that genial crack shot Bill Taylor, brother of Jack. The winners of first sweep were Van Riper and T. G. Peck, with straight scores of kills; Post and Blauvelt tied for second. Second sweep, Van Riper and T. G. Peck divided first; Post and Blauvelt second. Third sweep, T. G. Peck captured first, and second was divided between Post, Van Riper and Eley. Fourth sweep, T. G. Peck and Van Riper divided first, others divided. The sixth and last sweep was a hotly contested one, at 7 birds each man. Four tied for first, with six kills each to their credit—T. G. Peck, R. Van Riper, E. I. Peck and W. Eley. The tie was shot, miss and out, Van Riper winning. Second money was divided between W. Taylor and R. Blauvelt; third went to G. H. Peck. Old veteran Jacob Pentz was referee.

ALLENTOWN, Pa., Oct. 3.—The Mahanoy City Gun Club arrived at Allentown to-day and engaged in a return shooting match with the Lehigh Gun Club. Each contestant was allowed 10 shots. The local team won by the following score: Lehigh—J. Nettles 10, J. B. Saeger 4, L. W. Masuric 5, P. C. Blank 5, E. Fink 6, M. Ochs 6, U. H. Wieand 8, D. Brown 5, J. Bell 5; total 54. Mahanoy City—F. Cooper 10, M. Cooper 7, G. R. Goodman 6, M. Clauser 7, J. Barr 5, H. S. Miller 4, W. Baker 4, S. Wildes 4, C. Burke 4; total 51.

HELLERSTOWN, Pa., Oct. 3.—The Valley Gun Club held its fall meeting here to-day, shooting three 5-bird pots and one at live birds. In the clay bird shooting the score was: O. Marsteller 11, J. Woodring 10, W. H. Gosner 8, J. Kane 8 and G. Quier 7. At live birds: Woodring, J. S. Hagey and J. Kane tied with 4 each, and in the shoot off Woodring won by 5 out of 6. The shooting was good and attracted a big crowd.

CARLISLE, Pa., Oct. 1.—Several hundred persons assembled on the county grounds yesterday to witness the all-day tournament given by the Cumberland County Fish and Game Association. Over 500 live birds were used, and shooters from all parts of the State were present. The big purses were won by Dingert and Bresinger, of Harrisburg; Cassell, of Hummelstown; Corcoran of York, and Lefevor, of Carlisle.

PEEKSKILL NEXT MONDAY.—A grand all day shoot at kingbirds and bluerocks will be held by the Ravine Gun Club, at the Peekskill Baseball Park, Peekskill, N. Y., Oct. 14, beginning at 10 A.M. sharp. Two sets of 6 traps each with the rapid system will be used and the several events on the programme will be shot off as fast as possible. Shooters from New York and vicinity can leave the Grand Central depot at 8 A.M. arriving at Peekskill at 9:20 A.M.—W. H. PIERCE, Secretary and Manager.

HARRISBURG, Pa.—The first annual fall tournament of the West End Social Gun Club will be held at the baseball grounds, Oct. 17, 18 and 19.

HAVANA, Ill.—A Peoria blackbird and live pigeon tournament will be held here Oct. 16 and 17.

Canoeing.

FLY.

THE accompanying plans of the canoe Fly, whose lines appeared last week, show the interior arrangement and the leading fittings. The canoe is used for match sailing almost entirely, and consequently the requirements of cruising have been little considered in the planning. The well is square at the after end and pointed forward, being 17¼in. wide inside. It is but little over 4ft. long, while the greater part is taken up by the centerboard trunk, leaving little room to sit below, but as the sailing is done entirely from the deck, this is a small matter. There are two bulkheads, one forward of the trunk and one immediately abaft the well, each having two circular openings or hand holes about 4in. diameter, closed with a flanged cover held in place by a screw, the flange being lined with rubber; the whole arrangement being modeled on the ordinary hand hole plate of a steam boiler. The compartments are quite large, but are not used for stowage. The well contains only a plain flooring, there being no foot steering gear or fittings of any kind below deck. The deck furniture is also very simple; at the stem is a small socket plate let into the deck, into which a ring about 1in. diam. drops, being used for the painter, and in sailing for the snatch block that takes the halliard. The mast tubes project about 2in. above the deck, each being carried up through a deck plate. Two travelers are provided, for main and mizen sheets, the former made of two pieces of rod, about ¼in. diam., as shown in the section, united by a length of tubing just large enough to slip over the wire. The ends are passed through the coaming and secured by wing nuts. The mizen traveler is one of Mr. Butler's most ingenious inventions, a metal tube 6in. long pivoted so as to swing in any direction in a horizontal plane. The two parts of the mizen sheet are led through this tube, as shown, the result being that the mizen boom can be trimmed down flat without at the same time being hauled in to the exact center line of the canoe, thus giving a very much more effective angle to the sail. The details of the traveler, with those of rudder, tiller, etc., will appear next week.

The canoe is constructed on the ribband-carvel method, and resembles very much that shown in Mr. Stewart's two Pearls. The keel is of oak, 1¼in. wide at rabbet amidships, with a keelson of white pine 3in. wide and ¾in. deep. The stem and stern are of steamed oak. The planking is of Spanish cedar $^3/_{16}$in. thick, with but three strakes to the side, as shown in the section. The ribbands are each ½in. wide and ⅝in. deep, slightly rounded on the back. The timbers are ½in. wide and ¼in. deep, spaced 6in. In building the ribbands are first run along the moulds, then the ribs are bent to shape and jogged into the ribbands, the reverse of the method described in "Canoe and Boat Building," after which the frame is planked up. This makes a very strong and light canoe, with perfectly flush seams. The deadwood of stem and stern, as well as the keel, is very carefully rounded away, while every care is taken to preserve a fair sweep of the lines from the stemband to the after side of the sternpost. The stem is protected by a carefully-shaped casting of brass, making almost a knife edge to the stem. The metal fittings are of aluminum, specially made for the boat. The centerboards, of which several kinds are used, are of steel or brass, the latest one being made of two thicknesses of sheet brass, about $^1/_{16}$in., riveted together along the edges. In the upper and after angle a small auxiliary board is fitted, filling the space between the keel and board when the latter is down. By this means the width of the main board is considerably reduced. The deck is of Spanish cedar, some of the Vesper canoes being decked with butternut. It is laid on beams spaced 9in., with 2½in. crown. The coaming is ¾in. high amidships.

PADDLING CANOES IN THE A. C. A.

Editor Forest and Stream:

It seems now about the time in the course of human events and canoeing for the Association to do something in regard to paddling canoes. After such an unsatisfactory race as the championship this year, not only to the participants but as to its conditions, and as we are in the future to have a valuable trophy for that race, now is the time for the Association to make as strict and permanent rules for paddling canoes as we have for our sailing canoes.

Last year and the year before the "disgruntled kickers" had the standing rig and the sliding seat to worry their wits and brains about, calling all sorts of names. This year they have before them a startling vision of a shell planked, veneered deck, cotton-stuffed centerboard—does any one know what it is?—with its mast tubes too small for a match and its ridiculous substitutes for centerboard and rudder, etc., upon which to vent their wrath and fling their scathing criticisms. Last year I sailed a boat with standing sails and sliding seat, and this year I am the possessor of one of the above described crafts. Surely I must be running in hard luck. These criticisms that have appeared at such length in the FOREST AND STREAM do not do the boat justice, so, lest the veracity of the critics be questioned, I am thinking seriously of having the necessary alterations made; to make the crime fit the punishment, as it were.

Let us look at the conditions of the championship race.

"Canoes noted as decked must be properly equipped sailing canoes."

"Open canoes must use the single blade paddle."

In the opinion of the committee, as was given after the race, decked canoes must be such as are used ordinarily in sailing and which weigh anywhere from 70lbs. to 125lbs., and these were to be matched against racing open canoes weighing anywhere from 30lbs. to 40lbs. Could you expect a race with any such conditions or were we expected to bring forth a race of giants to paddle with the double blade?

Can any one be blamed for entering the race in as light a boat as he thinks will come within the requirements, with such conditions as these?

I race for the excitement and fun I derive from it and there is as much excitement in paddling races as there is in sailing or rowing or any other kind of racing, except when you are away off in the back ground trying to get a move on a sailing canoe in a paddling race.

It seems to me that this race was all wrong from the start, the matching of sailing canoes versus open paddling canoes, the double blade versus the single, and the committee's allowing the decked boats to start in the race when they did not consider them properly equipped sailing canoes.

Let us encourage paddling, not discourage and handicap it in this way.

How easily this can and should be done.

Let us introduce a new class of canoes, the decked paddling canoe with the double blade.

Is there any reason why we should not have it?

It is the fastest boat and fastest blade.

I am sure there are many who would enter the races if they were allowed to paddle in a boat built for paddling and a boat that bore a relative proportion in its weight to their weight and strength.

Let a man race in the fastest boat he can build, only limiting the boat, of course, as to dimensions and its weight to 35lbs.

Is there any reason why we should not have racing paddling canoes as well as racing sailing canoes?

Nearly all the canoes in the championship races in the last two years have been canoes built to win that race or were racing canoes.

Let the men with the sailing canoes stick to sailing and the Record.

The men with the paddling canoes could not go into the Record paddling classes, but they could go in for the championship in singles and tandem and we would have good races, plenty of excitement, and what we want most, more entries.

Is this not reasonable?

Perhaps after all my boat may not be so much of a scapegoat as it is a martyr to a good cause. ALEX. E. PUTNAM.

WORCESTER, Mass.

[Our criticism of the two canoes that were disqualified dealt principally with Mr. Johnson's craft, certainly a poor specimen of a canoe, and built with the evident intention of evading the rule. Mr. Putnam's canoe was not as bad, but taking the two together we still think that the protest against them was made on good grounds. The splintered deck of Mr. Johnson's canoe, torn off after the race, was lying about the float for several days, a pretty good evidence of the build of the canoe. We have always opposed the absurd division which matches decked and open canoes together in paddling races, and the still more absurd attempt to even the matter by allowing only the single blade in an open canoe. There is no shadow of reason for such distinctions, and no good can result now from classing decked sailing and open Canadian canoes in a paddling race, or for compelling the use of the single blade in the principal paddling races. There seems to be a need at present for a paddling class of canoes, unhampered by any sailing gear, and to meet this the regulations of the new paddling trophy should be framed. While encouraging speed, the requirements of a good serviceable canoe should not be lost sight of, and in addition to a maximum limit of length and a minimum limit of beam as at present, it will probably be necessary to impose a minimum limit of weight. The best service paddling canoes now used are the open Peterboro, 15 to 16ft. and 28 to 30in., that have lately become so popular in the States, as well as in Canada, and by weighing several of these of average light build, such as are sold and used for general purposes, it will be easy to determine a reasonable limit of weight. The best limit will probably be not over 16ft. length, not under 28in beam, nor under 40lbs. weight. The limit mentioned by our correspondent, 35lbs., is very good for a racing craft, but would not be fair to men who wish to enter in ordinary light service canoes not built and used specially for racing. Narka, a strong canoe fitted for sailing, weighed 55lbs. without her movable board and trunk. With no limit on weight, we should soon see a Spanish cedar "shell" canoe, decked with silk and fit for nothing but racing. On a weight of 40lbs. there is ample chance to build a fast racing canoe 16x28, with a light deck if desired, that, through superior model, could outrun any of the regular Canadian open canoes, as was proved by Narka. The latter canoe, deep and V-shaped in her bottom, rather than flat and U-shaped like the Canadian canoes, cut the water like a knife, not leaving a ripple, and was capable of far greater speed than the flat Canadian canoe, built to skim over the water. The regular decked sailing canoe is out of the paddling championship for ever; no honest sailing canoe can be built to race against the racing machines which a continuance of the present conditions will bring forward every year. A very good proposal was made at the meet to make no canoe elegible for a place on the Record unless she has entered in one sailing, one combined, and one paddling race. This would offer some needed inducement to the sailing men to paddle, and insure that with some of them at least the use of the double blade would not become entirely a lost art. The single blade, though not the equal of the double in point of speed, has so many advantages in its way that its use should not be discouraged entirely by the Association, but a special race for single-blades only might be a permanent and interesting feature of the programme.]

NEW YORK C. C. FALL REGATTA.

THE fall regatta of the New York C. C. was held on Oct. 5 at the club house, Stapleton, Staten Island, a number of ladies being present among the spectators. The wind was very strong from S. E., while the flood tide was running swiftly. The race for keel canoes was quite a novelty, as these craft have long been out of fashion, but the club possesses three old keel boats, the Fence Cat and Kittiwake, each 16ft., and Mime, 14ft., which have raced together through the summer, so a special race was made for them. Fence Cat was sailed by her owner W. W. Howard, Kittiwake by C. L. Norton, and Mime by R. C. Delavan. The course was triangular, to a buoy off Clifton, then to a buoy in mid-channel, and home. Fence Cat was very well sailed by Mr. Howard, and won easily, beating Kittiwake by 8m. Mime did not finish. Neither Vagabond nor Eclipse had reached the club house from Travers Island on Saturday, so the only starters in the unlimited race were: Atom, C. B. Vaux; Nenemooska, G. P. Douglas; Ellida, Schuyler Schieffelin; Random, H. O. Bailey; Sylph, D. D. Gessler; Sea Urchin, B. H. Nadal.

The start was near the dock in a very strong tide, and while Atom and Nenemooska got away promptly, both Ellida and Random were caught by the tide and carried away from the line before they had gathered way, not crossing the line for several minutes after the others. Atom won in 28m. 5s., beating Nenemooska by 1m. 39s. Ellida sailed fast and made a good showing in third place, in spite of her bad start. In the maneuvering race Nenemooska beat Sea Urchin. The tandem paddling brought out the Collins Bros., of Bayonne, in the She, a borrowed canoe, as their own had not arrived, Stewart and Douglas in the Nenemooska, and Gessler Bros. in Sylph. She was first and Nenemooska second. The paddling race was won by Mr. Douglas in the Nenemooska, with H. S. Farmer in the Wind second. Mr. E. W. Dinger paddled the She, coming in first, but not going over the designated course. The upset race and duck chase did not take place.

YAWL RACE AT TRAVERS ISLAND.—Roslyn, L. I., Oct. 4.—*Editor Forest and Stream:* I notice that in your report of the canoe regatta given last Saturday by the New York Athletic Club at Travers Island, no mention was made of the yawl race over the same course and at about the same time. Such being the case, will you kindly publish the following facts? Through the commodore of the Corinthian Mosquito Fleet, who is also a member of the N. Y. A. C., I was invited to enter my sharpie yawl Gnat to sail for a prize kindly offered to the yawls of the Mosquito Fleet by the N. Y. A. C. The Gnat was duly entered, appeared at the starting line, having for her sole antagonist the yawl Cossack, a boat some 3 or 4ft. longer than herself. Yawls Hyacinth and Lestris, of the Mosquito Fleet, were also on hand but did not enter, because one of them had "carried away two halliards, and had no spinaker boom," while the other was "not in trim," and her owner stated he "wanted to start for the Norwalk Islands." So rather than spoil a race or appear discourteous to another club that had extended its invitation to the Mosquitoes, I concluded to sail against the much larger boat. We were duly started and timed by the committee five minutes after the canoes. Cossack led over the line, was passed by Gnat just after turning the flag off Glen Island. At the outer flag Gnat was four minutes ahead, and held her lead until the finish, which was made by Gnat about 9 o'clock. The captain of Cossack when within about 100yds. of the finish line lowered sail and was towed up to the landing stage, at the same time remarking to me. "They won't give it to you," which, taking the facts just as they are, appears to me a singular thing to say. I will add that shortly after the canoe race was completed everybody and everything except the two yawls vanished, probably to catch a train, or a crab, or something.—THOMAS CLAPHAM.

THE STATUS OF THE CLERK OF THE COURSE.

Editor Forest and Stream:

In the admirable report which Mr. C. Bowyer Vaux, as chairman of the regatta committee of '88, submitted to the executive committee, he made the following suggestions relating to the status of the clerk of the course:

"The clerk of the course is the most important officer, next to the chairman of the executive committee, and therefore he should be a member of such committee, appointed at the suggestion of the chairman from the same town or club as the chairman, or living near him. The timekeeper and buoymen can be got at the meet, and by appointing a number, need serve only one day each. The clerk should serve all the time, to make sure of accurate records."

These suggestions were not acted upon at the last meet, and it is because, as a result of my experience as clerk of the course at the last two A. C. A. meets, I am thoroughly convinced that they are advisable, that I wish again to call the attention of the canoeing public to them. The principal advantages which would be secured by the adoption of these suggestions are, first, that a thorough understanding would exist between the chairman and the clerk of the course; second, that the clerk would come to the meet prepared for his work, and with a supply of the necessary material; third, that the clerk would be thoroughly acquainted with the nature and conditions of the regatta programme; fourth, that the clerk would be in a position to give an authoritative answer to the greater number of the countless questions with which anxious contestants ply him; and fifth, that the decision of disputes would be materially assisted by the constant presence of a member of the committee, the clerk, in the stakeboat.

The successful use of sailing numbers instead of the A. C. A. numbers or totems, as distinguishing badges in all sailing races, at the last A. C. A. meet, will, I trust, never be departed from, and the executive committee at its next meeting should amend the sailing rules in that particular, in the manner and form recommended by Mr. Vaux. It is not necessary, however, that the numbers should be placed upon both sides of the sail, if the stakeboat is placed as it should be, inside, not outside of the course. The rules as to the carrying of colored flags in paddling races should also be amended. The flags now used as distinguishing signals in paddling races, are, if not altogether useless, nearly so. All paddling races are now straightaway, and it is impossible for the clerk of the course to be in the stakeboat at the finish and at the start to distribute these flags to the contestants. They are even when distributed, indistinct, hard to pick up, and harder still to take a record of. The better plan would be to give the paddling as well as the sailing men their consecutive number and let them carry it upon their canoe or person, in any way they please, so that it be sufficiently conspicuous.

It is, I think, of some importance to the Association, that as far as possible, not only the racing records of the Association, but of each division should be taken in as uniform method as possible. To facilitate this I wish to suggest that a form of record book should be adopted by the Association, and that all clerks of the course be requested to make use of these books and of uniform blanks and methods.

As I trust that I have earned the right to serve the Association in the capacity of an ordinary member in future, I wish for the benefit of all future clerks of the course to mention a matter that pertains exclusively to the clerk's work. Acting upon a suggestion of Mr. W. P. Stephens I this year took all sailing races upon boards which I got the camp carpenter to plane up for the purpose. A board was ruled off for each race, with a space for the sailing number and the time for each round, and as each canoe went round the flag I took its number and time. All the record books were left in the regatta committee's tent, where they were safe from all accidents of weather. Unless paddling races take place on a rainy day it is not necessary to prepare boards for them, they can be best taken in a common-place book, which can be used as an entry book, a regatta committee minute book, etc.

DAVID A. POE.

AMATEUR VS. PROFESSIONAL CANOEISTS.

Editor Forest and Stream:

The downward course of many men can be traced to very small beginnings. Take, for instance, the present "horrible example," who from the high position of a "pot-bellied cruiser" has gradually descended to that of a common professional canoeist, and all through the introduction of an innocent-looking spirit level into his canoe. This, however, was only a beginning, and in a short time was followed by the hiker seat and such like contrivances as one is apt to adopt when trying to shake speed out of his craft, with the result that we now see his name being coupled in the FOREST AND STREAM by "No. 1213" with the word "professional."

As "No. 1213" remarks, the A. C. A. is a strictly amateur organization, and should be governed by its rules, but still that does not necessarily mean that we are to be governed by the N. A. A. O. or any other athletic rules, as in canoe, skiff or yacht sailing races one does not require to be an athlete to take part in them, and they are of a totally different character from those in which personal strength plays such an important factor, and therefore properly come under a different rule. It is and has been customary for a couple of centuries to offer money prizes for all classes of yachts both here and abroad, and yet no one would call the gentleman yachtsman who sails his own craft in a race for a money prize a professional yachtsman; and yet according to the N. A. A. O. he and all those who took part with him in the race for a money prize would be professionals. Where would Commodore Stanton, Wm. Whitlock, W. P. Stephens and many of the best of our Association be if such a rule as that were allowed.

But Rule V. says no prizes of money shall be raced for. This spring several canoeists to who also belonged to the Royal Canadian Y. C. were at a loss to know what to do about this rule; they wished to enter their canoes against the skiffs, and see how they would make out, but the prizes were $12, $8 and $4. Now, while they did not want any money prize, they did want to race and see how a 16ft. canoe would make out against the larger class of skiffs, but wishing to be sure of their ground before they went into a race, they wrote to the FOREST AND STREAM on the subject, asking if they went into the race and won, but purchased a trophy instead of accepting the cash, whether they would be considered as professionals. The reply was to the effect that they would not be professionals as long as a trophy was purchased. This was considered just and satisfactory, and two of us went into the races, and took prizes to the value of $12 each, the cheque for which was handed to the secretary of the Toronto C. C., where it now lies waiting till a suitable trophy can be selected.

If judgment were given otherwise on this question whole clubs would be disqualified. The Royal C. C. of London, I believe, offers prizes to the value of so much, with which the winner purchases a prize to his liking. The same course has been pursued this year in the Toronto C. C., where instead of saying the prize will be a medal, they state that the prize will be so much value, and the fortunate winner can purchase a trophy to his liking; if he likes flags he can buy a flag, or if a medal he can get one made to his liking, or if he has a hankering after mugs he can have his mug.

Trusting that the foregoing will provide friend "1213" with the information which he desires, I will belay!

W. G. MACKENDRICK.

[The question was submitted to us last spring, and we gave a decision in accordance with previous usage in similar cases about New York, in which canoes had entered special races for small craft held by yacht clubs, the prizes being small sums of money. In all cases the entries were made with the understanding that if a prize was won the money should be paid to the secretary of the canoe club to purchase a suitable trophy for the winner, and this was deemed to be in compliance with the spirit of the rules. According to the reasoning of "1213," the A. C. A. rules are to be interpreted strictly in accordance with the usage and precedent of the National Association of Amateur Oarsmen, and a man who starts in any race for which a money prize is offered, even though he does not complete the course or take the prize, is at once constituted a professional, as are all who may in future race against him. Under such a literal interpretation of the N. A. A. O. rule applied to canoeing some sweeping results would be reached; several New York canoeists who have in the past entered races under the conditions described above would be rated as professionals for the past six years, as would every canoeist who has raced against them in that time, to say nothing of those canoeists who are also yachtsmen and race for the prizes regularly given by the various yacht clubs. Rather than to reach any such dire result as this, involving the entire reorganization of the A. C. A., it might be better to interpret the rules in the light of a little common sense and the usage of other bodies besides oarsmen, as between match rowing and canoe sailing there is little in common. The conditions and surroundings of rowing, running and athletic sports in general, in all of which personal strength is the chief factor, have long been such as to encourage very active competition, with its attendant evils of gambling and professionalism. In sailing, on the contrary, in all classes of craft, betting and gambling are comparatively unknown; though yacht races are sometimes sailed for large sums of money, and heavy betting is found on the great international races, more is staked by the outside sporting fraternity than by yachtsmen themselves. As a rule, the evils which have attended rowing for money have troubled yachtsmen but little, and consequently while the rules have necessarily been drawn very tightly in one case, they are comparatively lax in another. The accepted definition of an amateur in yachting, one who does not earn his living by manual labor about the water, or does not sail a vessel for wages, is far less stringent than the definitions in rowing or athletic sports generally, and there is nothing said about racing for cash prizes. A yachtsman may with perfect propriety race for money, and in no way impairs his standing as an amateur, and if he chances to be a canoeist too, it would be straining a point to force him, and all who race against him, into the ranks of the professionals. As to the case in point, it would seem that every precaution has been taken to comply with the spirit of the A.C.A. rule by making the prize which the winner receives a trophy such as he might win with propriety in an A. C. A. race. Though the rules of the Amateur Rowing Association of Great Britain are far more strict than those of the N. A. A. O., proscribing any man "who is or has been by trade or employment, for wages, a mechanic, artisan or laborer, or engaged in any menial duty" in addition to the usual restrictions as to racing for money or against professionals; and though in addition they expressly prohibit any "value prize (*i. e.*, a cheque on a tradesman);" they have not been accepted as a binding precedent by the Royal Canoe Club; the winner of prizes in the club being allowed to select the value in silverware or other articles. The value of such prizes is usually from £3 to £5. One great source of strength in the A.C.A has been the purity of the amateur standard which it has set and maintained, and the corresponding freedom from any of the doubtful practices which have brought discredit on both amateur and professional rowing. We should regret any action which might be used as a precedent to lower this high standard, but under such circumstances as those in question, where a prize of a few dollars only is involved, which prize, though nominally in money, is actually in the form of a cup, a flag or some similar trophy, the whole transaction being open and above board, there seems little danger to be apprehended. The spirit of the rule is complied with, and it is hardly likely that the case would be used as a precedent for racing for a large stake. If the other extreme view be accepted then a change of the rules is necessary, and some line must be drawn between the Corinthian yachtsman and the amateur canoeist as recognized by the A. C. A. Since the above was written we have received from a British canoeist a sum of prize money won in sailing races, with a request that we should purchase for him an assortment of American canoe fittings.]

RED DRAGON C. C. REGATTA.—The annual regatta of the Red Dragon C. C. was held on Sept. 28, on the Delaware River. Three events were contested with the following results. Unlimited Sailing and Trophy Cup:

Ramona, B. E. Fortiner	3 50	4 17	27
Cigarette, F. N. Noyes	3 50	4 18	28
Nacoochee, H. E. McCormick	3 50	4 20	30

Course triangular 1½ miles, wind strong from S.W. Class 4, paddling:

Valesca, H. M. Kreamer	1
Alice, C. B. Haag	2
Mermaid, D. A. McCormick	3

Tandem paddling:

Valesca, Kreamer and Bond	1
Mermaid, Haag and D. McCormick	2
Nacoochee, Fortiner and H. McCormick	3

This ends the racing for this season. There will be quite a number of new boats this winter and doubtless some hot contests next year. All of the old boats can be greatly improved, both in rig and finish.

TORONTO C. C.—The final sailing race of the season was sailed on Sept. 27 over a 5-mile course, the wind being strong and puffy from N.W. The times were:

	Start.	Finish.	Elapsed.
CLASS I.			
Hyla, D. B. Jacques	4 00 00	4 00 00	1 00 00
Una, Colin Fraser	4 00 00	5 02 00	1 02 00
CLASS II.			
Petrel, Geo. Sparrow	3 55 00	5 13 00	1 18 00
Isabel, Robt. Tyson	3 55 00	5 23 00	1 28 01
Bervie, A. Shaw	3 55 00	.. ..	.. ..
Levite, W. C. Lee	3 55 00	.. ..	.. ..

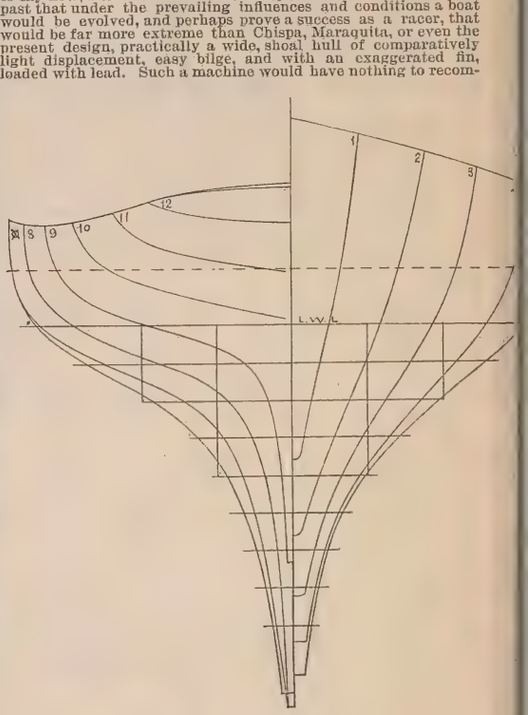
The record in Class I. now stands: Una 9, Hyla 8 and Mac 6. In Class II. it is Petrel 11, Bervie 7, Isabel 4, Levite 5.

CORINTHIAN MOSQUITO FLEET.—The fall regatta of the Corinthian Mosquito Fleet will be held at Roslyn, L. I., on Oct. 12, race to start at 12 o'clock. Cups will be awarded by the Association in all classes where two or more boats start. Com. Smith offers a cup; class and conditions to be named on day of race. Vice-Com. Clapham offers a pennant to yawls of 15ft. l.wl, or under. Mr. F. B. Jones offers a cup "for the best time over the course, corrected, by a double-rig boat; canoe, sharpie, yawl, etc., irrespective of class." Boats from other clubs having a water line of 20ft, or under are cordially invited to enter for the Association prizes. A regular meeting of the club will be held on Oct. 21, at the Sturtevant House, New York, at 8 P. M. Eleven members have been proposed.

BRANTFORD C. C.—The postponed events of the Brantford C. C. regatta came off on Oct. 2, a half-mile paddling race finishing as follows: Fred Frank first, Fred Blomfield second, A. McQuillie, J. McQuillie and S. R. Potter; time 4.59. The tug-of-war was won by Fred Frank, Fred Blomfield and J. McQuillie against S. R. Potter, E. R. Salter and Alex McQuillie.

WHO WAS AT THE MEET.—The *Sail and Paddle* for October publishes a complete register of the A. C. A. members present at the last meet, 246 in all. The total number of members of the A. C. A. since its formation is now above 1,600.

A. C. A. MEMBERSHIP.—Eastern Division: John J. Martin, Boston; F. C. Waterman-Stanstead, Jr., Quebec.



Yachting.

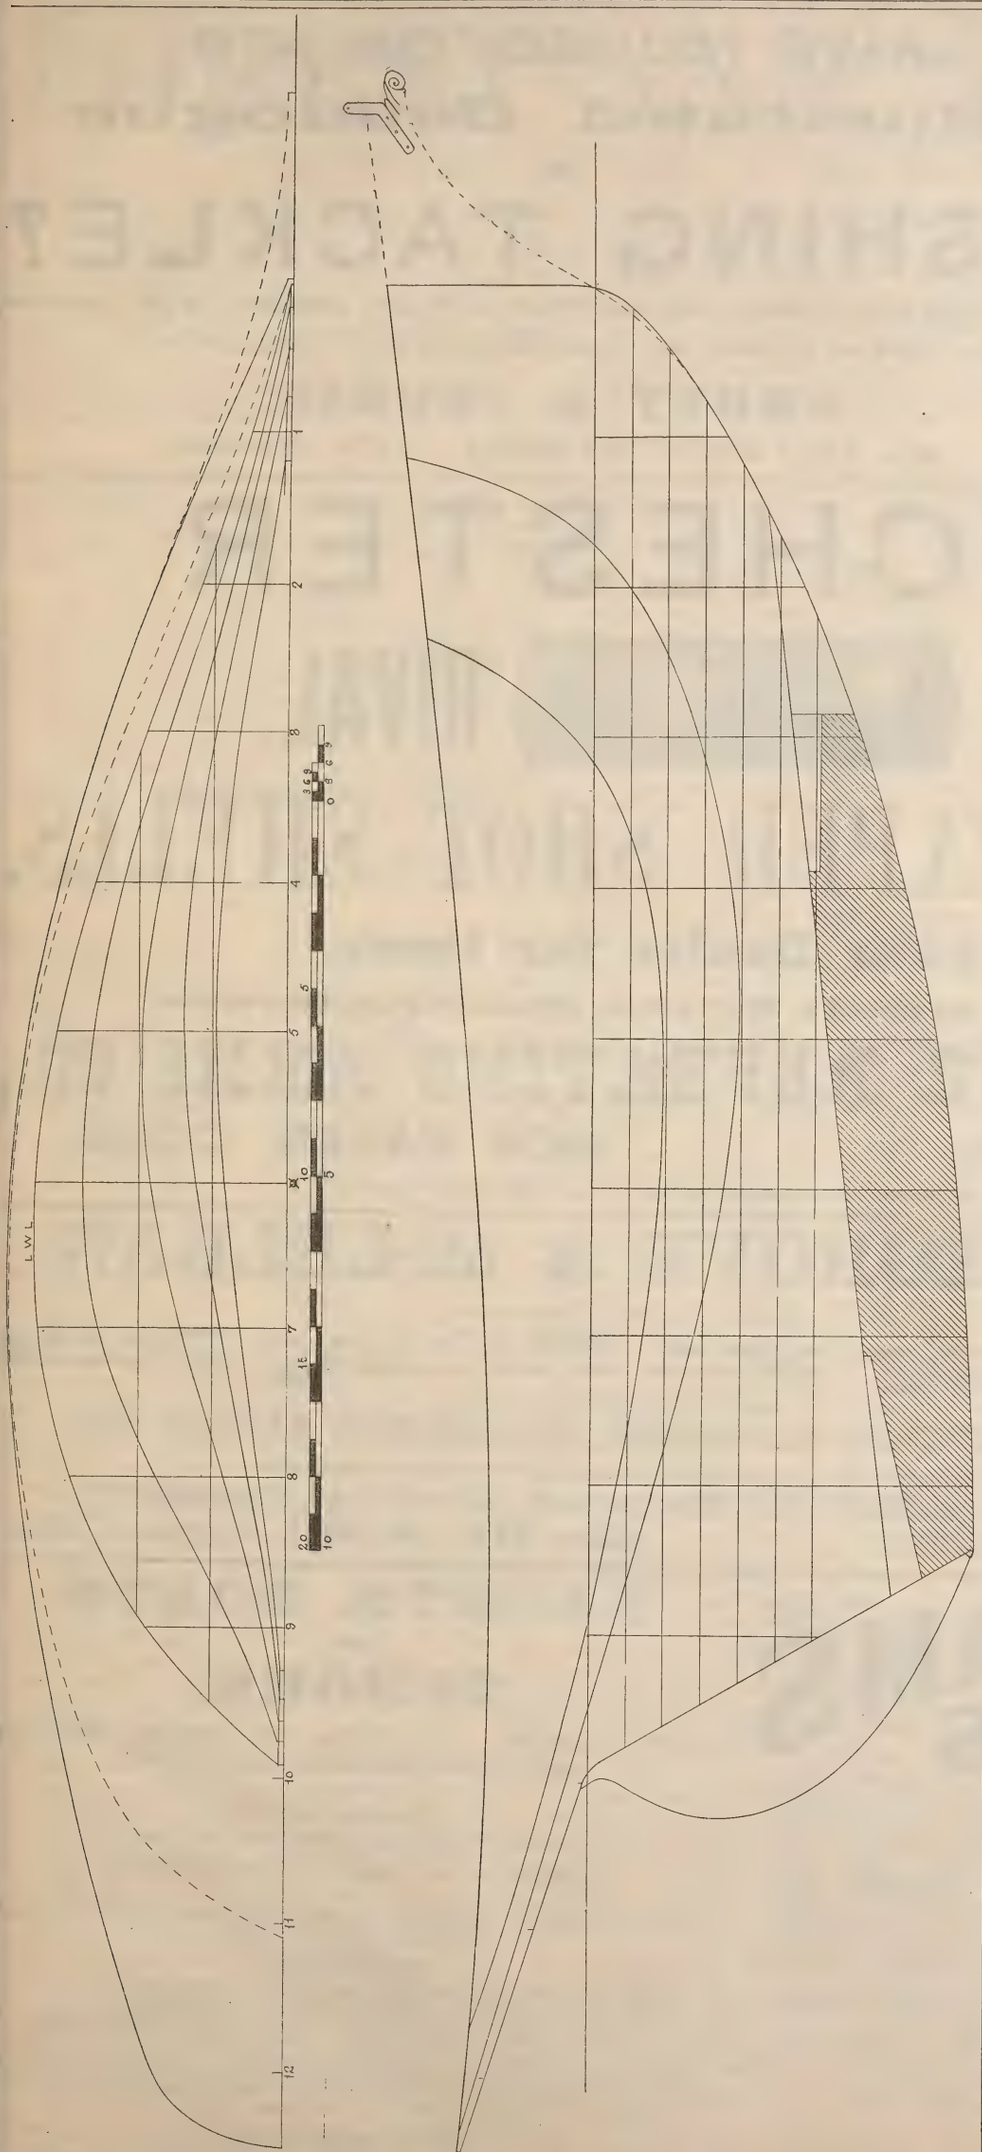
"West India Hurricanes and the Great March Blizzard." By Everett Hayden, U. S. Hydrographic Office. Large quarto, with 23 lithographic plates. Price $1. Contains full history of the great storm of March, 1888, with practical information how to handle a vessel in a cyclone; use of oil at sea, etc.

A LENGTH CLASS RACER.

THE accompanying design is the work of Mr. Chas. Livingston, of Liverpool, an amateur boat sailor and designer, and also a canoeist. She was designed for racing on Lake Windermere, being built this spring by John Shaw, of Bowness. The yachts of Lake Windermere are built under peculiar rules, that for the 20ft. class being as follows: Beam, not less than 6ft. 6in.; draft, limited to 5ft. 6in.; the after end of counter, not less than 1ft. 4in. out of water, and the counter 5ft. 6in. long; no part of the stem to project either above or below the water beyond the 20ft. gauge, nor the sternpost under the water; that the mast from deck to extreme top be 26ft. 8in.; that the bowsprit from fore side of mast to extreme end be 19ft.; that the boom from aft side of mast to end be 18ft. 6in.; gaff be 16ft. 8in.; topsail yard be 18ft. 9in.; hoist of mainsail from thimble to thimble be 16ft.; from deck to pin of jib halliard sheave be 23ft. 9in; that mast from deck to pin of topsail sheave be 25ft. 9in.; that there be no alteration in the new class for five years, dating from July, 1884; that the boats be constructed of wood, with steamed and natural frames, and single planking, pine, deal or larch; iron knees to be used to secure the lead keel only; to carry not less than 1 ton 2cwt. of lead. The practical result of all these numerous and arbitrary dimensions is a length rule, the yachts not to exceed 20ft. l.w.l., as though the sail is limited also, the limit is so great as to permit a very large sail plan for the length, and to offer no inducements to the designer to use a small sail plan. The actual dimensions of the Windermere boat are given below and also the dimensions on a scale that would give a length of 40ft. instead of 20, as the design is just as well adapted for the 40ft. class in American waters.

What the speed of this specific design would be if properly built to for the 40ft. class, is a matter of opinion, but the tendency of the past three years has been almost entirely in this direction, of great beam and draft, light bilge, high center of buoyancy and low center of gravity, with a very large sail plan. Since the advent of Pappoose the drift of designing in the class has been away from the moderate section of the former wide cutters with plenty of displacement and a fullness about the garboards, and toward the type represented by the present design, with moderate displacement and a thin, deep keel. However fast such boats may prove under a big rig, they are objectionable as seaboats, and have the additional disadvantage of very little room in proportion to the great draft, being so thin in the keel that the floor must be raised very high in order to secure a reasonable breadth, often necessitating a cabin house. What the effect of Minerva's success will be, she being of the exact opposite type, it is not easy to say now, but there has been every indication for some time past that under the prevailing influences and conditions a boat would be evolved, and perhaps prove a success as a racer, that would be far more extreme than Chispa, Maraquita, or even the present design, practically a wide, shoal hull of comparatively light displacement, easy bilge, and with an exaggerated fin, loaded with lead. Such a machine would have nothing to recommend her save her speed, she would be a worse racing machine than any yet seen, but there is good reason to believe that she would win races under the New York, Larchmont or Atlantic rules. It may be that Minerva's success will lead designers in the contrary direction, a consummation devoutly to be desired, but if the present rules remain, and Minerva is disposed of by the ostrich-like policy of calling her a racing machine and the American forties cruisers, there will be some queer productions afloat next season to beat Liris.

BODY PLAN OF WINDERMERE YACHT.



For racing only in the 20ft. class where one exists, the design would make a very good boat and probably be speedy, but those intending to build from it will find it best to replace the peculiar sail plan, the outgrowth of local conditions on Lake Windermere, by the ordinary proportions of the sloop or cutter rig, preserving about the same area. The details of the design are as follows:

	20ft. Design.	40ft. Design.
Length over all	25ft.	55ft.
L.W.L.	19ft. 9½in.	39ft. 6in.
Beam extreme	7ft. 6in.	15ft.
L.W.L.	6ft. 10in.	13ft. 8in.
Draft extreme	5ft. 1½in.	10ft. 3in.
Freeboard	1ft. 4in.	2ft. 8in.
Displacement, long tons	3.15	26.00
Ballast keel, long tons	2.05	14.00
Sail area, including topsail		

RACING IN TWO CLASSES.—Owen Sound, Ont., Oct. 2.—*Editor Forest and Stream:* At a regatta held here in August last, prizes were offered to the yachts winning in the following classes: First class, 30ft. or over; second class, under 30ft. and over 20ft.; third class, 20ft. and under. The yacht Lucille (belonging properly to the third class) entered for the second and third class races. These races were sailed over the same course at the same time. The Lucille came in first in the third class and second in the second class, and claims the prizes for each race or class. Our rules do not cover the point, and before deciding the question whether she is entitled to both or one only of the prizes, we would like your opinion, and what, if any, precedent you have in the point. I might add that under our rules any yacht is entitled to sail in any race higher than its own class.—H. B. S. [According to common usage of yacht clubs a yacht must enter in one class, and one only, before starting in a race; and it is not customary for a yacht to enter a higher class except when she has no competitors in her own. Under ordinary conditions we should decide that in the case given the yacht had sailed only in her regular class, and was entitled to that prize alone. If, however, as our correspondent intimates, she had made a formal entry in both classes, which entry was accepted by the regatta committee, and was known to all competitors, she could claim both prizes. It would obviously be very unfair to the contestants in the larger class to give a prize to a yacht belonging to a smaller, unless they were properly notified that she was admitted to their class and was sailing against them.]

CAPE MAY CHALLENGE CUP.—The race for this cup having been fixed to take place on Sept. 12, the Wendur started at 11 A. M. to sail over the course in the absence of the Irex. The wind was light from the westward, so there was a dead beat from Ryde to Cowes, with a fair-going tide. Off Cowes the wind still headed the vessel, but the strength of the tide asserted itself, so that the Needles was passed at 2:50. The breeze was now from W.S.W., so the yawl could just lay her course for Cherbourg, and with balloon foresail, jackyard and jibtopsails, she logged about seven knots without any perceptible motion, so lakelike was the Channel sea. The breeze going down and backing with the sun, at 9:30 a jibe had to be made, and another later on, and but little progress was recorded. The next day, at 8 o'clock in the morning, the kedge was let go two miles off the Cherbourg breakwater; got under way at 9 o'clock, and the west end of the breakwater was reached at 12:15. There was a dead run through the French roadstead, the air being so light that the east end was not left till 1:30, when a nice northwesterly sprang up, which afterward freed so much that sheets were checked, and the Wendur for a time reeled off eleven knots; the clinometer only registering 21° of heel, and the sea being smooth good progress was made. The Needles Light was passed at 10:30, and with a strong, fair tide Cowes appeared in the bright moonlight about midnight, and the winning line of the Royal Victoria club house at Ryde was crossed on Saturday morning, the markboat being hailed at 1:25. The Wendur now holds the Cape May cup, a handsome trophy of the value of 500 guineas, and it is to be hoped that in the interest of sport the Americans will try and regain their trophy next summer. The race was sailed under the flag of the R. V. Y. C., who, we are glad to see, are again occupying their former proud position.—*Field, Sept. 21.*

NEW YORK YACHT RACING ASSOCIATION.—At a meeting of the New York Y. R. A., on Oct. 4, it was decided to hold an annual cruise on Long Island Sound in August, beginning in 1890. President Prime reported that the association had been regularly incorporated. The regatta committee presented its report of the first regatta, the prizes being awarded as follows: Class D, Gertrude, Com. H. B. Pierson, Jersey City Y. C. Class E, Mergus, Vice-Com., Rowe, Columbia Y. C. Class F, Forsythe, A. F. Rowe, Jersey City Y. C. Class G, Lurline, H. C. Rosemond, Columbia Y. C. Class 1, Amateur, Com. Francis Burritt, Cedar Point Y. C. Class 2, James F. Corlett, C. Roth, Hudson River Y. C. Class 3, Rival, Com. Burritt, Cedar Point Y. C. Class 4, Lone Star, A. Bauer, Hudson River Y. C. Class 5, Bessie, G. Van Horne, Jersey City Y. C. Class 6, Nora L., Levings and Keegan, Williamsburg Y. C. Class 7, Alida, C. P. Vreeland, Newark Bay Y. C. Class 8, Pauline B., James Smith, Sing Sing Y. C. Class 9, Bon Ton, E. M. Post, Staten Island A. C.

20-FT. RACING YACHT FOR LAKE WINDERMERE.
Designed by Chas. Livingston, Esq., Liverpool, 1889.

QUEEN CITY Y. C.—A race for the Commodore's cup was sailed on Sept. 28 in a strong N.W. wind over two rounds of the club course. The cup was presented by the commodore to be competed for by second class club boats, the winning boat to hold it for one year. If won by same boat three times in succession to become the property of the owner. The starters were Elsie, Alliance, Tramp, Come-Again and A. A. Elsie won easily in spite of a bad start. The postponed race for 20 to 25ft. boats was sailed on Oct. 5 in a strong wind, the starters being Brenda, Mischief, Madeline and Swan. Brenda, when in the lead, broke her tiller, but an oar was passed aboard from the judges' boat and she continued the race, being steered by the oar, holding her place for a time. The times were: Mischief 5:12:05, Swan 5:16:43.

A RATHER FISHY STORY.—The following dispatch to the New York *World* marks the opening of the winter season of paper yacht racing. The report is in every way improbable: "Glasgow, Oct. 5.—James Bell, one of the members of the syndicate who owned the Thistle, has bought out his associates, and, it is reported, intends to fit her with a centerboard. He will then issue a challenge on the old terms for the America Cup, which, under the circumstances, the New York Club will not be able to refuse."

A CURIOUS BLUNDER.—The last issue of the *Field* contains a table of the 40ft. racing copied from an American paper, in which the number of starts and the positions in each race are given for each of the leading forties. The *Field* has interpreted the list of positions to mean that seventh and even eighth prizes are given in America, and laments over the long string of flags which Gorilla must fly, running all the way from firsts to eighths. It is hardly necessary to say that prizes are seldom given for anything worse than third place, and more commonly for first and second only.

ROYAL CANADIAN Y. C.—On Sept. 28 a race was sailed for the Cosgrove cup, the times being:

	Finish.	Elapsed.	Corrected.
Brenda	4 41 50	1 41 50	1 38 47
Kelpie	4 39 48	1 39 48	1 39 48
Alert	4 42 28	1 41 28	1 40 37
Finette	4 42 30	1 42 30	1 41 51

Finette protests Alert for forcing her on a buoy. On Oct. 5 the race for the McGaw cup was sailed in a fresh S.E. wind. The times were:

	Finish.	Elapsed.	Corrected.
Viper	4 49 00	1 49 00	1 49 50
Ellida	4 51 45	1 51 45	1 50 25
Woos	Withdrew.		
Freda	Withdrew.		

SING SING Y. C.—A race for 22ft. catboats was sailed on Oct. 4 in a strong northwest wind, the course being two rounds of a 5 mile triangle. The times were:

	Length.	Elapsed.	Corrected.
Pauline B., James Smith	22.06¾	1 38 50	1 38 50
Orient, Aug. Osborne	22.06¾	1 40 21	1 40 21
Irex, Roger Haydock	22.00	1 41 14	. . . .
Columbia, —— ——	22.00	Disabled.	

The judges were Messrs Gibson and Sherwood.

CATBOATS AT NEWPORT.—On Oct. 5 a race was sailed at Newport for prizes of $35 and $25 in each of three classes, given by Mr. E. D. Morgan. The course was 16 miles, wind light. The winners were:

FIRST CLASS.

Dove....4 12 18 Jennie....4 14 20

SECOND CLASS.

Pawpaw....4 20 32 Lizzie....4 24 16

THIRD CLASS.

Shamrock....4 42 04 Rebecca....4 44 18

VALKYRIE.—On a late voyage from Cherbourg to Southampton Capt. Diaper was thrown from the forecastle ladder as the yacht plunged into a sea, breaking both the small bones of one leg.

CORINTHIAN Y. C.—The Corinthian Y. C. of Marblehead has issued a very complete and interesting summary of its midsummer races for 40, 30 and 27ft. yachts.

A GOOD RECORD.—The jib-mainsail boat Eureka, designed by Mr. J. Borden, Jr., has won 10 firsts and 4 seconds for 14 starts. She is 25ft. over all, 19ft. 6in. l.w.l.

A NEW CENTERBOARD PILOT BOAT.—A new Burgess pilot boat is talked of for Capt. J. N. Reid and other owners, to be a centerboard craft.

RIVAL, sloop, has been sold by Messrs. Hope and Capman to her former owner, Mr. P. G. Sanford, of the Cedar Point Y. C.

TIDAL WAVE, schr., has been sold to Dr. A. L. Ranney.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

C. S. W., Zanesville, O.—See our game columns.

Setter, Asheville, N. C.—The American Kennel Club, 44 Broadway, publishes the Stud Book.

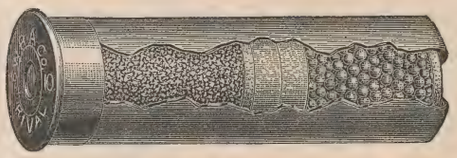
Kenmore, Albany, N. Y.—The Irish setter Kenmore is owned by Mr. W. C. Hudson, Albany, N. Y. He is not a champion and was not shown at Toronto.

F. N. M., Lebanon, O.—The Park bill did not become a law. On application Mr. Chas. S. Fee, general passenger agent Northern Pacific Railway, St. Paul, Minn., will send you pamphlet describing the National Park.

W. H. B., Spring Lake, Mich.—1. We do not know of any firm which will sell the castings you wish. You might apply to the Bowdish Mfg. Co., Skaneateles, N. Y., for castings or drawings. 2. Read "Training vs. Breaking." For sale at this office. Price $1.

J. M., Raleigh, N. C.—Please give me the name of some reliable firm who can furnish me with genuine waterproof silk English corduroy. I have written to every prominent firm in New York and have so far failed, and to a great many other places with a like failure. Ans. We cannot find a waterproof silk corduroy. Dealers say that they do not know that such an article was ever made. If you wish silk waterproof cloth the rubber dealers, whose addresses are given in our advertising columns, can supply them.

J. R. T., Norwich, Conn.—How can I tell the small-mouth black bass from the large-mouth? I sometimes see a fish in the market that the dealers call a chiquit; is that the right name for the fish? Which is the best line for trolling, Cuttyhunk bass or braided linen? Which is the best material to make a dip net with fine mesh to catch small fish for bait, cotton or linen, and what size twine? Ans. 1. By its smaller mouth, the upper jaw ending at a vertical through the middle of the eye, and by the larger number of rows of scales between the head and tail (lateral line), and by its different coloration. The small-mouth has 74 scales in the lateral line, and the large-mouth but 68 scales. 2. We are unable to find out to what fish this name is given. 3. Braided linen. 4. Ordinary net twine, fine. Mesh small according to size of fish desired.



New Jersey.—Please identify this bird observed in New Jersey: Length about 7½in. Head and bill shaped like that of white-throated sparrow. Head black with whitish yellow line over the eye. Broad yellow stripe on crown streaked with brown. Bill yellow. Feet and tibia black. Feet small, seemed feeble. Back variegated. Wings and tail black or dark slate color. Two white bars on wings. When flying showed bars and white spot, either on each wing or on outside edges of tail. Wings when closed extended nearly half way down the tail. Tail rather long. Under parts white. Throat and chest tinged with reddish yellow streaked with light brown. Sides under wings when flying showed bright rose colored patch. Flight was jerky like a chewink. Seemed to walk slowly and with difficulty. Very tame. When first seen, flew from ground to roof of shed. Then to ground. From there it continually flew a few feet upward and caught small moths that lit on side of house. Ans. The bird described is a young male rose-breasted grosbeak (*Habia ludoviciana*).

Beecham's Pills act like magic on a weak stomach.—*Adv.*

PAINLESS EFFECTUAL
BEECHAM'S PILLS
THE GREAT ENGLISH MEDICINE
WORTH A GUINEA A BOX
For Bilious and Nervous Disorders, such as Wind and Pain in the Stomach, Sick Headache, Giddiness, Fulness, and Swelling after Meals, Dizziness and Drowsiness, Cold Chills, Flushings of Heat, Loss of Appetite, Shortness of Breath, Costiveness, Scurvy, Blotches on the Skin, Disturbed Sleep, Frightful Dreams, and all Nervous and Trembling Sensations, &c. THE FIRST DOSE WILL GIVE RELIEF IN TWENTY MINUTES. This is no fiction. Every sufferer is earnestly invited to try one Box of these Pills, and *they will be acknowledged to be a Wonderful Medicine.*—"Worth a guinea a box."—BEECHAM'S PILLS, taken as directed, will quickly *restore females* to complete health. For a
WEAK STOMACH; IMPAIRED DIGESTION; DISORDERED LIVER;
they ACT LIKE MAGIC:—*a few doses* will work wonders upon the Vital Organs; Strengthening the muscular System; restoring long-lost Complexion; bringing back the keen edge of appetite, and arousing with the ROSEBUD OF HEALTH the *whole physical energy* of the human frame. These are "facts" admitted by thousands, in all classes of society, and one of the best guarantees to the Nervous and Debilitated is that BEECHAM'S PILLS HAVE THE LARGEST SALE OF ANY PATENT MEDICINE IN THE WORLD. Full directions with each Box.
Prepared only by THOS. BEECHAM, St. Helens, Lancashire, England.
Sold by Druggists generally. B. F. ALLEN & CO., 365 and 367 Canal St., New York, Sole Agents for the United States, *who,* (if *your* druggist does not keep them,)
WILL MAIL BEECHAM'S PILLS ON RECEIPT OF PRICE 25 CENTS A BOX.

DOG TRAINING:
BY
S. T. HAMMOND, KENNEL EDITOR OF FOREST AND STREAM.
For sale at this office. Price $1.00.

YACHTS, BOATS
AND
CANOES,
WITH SPECIAL CHAPTERS ON MODEL YACHTS AND SINGLEHANDED SAILING.
BY
C. STANSFELD-HICKS.
AUTHOR OF "OUR BOYS, AND WHAT TO DO WITH THEM.
NUMEROUS ILLUSTRATIONS AND DIAGRAMS
AND
WORKING DRAWINGS OF MODEL YACHTS AND VARIOUS SMALL CRAFT SUITABLE FOR AMATEURS.
DESIGNS:
Model Yachts.—Defiance, Isolde, Bonny Jean, and 10-tonner with sail plan.
Canoes.—Birch, Mersey Paddling Canoe, L'Hirondelle, Sailing Canoe.
Sailing Boats and Yachts.—Dabchick, Wideawake, Myosotis, Una, Singlehander by C. P Isayton. Puffin, 3-ton Racer, 3-ton Cruiser, 24ft. Auxilliary (steam and sail) fishing boat.
This volume contains much that is valuable and interesting to American yachtsmen and canoeists. The design, construction and use of small craft of all kinds is treated of in a simple and entertaining style, and the instructions are clear and easily understood.
Large crown 8vo., 380 pages and 16 large folding plates.
Price, Postpaid, $3.50.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, OCTOBER 17, 1889.

VOL. XXXIII.—No. 13 No 318 BROADWAY, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, and Brentano's, 430 Strand, London. General subscription agents for Great Britain, Messrs. Davies & Co., Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, and Brentano's, 430 Strand, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, $5 per year; $2.50 for six months.

ANSWERS TO CORRESPONDENTS.

SHOOTING FROM STEAMERS.

IT was once the common practice of tourists to shoot birds and alligators from the decks of steamers on Florida rivers and lakes. This abominable, because cruel and useless, warfare was waged until the supply of victims for the brutality was nearly exhausted. The development of the Florida railway systems, by which the tide of travel has been diverted from the water courses, has had a direct and marked effect on the wild life of the country. Instead of the leisurely progress by water craft tourists are now whirled through the country by rail, and the blood-thirsty contingent has no opportunity to deal out death at every turn. The waters and the shores are once again becoming populated with birds of plume, even the alligator is coming again into peaceful possession of his mudbank, and the moss-draped stretches of shore line are enlivened by the welcome charms of living creatures.

Some of the peculiarly constituted individuals, who find satisfaction in maiming birds by shooting from the decks of moving steamers, have found a new if more restricted field for their pernicious activity; and the scandalous practices that once disgraced Florida are now repeated by them in Maine. The shooting by tourists from the little excursion steamers, on many of the lakes, is rendering the birds that have usually bred on these lakes, scarce and extremely shy. Everybody shoots at them. Even the firemen on the little steamers shoot at every bird they see, and the poor loons—the great northern diver whose night cry renders such a weird charm to the woods and the lakes—are being exterminated. It is a shame. These steamer people are hurting their own trade in that they are destroying one of the principal charms of the lakes.

The birds are entitled to fair treatment, especially in the breeding season. Shooting from these steamers on Moosehead and the Rangeleys should be prohibited. Many of the ducks and loons shot at are only wounded, and the steamer people have no time to finish their cruel work. In one case, reported to us by our correspondent "Special" as having come under his own observation, a loon was shot at several times with a rifle and left minus his under mandible. The shooter thought he had accomplished a good deal, but alas for the poor loon that must die of starvation.

This shooting at everything alive on the water is wrong, and real sportsmen will not do it. There is no defense for this depriving wild creatures of life in pure wantonness nor for the cruelty of maiming them. No thoughtful, high-minded man will wound a bird which he knows he cannot put out of its misery, nor will he kill birds when no advantage can be derived from their death. Shooting birds from steamers, like the old-time game shooting from railroad trains, is very mean and contemptible business.

"MAD BULL"—PISTOLS ALL!

NEW YORK had a quiet autumn day last Sabbath, but the quietness was sharply interrupted by a street bull fight. That is, one four-footed beast tried conclusions with a thousand two-legged idiots and came out dead. He only made one victim, and this only indirectly since the shot which lodged in a spectator's groin was intended as a tickler in the hide of the bullock.

It was the old story. One which has been told over and over again and will probably be told as long as bullocks come afoot to this town to be eaten. The animal came with others over an uptown ferry. He did not go to the abattoir near by, but wandered away. He may have wandered along ever so quietly, but he at once became a "mad bull" in the opinions of the lads and men about him. Small fools "pegged" him with stones or belabored him with cudgels, bigger simpletons took him for a target, drew all manner of petty firearms, and made all the variety of misses possible in trying to hit him. This programme was carried out over several miles of city street, and naturally there were several retaliatory rushes by the bull; but he was finally downed, killed and carted away to the butcher's. Then a score tally was taken and thirty punctures of the skin were reported. Just about one hit in ten shots, a wretched showing of marksmanship, but nothing better than might be expected from such a parcel of shooters. One shot of the several hundred misses is accounted for. It is in the flank of an onlooker. Another, too, is accounted for; it was stopped by the hand of one of the assistant shouters. Police and populace stood side by side in popping away. The crowd on one side of the street fired at the bull in the middle, and the crowd on the other side responded in a vigorous skirmish fire, and neither company of fools seemed to think for an instant of the danger run.

There is a city ordinance which prohibits the firing of firearms within the city limits. There is another which requires the taking out of a license to carry a pistol, yet the moment a stray bovine is noticed in the street, these two ordinances are flung to the winds, and every Tom, Dick and Harry either rushes into the house for his family arsenal or yanks from his hip pocket his personal armory and shows how clever he can be at missing. The police are little, if any, better than the people as shots, but they keep at it to the end. A mad dog, or more often one which somebody has imagined might be mad, is in large measure a target for the mob; but he does not compare with a bullock astray in drawing out the reckless bullets of the citizens.

What is needed is a few arrests followed up by fines the very next time a bull takes a stroll. Let the ordinances about pistol firing hold good when the bull is abroad as at any other time. Let those familiar with the management of animals at large attend to the wanderer, under police supervision, but let not each and every man and boy appoint himself slaughterer by the pistol process.

IN next week's issue will be given the story of "Comanche Chief," being one of Mr. George Bird Grinnell's "Pawnee Hero Stories," soon to be published in book form. The same number will contain a lively account of the adventures and misadventures of a Washington party of duck shooters on the North Carolina coast, written by Alexander Hunter. Mr. Edward Wakefield, whose story of wild boar hunting in New Zealand is printed to-day, has promised us a number of other sketches of wild life at the antipodes.

SNAP SHOTS.

IT is much to be desired that the treasurer of the American Kennel Club should give to the public a plain, comprehensive and detailed statement of the income and expenditures of the club. Such an exhibit, demonstrating financial prosperity, would put an end to theories and speculations about the condition and prospects of the club, and would at once and most effectually silence adverse criticism, questionings and "croakings." As the club is a public institution we can see not the slightest objection to making public these details; in fact, the more the publicity given to them, the more surely will the club be accorded such measure of support as the figures shall show it to deserve. The club is a voluntary association; and no good purpose can be served by withholding from the kennel world the fullest information as to the finances. It strikes us as altogether unreasonable to construe this demand for the figures into an attack on the integrity of the treasurer, or to question the motives of those club members who are calling for facts and figures. Certainly nothing that Mr. Peshall has published can be construed as casting imputations on Treasurer Vredenburgh's honesty; it has rather been a reasonable and quite justifiable demand for enlightenment on the business standing of the concern. The controlling spirits of the club should have discernment enough to distinguish between the chagrined snarls of those newspaper managers whose penny-catching schemes have gone awry, and the well-meant comments of club members who have at heart the well-being of the A. K. C., and deserve at least the credit of meaning well, whether right or wrong in their contention.

Last Saturday Kaiser William, having the Russian Czar to entertain, and too considerate to treat him with any more Bismarck, did the most sensible thing he could do under the circumstances, and took his imperial brother hunting. Of course Diana is always favorable to royalties, and never permits them to draw a blank cover. Red and fallow deer were driven within shot of their imperial majesties, and Czar and Kaiser laid each his victims low; then came a rest for lunch and a renewal of the royal sport. Doubtless the Czar bethought him of the ponderous wisent, or bison, in his forest at Bialowitz, and of the Russian bears and wolves, and craved for the triumph of demonstrating to his imperial brother the superiority of Russia in this respect. Pending war may even be averted to afford the opportunity. Be this as it may, nothing could have been better designed for the promotion of peace as far as it depends on the will of the two autocrats, than a day spent together in a congenial pursuit in the forest. There throwing aside all cares of state, stripping themselves of the trappings of royalty, and exhibiting themselves as comrades in a pursuit of which both are said to be passionately fond, each revealed himself in his true light. In the forest Czar and Kaiser met each other as man to man, and whatever is noble and manly in the character of each would be sure to have commended itself to the other. All the talent of a Bismarck could not do as much to cement a good understanding between the two potentates, as a day spent together in the hunting field. If Kaiser William designed that hunt, he is perhaps a keener politician than he himself wots of.

The yachting season which opened in American waters with a strong breeze in the match between Titania and Shamrock on May 30, and closed very appropriately with the very squally finish between Kathleen and Shona on Oct. 1, has been a remarkable one in several ways. The weather conditions have been more severe than in many years, the usual drifting matches being few compared with the races sailed in moderate to very strong winds; this year for the first time has been seen a regular racing class, well built up to and keeping up the racing persistently about the coast, as both forties and thirties have done, while there has been an unprecedented number of races. Each class, 40 and 30ft., has sailed some thirty matches, and while there are many knotty questions still unsettled, and many apparent contradictions to be reconciled, the season must be set down as a most successful one, for the racing men in all classes, for the non-racers who look on, and as an aid to those enthusiasts who are constantly at work for the advancement and perfection of the sport.

The Sportsman Tourist.

AUTUMN THOUGHTS.

THE summer has fled with its garments of green,
And the pencil of autumn is painting the scene
Upon hillside and forest with colors that glow,
Ere old winter sends down his drop-curtain of snow.

How brilliant the picture our eyes may behold,
With the maples all flaming with scarlet and gold;
'Tis as if in regret for once breaking the chain,
Our New England had donned royal colors again!

Now the oaks are all gorgeous in purple and brown,
The bright gold of the beech to the hills lends a crown,
While the backgrouud of hemlocks, that once looked so green,
Seems black from the contrast to all this gay sheen.

Still a few faded asters are left by the brook,
While the harebell yet lingers in some sheltered nook;
But the brightness and beauty of flowers are gone,
And the berries are red on the alder and thorn.

I have likened my picture to some mimic scene
Which is set on the stage, the great actions between,
For it makes a bright moment of happy repose,
Ere the drama of life draws at last to a close.

Would that such brilliant hours may come in one day,
When bright morn and hot noontide have faded away,
And our autumn of life be as sunny and clear
As the picture which nature is painting us here. VON W.

HOW WE SLEW THE GREAT BOAR.

THERE has long been a controversy among naturalists as to whether the wild boar and the domestic pig are two different species, or merely one and the same species under different developments. So far, the former theory has been universally adopted in books on natural history, and the zoölogists invariably class the wild boar as a separate species and under a separate name, *Sus scrofa*. They assume it to be a distinct kind of pig, like the peccary of South America or the indigenous pigs of the tropical islands of the Indian Ocean, which are totally dissimilar, both in habits and appearance, from the domestic porker. Yet there is absolute proof, in one very conspicuous instance, at all events, that they are all mistaken.

When Captain James Cook, the celebrated English navigator, rediscovered New Zealand in 1774—it having been discovered by Tasman more than a century before, but never visited in the interval by any European—he found no animals of any kind in the islands, nor could he gather from the natives any idea of quadrupeds. They were cannibals living on one another, and on fish, birds and vegetables when the supply of human flesh ran short. They had certainly never seen a quadruped of any sort. Captain Cook put ashore a number of pigs and goats, which he had brought with him for the purpose, and on revisiting the country two years later was pleased to learn that they had increased considerably, the natives apparently being too much afraid of them to molest them.

Seventy years passed away after that before New Zealand was occupied as a British colony, and when the first settlers arrived in 1839, they found wild pigs, having all the characteristics of the wild boar of Westphalia, in possession of the mountain fastnesses and the forest depths; while pork was a favorite food of the natives, though they still had a hankering for "long pig," as they called a missionary or a sailor, when properly cooked in one of their nice, clean stone ovens.

It is now 115 years since Captain Cook landed his pigs; and the wild boar of New Zealand, the direct descendant of these miserable animals which had been cooped up on board ship for many months, is now a ferocious monster, a terror to men, horses and dogs, and monarch of the impenetrable gullies which he loves to haunt. The increase of the European population, who now number nearly 700,000, and the occupation of all the lower or more open lands, has only had the effect of making the wild boar wilder than ever, by driving him into the mountains or bush, and compelling him to lead a purely savage life, rooting his subsistence out of the sterile soil or devouring everything eatable that he can get hold of. Yet, notwithstanding the incessant war that is waged against him, he holds his own very well and is in no more danger of being exterminated than the tigers of India are. The sheep farmers, in fact, only hold their own against him by organizing raids upon him in his own territory and offering rewards for all the tails that are brought in by shepherds and hunters. The mountainous interior of New Zealand is mostly covered with tussock grass, an excellent summer pasture for sheep, intermingled with "Spaniards," a terribly sharp-leaved plant, somewhat akin to the yuccas of the Rocky Mountains, which has a huge succulent root like a parsnip, a foot or two long, and as thick as a man's leg. This root is the favorite food of the wild boars, and to find it they will often root over miles and miles of grass country, leaving it very much like a plowed field, with nothing for the sheep to eat. They never attack full-grown, active sheep, which can easily get away from them, but they make havoc among the lambs, while if they come across a cast sheep or a "crawler," unable to keep up with the others, they trample it down and soon leave nothing but some bones and shreds of wool.

New Zealand is a grand country for sport of various kinds, if you only know how to go to work, and it has this great charm, that there are no drawbacks in the way of climate, insects, venomous creatures of any sort, or heavy expenses. It is a temperate, healthy, exquisitely beautiful and very cheap country; and the sportsman can enjoy himself to the utmost without taking too much out of himself and without exhausting a moderate purse. There is no better sport, perhaps, in its way than boar hunting. Of course it cannot be got near the cities, and to have anything like a good time at it you should either go and stay with some friend at a sheep station in the hills or else organize an expedition and make a week of it under canvas.

There are several ways of hunting the wild boar, the most approved being to find him in his lair with dogs, and then, having got him into the open, to spear him or knife him on foot while the dogs hold him by the ears or by any other part of him that they can get hold of. It is very dangerous work both for men and dogs, for the boar is a huge brute, four or five feet long and three feet high, with vast strength in his forepart, the muscles being developed to an exaggerated extent by rooting and tearing in the woods—and his jaws are furnished with long, curved tusks that would go through a half inch plank easily. The dogs are often ripped from end to end and disemboweled on the spot, while sometimes the boar will get a clean snap at one and bite a great piece out of its side or its leg, leaving a wound that nothing will heal. It treats a man the same way when it gets the chance.

It is difficult to give an idea of the invulnerability of a real old boar which has survived a hundred fights. Its ears are all gone, so that the dogs have nothing to lay hold of, it has a "crest" on its shoulders and back, consisting of half an inch of solid gristle, which neither steel nor lead can penetrate, and on the top of that a hard coating of stiff, shining bristles, from which, when it lays them back, a spear, or knife or bullet glances off as from a polished marble surface. The only way the dogs can tackle such a brute is to seize it by the legs, at the risk of being ripped every moment, or by its terrific jaws themselves, with the certainty of being horribly chawed; and the only thing the hunter can do is to come close up to the boar, watch for a moment when its attention is taken up with the dogs, and then drive his spear with all his force into the comparatively soft part just behind the shoulder. Even then the boar often rises in his wrath, rips or tramples the dogs, sends the hunter flying to a tree or to his horse, breaks the spear off short and trots off sullenly to his lair, leaving a trail of blood, but not more than enough to make him more savage than ever. I have seen a boar when it broke loose like that, chase a hunter to his horse, rip his leg before he could mount, and then rear up on his hind legs and rip the horse so badly that it died a few days after. Another way to hunt wild boars is to drive them out of their fastnesses and shoot them, in places where it would be almost impossible to go in at them with dog and spear, owing to the nature of the country; and this also is a form of sport requiring some nerve and skill. It is an adventure of this kind that I set out to describe for your readers' entertainment.

I was staying the other day with a friend of mine who owns a large sheep station in the interior of Otago, the southernmost and most mountainous province of New Zealand, and I had for my fellow guest a young clergyman from England, brother of a very famous sporting man there, and himself keen after any sort of game. At my friend's table, and round the log fire in the evening, sport was all the talk, and "his reverence" and I were much interested in the stories we constantly heard about a tremendous boar which was said to have held despotic sway in a deep glen away in the mountains for many years. He was commonly supposed to be quite invulnerable, and the shepherds and station hands, who are all boon hunters, declared that he must have fifteen or twenty bullets imbedded in his hide. They scouted the idea of our being able to make anything of him, and my friend the sheep-farmer looked grave and said nothing when I proposed that we should try. A few days later, however, "his reverence" and I were to go for a ride to another part of the run, where there was good paradise duck shooting, and it was agreed that we should take our guns. We were accompanied by a young lady, a beautiful, ingenuous, high-spirited girl of sixteen, sister of our hostess. Our friends also sent with us a young shepherd on horseback to show us the way. The parson and I held a secret council of war before starting, and resolved that we would not trouble the paradise ducks that day, but find that big boar and slay him or die. Instead of a shotgun, therefore, the parson took a French carbine, in which he had great confidence, with copper-cased cartridges three inches long, a terrible weapon for big game at short range, but certainly not my idea of a gun for wild boar. I took a double center-fire 12-bore Greener chokebore, a shooting iron which I have found of great service under all sorts of conditions, the choked charge serving as ball at short range, and the scattered shot making sure of bird or hare at 70 or even 80yds.

When we had got a few miles from the house, we drew the shepherd into conversation about the big boar, a topic on which he soon grew very excited; and on our asking him whether he thought he could show us where to find him, he swore he could, but he declared nothing would induce him to go into the gully himself. As for Rosie, she nearly jumped off her horse with joy at the thought of a big pig hunt, and faithfully promised to do exactly as she was told, if we let her come with us. Accordingly, we turned our horses from the direction of the plains and the river and followed our guide in single file, rode along the narrow, winding ridge of a saddle till we were quite in the wilds and could see nothing all around us but hills on hills and alps on alps. It was quite afternoon before we rested for lunch in a shaggy glen, under a precipice of black basalt, where a stream of glittering water gushed out of a crevice into a natural basin full of watercress and sweetly perfumed water-orchids.

The shepherd told us we would find the boar in the scrub at the bottom of this glen, that being his regular retiring place during the heat of the day. As soon as we had finished our cold swan and scones, and taken a grown person's dose of cherry brandy to steady our nerves, we set off and rode slowly along the steep hillside, above the gully, the bottom of which was entirely hidden in tangled fernbrake with thorny shrubs growing through it here and there, matted together with brambles. The shepherd got off his horse and led it cautiously along the opposite side of the gully which was just within "coo-ee" of us—"coo ee!" the watch cry or view hullo in all the Australasian colonies. The only dogs we had were the two collies which had followed the shepherd.

After working our way noiselessly like this for a mile or so, we saw the gu'ly open into a larger valley ahead of us, and we were beginning to fear we had missed our quarry when we heard a long "coo-ee!" from across the gully and saw the shepherd waving his arms over his head and then pointing below him. At the same moment the dogs began barking furiously from some place in the thicket where we could not see them. Looking down, we could see that some big animal was crushing its way through the brake toward the opening of the gully, followed by the dogs. We held a hurried conference and agreed that the parson should remain on the hillside and shoot as soon as he got a shot, and that I should go on ahead and wait for the boar in the open in case he broke away. I told Rosie, who was now pale with excitement, to come on quickly with me, and to remain perfectly still with her horse and mine, at a safe spot which I showed her on the other side of the gully. She promised she would, and having posted her with the two horses, I took my own stand about 50yds. clear of the scrub in the flat of the gully. The barking and yowling and crushing went on hotter and hotter. Suddenly there was a rush and a yell. "Crack" went the parson's carbine. "R-r-r-r-r-r-r," went the long, rattling echo in the crags above us. I felt my triggers and hardened my heart.

"I've missed him," shouted the parson, "look out for yourself!" At the same moment an immense beast broke from the thicket with the two dogs close to him, and came straight toward me at a heavy gallop. As soon as they got into the open one of the dogs turned tail and skulked yelping away. The other made for the boar pluckily, but was rolled over and left behind. I saw that it all depended on my Greener, so, running a few paces to the left, to get as near a side shot as I could—"bang, bang!"—I fired both barrels as quickly after one another as I could draw finger from trigger to trigger. The boar let out a deafening sound, a grunt, a roar, and a shriek in one, and tumbled head over heels into a tangle of fern and rushes and brambles. I reloaded, and then went up to him, but what was my astonishment when I felt a light hand on my arm and heard a trembling voice say: "Is he dead? Oh, you will be killed if you go up to him!" It was Rosie, who had forgotten all my injunctions, left the two horses to take care of themselves, and rushed into the very thick of the danger—if there had been any danger—out of sheer excitement and fear for my safety. I soon reassured her, and the parson having descended from his hill, we examined our boar. He was as dead as herrings, herrings that are red. My chokebore had made a hole in him half as big as my fist, just behind the shoulder. The parson, however, had by no means missed him; but the wonderful copper-cased French bullet had simply gone in at one side of his flanks and gone out at the other without stopping him for a moment. He might have died of the wound some other day, or he might not; but such a wound was neither here nor there in the heat of the fray.

The boar was of a kind of leaden blue color, very smooth all except the forepart, which was bristled like a mat, and though he was scarred and ribbed with old wounds, we could not find any sign of bullets in his skin. He measured just 5ft. from snout to tail, and his tusks were 5½in. long from root to point, though, being curved more than half a circle, they looked much shorter. They were as sharp as a razor and beautifully white.

Fastening the boar's tail in Rosie's hat for a trophy, we cut off the head and hung it to the parson's saddle bees, and in this triumphant style we returned to the station and received a cordial ovation from all hands. The boar's head was duly cured, and I doubt not that when it is fit for the table, the tale will be retold to many a guest in that hospitable home, which I have told to you to-day.

My friend the parson died of consumption at Salt Lake City on his way home to England; but in a letter I received from him in New Zealand, written a few weeks before he died, he called to mind the good time we had together "the day we slew the great wild boar."

EDWARD WAKEFIELD.

Natural History.

THE HIBERNATION OF REPTILES.

THE more we study and observe reptiles (and the term may here include both the *Reptilia* proper and the *Batrachia*) the more do we realize how little we know of their habits, and how much there is still to learn concerning them. As regards, for instance, their natural term of life, we can only affirm of those in captivity that a certain snake was so many years in the menagerie, that a particular toad was an inhabitant of our garden, or a lizard of its cage for such or such a time; but who shall say how much longer they might have lived under their natural conditions, supposing they had escaped their natural enemies? Long-lived all reptiles are reputed to be; and considering that they are active at most only half the year, and sleep away the other half, expending but little energy, even when they display their maximum of vitality, there is no reason why they should not be long-lived. We have no clue to any definite period beyond what can be observed of them in captivity. Evidences of their marvelous powers of endurance are obtained in the phenomenon of hibernation alone, when they retain, or recover vitality under peculiarly trying conditions. Some cases under my own notice have been so amazing as to render one almost a convert to the belief that toads have been encased in rocks for countless ages, as has been often affirmed. Some of my pet batrachians have been encased in solid ice and survived. And hibernation during captivity is, and must be, far more trying to them than when, obeying a natural instinct, and under certain physiological conditions which dictate that instinct, they retire to their own selected spot at their own time.

In a reptilium it is seen that on the approach of winter they become disinclined for food, are less active and, as visitors vote them during the colder months, are extremely "stupid and disappointing." They are indeed so readily affected by temperature that even during summer a chilly day produces inactivity. It was, I think, the distinguished writer, P. M. Boget, in his "Animal Physiology" (1834) who first used the oft quoted words "reptiles are obedient to the external atmosphere." Observing them in captivity one is more and more impressed with this truth. "Obedient" in its widest sense they are; submitting, as it were, without resistance, without a struggle even to *quasi* death, and renewing life with as little effort. More sensitive than the most delicate invalid, your pet batrachians will inform you of a change of weather almost before you perceive it yourself, by their becoming suddenly dull and inactive. Some newts that on warm summer mornings have been swimming about actively, every few minutes popping their noses out of the water to take a fresh breath, suddenly remain below and almost motionless, and you open a door or a window to discover a fall in temperature. Other reptiles are similarly affected, and should you see them by and by resume their activity, you may, without consulting the thermometer, decide that the temperature has risen. Even their intelligence is affected. During the height of summer my captive newts readily recognized me,

looking up expectantly for food supplies, and rising to the surface when a worm was held there, and sometimes so quickly as actually to take it from the hand, whereas in cooler weather they took no notice whatever of either person or food. This was the case with some frogs also.

The hibernation of reptiles in captivity is not attended with invariable success, nor must it be forced. In zoological gardens, where the reptilium must be kept at a given temperature, all take their chances alike. Those from tropical countries may retire beneath a covering and cease to feed, while others from temperate zones may continue active and hungry throughout the winter. On the whole, the conditions of the spacious reptilium are more favorable than the narrower limits and fussy attentions frequently bestowed on private pets. As regards my own, the hibernation has been a perplexing business, aggravated not a little by the great and sudden changes of weather, early frosts producing early torpor, and midwinter mildness causing them all to be astir again. So early as September, and even sooner, a few sunless days, so common in England, render them disinclined to feed, and instead, therefore, of being in a thriving, well-nourished condition to enable them the better to sustain the approaching winter fast, they are poor and with low vitality at the outset. Yet in this latter case, one has been amazed at their powers of prolonged endurance. One very tiny frog (*Rana temporaria*) and an undersized English newt (*Molge vulgaris*) were remarkable instances of this. Both, at the beginning of summer, were in a globe with others, and both soon became melancholy examples of "the weakest going to the wall," while their companions proved themselves "survivals of the fittest," at any rate the strongest. There were eight or nine frogs of the same brood, and during the first few weeks of their captivity all of the same size, but soon showing conspicuous gradations, some rapidly outgrowing the rest; and then, by reason of their being the most active and quickest to seize the food given them, leaving the others, and one especially, far behind, till this tiny creature was almost starved. A similar state of things existed in the newt bowl, one feeble little hungry newt looking up almost pathetically when the cover was removed; yet only occasionally would it take such small creatures as were presented to entice it. Both it and the wee frog seemed easily baffled and discouraged, as if they had discovered that resistance was useless; and though extra care and vigilance were bestowed on them, their lives were almost one prolonged fast. If placed in a bowl by itself the little newt fared not much better, seeming to have no energy to pursue its prey, and only if conveniently close making any attempt to seize it. Nor did this small *Molge* show any disposition to hibernate. In September it ceased entirely to feed, and so late as December the tiny creature persistently kept above, generally clinging to the side of the glass globe, a mere skeleton, pitiful to behold. An occasional rise of temperature caused it to move ahead a little, but otherwise thus it remained during the whole of the winter, not once closing its eyes or showing signs of torpidity. Its head looked preposterously large, its vertebræ were painfully distinct, and its legs were mere threads. During some sunny days in March it moved about somewhat more vigorously, looked at such small creatures as could be found for it, and even made an attempt to seize one now and then; but its efforts were, so far as I could see, ineffectual, except on one occasion, when a very small worm was swallowed. This single meal, together with a show of spring weather, revived it slightly, and toward the end of April it took to the water; but its crest not having developed, and its tail being almost cylindrical, its swimming capacities were evidently feeble, so that it had much difficulty in rising to the surface. Strange to tell, this little amphibian, fitted so admirably for an aquatic life, was drowned at last. On the morning of April 29 I saw it lying on its back at the bottom of the bowl, motionless. Probably it had been there for some hours, unable to rise, perhaps all night, as during the previous days I had several times lifted it out of the water, but, obedient to its natural instincts, it soon took another dive. When, now, once more taken out and brought into a warm room, a slight movement of the tail showed that life was not quite extinct, but it did not revive. Only after some hours its eyes became duller and the tail quite still. Its tiny form, with every bone distinct, was a perfect skeleton, held together by the cuticle only. A study of anatomy the delicate structure distinctly is, and at the same time a marvel of the vital power having been so long sustained in a mere skeleton. Its vertebræ are easily counted; fourteen I think there are to the tail, and above thirty in this latter, but so minute toward the tip as not to be accurately reckoned. All the other articulations are equally recognizable. The entire length of the skeleton is exactly 2¾in., of which the tail is nearly two-thirds. It was—as all newts are—entirely gentle and inoffensive, yet it displayed a good deal of spirit and activity to the very last when taken out of the water, in its determination to get back again, fatal as I foresaw in its feeble condition and inability to rise to the surface. Just one year it had been in my possession, and eight months of the time had literally lived on air.

Of the rest of the batrachian family only the one tiny frog had succumbed to the first hard frost, the others, frogs, newts and toads were none the worse for having been buried in icy graves, literally frozen hard during a part of the winter; and when on one occasion I broke the surface ice under which some frogs were immersed, they had their eyes wide open, and they dashed about as actively as in summer. Some of the family had got away during the previous autumn and managed their own hibernation out of doors, no doubt more healthfully and satisfactorily than those on whom much anxious care was lavished, for they reappeared in April and even found their way back to their old haunts, a small conservatory where, during the previous summer, they had hopped about at will, and now re-established themselves.

CATHERINE C. HOPLEY.

WILD PIGEON IN MASSACHUSETTS.—East Templeton, Mass., Oct. 13.—*Editor Forest and Stream:* It gives me pleasure to be able to report the return of the wild pigeon to Massachusetts. I saw three Sept. 23, genuine *Ectopistes migratoria*, the first seen since 1879 or 1880. They were feeding on blueberries and huckleberries that, although badly dried, were persistently hanging to the bushes. May this beautiful and purely American bird soon cease to be a *rara avis* in Massachusetts.—C. E. I.

THE WOODCOCK'S WHISTLE.

STOCKHOLM, Oct. 1.—*Editor Forest and Stream:* The other day, when shooting partridges in the Province of Delacarlia, Sweden, my good dog Nero came to a dead halt in a clump of bushes by the reedy lake shore. Nero was facing me, and as I walked toward him a large bird flew up between us and went tumbling along through the air in its drunken flight. It was an easy shot in the open, and at the report the bird fell dead, riddled through and through. A woodcock it was, to be sure, but not the merry brown beauty of America. Its wings were longer and more pointed, its color less brown and more gray, and its flight as silent as that of a hawk. It was a great, big fellow, however, to American eyes, and tipped the scales at 12oz.

The FOREST AND STREAM reaches me regularly in my northern home, and as I picked up this bird and looked him over, as the sportsman is wont to do, I thought of the controversy now going on in your columns upon the whistle of the woodcock.

I have said the flight of the European cock is silent. It is not always so. An American sportsmen visiting Sweden in May will surely be invited out woodcock shooting. This is a very leisurely sort of sport. You leave the city at six in the evening, after the day's work is done, sail out a dozen miles among the islands, and landing, take your stations in favorable openings in the woods. Some time after nine the laggard sun goes down and the woodlands ring with the sweet carols of the birds of spring.

But what is that? *Gnarr! Gnarr!* like the grunting of a hog. It comes again and again, always twice repeated. Now it is nearer and followed by a hissing whistle thus: *Gnarr! Gnarr! Hvist! Gnarr! Gnarr! Hvist!* Yes, it is over head. You look up, a dark bird sails across the opening in the treetops. There is just time for a snap shot and your first European woodcock drops dead at your feet. This is shooting "*på streck*" on the flight. It is the male bird alone that flies thus, and the shooting is only permitted after the female has laid her eggs, is sitting on her nest, and *pater familias* has become rather a nuisance about the house than otherwise.

But what has all this to do with the whistle of the American bird? Not much, perhaps, and yet it may throw a side light upon the question.

The European woodcock makes this grunting, and also this hissing, whistling sound with its bill. This is an undisputed fact. It makes these sounds only in the breeding season, to be sure, and the hissing whistle is not the merry jingle of our October bird as it springs from the alder swamp. Yet these two facts remain. The European cock does make a hissing whistle with his bill, and second, no bird in the world is so like our own woodcock as its European cousin.

Now this does not prove but that our own "timber doodle" whistles with its wings. In fact, that has always been my belief. But the question is still an open one, and the vocal notes of the woodcock in Swedish woods show that the thrilling whistle of our own bird may be, after all, not a matter of a pinion. MARSTRAND.

QUAIL'S NESTING HABITS.—A writer in a recent issue tells of a male quail that devoted its time to developing the brood without aid from the female. The habits of the quail in this respect are somewhat changeable, being due to certain laws of nature which are quite beyond our knowledge to explain. Bee keepers are aware that bees swarm more in some seasons, and this year was one for the sending forth of more than the average number of swarms. The same principle is true of quail, and the flocks number probably a hundred per cent. above the average. Sometimes a female quail will lay a nest nearly full of eggs, and then begin a second nest within a hundred feet of the first one. In this case the cock bird will take possession of the first nest and diligently and patiently sit upon the eggs during the long period of incubation, thus allowing the female quail the privilege of laying and bringing forth the second brood. This is usually smaller than the first one, and is about one month later.—JASPER BLINES (Alexandria, Mo.)

Game Bag and Gun.

ODD INCIDENTS.

ONE of the druggists had been out shooting and several of us dropped into the store in the evening to ask the usual question of, What luck? After the narative of the day's sport had been related, by-gone days were talked of as is usual at such gatherings, and among other incidents the following was related by the elder druggist.

"Late last fall four of us were out looking for the last woodcock; we had two dogs and hunted in twos, agreeing to meet at a certain point in the afternoon. Each party had fair luck, and when we met we had five birds and the others six. There was a slight rivalry between the parties and we wanted to show as good a score as they, so I proposed that we hunt a cover about a quarter of a mile distant. To this the clothier and his friend objected and remarked that they were ready to go home, as they wished the score to stand as it was and feared that we would tie their score, or beat it, as we were always considered a lucky pair. However, after some talk we started and they went along, thinking, I suppose, that possibly they might get another bird or so and beat us still more. When we arrived at the cover we spread out and entered it; my dog made game and soon came to a point in a position where I was the only one who could see him; I said nothing to the others, but went up to him and walked up the bird, which came almost straight towards me. I waited until he passed, then turned and fired first one barrel, then the other, but he kept right on, and leaving the cover, crossed a small opening, going down among a few scattering trees. I thought I must at least have wounded him; so, calling the dog, I started after him. When I got there I sent the dog in and he worked over every foot of the ground, but failed to find him. I called to the others to come and help me find him, as they had not found any more birds. They came, but we could not find him, dead or alive. Then they began to laugh, and tell me that I had shot at a robin, but I was positive, and went over the ground again with the dog but without success. I had about concluded that the bird must have flushed again before the dog got there, when, as we were coming out of the timber, I noticed the dog making game near an old rotten log just at the edge. I called the others' attention to it, and we went over there all ready to shoot at the first sound of the whistle. But no whistle was heard, although we looked carefully and walked all around the log. I suggested that possibly the bird had been wounded and crawled under the log. As it did not appear to be hollow, the other fellows laughed, but finally one of them helped me roll the log half over, which proceeding failed to reveal the bird. We both let go of it at the same instant; and it rolled back with a crash, splitting in two from the jar; and there, to our astonishment, on one half of the split log, lay my woodcock, still alive, but badly wounded. On studying the problem of how the bird got there we found that at that portion of the log a knot had been pulled out, leaving a hole just large enough to admit Mr. Woodcock, but how he came to go into the hole is still a mystery."

A few evenings later I happened into the hardware dealer's place of business, when he told me the following: "One Sunday several years ago I was out for a walk with a young dog I had just purchased; and, naturally enough, my steps led to a small cover near town, where an occasional woodcock was found. I thought possibly there might be one there, and wished to try the dog on a point. I did not have a gun with me, but carried a light walking-stick. The dog worked carefully through the cover without even making game, but just as he came out on the further side he froze stiff about ten feet from a cedar bush. I came out about ten feet on the opposite side of the bush, and could plainly see a woodcock sitting under it. The thought came to me to make a rush and hit him with my walking-stick as he went up; but after less than a second's deliberation, I raised the cane and threw it at him, striking him fair in the head, and stunning him so that I ran and picked him up before he could recover."

The above is vouched for by several reputable men; and by its oddity it reminds me of one of the strangest occurrences which has happened in my hunting life. The snow was about a foot and a half deep and light. We were hunting rabbits. The bag was rather light, so when I spied a partridge in a hemlock tree, I promptly fired at him; but the effect of my shot seemed only to hasten his speed more than usual if possible. We followed, and had gone some distance without seeing him again, when I stepped on to an old log to get a better view. As I stepped off on the other side I felt something moving under one of my feet, and could hear the confused fluttering of wings. Quickly looking down I saw that I had stepped on a partridge, which had, probably, striven to hide under the snow. On capturing and examining the bird a shot mark was found on one of his legs, which was the only wound seen; and a post-mortem confirmed the diagnosis. So he was, probably, the bird shot at, which had flown some distance, and, striking the snow at an angle, had gone under for safety, as they sometimes do during severe storms.

In this narrative of novel happenings the following seems worthy of a place: A young gentleman of the name of Northup, who was staying at Dunbar's, at Stillwater, a short time ago, went to Mud Pond, about three miles above Stillwater, to watch for a daylight shot. He waited until daylight waned without seeing any game; and as he was some distance from camp and one of the plucky kind, he concluded after eating his lunch to make a night of it and try his luck the next morning. So finding as comfortable a spot as possible to lie on, he prepared to sleep. Night had let her blanket of darkness fall upon the land, and Morpheus was lulling him to a quiet slumber, when suddenly he was startled from a dream of a monster deer by the sharp cracking of dry sticks, as if some animal were walking. He raised himself to a sitting posture, and as he did so the thought occurred to him that it was a deer coming down to drink.

The night was dark as Erebus; he could not see his hand before his face. How he was to see the deer, to say nothing about shooting her, was a question. After a few seconds' thought, he decided to get his rifle ready anyhow; it was close beside him; and as he reached for it his hand brushed against the paper bag he had carried his lunch in. At this moment a scheme flashed across his mind and he proceeded to execute it and the deer at the same time. Silently cocking his rifle he laid it across his knees, with the muzzle pointing toward the sounds he had heard, then he took off his hat, carefully picked up the paper bag and placed it, or as much of it as he could without making any noise, in the hat. When this was done he took out one of those old-fashioned, blue-headed, Gates's eighteen-day matches (it takes something like that amount of time for the brimstone to burn before there is a flame that can be used), and holding the hat with the paper toward him, he lit the match in his coat, and as soon as possible lit the paper bag, which instantly blazed up, when he could see a fine doe standing a few yards from him. As the bag lighted he had turned it toward the deer, which immediately turned her eyes full upon the light. In an instant Mr. Northup had raised the rifle to his shoulder with one hand, holding the hat with the blazing bag in it with the other, and shot her in the head, dropping her in her tracks.

He then built a fire, by the light of which he dressed his deer and hung her up, after which he awaited daylight by enjoying that sleep which a contented mind always brings in the woods. The next morning he returned to camp for help to bring in his deer and told his story, which was generally voted to be the "biggest lie of the season," but to the guide who went with him after the meat he showed such conclusive evidence of the truth of his story that its veracity is not questioned; and I believe it, or I should not have ventured to send this narrative to the FOREST AND STREAM with these other odds and ends of sport. OSCEOLA.

NORTHERN NEW YORK.

SEEING A BULLET.—At the inquest in the case of the Ship Harbor, N. S., men killed by mistake for a moose, one of the party with them swore: "The sun was about half an hour high, and it was a beautiful clear, still morning, I was looking intently ahead, and saw a black speck or streak distinctly and the bullet whistled past my ear within a few inches." "Did you see the bullet coming?" "The morning was clear and I was looking very intently and the bullet came so directly toward me that I am firmly convinced I saw the bullet as a black streak coming."

DUCKS AND DUCK SHOOTING.

NATURE has divided ducks into two broad classes, the divers, and the non-divers. Ducks of the first class, having their feet or paddles well behind, can, by diving, obtain their food from the bottom of even quite deep water. The non-diver, on the contrary, feeds on the flats or in water so shallow, that the bottom can be reached by the head and neck only being put under water.

The object of these different organizations is evidently to increase the range of their food. The divers readily reach the marine plants, which grow on the bottom, and the smaller crustacea and insects, also found there; whereas the non-divers consume the food found at or near the surface, or on the flats or mud-banks temporarily left bare.

The divers needing light for their search for food in deep water, feed almost wholly in the daytime. The non-divers on the contrary, feed principally at night, and are guided probably to their food by their sense of smell, which in most of the class is quite acute.

Ducks are large feeders. To propel a body of several pounds weight through the air, at a speed of 50 or 60 miles an hour, requires great expenditure of muscular energy, which can only be supplied by much nourishment. Besides, ducks are cold weather birds, and their animal heat must be kept up by much fuel in the form of food. It is apparent therefore, how ingeniously Nature has provided for the multiplication and liberal support of waterfowl, by doubling as it were their feeding grounds, and making the bottom as well as the surface and shores of the water, tributary to their support.

The different habits of these two classes of ducks perhaps explain the extraordinary difference in their mental endowment. The non-divers are very intelligent birds and in their keenness of observation and power of drawing inferences as to danger from very slight circumstances, they are equal to, if they do not surpass man.

The divers, on the contrary, like the sea coot, the canvasback, the redhead, the bluebill or bay widgeon, etc., are dull birds, with apparently limited observation, and are slow to avoid danger. But this class of ducks live and feed on broad waters, and can only be approached by boats which are easily noticeable, so that the approach of danger is sufficiently obvious, even to their sluggish observation.

The non-divers feed near the shore, often quite close to high reeds or bushes, which allows a stealthy approach of their enemies; a constant hazard, to be avoided only by their higher organization and the development of their powers of observation.

The diving fowl come more readily to decoys. They fly but a few feet above the level of the water, and so have a limited range of observation. They will light among decoys, set near an open boat, or a boat slightly concealed by bushes. If shot from the shore with decoys, a very slight screen is sufficient for the shooter.

They have apparently little or no sense of smell. They rise slowly and heavily from the water, and at an acute angle with the surface, and although among this class are some ducks, like the canvasback, which afford the most delicious food, they are far less interesting to the sportsman, and require much less of his care, patience and skill for their capture.

They are largely shot in the Chesapeake and Currituck waters from batteries, which are boxes sunk to the water's edge, in which the shooter lies down for concealment; and in this way the autumn and winter markets are kept supplied by the market gunners with this table luxury.

The non-divers, like the mallards, the black and gray duck, the bald pate or American widgeon, fly high in the air, approach their feeding grounds or the decoys 30yds. or more up in the air, and then only after a close scrutiny and observation of all surrounding objects. They differ from the divers by not usually alighting among the decoys and by sailing a few yards above them; they come up from the leeward and fly either into or across the wind, and in so doing, if they detect any motion or recognize the artificial character of the decoys, they spring into the air, with the wind under their wings, and are beyond shot often in less than a second's time.

They also have the power, if alarmed when sitting on the water, of springing six or eight feet up into the air, like a quail or partridge when flushed, and making off with great rapidity.

Apparently they have keen power of scent; for frequently when the wind drifts them into the line of the scent of the sportsman in his stand, they will instantly, even at a distance of 50 or 60yds., recognize the danger, and escape it by rapid flight across the wind.

Currituck Sound, in North Carolina, is the resort in autumn and winter of great numbers of ducks of all kinds. The canvasback and the redhead frequent the open waters, and are shot in great numbers for the market from batteries and blinds by the native gunners. The non-diving ducks frequent the shallow waters and marshes which form the eastern side of the sound, and which lie adjacent to the wide sand beach which is the barrier to the ocean.

On the eastern side large tracts of marshes have been purchased by various shooting clubs. Among them is the Swan Island Club. This club owns about six thousand acres of marsh land and shallow waters, held under an original grant from the State of North Carolina, which gave exclusive titles, to the waters, as well as the land, thus affording ample legal protection against trespassers. As, however, the canvasback and redhead bring a much higher price in the market than the non-diving ducks, there is little temptation to the natives to shoot the latter; and as the members of the Swan Island Club do not shoot from batteries or blinds, there is no interference between them and the natives; and the relations of the parties are harmonious and satisfactory, the club giving a good deal of employment to the natives as boatmen, etc.

This club is exceptional in having no by-laws nor rules, but it is tacitly understood that no member is to go out to shoot before breakfast, and that each member has his choice of position for the day by rotation.

The member who has this first choice of position naturally takes an early survey of the club grounds before announcing his choice. His object is to find a large body of ducks which appear to be wonted to the place they are resting in, and to want to remain there for the day; or, failing this, to find a place in the probable line of flights of ducks for the day.

With a glass he can command a stretch of about five miles, and in this extent he sees thousands and thousands of ducks. It would seem a very easy matter to go almost anywhere, and secure three or four dozen as his day's bag; but experience soon teaches him that nature has made much too good provision for the safety of her feathered children to allow of any such certainty. He therefore studies the weather, the wind, the flight of such birds as are moving, and especially the possible changes in the day, so as to secure a position well to windward, as the ducks moving during the day usually make their flight to windward.

Having announced his choice, he starts for his destination with his flat-bottomed boat well loaded with decoys, and is rapidly driven over the shallow water by his boatman with a long shoving pole. Having arrived at the bay or cove which he has selected, he puts out the decoys in such a position that the ducks coming to them may have a long sweep over the water from the leeward, so that the wind blowing across their flight gradually draws them toward the stand or screen in the reeds or bushes, in which he is concealed as carefully as possible.

The great object is to secure the ducks passing within shot of the sportsman and then leaving him, flying straight into the wind. The more perfectly this position is obtained the better will be the shooting. The ducks when flying away offer a better mark. He does not flare or jump when the gun is raised, and if there are two or more ducks the second barrel can be used more effectually.

It is very difficult to place the decoys perfectly until several birds have drawn in and passed over them. The first few birds often come wild and full of suspicion, probably owing to the decoys having an artificial appearance, or their being too near the stand, or too far to the right or the left.

Various changes will have to be made, and some good shots apparently lost before the decoys are all right; then the satisfactory shooting begins and continues until a shift of the wind of two or three points may compel the sportsman to move his entire rig to some other point where the wind favors, and begin his shooting over again. And so the day goes on, his success being dependent on the vigilance of his observation, and on his activity and energy in arranging for the changes of the day and the caprices of the ducks. Then the element of luck comes largely in. A day may have been a very dull one until the middle of the afternoon, when a sudden and unforeseen change of wind and weather may bring a great flight of ducks and give a couple of hours most active shooting.

The shooting is wholly at single birds, that is, when a flock of ducks come to the decoys they spread, so that two can be rarely caught in a line so as to be covered by one barrel. A right and left shot at single birds is usually all that can be accomplished.

The gun in use at the club is a light No. 10 breech-loader, loaded with 4¼drs. powder and 1⅛oz. or 1¼oz. shot. This, with a good shot, insures the death in the air of any single bird within fifty yards. With No. 5 shot a bird may be killed at even seventy yards, but not with certainty, and such long shot are avoided.

Geese are shot with No. 1 shot of the same load as to powder and weight of shot as for the ducks, and can be effectually shot at seventy-five or eighty yards, and occasionally at a hundred.

The shooting ceases at sunset, and varies of course as to its success with the weather, the height of the water, and the habits of the ducks for the day. On a still, bright day ducks come very little to the decoys. A windy day with clouds increases their readiness to decoy, and on a stormy day with violent rain or snow they decoy very boldly.

At Swan Island, on a bright, pleasant day, twenty or twenty-five birds make a good average bag. On a more favorable windy or cloudy day, forty or fifty are a good bag. On a first rate shooting day the bag may come up to seventy or even to ninety or a hundred.

These bags are made between ten in the morning, about which time the decoys are set, the stands made up and the shooting begins, and half past four or a quarter to five, when the sun sets. In fact, a member of the club is generally sure of six hours of active, interesting and successful shooting for three days out of four.

All the ducks killed on the Swan Island preserve are excellent eating, though perhaps not quite equal in flavor to the canvasbacks of the Chesapeake, after they have fed for two or three weeks on the wild celery. The wild celery grows sparsely in Currituck Sound, where the widgeon grass furnishes abundant pasture for the immense flocks of swan, ducks and geese.

All the ducks not eaten by the club are sent to the market in Norfolk, so that nothing is wasted, and every bird killed furnishes a good, nutritious dinner for somebody.

The duck shooting at Currituck begins, by the law of North Carolina, on the 10th of November, and is restricted to the hours between sunrise and sunset. The climate of the sea coast of North Carolina is a very healthful and delicious one during the late autumn and winter. Occasionally a severe frost freezes over the shallow waters, but the ice generally continues but for a day or two, and as it melts and leaves spaces of open water, good shooting can be had. The ordinary temperature is very like that of the New England September or October, but with a very much softer character.

As a sanitarium, the place is of great excellence. The open-air life and the exercise, of which the snipe shooting affords abundance, and the good food, for the ducks are by choice the principal article of diet, and the sound sleep, make a marvelous change in the mental and physical condition of the man who exchanges his office and indoor life in New York or Boston for his vacation at the club.

It is probable that the club grounds will continue for many years to be a good preserve for ducks. They are disturbed as little as possible on their feeding grounds. They find abundant food and entire quiet, and it is not uncommon to see from the lookout on the club house from fifteen to twenty thousand ducks and geese within the limits of the club's grounds.

The number killed is but a very small fraction of the immense numbers that pass the winter there; and until their breeding grounds in the extreme north and northwest are broken up, the annual increase will far exceed the loss from shooting, or even from that unseen and somewhat mysterious destruction carried on by Nature through the agency of birds or animals of prey, or by unusual severity of storms and other similar causes, which regulate and balance the different orders of living creatures, whether inhabiting the land or the water. M.

THE SAFETY OF GUN LOCKS.

Editor Forest and Stream:

Of the casualties mentioned by you in "A Fourth Chapter of Accidents" something more than fifty per cent. were occasioned by the hammer falling without the trigger being pulled; and as it is improbable that all the unfortunates were guilty of using the rubbish sold as a cheap gun, the inference is that the rebounding lock does not always furnish adequate protection, even in well made guns. At least one firm of London makers think so for in some of their hammer guns Holland & Holland use the additional security of an intercepting safety.

And apropos of this safety I wonder why it is that no tumbler bolt is used in the hammerless gun built in this country. The gun critics are quite agreed that there is need for it, and abroad the makers of best reputation use it. Mr. J. H. Walsh ("Stonehenge") in "The Modern Sportsman's Gun and Rifle" takes very strong ground in favor of an intercepting safety, a judgment concurred in by "Gloan" and by the authors of "Shooting" in the Badminton Library. The latter insist on it, almost as a *sine qua non*. They say: "We strongly recommend a sportsman invariably to insist when choosing a hammerless gun that it shall possess besides a so-called safety bolt an intercepting block that is only moved from its protective position when the triggers are purposely pulled." (Badminton Library; "Shooting," pp. 92.)

Mr. Purdey employs intercepting safeties. Mr. Lancaster has invented and uses a device for blocking the mainspring. The Messrs. Holland use the block safety so popular in the Scott gun. Mr. Grant relies on a secondary scear, as does also Mr. Greener in some guns. And, without further enumeration, it may be said that the best British makers use a tumbler bolt of some description, either of their own motion or to appease the demands of their customers.

Then why, I ask, is it not as generally used in this country? Certainly not because of the trifling additional cost of manfacture, for we have makers who seem to be more anxious to make fine guns than large profits. Neither can it be that the best gun made by any of them is without it secure beyond the possibility of such accidents as the tumbler bolt is designed to prevent; for to claim it would be to assert that the authorities are all wrong, or that the American gun possesses some superlative excellence in design, material and finish which they have failed to discover in the weapons of the crack London makers, quite universally regarded as the highest achievements in sporting arms. I think that the answer lies in the fact that our shooting men know little and care less about the construction of their guns, if only they shoot well and function easily. I doubt that many of them have ever examined the lock with the purpose of ascertaining just what is meant by the word "safe" underneath the trigger slide. Could they be induced to do so there would soon be a demand for something to prevent the firing of the piece by a hammer falling because of a sudden jar or the breaking or fouling of the scear nose or tumbler bent. When such a demand shall be heard the makers will respond quickly enough, with the result of enabling one, for a fair price, to buy an American-built gun that shall be quite as safe as its British competitors. CAUTION.

THE HUNTING RIFLE.

Editor Forest and Stream:

In your paper of Sept. 12 a correspondent, "Senex," says he would like the .32-20-115 rifle better if it carried 35grs. of powder, but he seems to fear that so large a charge might cause the bullet to strip or lead the barrel if the twist of the grooves is very quick. The following account of an experiment made by me lately shows that with proper loading there is no risk of stripping:

Having a Maynard .32 barrel, rifled with a turn in 16in. and chambered for the .32-160grs. cartridge, I loaded with the Winchester factory-made 115gr. bullets and 30grs. of Curtis & Harvey's No. 6 powder. (Judging from powder trials I believe this charge to be quite as strong as 35grs. of Hazard rifle powder). A lubricated cloth wad was next the powder in the shell, and then a card wad to prevent the powder adhering to the bullet in its flight.

I first tried three shots at 36yds. range in my garden, using a chair for a rest. They hit the central line of the bullseye and were all in a space ¼in. wide and ⅜in. deep (measuring through the center of the bullet holes). The bullets struck with great force, considerably indenting a ⅝in. iron plate behind the target.

I then loaded sixteen cartridges and took the rifle to a proper range some miles distant. The light was good, but the wind blew in strong gusts from 4 o'clock. I fired from the prone position without a rest, using an aperture hind sight and the bead of the Lyman and Beach foresight. After one cartridge for a sighting shot the remaining fifteen gave the following results:

Three at 50yds. struck in a space 2in. square.
Four at 75yds. in 2in. deep by 3in. wide.
Four at 100yds. in 2in. deep by 6in. wide.
Four at 150yds. in 4in. deep by 2¾in. wide.

The wind was extra strong at the 100yds. target, which accounts for the shots being in a greater width than at the other ranges. The 115-grain bullets were scarcely tight enough for the shells, and were pushed in with the fingers. If some shells were made slightly smaller in the mouth, and a proper bullet-seater used, similar to that supplied by the Maynard people for their own bullets, there is no doubt that cartridges loaded as above described would shoot with the most delicate accuracy up to 200yds. I should have mentioned that the rifle was not wiped out at all while firing the 16 shots. I never clean the barrel now during a whole afternoon's shoot at the weekly meetings of the club to which I belong, having found that with proper wadding there is no perceptible difference between the last and the first shot.

I lately made another trial of the muzzleloader described in FOREST AND STREAM of July 18. Fired from right and left barrels alternately, with hollow bullets and 90 grains of powder, it will put a succession of shots into a 4in. ring at 100yds. The recoil is so moderate that it would not be noticed at game shooting. J. J. MEYRICK.

DUBLIN, Ireland.

FLORIDA CRUISING.—Mr. F. D. Hughes's advertisement in this issue offers an exceptional opportunity for a small party to join the advertiser for cruising, hunting and tarpon fishing in Florida this season.

THE GAME SEASON.

Editor Forest and Stream:

One of our sportsmen a few day since shot an albino pine or red squirrel, which is certainly rare in this section, and if its like was ever caught I have never seen any record of it. Mr. A. K. Pierce is the lucky possessor of this rare specimen, and has it on exhibition nicely stuffed and mounted.

The rapidity with which the pheasant can fly is certainly something marvelous. One of these birds in taking a "flyer" on the north side of the mountain opposite the railroad shops here got his bearings a little too low, and in his flight struck the window of a baggage car that was standing on the siding, going between the iron bars that are about 4in. apart—and are placed on the windows of all baggage cars—broke the double thick French plate-glass and was picked up by one of the workmen inside the car comparatively unhurt.

The exodus of the squirrels is now being followed by the black bears, who have within the last week become numerous in our surrounding mountains. Quite a number have been seen by our hunters and four have been killed within a radius of six miles from here within the past week.

The squirrels are still on the march southward, and fabulous stories come to us from Clearfield county to the south of us of hundreds of little fellows being killed by the boys with clubs and stones. JAS. H. FERGUSON.

RENOVO, Pa., Oct. 14.

Editor Forest and Stream:

Our deer season opened on the first inst., but so far but little attention has been given to deer hunting. Our sportsmen have had smaller game enough to satisfy them, and then the heavy growth of leaves has made it impossible to see a deer in the red brush on the mountains, where they are generally found here at this season. The squirrels are still here, but not nearly so numerous as in September. Yesterday a party some twenty miles down the river killed a black bear that weighed 470lbs., certainly the largest killed in the county for years. They sent his head to Harder's gun works to be mounted. Other bears have been seen quite near here. One party of five, consisting of Moore, Punpacker, Fornman, Reams and the writer have arranged to spend next week in the "green woods" of the Alleganies, and Mouday morning at daybreak will see us off. I want to write you sometime again of "Bill Reams," a hunter from childhood, a royal good fellow, and who has been in at the death of carloads of big game. FRANK G. HARRIS.

CLEARFIELD, Pa., Oct. 12.

Editor Forest and Stream:

The dry season has been favorable for most kinds of feathered game. Woodcock are unusually plentiful. I know of one bag of sixty-one being made by two guns in one day; while bags of thirty to forty are quite common for two or three guns during an afternoon's shooting.

Ruffed grouse and quail are very abundant, and as soon as a law is made to prevent these game birds being shot for the market, they will steadily increase in numbers. The Dominion Gun Alliance has taken hold of this matter, and we may expect such a law passed at the next sitting of the Ontario Parliament.

Duck and snipe shooting has so far been poor, as many of the marshes are destitute of water; and unless heavy rains come soon the shooting will not improve when the flight birds arrive. STANSTEAD.

WESTERN ONTARIO, Oct. 5.

Editor Forest and Stream:

Here is our bag for Friday last: Four partridges (ruffed grouse), one rabbit, seventeen woodcock. Guns—Fred S. Godfrey, W. H. Bradford, John Davis, H. C. Shields and yours truly, SEYMOUR VAN SANTVOORD.

BENNINGTON, Vt., Oct. 8.

Editor Forest and Stream:

Partridges very plentiful in New Brunswick this year, and some good bags of woodcock have been made around St. John. No gun accidents recorded here as yet.

R. D. W.

ST. JOHN, N. B., Oct. 9.

PATTERN AND PENETRATION.

SOME COMPARATIVE FIGURES.

OF course the whole tendency of our tests of shotguns is in the direction of comparative results. As soon as gun No. 2 is shot the first question is "How does it compare with No. 1," and so it is that some of our watchful correspondents have sought to reduce the results into tables of percentages, etc. Had an exact basis for uniformity of comparison been sought it would have been the easiest thing in the world to have a standard 10-gauge cartridge prepared and a similar 12-gauge and loaded each gun as it came along from the proper heap of cartridges. This would have made our work very simple and at the same time have made the outcome as unsatisfactory as previous gun tests conducted on the leveling rule have been. Instead we preferred to allow each gun handler to put into his weapon just the charge with which he thought he could secure the best results. This cut off a vast deal of growling at the very start and has we think made the data as collected of far more general interest.

But while this was the rule it did not prevent a great deal of direct comparisons making from time to time. On Sept. 19, when four guns met on the range, there was such a comparison so far as weather conditions went, but that was a great deal more, for the loading in some of the trial shots fired enabled the most direct averages to be struck between the several guns. It will be remembered that on the date mentioned we took down for trial a 10-gauge Liege gun costing $8 at retail and a 12-gauge of similar make and price.

The story of the trial of these guns has already been told. There came to the range two other guns for trial, one was a 10-gauge Greener of the $150 grade, and the other a $125 L. C. Smith gun. How these guns acted under the charges prescribed for them by the agents was given at length in our issue of last week.

It will be remembered, too, that some weeks before we had a Scott ducking gun on trial. It was a heavy 10-gauge weapon, and the showing made by it was not very high, taken by percentage. This Scott gun was tried with two sets of charges. One was a black powder load with 4½ drams of Dead Shot powder. There were a number of the charges remaining in our magazine and these were put in the 10-gauge Liege gun, and at 60yds. in the Greener arm. To make our table complete we reproduce the figures of the Scott gun and give the data for each shot fired. It will be seen that at 40yds. the cheap gun surpassed the imported arm. At 60yds., where the Greener came in, it seemed best suited to this charge, being almost equal to the total of the other two arms.

THE CHARGE.

Shell—U. S. C. Co.'s Climax.
Powder—Dead Shot, 4½drs.
Shot—Tatham 1¼oz., No. 6 Chilled.

CARTRIDGE ANALYSIS—THREE CARTRIDGES.

76	88	5	16	72	71	5½	12

There was also tried in the Scott gun a cartridge loaded with Schultze powder. It was intended to have the two charges, black and white, of about equal effect as to powder, as they were evenly charged with shot. This charge was not put in the Greener gun, as its owner shared the very prevalent objection to having the strong explosive tried in his barrels. There was no hesitation on our part, however, in putting it to test in the Liege gun barrels. It will be noticed that both arms show a falling off in pattern when charged with the white powder. In this, as in each of the other cases, the charge as given and the analysis for immediate comparison is printed in juxtaposition with the record of results.

We now come to the 12-gauge guns. When we tried the Greener 12-gauge sent over from the Birmingham works of W. W. Greener, it was charged with two differing cartridges, each of black powder. They were both of them loaded by the American agent of the gun, Henry C. Squires, of this city. In one he used the shells sent over by Mr. Greener with English powder and shot. The other set was a finely loaded and strong cartridge, American make throughout. The trial was a sort of international match on a modest scale. Readers of FOREST AND STREAM will remember our report on the Greener gun. Well, there were some of both sets of cartridges left over, and they were brought out on Sept. 19 for trial in the Liege gun from Folsom Bros. importing house and in the L. C. Smith weapon. First is given the result with the English charge. Here the superiority of the better grade of gun is seen in a very marked way, though in the matter of penetration the charge seems to do its own work independent of the barrel from which it is fired. The comparison between the three arms was carried through both ranges. The five shots from each barrel in the original Greener are given, while the others have but two shots at each range fired from each barrel. The figures throughout the test will repay careful study and let the reader into some of the vagaries of which guns, no matter of what make, are liable. Let him who can, fix the rule which governs these variations.

THE CHARGE.

Shell—U. M. C. Co.
Powder—Dupont Ducking, 3¼drs.
Shot—LeRoy Chilled, 1¼oz. No. 8.

CARTRIDGE ANALYSIS—THREE CARTRIDGES.

Loading.		*Powder.*	*Shot.*	
Card over shot; heavy felt and card over powder.	1	91 grs.	611 grs.	623 pellets.
	2	89 grs.	606 grs.	519 pellets.
	3	89 grs.	613 grs.	539 pellets.
	Average	89 grs.	610 grs.	560 pellets.

82	97	7½	6	88	105	7½	6

Finally, we come to the last set of comparisons made on Sept. 19, bringing the cheap Liege and the standard L. C. Smith into trial with the Greener, with American cartridges, just such charges as are used by thousands of our field shots. Again the higher grade guns leave the cheap weapon far behind, and the English arm seemed to accommodate itself very easily to the American charge and put in a far greater average of the charge than did the home gun.

ADIRONDACK DEER.

Editor Forest and Stream:

The game law has been very generally observed in this section during the past summer. Up to the first of September very few deer were killed, for jacking is not very successful after the middle of August. But I cannot say as much since the open season for hounding deer, for by this method of hunting killing deer becomes an easy thing to do. This brings in a horde of hunters, who could not kill a deer in a lifetime by any fair method of hunting. Almost every lake and pond has its watchers, consequently the slaughter must necessarily be great.

A party consisting of twelve men and thirteen dogs passed this place a few days ago en route for the hunting grounds. I heard from them after they had hunted three days, and they had then killed twenty deer. They have yet two weeks to hunt, and seventy-five or one hundred deer are not too high an estimate of the number that will be killed by that party alone. The one-deer transportation law and the three-deer clause do not apply to such a party. They can jerk the venison and thus lay in their winter supply of meat, and they are of that make-up. The law allows them to bring out as much venison as they please in that form, while such a party could legally bring out the legs and heads of thirty-six deer. Numerous parties are doing the same thing. It is sanctioned by law and there is no help for it. More deer will be killed during the hounding season than by every other method, including the cruster and the June jacker.

What a shame that the great State of New York by its legislative enactment should open the way for this unmitigated slaughter of its noble game, which, if properly protected, would remain sufficiently plenty to supply all reasonable demands of the sportsmen and the tourist so long as the Adirondack woods remain. But with the present fifty days of open season for hounding, the deer of the Adirondack will soon be a thing of the past.

NUMBER 4, New York, Oct. 7. MUSSET.

THE BEAR AS A BOXER.

Editor Forest and Stream:

In one of the most graphic and best told stories I ever saw in print (your issue of Sept. 19) your Dakota correspondent "Larry Yatt" ingenuously states that "Hugh Campbell taught Rube boxing." Rube, I must mention, was a camp bear raised from a cub, and Campbell was a "rustler from the Bad Lands." You will mark the difference? But I object to the statement. I am willing to believe that what Larry slings off-hand so gracefully was said inadvertently, for I am convinced that he knows better. Rube never had a lesson from Campbell, or any other man. They may have had intimate business relations, but there is no room for them both in the same prize ring. John L. Sullivan himself couldn't give a bear points. Bears are self-taught. The sparring instinct is in 'em, and there never was a professional so handy at Græco-Roman, or catch-as-catch-can. I say this boldly, I know bears—as well as beans. I have raised bears from young cubs up to four years, and I have had them in the kitchen and in the camp, several of them.

When I was corresponding secretary of the Blooming Grove Park Association in 1871, we were building the club house and staking out the one-mile deer paddock in Pike county, Pa. Ira Tripp, of Scranton, gave us a cub, which became a great pet as he grew in years, and the ladies fed him ice cream and watermelon. He was very gentle, and would let us comb his hair. We called him "Joe" for short; but this didn't shorten him any, for he grew in stature until he measured eight feet standing erect by his climbing post, with his great black paws clasping it above his head to steady himself. Capt. Lafayette Westbrook was then a war veteran of seven years standing, and he stood six feet four inches in his socks. He had been a member of the Legislature for Pike, Green and Monroe counties, and had plenty of practice in legislative sparring, as well as previously in the school of the drill-shed. Indeed, we all regarded him as an expert, though he made no great account of himself, being of a rather retiring disposition and by no means aggressive. Lafe was as good-natured as the bear. But one day when a party of us were amusing ourselves with Joe, he took it into his head to aggravate the animal. Bruin was upended, smiling, and Lafe waltzed into the ring with a flourish, and made a few scientific passes at his chest and mug. He tweaked his nose, smacked his chops, rubbed his head, pulled his ears, thumped his ribs, and made himself generally familiar. Joe stood it for a while without showing heat, merely dropping his jaws, lolling his bright red tongue and leering foolishly at the crowd. Occasionally he would clutch somewhat briskly at the captain's feints, but the play went on monotonously, until quite of a sudden the bear hit the captain a left-handed swipe which tossed him outside of the ring and curled him up promiscuously. This ended the play. The captain allowed he was hurt badly, and we didn't see him any more for several days. It was whispered that he had gone down to Milford.

There were a couple of rather amiable full grown bears up at my place in Hallock, Minnesota, a brown one and a black one, who used to try their science on each other for the amusement of spectators, but they never injured any one until one day the black one laid out a spiflicated Swede in pretty much the same way. Although repeatedly warned, he persisted in monkeying with the bear, and hence those tears and tears, the court plaster and the tailor's bill.

I tell you, Mr. Editor, that it never came in Hugh Campbell's way to teach Rube boxing. I don't know either of them, but I declare it on general principles. If any of your readers whose name begins with Aleck wish to be convinced, let them step into the zoölogical house at the Smithsonian grounds in Washington, where the bears have an hourly set-to in the pit every day in the week, including Sunday. Why, sir, they are the very masters of science. Go and see them, Mr. "Larry Yatt," and then pit Rube against the field; but leave Mr. Campbell out of the play. CHARLES HALLOCK.

NOTES FROM WORCESTER.

WORCESTER, Mass., Oct. 11.—The good bags of birds brought in on opening day led every one to believe that we were to have an excellent season's shooting, but nearly every one has experienced some strange freaks of fortune since then.

One day you find a good number of birds and find them right where you want them. They lie well for the dogs, and when they get up you "get in a right and left with the little hammerless." The next time you are out the moment you get over the wall into a cover, purr-r-r-r-t goes its sole occupant in the shape of "biddies" out the other side. When you do get a woodcock pinned, he gets up and whips around a birch before you can cover him, and you are forced, at dark, to quit without a feather. When it comes to putting in two such days in succession, especially by one of the "Old Guard" and on his favorite ground, it seems a trifle like rubbing it in, doesn't it?

Possibly the next report you hear from one of the "beginners" who declares that he never killed bird yet that he saw when he shot at it. He has been out and downed five partridges in a day. That evening you drop into "Lisha's" and hear the boys making it interesting for two of the best bird shots in the country who were out all day and both got shut out.

Well, so it goes, but the general belief is that there are a fair number of birds, and if they ever do get out into the edges and runs, some of them will have to pay dearly for the trickery and even abusive treatment we have received from their relations.

That the birds are more wary than usual this fall there is no doubt. Even the woodcock are getting educated, and you find them with their dress suits all on, ready for a party at a moment's notice, and the way they do scoot across an old pasture about the second time you get them up makes you think of the flight of an old cock partridge when he dives out of an apple tree and sails away over a mowing with his coat buttoned up so tight that he is out of reach before you can make up your mind whether it's a robin or not.

The woodcock flight has not arrived yet, but there is a large self-appointed reception committee waiting impatiently to make their short stay with us as interesting as possible.

The opening day of the fox season, Oct. 1, as regulated by the "Fur Company," was anything but an ideal one. Very few of the fox hunters braved the disagreeable cold drizzle, and of these but one secured a brush. E. F. Whittaker, with his hound Tilden, went out to Oakdale the night before, and between showers the dog started a fox which Ed. shot after a half hour's run. Not much fox hunting has been done as yet, but about every one who has gone out started a fox. The Fur Company are already talking up the big annual hunt, and intend to make it a greater success than any of its predecessors. This year they think they must be about due for a good day. We trust the clerk of the weather may deign to smile on them this year.

A pretty good thing, and one that is just "peaches" for some of the fox hunters, has just come to light. The president of the Worcester Fur Company (I think he still holds that honorable office), early in the season, made it known to the fox hunters that they were expected to keep away from a certain territory, known as "Bonds" and "Sewall Hills," until the time of the annual hunt, and there was an understanding that these grounds were to be reserved, as it were, for that occasion. The gentleman who was particularly instrumental in circulating this request has been out several times since Oct. 1, and yesterday one of his party killed a fox.

For some reason the man who engineered the hunt did not show up at "Lisha's" last night with his report, but a delegate from the hunt was there "instructed." He gave a very minute and interesting account of the day's sport, describing the spot where the fox was shot, "just back of the old barn between Rattlesnake and Bailey Hill." Well, the boys listened with due respect for some time, but finally they could stand it no longer, and when Charlie Knight asked him if "the old oak tree had moved from Bond Hill up on to Rattlesnake," every one gave way, and the way they lit on that "instructed" delegate was a caution to sub-liars. Si. Lovell had been into "Lisha's" that afternoon and told the whole story of their killing the fox right in front of his house. He lives just at the foot of Bond Hill.

The delegate weakened, but protested that he told the story as he had been instructed to. "However," he said, "it's no earthly use trying to lie to a party of old liars, and I might have known better." The chances are that the "combine" won't be able to reserve any more fox ground, to enable them to have a snap on it themselves, under pretense of keeping it fresh for the annual hunt.

An invitation to a coon supper took Uncle Nathan out before he had time to express his opinion of this sort of sportmanship, but remarks were pretty freely circulated which tended to show that the boys had arrived at some very definite conclusions in regard to "fox hunting as she is foxed." HAL.

CHICAGO AND THE WEST.

CHICAGO, Ill., Oct. 2.—Writing under date of Sept. 12, from Plainfield, Mass., Mr. Charles Hallock inclosed to me some tickets, which invited the bearer "to be present at the first annual chicken hunt of the Rising Sun Game Park Association, beginning Sept. 15." The tickets were signed by Valentine Hicks, director, Ashton, Ill. As I could not go down to the hunt, and as I knew very little about this association, I wrote to Mr. Hicks, and duly received the following reply:

"I have handed your letter to our president, Mr. Samuel Dysart, of Franklyn Grove, who will call on you next week and have a talk with you about our object in this hunting and game park. It is run for pleasure and for profit, and the two can go together as well as not, for though we graze cattle and sheep, and sow timothy and clover, the land raises all the more game for that, on account of the increase in insects, etc., and even when pastured down to a solid blue grass sod, all the game needs is a strip or so of timothy grass left for them to rustle and nest in, and some wet oats, sorghum, Egyptian or Kaffir maize, sunflowers and buckwheat. We use these and a short, sweet corn or early ninety-day dent corn, which will grow about four feet high. All these seeds fall down, and all winter long can be found by grouse, quail, turkeys or wildfowl. We also have lime shells, snails, etc., and gravel (thrown up by a steam ditching machine) on a few localities. You should come down and see the place. It is most perfect for all kinds of land and water game birds and animals. It can be made a great place for bass and pickerel, and I think by damming up some of the streams from the cold springs which bubble up, all pure soft water, we could make some special trout ponds much better and cheaper than is done on Long Island, my native home.

"I send you a pamphlet showing our first move of organization into a stock company. Come down and a team will meet you at Ashton and take you to the club house and back again when you like. You can shoot on the club grounds within two miles of the house.

"As you know, our law was up on last Sunday (Sept. 15), and town and club hunters were out in full force. Mr. S. Dysart informs me they shipped at the express station 113 prairie chickens. If it had been a warm, still day instead of a cold and windy one the market-hunters would have killed nearer 200 apiece, for they are good shots. The birds are full grown, and fly a long distance, hiding in the cornfields, where they protect themselves much better than any land owner can protect them.

"I sued one market-hunter Monday. He paid the costs, $11.50, without standing trial, and promised to stop hunting. I sued a club hunter yesterday, putting the damage at $200, the highest sum allowed by the law. We want this Nathan Roe to stand trial and test our power as land owners to prosecute for trespass. We will now sue any man who trespasses on any part of over 20,000 acres of land, which extent we mean to increase for the next three years. Our friends, the adjoining farmers, have caught our idea, and have posted their lands, warning off trespassers, and thus beat off the market and town hunters. I stopped the whole shooting business to-day over nearly ten miles square of country. I have one more extra good shot, a renter, to sue. He is a great liar, and he has often told my neighbors to go to a warmer climate when they ordered him off, saying he meant to hunt anyhow. He has begged me not to sue him, but I must. He was on my farm. I am very busy and will write more later, but you must come down and bring a friend or two. The chicken shooting lasts all October. V. HICKS."

I turned with considerable interest to the pamphlets Mr. Hicks mailed here, and found that the Rising Sun Game Park Association was incorporated Dec. 24, 1887. It is the theory of its originator that our game laws are a farce, and that in ten years our game will be gone. He reflects with bitterness on the failure of a proposed national convention at Chicago a year or so ago, to secure uniform game laws, and says, "There were four of us attended, and four Chicago sportsmen came, by our coaxing them to be there at 8 P. M., after business hours." He hits a good idea squarely when he says, "The selling of game should not be allowed any more than killing it, no difference whether it is a plover or a rabbit, or a deer, or even a woodcock. Let October and November be the only two months to shoot. The law should be made strong enough so all would obey it to a certainty by the complainer having all the fine. This law would save the game nearly twenty years longer, but it must go; the hunters increase faster than the game." He does not believe, however, in the efficacy of any law, and thinks the only remedy lies in the park system of increasing game. He thinks northern Illinois a good country for such a park, on which head he says:

It is very evident now, that the only hunters who will enjoy any shooting worth mentioning, will be the sportsmen who are smart and sensible enough to build up a park to hunt in. Ten years of this decrease will settle the hunting in America, sure; no law can stop it, because the hunters are bound not to agree on any uniform system of belief and action, any more than the church, religion, or the political parties. This evidence has shown that we can't have any uniform protective game laws. The land-owner sees that he is forbidden to trap game in his own way, and any loafer that can shoot, has the right to kill it and bear no expense of tax or of feeding or protecting the game. It is no strange thing that the farmer is down on the hunter shooting on his land, and takes no pains to save the birds' eggs or young, and does not complain of any violation of shooting, which he sees more than any one else; he says it is no use for him to get into trouble and make enemies, with no pay or equal rights. We have in this country the naturally greatest variety of game of any part of the earth, and we have about destroyed it. The people are the law and they interpret their different ideas of game laws to suit their tastes according to location and convenience to a special few. The minority make the laws against the majority's wishes, and cannot get them respected because there is fun and money in breaking them. These, and many other causes, have shown that there is no way left in America for us to have game left for shooting, without we adopt the park system in every good place, that will increase game and pay its own expenses, so the poor can enjoy shooting as well on a limited number of ten or one hundred dollar shares in a stock company. The hunter must now look out and provide his own hunting grounds.

Nature has given in many places the water for fish with the natural place for land game. Lakes, bays, rivers, etc., will always be public property, for fishing for any citizen, which law can protect, but the migratory game it cannot. Now I, with seven other good men, who saw the need of the enterprise, have started in to form a large, grand park, in a natural, good place, which can yield a revenue much more than will be needed to bear the necessary expense of the park and game increasing. I am the only one of the organizers that has been a practical game raiser and hunter. There are two that never hunt or fish and only two that are young enough to ever shoot much, if they get time from their large farming and stock business. There is no speculation in stock shares by this company, or land to sell at a high price or any salary expected for services rendered. I never expect to get any pay for managing the hunting and increasing of game; only pleasure and a plenty of good things to eat, and to have the satisfaction of knowing that I have made some return for my long great pleasure in hunting without doing anything toward increasing. As soon as I can find any young hunters capable of attending to the management of the game and fish raising, I want the company to only let me look on and rest happy. I am sixty two years old and naturally cannot have power to attend to a great park like this will grow to be in a few years.

When I had read so far as this I began to get a good deal interested, and finally I just got down and read all of the delightful, naïve, rambling and absorbing little book which constituted the first prospectus of this association. It seems that Mr. Hicks is an old market-shooter, and was "commodore" of the old Currituck Club in Carolina before the war. He went West in search of new pastures, settled in northern Illinois, bought land, slew ducks as thoughtlessly as ever for a time, and then reformed and fell to thinking how he could bring back to life again some of the thousands he had slain. This park, embracing large amounts of land under close wire fence, and amply stocked with game of all sorts, was his solution and his dream. The project is stocked for the modest sum of $6,000,000, and books for subscription thereto are placed in this and other cities. I do not know what has been accomplished by way of actual success in this project, but hope to find time to go over to Ashton and investigate. It is very probable that something very interesting is to be learned there. There is some quaint and delicious reading matter in this same little prospectus, in which Mr. Hicks, now sixty-two years of age, sometimes makes reference to his past life as a coast shooter. He is a Quaker, and says of himself: "I grew up in the Hicksite Quaker church, where the women make the best preachers. Elias Hicks, the founder of the Hicksite religion, was said to be the best shot that ever hunted on Long Island. He would always shoot at the hind bird in the flock so as to keep from crippling the rest. This is more than I have ever done to save game. I killed all the ducks and geese I could, and never knew a man kill as many wild Canada geese. Now I am appointed as a director and as an executive officer to increase the fish and game, and I have a lively business to attend to the balance of my active life." May the balance of his life be happy, and may we hear more of his park and his prospectus. From the latter I promise myself the pleasure of offering, at some future day, a description of a day on Currituck in the old times, all written just as its author gave it, and therefore simple and delightful.

Oct. 3.—I got a notion the other day that I could write newspaper paragraphs, so I sent some to the *Daily News*, of this city. The editor, Mr. John F. Ballantyne, very promptly and wisely sent them back; but in the course of his letter had occasion to say:

"By the way, I saw something in FOREST AND STREAM the other day about albinos, and it reminded me that Arm. Waugh (I spell his name phonetically), of Hennepin, told me last spring that he had shot two white mudhens, and that he or somebody else there had shot a white teal."

Mr. Ballantyne is a member of the Hennepin Duck Club, and the inventor of a new style of duck boat which George Cunningham, the club keeper, is going to construct as soon as the plans and specifications are completed.

Speaking of albinos, I am reminded that I saw in the Zoölogical Gardens at Cincinnati, the other day, two white squirrels, labeled "From S. Carolina." They were in the gray squirrels' cage, and were of about the size of the gray squirrel. In coat they were quite white. Were not these albinos? Is there such a thing as a species of white squirrels in this country?

Very delightful is a visit to these animal gardens, either at Cincinnati or St. Louis, and one never tires of seeing so close at hand the big creatures he has pursued in a state of nature. In each of the above parks there

are a few buffalo. Capt. Bellairs, superintendent of the St. Louis fair grounds park, wished to say to FOREST AND STREAM that their buffalo cow dropped a healthy calf this year, but the bull killed it the next night after its birth. There were three good elk in the Cincinnati gardens, and a number of fine bears. One of these, a grizzly, weighs 1,200lbs. I remember a series of articles written by an expert grizzly bear hunter, in which he said he had never seen a grizzly that weighed over 600lbs. I wouldn't want this Cincinnati bear to sit on me at any 600lbs. estimate. Yet he is not nearly so large as was the Chicago grizzly, old Bob, who was killed in a battle-royal of bears at Lincoln Park here not long ago. The grounds of the Cincinnati gardens are diversified and beautiful. There is a good dining hall near the big music stand where the band plays. In this room I sat and ordered a very good supper. It was growing cool with the breath of fall, and the windows were closed. A fire in the grate cast a pleasant glow through the dusky room, and lit up the face of a comely matron at an adjacent table. The band blared out some cheap and vulgar air, but once in a while in some intermission of the music there pealed out the more stirring trumpeting of the big elk's October challenge, hoarse and wide-borne on the wind. It was enough to set one thinking. This summer I fished to the music of a brass band. Here was a brass band vying with a live elk at the music of the reddening leaf. The brass band is getting the better of it all over the country. They have them in the Rockies, now. Perhaps Mr. Hicks is right, and perhaps we must park our game if we expect to save it.

Oct. 12.—Mr. C. E. Willard, superintendent of the Standard Cartridge Co., Mr. E. S. Rice, general agent of the DuPont powder, and Mr. Heizer, the patentee of the Standard people's loading machine, went on a family picnic to Fox Lake last Friday. Mr. Willard killed 102 jacksnipe on his first day's shoot, and 50 on the morning of the following day, using No. 6 shot most of the time, as he didn't go loaded for snipe. Mr. Heizer killed 42 snipe in a half day, and Mr. Rice got a dozen ducks up the river. It seems that the snipe are coming in with the moon. Mr. Willard adds that he killed 41 chickens on Sept. 15, near Woodstock, in this State. The fishing was good at Fox Lake during the days he was there last week. This is a sporting country out here, and there don't anyone want to forget it. "Podgers" would better move out here. He can have a lot of fun for mighty little money around here. Railroad fares, 50 miles and return, $3, with big discount on 25-ride tickets. Board, $1 per day up to $10 per week. Pusher and boat (including decoys, etc.), $2 and $3 per day. E. HOUGH.

LOADING CHOKEBORES.—Upton, Maine.—I have found strong choked guns (full choke) to shoot a little thicker (in 10-gauge) by loading without that card wad under the powder wad, and with two card wads on top of shot. I can always make the strong choke barrel of my Parker spread the shot wide and even, like a woodcock gun, just by loading with one wad on shot.—C. B. S.

Sea and River Fishing.

CLUB LEASES.

Editor Forest and Stream:

The system of the Quebec Government in dealing with its inland fisheries has a great deal to commend it; it recognizes the common right of the people at large, to all the rivers and lakes of the Province, and provides for leasing exclusive rights in any of them, to individuals or associations.

Non-residents are not permitted to fish in any of the waters of the Province without a license, and although it would be more logical and consistent with protective measures, to extend the same prohibition to residents, the unpopularity of the measure would render it highly inexpedient. Moreover the present system is an excellent training school for the people, in the doctrine of exclusive rights for those who are willing to pay the market value of them. They learn to respect exclusive rights legitimately secured, and as the area of free waters is contracted from year to year, they recognize that they must either secure exclusive rights for themselves, or give up fishing, and are prepared to accept the situation without murmur.

At this present time the best and most accessible salmon rivers are leased by wealthy individuals, clubs or associations of anglers, and the same is mainly true of the best trout and winanish waters. The annual rental is very low, and the lessees secure the privilege entirely for their own enjoyment: but if prudent provision be only made for keeping the waters well stocked, it will not be many years before the demand for fishing privileges on the part of non-clubmen will result in a very considerable modification of existing conditions. There are thousands of residents, and a growing number of non-residents, who do not feel that they fish enough, or have their pockets sufficiently well lined, to justify their belonging to a club, but who nevertheless are eager to secure fishing privileges during their limited summer outing to pay a fair price for them. Such a widespread demand will create the means for its own gratification. Club members may hold it *infra dig* to accord fishing privileges for a consideration, but speculators will not be slow in realizing that it will be good business to lease fishing waters and throw them open to the public at a moderate fee per month, or week or day. Hotel keepers notably will find it to their interest to secure all the fishing privileges in their neighborhood, and railway companies will find it essential to their prosperity to provide fishing privileges for as many of the traveling public as wish to avail themselves of them. The suggested measures have already been inaurated in Quebec; the Q. and St. John Ry. Co. have secured fishing privileges along their line of route and thrown them open to the public; and fishing privileges can be secured for payment in the famous winanish waters of the "escape" of Lake St. John.

Fishing is a popuiar and healthy recreation; its votaries belong to the best classes in the community, their number is continually increasing, and there need be no fear that in Quebec at least, where fishing privileges are granted on short leases only, the wealthier clubs will be enabled to monopolize all the best waters, to the exclusion of the less wealthy non-clubmen. What these latter cannot do for themselves will be done by the organized efforts of railway companies, hotel keepers, and others. The one important point, about which there is any room for doubt, is whether the waters will be kept sufficiently well stocked to maintain their present high reputation. The Quebec Government appears to be alive to the importance of the fisheries as an element of wealth, directly and indirectly, but as far as I can learn, no adequate measures for the maintenance of the supply are in contemplation. VOYAGEUR.

NIPIGON, THE PARADISE OF ANGLERS.

HAVING obtained the required permit from the Minister of Marine and Fisheries to angle in the Nipigon River from July 28 to September 1, I took passage for Red Rock, the most southerly trading post of the Old Hudson's Bay Company, and came to an anchorage at the head of Nipigon Bay. Having purchased my commissary supplies at the Sault, I found no difficulty in supplying myself with necessary camp equipage at Red Rock, situated at the mouth of the river; and here I employed three Ojibwa Indians with their birch bark canoe to convey me up the river. This river is but a chain of small lakes connected by a succession of rapids, pouring down a great volume of water from 500 to 800yds. wide, leaping and seething through granite boulders, and over cliffs ten, twenty and fifty feet high. The portages around the rapids were along rough trailways, the Indians carrying the canoe and baggage from point to point. At 5 P. M. I had reached a point twenty-five miles up the Nipigon, and here, at the foot of one of the rapids, I determined to try my luck as an angler. My tent was soon pitched and my house put in order.

After an early breakfast next morning, I started equipped for a day's sport, accompanied by Indian Henry to manage the canoe and handle the landing net. My first throw was a success, as a speckled beauty caught the fly on a leap of several feet about the surface of the water. After a desperate fight for several minutes he was safely landed, and weighed 3½lbs. The ball was now fairly opened, and by noon I had killed twenty-two trout, several of them weighing 4lbs., and not one under 2lbs. I now pulled ashore, and my little party fared sumptuously at dinner. Again in the afternoon I amused myself in loitering along the bank near my camp, and watching the trout rise to the deceptive fly, only to find a resting place in Henry's net. Although I had not been over half a mile from camp during the day, I was completely overcome by fatigue and excitement, and was soon sound asleep in my tent, before which a large fire was kept burning during the night, as the temperature was down to 45° Fah.

Early next morning I resumed offensive operations. The whole river seemed alive with trout, the genuine *Salmo salvelinus.* Near the camp I secured my trophy after a hard and prolonged struggle, a 5½lbs. trout, which I preserved, and have sent to the artist of the officers of the Smithsonian, who returned me an admirable painting of it, which now adorns my office walls. Having killed more fish than I wanted, I packed 115 in our frail canoe, broke camp and returned, reaching Red Rock at 6 P. M. Next morning we bid farewell to the Nipigon, having had a few days of the finest sport that was ever enjoyed by AN ANGLER.

WASHINGTON, D. C.

SALMON FISHING IN SCOTLAND.*

THE salmon fishing for 1888 has shown a falling off from 1887, and though not successful as a whole there have been at certain times during the season, and at certain parts, excellent angling and good netting. The shipments to Billingsgate market during the year amounted to 23,859 boxes of Scotch salmon, the smallest quantity sent there since 1880. The average annual shipment for the seven years, 1881 to 1887 inclusive, was 28,610 boxes. The value of a box of salmon is placed at £5 5s., making the value of the shipments to Billingsgate during 1888 £120,009. The estimated value of the salmon fishery for the whole year is £240,018. The income derived from the rental of the salmon fishings of the Tay, the chief salmon river in Scotland, amounted to £19,655 during 1888. The rental for 1887 amounted to £22,142.

An alteration of close time on the Tay has been made. The fishing season on that river will be from Feb. 10 to Aug. 27, with extension of time for rod-fishing until Oct. 31. In 1888 the season commenced on Feb. 5 and closed Aug. 27.

There is much illegal fishing for and illicit traffic in Scotch salmon. It is estimated that more than 100 tons annually are sent to English and French markets through this illicit traffic.

Mr. Archibald Young, Inspector of Salmon Fisheries, reports:

"The salmon angling in Loch Tay was fairly good in 1888. The total number of salmon killed was 378, and the total weight was 7,006lbs., giving an average weight of 18lbs. 8oz. per fish. The heaviest fish caught weighed 37lbs., the lightest 12lbs.

"Both on the Tay and the Earn the rod-fishing season of 1888 was a bad one. After the nets were off the rivers were too low, until a freshet in the end of September brought up a good many fish, when some fair angling was had on the Stobhall water at Isla Mouth and elsewhere; 45lbs. was the weight of the heaviest fish caught by the rod during the season." The Aberdeenshire Dee, usually productive, was disappointing. In the autumn there was some fair fishing on it. One 36lb. salmon was taken. "On the Forth the angling was likewise poor, the rain coming too late. The largest salmon (37lbs.) was captured by Sergeant Tait.

"On the Spey the angling season was fairly good. The largest fish (40lbs.) was caught by Lord Leconfield on the Gordon Castle water.

"The fishing on the Nith was very poor, but some fine salmon were landed from the Annan late in the season. A fish of 44½lbs. was taken in the nets in August, and in November one of 46lbs., and another of 41lbs. were captured by the rod." Mr. Young also mentions the singular capture of a 43lb. male salmon in the little River Urr:

"The keeper of Mr. Thomas Gladstone was dragging a pool with an artificial minnow, with the view of recovering a lost cast of flies, when the bait was seized, and after a fight of three hours a male salmon weighing 43lbs. and measuring 4ft. 2in. in length was landed. But, unquestionably, the greatest angling performance in 1888 was at the wonderfully productive fishing at the Grimersta, in the Island of Lewis. Last year Mr. A. M. Naylor, in nineteen days' fishing in the month of August, killed, to his own rod, with fly, 214 salmon, weighing 1,307lbs., besides 304 sea trout, weighing 161lbs. His best days were as follows: Aug. 23, 31 salmon, weighing 183lbs.; Aug. 28, 54, weighing 314lbs.; Aug. 31, 45, weighing 269lbs. The best two days made by Mr. Naylor's two companions were 36 and 46 salmon.

"Mr. Naylor states that he has not a record of the total kill of the three rods during the month of August; but he gives the following summary of the take during the last six consecutive days of August: No. 1 rod, 143 salmon, 856lbs.; 31 sea trout, 23lbs. No. 2 rod, 106 salmon, 680lbs.; 26 sea trout, 19lbs. No. 3 rod, 84 salmon, 490lbs.; 14 sea trout, 10lbs.

"Mr. Naylor states that the time he took to kill the 54 salmon on the 28th August was nine hours, or an average of ten minutes per fish. The average weight (a little under 6lbs.) was small, but notwithstanding he was quite tired at the end of the time; although, as there were two hours more of daylight, he could certainly have killed at least ten more fish if he had gone on."

*Seventh Annual Report of the Fishery Board for Scotland, 1888, Part II., Salmon Fisheries, Edinburgh, 1889.

AQUARIA NOTES.

Occasional observations on the fishes in the Aquaria of the U. S. Fish Commission.

FROM SALT WATER TO FRESH.

ONE aquarium is stocked with gar-pike (*Lepidosteus platystomus*) and mud fish (*Amia calva*). Very strangely the gars are infested with that very common fish parasite *Argulus* sp. (*entomostracan*), usually referred to as "fish louse," while the mud fish are absolutely free from it. So rapidly do they propagate that it is necessary to take the fish out of the water and free them of the pests very frequently, but all attempts to exterminate the lice by killing all that are found and through cleaning out the aquarium, have failed. During the past summer thousands of them have infested the gars, but not one has been seen on the mud fish. The smaller gars are also freer from them than the larger ones. Although they may at times be seen swimming about the aquarium or attached to the glass, they are undoubtedly true parasites and cause great irritation and suffering to the fish. They soon die when kept in a vessel without fish.

The power of endurance and tenacity of life of a fish is well illustrated by the rather sad story of a captive sheepshead which has just died in one of the aquaria. It was caught off Point Lookout in Chesapeake Bay, on Sept. 19. Several thicknesses of seine twine were passed into its mouth and out through the gill opening and tied tightly. In company with two large tautog or blackfish it was towed after a sailing canoe, probably ten miles, including tacks, to where they entered the live-box of the Blue Wing. This is the method of handling these fish in that locality; they are tied to stakes until ready for shipment to market. The shore water at that point is not very salt, being only 1.009. This sheepshead was just eight days on its journey to the aquaria in Washington, during which time and for four days additional it ate nothing, and was kept a portion of the time in water almost fresh, being 1.003 to 1.005. The transfer to water at 1.024 was made as gradually as possible under the circumstances and evidently had no injurious effect whatever, as the tautog are thriving and feeding in the same tank. After death it was found that the cords used in towing the fish had lacerated the gills and the inner surface of the opercle, the surrounding tissues also being highly inflamed.

I have found that when fresh water is introduced into a salt-water aquarium it will remain on the surface unless the whole is thoroughly stirred or mingled. It is probable that the fresh water of rivers is not thoroughly mingled with the water of bays, but flows off on the surface, and that at considerable depths it may be very nearly as salt as that near shore outside, say 1.024, or at least 1.020.

The sheepshead and tautog are bottom fishes, and extremely local, requiring hard or rocky bottom (ledges). It occurs to me, in view of the extreme changes of salinity encountered by these fishes in this transition without apparent effect, that it opens an interesting field for experiment. It is probable that the conditions of environment of most animals, and of fishes especially, are accidents rather than necessities of existence. I feel confident that it would be possible to transfer successfully many salt-water fishes to water wholly fresh, by slow degrees, if conditions were found otherwise similar to their native ones. What a noble fish the sheepshead would be for the Great Lakes.

Some experiments of this nature will be made during the coming winter and the results noted in FOREST AND STREAM. It is well known that the brook trout goes to the sea from streams contiguous to the coast, where it undergoes considerable change of appearance and is known as the silver trout.

WHO HAS EATEN TOAD FISH?

The toad fish (*Batrachus tau*) is to most persons a slimy, repulsive object. To the naturalist it is beautiful rather than ugly. It is perfectly harmless to man, and when caught on a hook may be taken freely in the hands to disengage it, although fishermen and others will inform one that it will sting. At St. Jeromes, Md., where they are very abundant (and where there is also an abundance and variety of fine food fishes), they are eaten and pronounced excellent, although in other localities they are generally despised as utterly worthless. I intended trying them, but circumstances prevented. I will embrace the first opportunity to test their merits and report to the epicurian readers of FOREST AND STREAM.

WM. P. SEAL.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price $2.50. For sale by FOREST AND STREAM.

SEINES, NETS of every description. American Net & Twine Co., Mfrs., 34 Commercial st. Boston, or 199 Fulton st., N. Y.—*Adv.*

A SILVER-SIDE.

SEATTLE, Washington, Oct. 4.—In my last letter to you I spoke of the destruction of fish in Lake Union near this city. Seattle, by the way, is building up since the fire of June 6 so rapidly as to astonish even Western people.

Four and a half miles by cable (fare 5 cents) from this city lies Lake Washington, and around its shores are sawmills dumping sawdust into this magnificent body of water, poisoning its waters, teeeming as it is with fine trout.

I thought I would like to land one of the large salmon our bay is now crowded with. Taking my wife with me and a friend of ours we pulled out into the bay with my light trout rods and tackle, Mrs. C. handling the rod and I the oars. It was a lovely evening (Sept. 29) and the bay was fairly dotted with the boats of anxious fishermen. We met with no success and the motive power of our craft grew tired of changing the spoon baits for Mrs. C., and in despair put on an old worn silver spinning bait that had seen service in many States and Territories and declared himself tired of the whole business and headed for the boat house. We had gone on our homeward way but a very short distance when Mrs. C. shouted, "He has struck," and instantly a beauty sprang from the water, showing his silver sides; and with a dash for liberty made the rod bend and the reel sing. I laid down the oars and reached for the rod (which the lady was slow to give up) and then began as beautiful a play as I ever had, with many mad rushes under and around the boat, but finally he was coaxed alongside and the net neatly slipped under him and landed. He was a beauty silver-side, weight 4½lbs. As it was now rapidly growing dark we pulled for home. W. P. C.

P. S.—Mrs. C. says she caught the salmon.

TROUT IN VIRGINIA.—Col. Marshal McDonald, U. S. Commissioner of Fish and Fisheries, has received an interesting communication from Dr. Thos. R. Perry, of Tazewell C. H., Va., who writes under date of Sept. 27: "Last summer I sent in two applications for California and brook trout for stocking headwaters of Clinch River, and received 560 of each kind. A short time since I took my rod and caught nine in an hour, five California and four brook trout, from 5 to 9in. in length; the trout being the larger. The brook trout were heavier and in better condition than specimens caught in Wolf Creek, and were the prettiest and fattest specimens I have ever seen. The Clinch is a small stream from this point to its head, some four or five miles above where I live, and has two branches which come together on our farm admirably adapted to trout, and I am anxious to have it stocked with California and brook trout. I have seventy-five brook trout large enough to spawn this season. Have hatched mountain trout as well as common fishes artificially. I have a cold spring (52¾°) on hillside well suited for hatching, and have constructed three ponds for the purpose of raising two varieties of trout, and hatching a sufficient number of each to stock streams."

THE "CHIQUIT" IS A SQUETEAGUE.—New York, Oct. 10. —*Editor Forest and Stream:* I notice in your correspondents' column "J. R. T." asks what kind of a fish the "chiquit" is. In Niantic Bay, Fisher's Island Sound, and New London, the fishermen call our common weakfish by that name. They are very scarce there; in many years that I have sailed over that ground I have caught but few, although I fish a good deal.—F. D. [The Indian name of the weakfish (*Cynoscion regale*) is squeteague; of this the local names, squit, succoteague, squitee, chickwit or chiquit are probably corruptions. Two other correspondents have written us, C. J. K. J. of Louisville, Ky., and A. D. D. of New York, who says: "The name is locally applied to weakfish from Stony Creek to Madison. I have frequently seen weakfish taken from menhaden pounds and so called by the fishermen."]

Fishculture.

U. S. FISH COMMISSION WORK.

WE print below a table showing the distribution of fry and one-year-old fish from the central station of the U. S. Fish Commission at Washington, during the year ending June 30, 1889. The salmon, trout, whitefish, and the shad were hatched in this station. The carp and tench were reared at the carp pond, and the red-eye perch were reared at Wytheville, Va.

The McDonald hatching jars are used for hatching the eggs of the *Salmonoids*, as well as for eggs of the other species here mentioned. The water is obtained through the pipes of the city, this hydrant water being found suitable for the purpose of hatching fish eggs, and without filtration.

The uses of this station are threefold. 1. As will be seen by reference to the table of distribution, many fry and young fish are hatched in and distributed from it. 2. The station being situated right in or near the center of the city, is daily visited by hundreds, and is, therefore, especially useful as an instructor in the art of practical fishculture. 3. An extensive aquaria has been established, in connection with the fishcultural work, and both fresh and salt-water species are here shown; also numerous other animals, such as crabs, lobsters, crayfish and various shells inhabited by small crabs, etc., are to be seen. Fresh and salt-water plants are also exhibited. The animals and plants are collected at Woods Holl, Mass., in Chesapeake Bay, Potomac River, Western rivers and lakes, and brought to Washington in live boxes of the Fish Commission. There is now on the way from Woods Holl a shipment of a fine lot of live fishes and many beautiful plants. The sea anemones are said to be especially fine and doing well.

The aquaria are vastly interesting and instructive; observations on how certain species of fish are affected by handling and by change of water, surroundings, etc., are of much value. The Bluewing, on her recent cruise to the Chesapeake, brought up a lot of spots (*Liostomus xanthurus*). These are doing well, much to the surprise of everyone immediately concerned, and are interesting from the fact that the members of this family (*Sciænidæ*) are not especially hardy. Thus it is readily seen that the work done at Central Station is of great importance, and on account of the lesson to be obtained through the aquaria it is likely to prove invaluable.

Following is a statement of the distribution of fry and one-year-old fish from Central Station, U. S. Fish Commission, for the year ending June 30, 1889:

Species.	Fry.	One year old.	Total.
German carp	....	190,928	190,928
Goldfish	....	6,509	6,509
Landlocked salmon	27,000	....	27,000
Rainbow trout	....	10,280	10,280
Brook trout	21,000	125	21,125
Lake trout	36,000	....	36,000
Whitefish	4,595,000	....	4,595,000
Red-eye perch	....	1,218	1,218
Tench	....	1,530	1,530
Shad	34,501,000	....	34,501,000
Totals	39,180,000	210,590	39,390,590

SALMON WORK IN MAINE.

THE U. S. Commissioner of Fish and Fisheries, Col. Marshall McDonald, has returned to Washington after an absence of more than a month. During this time he has visited Woods Holl, the zoological station of the Commission, and inspected the salmon hatcheries in Maine. Commissioner McDonald is well pleased with the prospects for good work on the Penobscot River, and says that the work has been developed with the idea of turning out yearling salmon instead of fry. The Commission have now over 100,000 Penobscot salmon for distribution; many landlocked salmon will also be handled; there are now 15,000 of these for distribution. The Commissioner says the salmon have been reared on natural food. The actual food given the fry are maggots; these are bred at the hatchery at the rate of eight quarts per day. These salmon will be turned into the Penobscot and its tributaries. The landlocked salmon will all be placed in Green Lake, which has been selected because this species is already indigenous to the lake, though the numbers have been greatly depleted by trapping and spearing. The real object in stocking it, however, the Commissioner says, is that it may be made a base for operations with the landlocked salmon hereafter. It is expected that the fish will thrive here and that fish for spawning purposes can be procured in this way quite readily and at a small expense. Under authority of Congress, which has made appropriation for the purpose, the Commissioner has recently purchased a tract of land of 130 acres, and the property now under control of the Commission includes the entire brook which furnishes the water supply for the station. Plans for the erection of the new hatchery buildings, quarters and ponds have been perfected. The erection of these building and the developement of the salmon work in Maine are in charge of Mr. C. G. Atkins, who, on account of his long experience and work upon salmon, is especially fitted for this duty.

TROUT WORK IN COLORADO.—Mr. E. M. Robinson, Superintendent of the Government Hatchery at Leadville, Colorado, in a private letter expresses himself as highly pleased with the outlook for good work at that station. Mr. Robinson writes under date of Oct. 3, 1889: "I have 6,000 beautiful trout in a pond where they can be spawned without any trouble, and I am daily collecting from two or three hundred fish for this purpose. I cannot now see why we should not collect 1,000,000 brook trout eggs; this looks like a large estimate, but the brood stock here is unlimited. I have never before seen trout do so well and to all appearances without any care. The climate is beautiful, cold, dry and clear. This is a lovely country and things now look as if we would make this a station that the Commissioner and all concerned may feel proud of." The trout mentioned by Mr. Robinson are black spotted trout, native to that region. It is the intention of the Commissioner of Fish and Fisheries to introduce the brown trout into that country at an early date.

The Kennel.

FIXTURES.

DOG SHOWS.

Nov. 14 to 16.—First Dog Show of the Continental Kennel Club, at Denver, Col. Claude King, Secretary.

Jan. 13 to 18, 1890.—First Annual Dog Show of the Georgia Pet Stock and Bench Show Association, at Augusta, Ga. A. H. Vonderleith, Secretary.

Jan. 27 to Feb. 1, 1890.—Dog Show of the Colorado Poultry and Pet Stock Association, at Denver, Col.

Feb. 18 to 21, 1890.—Fourteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.

March 11 to 14, 1890.—Second Annual Dog Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

March 25 to 28, 1890.—Second Annual Dog Show of the Mass. Kennel Club, Lynn, Mass. D. A. Williams, Secretary.

April 1 to 4, 1890.—Sixth Annual Dog Show of the New England Kennel Club, at Boston, Mass. J. W. Newman, Secretary.

April 15 to 18, 1890.—Second Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Secretary.

FIELD TRIALS.

Nov. 4.—Third Annual Field Trials of the Indiana Kennel Club. P. T. Madison, Secretary, Indianapolis, Ind.

Nov. 11.—Inaugural Field Trials of the Canadian Kennel Club, at Chatham, Ont. C. A. Stone, Secretary, London, Ont.

Nov. 18.—Eleventh Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Saratoga Springs, N. Y.

Dec. 2.—Inaugural Field Trials of the Central Field Trial Club, at Lexington, N. C. C. H. Odell, Secretary, Mill's Building, New York, N. Y.

Dec. 16.—Second Annual Field Trials of the Southern Field Trial Club, at Amory, Miss. T. M. Brumby, Secretary, Marietta, Ga.

Jan. 20, 1890.—Seventh Annual Field Trials of the Pacific Coast Field Trial Club at Bakersfield, Cal. H. H. Briggs, Secretary, 313 Bush street, San Francisco, Cal.

Jan. 27, 1890.—All-Day Field Trials, at West Point, Miss. F. R. Hitchcock, 44 Broadway, New York, Secretary.

Feb. 11, 1890.—Fourth Annual Field Trials of the Texas Field Trial Club, at Marshall, Tex. W. L. Thomas, Secretary.

COURSING.

Oct. 9 to 12.—Fall meet of the National Coursing Club at Hutchinson, Kan. M. E. Allison, Manager.

Oct. 24.—Annual Meet of the American Coursing Club, at Great Bend, Kan. F. K. Doan, Secretary, St. Louis, Mo.

THE A. K. C. FINANCES.

Editor Forest and Stream:

The secretary and treasurer of the A. K. C. made a partial report of the financial condition of the club, and I will say that, if there is any error as to the deficit or loss between the actual earning of the club since Jan. 11 last, I am now fully convinced that my former estimate was substantially correct, while the deficit is more than I claimed. The club is losing not less than $300 per month, and as the treasurer did not make a detailed report showing income and source thereof, I will now give to your readers a detailed statement, which, upon examination of the book when examined or detailed report when made by the treasurer, will, I believe, be found to be substantially correct.

I will first call attention to the following report made by the treasurer to the club Feb. 21, 1889:

TREASURER'S REPORT, 1889.

A. K. C. ACCOUNT.

Balance on hand Dec. 5, 1888	$5.39
Received from clubs for annual dues	370.00
Received for registration of prefixes	15.00
	$390.39

EXPENSES.

Returned dues to Tenn., P. & P. Sk. Association, said club withdrawing its application	$10.00	
Stenographer, meeting Dec. 6, 1888	25.00	
Office furniture	15.00	
Petty expenses	6.94	$56.94
Balance		$333.45

CLUBS IN ARREARS FOR DUES.

American Field Trial Club	$10.00
National Poultry Association, Atlanta, Ga.	10.00
Stafford Kennel Club	10.00
Winsted Kennel Club	10.00

A. P. VREDENBURGH, Treasurer.

Treasurer's Report, 1889.—Of moneys received by the A. K. C. from all sources, and of expenses of every description to Feb. 16, 1889:

Receipts to January 11, 1889, as per balance carried forward to new cash book	$1,228.28
Receipts from January 11, 1889:	
From registrations Stud Book	$182.00
Sales of Stud Book	145.50
Advertisements Stud Book	50.00
From registrations *Gazette*	141.75
Sales *Gazette*	50
Advertisements *Gazette*	9.00
Subscriptions *Gazette*	6.00
Annual dues active members	90.00
Annual dues associates	507.50
Claims for prefixes	15.00
	$2,375.53

Expenses from January 11, 1889:		
For Stud Book, including editor's salary on account last year	$191.29	
For *Gazette*	365.64	
For Club	194.51	$751.44
Balance on hand		$1,624.09

A. P. VREDENBURGH Treasurer.

According to this report the treasurer has failed to in any way explain to us where and from what source the item $1,228.28 comes, except as to the item $333.45, having a balance recorded of $895.83 to be accounted for as received.

From Jan. 11 in this report every source of income, even to 50 cents for sale of *Gazette*, is stated. Will the treasurer kindly in his report say what for and from whence this sum was received?

On May 23 last the treasurer made another report to the club:

Receipts from all sources from Jan. 11 to date	$4,538.43
Expense for same period	3,578.38
Balance on hand	$960.05

Now will he kindly tell us what became of the moneys received by the A. K. C. from all sources before Jan. 11 as shown by item in report of Feb. 21 amounting to $1,228.28? Surely this amount should have been added to the balance in the May account, as this was received before Jan. 11, and the May account gives receipts from all sources from Jan. 11, and the same indefinite manner is employed to account for the expense. I now give the advertising rates as published in *Gazette*:

Outside covers—One inch.—One to three insertions, $2 each; six insertions, $1.50 each; twelve insertions, $1.25 each.

Inside covers—One inch.—One to three insertions, $1 50 each; six insertions, $1.25 each; twelve insertions, $1 each.

Other than covers—Half inch.—One to three insertions, 75 cents each; six insertions, 60 cents each; twelve insertions, 50 cents each. One inch.—One to three insertions, $1 each; six insertions 85 cents each; twelve insertions, 75 cents each.

And I will give the advertising for each month:

	Inside Cover. Inches.	Other than Cover Inches.
January	27	54
February	27	54
March	27	54
April	27	40
May	27	45
June	27	46
July	24	47
August	24	55
Total	210	395

Now, taking the six months' rate, if all pay, this would amount (210in. at $1.25 per inch) to $262.50, and 395in. at 85 cents per inch to the sum of $335.75. The two outside covers, I am informed, have been taken at $250 each for the year, so for the 8 months they will net, say $333; prefixes, say $50. So our income from the *Gazette* will be found, "not from all sources," but by adding together the amounts received from the different sources of income, to wit:

Registered dogs in *Kennel Gazette*, 1,904	$476 00
Advertising, outside covers	333 00
Inside covers	262 50
Other than cover	335 75
Prefixes, say	50 00
Total	$1,457 25

EXPENSES FOR EIGHT MONTHS.

Editor's salary	$1,000 00
Cost publishing *Gazette*, say $200 per month	1,000 00
Office rent	125 00
Clerk and stenographer, say	100 00
Incidentals, including postage, etc	200 00
Total expenses	$3,125 00

RECAPITULATION.

Expenses from all sources for 8 months	$3,125 00
Income from actual earning	1,457 25
Net loss on *Kennel Gazette*	1,667 75

I now estimate the loss from the increased expense account as shown by the treasurer's report, as follows; Expense account as shown by last partial report, $5,173.11; and to this I will supply what I believe to be a full estimate of the club's income:

Stud Book Register, 1,875 dogs	$237.50
327 associated members (if all have paid)	1,635.00
Total earning of *Gazette*	1,457.25
Total income	$4,029.75
Expense account as shown by treasurer	5,173.11
	$1,143.36

Now as I have credited the club with the item paid by associated members, the club should be charged with the stock which the club owes them:

Kennel Gazette to 327 members for 4 months	$215.82
327 Stud Books at $3 each	981.00
Total	$1,196.82
	1,143.36
Total loss for the 8 months	$2,340.18

The Stud Book Committee say in their card in the August number of the *Gazette*, that each entry in the Stud Book will be published at a loss of over 31 cents. So if these gentlemen are correct we may add another thousand dollars to the loss.

Mr. Anthony, of the Advisory Committee, in a published letter referring to the *Kennel Gazette*, says: "The fee, 25 cents, barely covers the cost of printing and the time of the editor devoted to compiling such pedigrees for publication."

The Stud Book Committee say they are working at a loss. Mr. Anthony claims no profit from registration in *Kennel Gazette*.

As an advertising medium the *Kennel Gazette* is worthless, for I do not believe they have 100 subscribers outside the associate members.

As a book of reference, as Mr. Shotwell has well said, "It

is simply a nuisance." As a newspaper it is devoid of news. While as a roster of mongrels it is a success, forty-eight appearing in the last issue.

Will Mr. Vredenburgh kindly give us the official figures by making a detailed statement? PESHALL.

JERSEY CITY, Oct. 4.

NEW YORK, Oct. 12, 1889.—*Editor Forest and Stream:* I beg to inclose copy of correspondence passed between Mr. Vredenburgh and myself, which will serve to explain and answer certain criticisms which have appeared recently in a portion of the sporting press respecting the American Kennel Club. AUGUST BELMONT, JR., Pres. A. K. C.

NEW YORK, Oct. 11, 1889.—*August Belmont, Jr., Esq., President A. K. C.*—My Dear Sir: I had the honor of being elected secretary of the American Kennel Club May 6, 1886, and since that time, as each annual meeting occurred, I have been highly complimented by being re-elected, without opposition. By this action of the club, my course as its secretary has been approved and indorsed. One month after my first election as secretary, the office of treasurer was combined with the position I already held, and my predecessor turned over to me the balance on hand, amounting to $49.15. With that capital, the club opened its office and commenced the publication of its Stud Book. During the time that I have held my present position, over $11,000 have passed through my hands, and I am prepared to demonstrate to any committee, properly appointed, a full account, for every penny that has been received by me. In my treasurer's report at each quarterly meeting I have duly reported the receipts, disbursements and balances on hand, which without exception, has been satisfactory to the delegates, accepted, and ordered on file. The action of the delegates, from the time our list of members numbered thirteen, until now, embracing forty three members, has been one of confidence in my honesty, integrity and ability to care for the best interests of the club, and I assure you I highly appreciate their kindness and courtesy. Within the last few months certain gentlemen have seen fit to challenge the accuracy of my financial statements, and by inference question my truthfulness. They have published figures entirely different from the correct ones in all of the sporting press, claiming that they were right and that mine were wrong. One of the public papers has taken up the cry and called upon me to substantiate my statements. I have had a personal demand made upon me to exhibit my books, which I as their custodian promptly refused to do. I have been advised that the machinery of the law was to be put in motion to compel me to show my books, and to-day was asked on the street if there was anything wrong in our finances. All of this is not only very annoying, but is misleading, and is calculated to excite suspicion in the minds of a certain few who are new in the kennel world. In order to correct these erroneous statements, to remove any suspicions that may have been formed, and in justice to myself, I demand a thorough investigation of my accounts, and would respectfully request you to appoint a committee from the delegates (barring those comprising the advisory committee, with whom I am most intimately connected in the management of the office), with instructions to examine into and report on the following points:

First—Whether my accounts are correct or not.

Second—Whether we have ever received any moneys, by way of loans, donations, or from the guarantee fund.

Third—Whether the income has been derived from only legitimate sources or not, and

Fourth—To state from what sources our income does come.

In conclusion, I beg to thank you for your uniform courtesy to me in all of our business relations since you assumed the presidency of this club, and to assure you of my thorough appreciation of your valuable assistance in the transaction of many of the affairs of the club.

I will hold myself in readiness to meet your committee at any time that may be convenient and agreeable to its members.

I have the honor to be yours very truly,

(Signed) A. P. VREDENBURGH, Sec'y-Treas. A.K.C.

NEW YORK, Oct. 12, 1889.—*A. P. Vredenburgh, Esq, Sec'y and Treas. A. K. C.*—Dear Sir: I beg to acknowledge the receipt of your letter of the 11th inst., in which you request me to appoint a committee of three to investigate and report upon the correctness of your accounts kept as treasurer of the American Kennel Club.

Under ordinary circumstances I would immediately comply and name the committee without delay.

For reasons, however, which I will proceed to explain to you, I beg that you will permit me to hold the appointment of the committee in abeyance until a desire is manifested for investigation of your books by those more properly entitled to know their contents and entertaining a sincerer interest for the welfare of our association.

It is with regret that I feel compelled to speak as duty obliges me in this letter respecting parties with whom my personal relations are so friendly, but forced to it by the interests of the A. K. C. I shall not mince matters.

You will remember that early last spring I prepared you for the disguised, and later for the open, hostility of the *Turf, Field and Farm*. You must recall how at the outset of the *Gazette*'s existence Mr. Bruce, of the *Turf, Field and Farm*, gave evidence in his conversation with me of a misgiving as to whether after all the *Gazette* would not trench upon the domain of the sporting press, both respecting news and advertisements, and preferred to have the A. K. C. hire and pay for a certain number of columns in some sporting paper (suggesting his columns as at our disposal) to be used by the A. K. C. exclusively as its official mouthpiece and for publishing its official records; but this we did not think practicable. It is still fresh in my mind that I went to see Mr. Busby and informed him, when we started publishing the *Gazette*, that we tendered his paper complimentary space for its advertisement, both as a courtesy and on the principle that everything that tended to widen the circulation of kennel news was of mutual benefit to all kennel periodicals. It was accepted without condition on either side.

You will also recall the fact that later on Mr. Mayhew was negotiating to regularly enter the staff of the *Turf, Field and Farm*, and came to both you and myself with the proposition from Mr. Bruce to have the *Kennel Gazette* divide with him the cost of having dog show reports made by Mr. Mayhew. I talked with Mr. Bruce about it when visiting his office one day in the early part of the year, and we declined the proposition. Simultaneously with this, and afterward, came the attacks upon the policy of securing gratuitous judges' reports for the *Kennel Gazette*, and the remarks found a sympathetic echo in the *Stock-Keeper*, which, for reasons better known to itself, has always had some unpleasant criticisms or remarks to make about the A. K. C.

You will remember no action has been taken by the A. K. C.'s delegates, officers or committees on the subject of compelling judges to write their reports; it was merely a suggestion of yours, and yet, to prejudice interested parties against the practice, the matter was dexterously treated as though practically disposed of, and quotations from the *Stock-Keeper*, condemning our arbitrary course in this matter, were conspicuously printed in the *Turf, Field and Farm*.

A fair discussion of a subject with the pros and cons is one thing and the privilege of every one, and is and always will be recognized by the A. K. C. in the proper spirit, but to build attacks upon incorrect premises or for pecuniary consideration is quite another matter, and I feel it my duty to fight and expose them. It was with this feeling that I wrote for you the editorial of the *Gazette* for June and approved afterward with my colleagues in the A. K. C. of your omitting the *Turf, Field and Farm's* gratuitous advertisement.

Also when it became apparent that Mr. Peshall was receiving encouragement and indorsement from the *Turf, Field and Farm* in his malicious and hypocritical letters upon the subject of the A. K. C.'s financial condition, and on top of this it withdrew its exchange from us for the perfectly groundless reason that it was part of the consideration for the *Turf, Field and Farm's* free advertisement in the *Gazette*, I wrote the editorial of September, with the avowed object of letting our kennel world see those with consciences jump for the cap and put it on, and to dispel the fears their unanswered attacks might create among our mutual readers.

If the A. K. C. members individually or collectively believe with Messrs. Bruce, Wade, Peshall and his dependent Livesey, that the editorials referred to are not decorous, justified and legitimately within the province of our official organ, I take the entire responsibility of them and will answer for them to the A. K. C. at the next quarterly meeting.

The criticisms in all our other sporting papers have been criticisms on the merits of the question, some merely passing remarks, others complete arguments, and for those the June and September editorials were not meant, and they proved that they knew it by not crying out that they were stung.

Why should you ask to have your accounts investigated to confute a false interpretation put upon them by parties who merely desire material for further misrepresentation? You have made the same sort of general reports as the last one at all the previous quarterly meetings, reserving your detailed report for the annual meeting.

If the delegates of the A. K. C. or some one of recognized authority desires to change our custom and to have a detailed report now, it can be called for in the proper way and will be complied with in the proper manner. The A. K. C. is not a rabble; it is an organized body, and you and its officers, I am sure, will be sustained by its members in keeping its ranks closed up, discipline good, organization effective, and finances and treasury in order and above suspicion. We were not put in our positions to scare and run at every popgun which Mr. Peshall chooses to fire off, or at the stage thunder of some part of the press, intended to intimidate and drive us from pursuing a policy for the benefit of the A. K. C., which, however, may not redound to the pecuniary profit of that dissatisfied portion of the press. The cries of arrogance, dictatorial methods, cliques, society, are heaped upon us the while forgetting that we are nothing but the elected representatives of a big body of breeders and exhibitors in the United States, who can and do control us through their duly elected delegates, and can and will drive us out at the next election if we fail in our duty.

The *Stock-Keeper* is running a very clumsy second in this attack, making a mess of its criticism by treating the mooted question of compulsory reports by judges as an arrogant edict, while it had only been broached at that time in your secretary's report at the spring quarterly meeting, and the *Gazette*'s June editorial expressly indicated that it had not been acted upon, but intimated that when it was, it would be by the delegates, and if approved, would be the edict of the A. K. C. through its representatives and not its officers, and under those conditions would have to be obeyed. It is even now only proposed by Dr. Perry and is to be acted upon at the December meeting.

The A. K. C. is not likely to ill-treat itself. When its officers undertake to ill-treat it in an unauthorized manner, they will hear from the A. K. C. promptly. We court review of our actions in this connection.

The *Turf, Field and Farm* conspicuously quoted an article from the *Stock-Keeper*, and I could not insult Mr. Bruce's intelligence as a kennel authority by accusing him of ignorance of its absurd inaccuracy. Yet it was given currency to help in the unfriendly work. This article was on the Stud Book Committee's advance of the price of registration in the American Stud Book from 50 cents to $1, and our action was in it termed arbitrary and stigmatized as a miscarried attempt to be "English, you know." The American Kennel Club is anything but English in its composition or construction. Every man of reputable character is eligible to associate membership, and any one can have indirect right of membership through a club a member of the American Kennel Club. Every one is represented through annually elected delegates, and all officers serve but for one year. It is perfectly republican and very "American;" while the English Kennel Club is an exclusive club with a limited membership, and many, many dog men in England do not and cannot belong to it. The English associate member has no voice in the English Kennel Club; he simply has certain privileges for his annual subscription of a guinea, but he is not received at the club house, nor has he any voice in the conduct of affairs whatsoever.

As to the registration in the English Stud Book, it is much dearer than that in the A. K. C. S. B. to-day, even with the new charge of $1, which includes the 25 cents for compulsory registration in the *Gazette*. In England the compulsory registration in the *Gazette* is 1 shilling (25 cents), and registration in the Stud Book 5 shillings ($1.25), so that both cost in England 6 shillings ($1.50), as against $1. True, about one-fifth of the dogs are registered free by the English Stud Book's secretary and without the owners' intervention, as winners are put in without charge. In America we have not this practice, so that all our stud book registrations are voluntary and cost $1.

If you still insist upon the appointment of a committee of investigation I will appoint one.

After receiving my reply to your letter I trust you will come to the conclusion that the necessity for the appointment of an examination committee does not exist. Yours respectfully, AUGUST BELMONT, JR., President A. K. C.

"THE 'STOCK-KEEPER' AND ITS ASSAILANTS."

Editor Forest and Stream:

The statements of Mr. Geo. R. Krehl in your issue of Oct. 3 I will analyze accurately and briefly as possible. He says I attacked the *Stock-Keeper*, etc. Now, if he, or any one else, cares to take the trouble to re-read my notes, it will be found that I aver the *Stock-Keeper* would be a good paper if Mr. Krehl didn't do this, that and the other, or in other words, what a grand paper it would be were not he its editor. It was not my intention to attack the paper *per se*, but simply to assert that Mr. Krehl was not the proper man to have the handling of it, and this I still maintain.

Now, with regard to his biography of myself, he says: "I will proceed to furnish the clew to Mr. Mayhew's bitterness. When the respectable portion of the terrier world started their crusade against trimming, they met an active opposition from a body of men who made a considerable share of their living by exhibiting and dealing in a breed of dogs that are by some exhibitors trimmed," etc.

In the assertion about the men who made a considerable share, etc., with one exception must be included the whole of the wire-haired exhibitors. These include such men as Wm. Carrick (an exhibitor for at least 30 years), Harding Cox, Arthur Maxwell, H. Haywood Field, J. G. Pim, A. E. Clear, C. W. Wharton, W. Easton, Geo. Raper, and a host of others; in fact, Mr. Krehl's statement includes, as I have said before, every man—except one (P. C. Reid)—who had an interest in wire-hairs, so that I am not in such bad company as Mr. Krehl would wish to infer. With regard to my attack on Mr. Tinne, I was perfectly justified, for, for two years had this gentleman been attacking at every opportunity this breed, and as he had never owned such a thing, and openly stated he knew nothing about them, nor did he care to, his evident fanaticism was treated as it should be; but at last he overstepped the bounds, and it was necessary for some one to uphold the breed. This I did in a letter I shall always be proud of; not, as Mr. Krehl states, countenancing trimming and faking, but, to the best of my ability, defining what was trimming and faking and what was not, and contending that Mr. Tinne and his supporters (none of whom were real wire-men) had no right to dictate about that which they were ignorant of to those who were not, and to those who were also the most interested parties.

In order to show how unwarranted are Mr. Krehl's remarks concerning my upholding trimming and faking, and also my "outrageous" attacks against Mr. Tinne, in justice to myself I must further ask you to publish the letter to which he alludes, at the same time explaining that a meeting was to be held at the time, to decide as to whether "wire-hairs" were worthy of a place in the "Fox-Terrier Club." I may add, I am or was on the committee of the Fox-Terrier Club, and also on the list of judges.

To the Editor of the Fox-Terrier Chronicle:

SIR: So long back as last January, the question of trimming wire-haired fox-Terriers was publicly discussed, for the first time, by the Fox-terrier Club; the decision arrived at by that body, or I should say by a section of that body, was, that unless this practice ceased the wire division would be asked to retire at the meeting to be held in the following January, 1889.

Such was the resolution blazoned forth by two prominent members of the club, and though it elicited much correspondence at the time, not one regular wire-haired exhibitor thought fit to enter into the discussion, presumably with the hope that the advocates of such a scheme would, as time rolled on, perceive how unjust, and I may say tyrannical, was their proposition. Nor would I now have broached such a subject had it not been for the open manner in which Mr. Tinne, the smooth judge at the late York show, made manifest his extreme prejudice where the interests of the rougher variety were at stake. And as his eccentricity in this respect seems unbounded and never ceasing, it is surely time his monopoly of this subject was contested by those who do not appreciate this peculiar trait in his character.

I do not intend entering into the *pros* and *cons* of the trimming question, firstly, because denials are of no avail, even in the many cases where dogs are untrimmed; secondly, that, with one exception, no regular wire-haired exhibitor has yet complained, or considered it dishonest, to show his dog to the best advantage, provided he kept within the bounds of producing that effect, which would be the same as though the dog had been combed or groomed. Here it is where the imaginative mind of the immaculate (?) smooth exhibitor runs rife—mingling the fantasies of rumor with the solidities of truth—for all sorts of atrocities are laid at the door of the wire exhibitor. Ah! he is a base, black monster who owns a wire! Once let him own such an article, all Nebuchadnezzar's fiery furnaces, and all the possible and impossible tortures in this or any other world will not be sufficient to expiate that most terrible of crimes—contamination with a wire-haired fox-terrier. What that most debased of animals will have to answer for in the hereafter is known but to the gods! His connections are everything that is dishonest! discreditable!! and disreputable!!! What a contrast to his smooth cousin. He is everything that is honorable? creditable?? and respectable??? How utterly hopeless must be the case of the intended outcast, to whom even the expanded minds of 'Varsity men refuse a helping hand. Why all this thusness? Because a few men object to some old loose coat, which has a ragged and tattered appearance, having rather been extracted by a quicker process of plucking with the fingers than by the slower and more tedious operation of the comb and brush. Yet the most persistent of these objectors does not consider putting weights on his terrier's ears—even to just before the time of judging—tampering with nature in any way. Now, I dare say this man, who can for himself so satisfactorily determine two such crucial points, should have all credit due to him; but I, myself, utterly fail to appreciate the logic emanating from a man in such a condition of mental exaltation. If Mr. Tinne has really that innate dislike for wire-hairs which he professes to have, then he is the wrong man in the wrong place; and how much more dignified would it be on his part to retire from his post on the score of conscientous scruples than to forever have the stigma of being the cause of disruption of a club, which under ordinary circumstances should be happy and thriving; revered by those minor bodies, whose pleasure it should be to look up to this, their parent club. It seems such a shame to think that men who have been laboring together for so many years for one and the same object, viz., the improvement of the fox-terrier, wire and smooth, should be suddenly severed and rent asunder for the sake of a whim of a few men, which is a great deal more imaginary than real. Surely those men who, though in a minority, stand in the kennel world higher than the majority can be magnanimous and, for the sake of the majority, pocket all likes and dislikes, and so save two bodies, which cannot possibly exist singly, from drifting asunder. Is there only one opinion among smooth men? Do they all so utterly detest wire terriers, or is it only that the voices of two or three are stronger than the voices of those who still feel a regard and respect for their rough cousins? If there be any men who would protect the two varieties, now is their time to proclaim their intention, now is the time to show these high officials that they are not the Alpha and Omega of the fox-terrier world. But if there be no smooth men who consider the two breeds closely allied, then is the Fox-Terrier Club—as it should be—a thing of the past. It was openly avowed at the last York show that there was nothing in common between the two varieties, and therefore the two bodies should separate. For this reason, and this only, have I written, hoping that I may arouse some feeling of indignation and anger among those who thoroughly appreciate, without distinction of coat, that individuality that characterizes the fox-terrier. R. F. MAYHEW.

The end of the whole thing was that, in fact, my definition of trimming was accepted, through the proposition of my friend Arthur Maxwell (a member of the Kennel Club) by the Fox-Terrier Club.

Now for my dealing transactions: Until I came here and split up my kennel I had sold two dogs and bought probably a hundred, so my dealing was all on the side of purchases, and twice did I refuse $750 for my favorite.

Concerning his statement about the libel, Mr. Krehl, through probably placing too much credence in a deaf friend of his, who got into a four-wheeler with Maxwell, Geo. Raper, and myself at Birmingham, is all wrong, as it was their opinion it was libelous, not mine; for myself I never troubled whether it was or not, as I had been previously initiated into the ways of their money transactions, when not in their favor.

About my connection with the press, I had the pleasure of writing reports for the *Field* (London), as well as contributing angling articles; but if having at that time independent means, and not being in any way dependent on my own exertions, and doing such things for the pleasure of having some little employment, comes in the category of being "employed on odd jobs," then was I an "odd jobber" on the *Field*. With respect to this and my doggy position I inclose a letter which will speak for itself:

THE PRESS CLUB, 107 FLEET STREET (Ludgate Circus), E. C., London, March 3, 1889.—*Dear Mayhew*: I have pleasure in testifying to the excellence and reliability of the reports of dog shows you have at times contributed (through me as the kennel editor) to the *Field*, London, and believe that your practical knowledge of dogs and sport generally, angling in particular, would be of great service to any paper requiring such service. I hope that you may be able to secure such employment as I have found you fitted for here and regret that we are likely to lose your services, at any rate for a time. As a judge of terriers of all varieties, pugs and toy dogs, I believe you to have no superior in England, and your knowledge of other varieties will no doubt prove of use to you in the future. I wish you every success in your new home, and believe me faithfully, etc., RAWDON B. LEE.

Mr. Krehl goes on to say I never, to his knowledge, did work on the *Stock-Keeper*. Now, in this he is mistaken. At a show held by the Pug Club, at the Aquarium, he himself, in the presence of Mr. Berrie, "asked me to do a report of the show," adding he would pay the usual rate, and so lucrative did this turn out that I have never yet received the "usual rate," though the paper did not forget to badger me

for a dollar I afterward owed them. So much for his assertion as to my bitterness against him.

"Outside my own set" I am not known, nor is my name, except as a "wire-hair exhibitor." Considering I had been to probably more shows before he was ever heard of, than he has in his whole career, this is a decidedly cool misstatement, for in 1868 I made my first appearance at Birmingham, and only three times have I missed it since; and, young as I was, was well known and "intimate" with Sam Handley, T. Pickett, Mrs. Bligh Monck, and was known to the Rev. Hodson, Rev. Meller, Mr. Kingdon, and even corresponded with Miss Aglionby, the well-known breeder of the mastiff Turk. I was associated also with Octavius Green (owner of Monarch), Curtis (owner of Duchess, sister to Mrs. Roblinson's Countess), Herbert Bright and many other well-know faces, that are either of the past or hardly ever seen. George Hallewell can remember me then, also dear old dad Nichols and Mrs. Foster, so that I am not making a statement of the "has beens," without mentioning the names of these who were of that time and are still of the present. Few of the prominent exhibitors have there been with whom I have not been on speaking terms, especially in the non-sporting variety; and because I did not take up the breeds of which my father and mother were so fond, it does not follow that I am so incompetent as he would wish to be inferred. With pugs, toys of all kinds, mastiffs, Newfoundlands, and nearly all non-sporting breeds have I been associated all my life, and this he well knows.

That I am not stamped with the "hall mark" of the E. K. C., *i. e.*, have not judged there, puts me in the same company with such well-known men as Geo. Raper, Geo. Hellewell, L. P. C. Astley and others; but I do remember Mr. Krehl officiating at the last Alexandra Palace show, when the judge of "Foreign Dogs" could not attend, and no one else cared about the empty honor of becoming a "stop gap." I have never yet posed as an authority on any breeds, but have given my opinion, as I did in England, to be taken for what it was worth, that is, nothing or something. If it was worth nothing, I could not help it, but it would be given to the best of my knowledge. I was never desirous of thrusting myself forward, nor do I think I have done so here.

In his last paragraph, Mr. Krehl alludes to a friend, writing *Turf, Field and Farm*, and his letter not being accepted. He omits to mention the answer he received, in which it was intimated that Mr. Krehl could repudiate the charges himself, without the necessity of calling on a friend. With regard to my "cribbing" "Canine Whispers," I had not the faintest idea it was Mr. Krehl's heading. On the verge of going to press "Whispers" were put for the want of something better, never dreaming that such was Mr. Krehl's own special captions and original title.

R. F. Mayhew.

DANBURY DOG SHOW.

[*Special Report.*]

Danbury, Conn., Oct. 12.—*Editor Forest and Stream:* The eighth annual dog show of the Danbury Agricultural Society held here the past three days was the best one yet held both in point of number and in the quality of the animals shown. There were 197 entries with about 50 absentees. The visitors to the fair crowded the building set apart for the dogs most of the time, and it was apparent that this portion of the exhibit was second to none of the others. The Society, I understand, will charge an entrance fee next year and add to the number of classes and give larger prizes. Mr. James Watson, of Philadelphia, and Mr. E. S. Porter, of New Haven, judged, and so far as I am able to learn gave general satisfaction. Below is a list of the

AWARDS.

MASTIFFS.—*Dogs:* 1st, G. E. Sears' Kaiser William. *Bitches:* 1st and special and 2d, Herbert Mead's Aydah and Leonice.

ST. BERNARDS.—Rough-Coated—*Dogs:* 1st and special, H. Embens' Roland. *Bitches:* 1st, C. Wagner's New York Luce. Smooth—*Dogs:* 1st, T. Burke's Duke of Sparta. *Bitches:* 1st, C. Wagner's Thisbe Wagner; 2d, L. Albert's Duchess. *Puppies:* L. Albert's Duchess.

DEERHOUNDS.—Absent.

GREYHOUNDS.—Challenge—1st and special, H. W. Huntington's Balkis. Open—*Dogs:* 1st, Warwick Kennel's Ten Broeck; equal 2d, C. L. Griffith's Tramp and F. Comstock's Dick. *Bitches:* 1st, A. R. Kyle's Flora; 2d, Woodhaven Kennels' Fleet; 3d, G. R. Hair's Flash.

NEWFOUNDLANDS.—*Dogs:* 1st, W. F. Ageltinger's Nero. *Bitches:* 1st, withheld; 2d, Prof. L. P. Braive's Brunette. *Puppies:* 1st and special, E. H. Morris's Admiral.

POINTERS.—*Dogs:* 1st, E. H. Morris's Sancho; 2d, Dr. S. S. Banks's Underwriter; 3d and very high com., Fleetview and Reading Pointer Kennels' Spot Dash and Reading's Bang. *Bitches:* 1st, J. E. Gill's Don's Dot; 2d, V. L. Rockwell's Lafford Pearl; 3d, withheld. Very high com., Fleetview and Reading Pointer Kennels' Say. *Puppies:* 1st and 2d, Miss H. Wooster's Duchess of Naso and Duke Naso. Kennel, Fleetview and Reading Pointer Kennel.

ENGLISH SETTERS.—*Dogs:* 1st, Dr. J. E. Hair's Hair's Belton; 2d, J. J. Snellenburg's Count Henricks. *Bitches:* 1st and special, J. W. Wood's Donna Juanita; 2d, Dr. J. E. Hair's Topsy Laverack.

IRISH SETTERS.—Challenge—*Dogs:* 1st, E. W. Clark, Jr.'s Blarney. *Bitches:* 1st and special, C. T. Thompson's Mollie Bawn. Open—*Dogs:* 1st and 2d, St. Cloud Kennels' Glenmore and St. Cloud. *Bitches:* 1st, St. Cloud Kennels' Lida; 2d, G. E. Dawson's Flora D. *Puppies:* 1st and 2d, St. Cloud Kennels' Bendimore and Flora.

GORDON SETTERS.—Challenge—1st and special, S. G. Dixon's Little Boy. Open—*Dogs:* 1st, E. H. Morris's New York Ronald; 2d, Miss A. Hall's Nip. *Bitches:* 1st, W. A. Mitchell's Vic; 2d, Smith Bros.' Dandelion. *Bitches:* 1st, Smith Bros.' Laddie.

FIELD SPANIELS.—*Dogs:* 1st, E. H. Morris's Beau. *Bitches:* Absent. *Puppies:* A. C. Wilmerding's Princess Newton.

COCKER SPANIELS.—*Dogs:* 1st, J. N. Bliss's Don.

FOXHOUNDS.—Absent. *Puppies:* Withheld.

BEAGLES.—Challenge—1st and special, W. D. Hughes's Lou.—Open—*Dogs:* 1st and 2d, S. M. Cate, Jr.'s Ben and Don.

FOX-TERRIERS.—*Dogs:* 1st, A. K. Austin's Bute; 2d, M. Reynolds's Dandy. *Bitches:* 1st and 2d, Jean Grosvenor's Fina and Hillside Jaunty; 3d, J. M. Garvin's Chippie. *Puppies:* 1st, 3d and com., (2) E. L. Vanderburgh's Romp, Fanchon, Dick and Bob White; 2d, withheld. Wire-Haired.—1st and special, F. F. Dole's Cotswold Jocko.

COLLIES.—Challenge—1st and special, W. D. Hughes's Bonnie Brae.—Open—*Dogs:* 1st, A. R. Kyle's Robin Hood; 2d, Lothian Kennels' Glenboig; 3d, W. D. Hughes's Nullamore. *Bitches:* 1st and 2d, A. R. Kyle's Adela Doon of Nessel Down and Hebe of Nessel Down; 3d, Lothian Kennels' Lothian Maid III. *Puppies:* 1st, 2d and very high com., Lothian Kennels' Lothian Guard, Glenboig and Lothiana.

BULLDOGS.—Challenge—*Dogs:* 1st, Riverview Kennels' Portswood Tiger. *Bitches:* 1st, Riverview Kennels' Soudan.—Open—1st and special, Riverview Kennels' Lion.

BULL-TERRIERS.—*Dogs:* 1st, F. F. Dole's Hinks; 2d, J. H. Preston's Czar. *Bitches:* 1st and 2d, F. F. Dole's Starlight and White Daisy; 3d, J. E. Maddern's Blanche. *Puppies:* 1st, C. B. Andrews's Nailor.

SKYE TERRIERS.—1st, W. W. Stafford.

IRISH TERRIERS.—1st, Lewis Jarrett's Burnside.

BLACK AND TAN TERRIERS.—*Dogs:* 1st, Rochelle Kennels' Dick; 2d, F. F. Dole's Kaiser. *Bitches:* 1st and 2d, Rochelle Kennels' Rochelle Lass and Meersbrook Girl.

TOY TERRIERS.—*Dogs:* 1st, Prof. L. P. Braive's Marquis; 2d, Mrs. L. P. Braive's Jack. *Bitches:* 1st, A. Wipper's May; 2d, Mrs. B. C. Lynes's Cosette.

YORKSHIRE TERRIERS.—Absent.

PUGS.—Challenge—1st, Dr. M. H. Cryer's Bessie.—Open—*Dogs:* 1st and special, Dr. M. H. Cryer's Bob Ivy; 2d, J. Ellis's Punch. *Bitches:* 1st, Lothian Kennels' Lothia; 2d, Dr. M. H. Cryer's Uno.

MISCELLANEOUS.—Large—1st, F. H. Down's wolfhound Ours.—Small—1st and 2d, C. A. Shinn's Clydesdale terriers Clydesdale Loris and Clydesdale Lady.

Dan.

PORT HURON DOG SHOW.

[*Special Report.*]

Bay City, Mich., Oct. 8.—*Editor Forest and Stream:* There was a dog show at Port Huron, this State, last week, held by the Agricultural Fair Association in connection with their annual fair. Some 50 dogs were present and the show was pronounced by all to be a grand success for the first attempt. Mr. C. A. Stone, secretary of the Canadian Kennel Club, judged all classes. Following is a list of the

AWARDS.

MASTIFFS.—*Dogs:* 1st, Eureka Kennels' Bismark; 2d, J. J. Lynn's Dave. *Bitches:* 1st, Eureka Kennels' Mig; 2d, C. Grief's Nettie. *Puppies:* 1st, Eureka Kennels' Wonder; 2d and very high com., W. Cole's Dan and Jennie.

ST. BERNARDS.—1st and 2d, H. Gorman's Bernal and Brian.

ENGLISH SETTERS.—*Bitches:* 1st, J. Ellison's Lu Moll; 2d, G. Jackson's London's Pride.

IRISH SETTERS.—1st, J. Thompson's Jack.

DEERHOUNDS.—1st, J. Gamack's Captain.

GREYHOUNDS.—1st, W. J. Watson's Josey.

IRISH WATER SPANIELS.—1st, withheld; 2d, G. Jackson's Dolly.

COCKER SPANIELS.—*Dogs:* 1st, W. J. Watson's Grouse. *Bitches:* 1st, W. J. Watson's Jet.

FOXHOUNDS.—1st, W. J. Watson's Ranger.

BEAGLES.—*Dogs:* 1st, W. J. Watson's Tom Boy. *Bitches:* 1st, W. J. Watson's Fairmaid.

BULL-TERRIERS.—1st, W. J. Watson's Royal II.; 2d, G. Draper's Sue.

FOX-TERRIERS.—1st, withheld; 2d, J. D. Brientnall's Grover.

IRISH TERRIERS.—1st and 2d, W. J. Watson's Garry and Rock.

BEDLINGTON TERRIERS.—*Dogs:* W. J. Watson's Sting II. *Bitches:* 1st, W. J. Watson's Zulu.

BLACK AND TAN TERRIERS.—1st, J. Cailey's Tiney.

TOY TERRIERS.—1st, W. J. Watson's Nellie W.; 2d, J. Carley's Dandy. Very high com., Mrs. Jane Gamack's Nellie.

PUGS.—1st, Mrs. D. Lynn's Ban; 2d, Miss C. Goldie's Teddy. *Puppies:* 1st, L. Hanley's Tiney.

MISSCELLANEOUS.—1st, withheld; 2d, A. Roberts's Gipsy Queen.

Ned.

EASTERN FIELD TRIALS ENTRIES.

ALL-AGED SETTER STAKE.

Duke (J. T. Richards, New York city), black and tan dog, June, 1886 (Norton's Dan—Richard's Nellie).

Dame Coster (S. C. Bradley, Greenfield Hill, Conn.), black and white bitch (Dorman's Racket—Dolly S.).

Miss Monarch (Chas. C. Gray, Providence, R. I.), black and white bitch, 3yrs. (Roy Monarch—Flossie).

Nora (I. Norris Cochrane, Philadelphia, Pa.), black, white and tan bitch, 4½yrs. (Count Noble—Lit).

Nat Goodwin (I. Norris Cochrane, Philadelphia, Pa.), black, white and tan dog, 4yrs. (Roderigo—Bo-Peep).

Roi d'Or (O. W. Donner, Boston, Mass.), black, white and tan dog, June, 1887 (Roderigo—Bo-Peep).

Desmond II. (Chas. F. Thompson, Philadelphia, Pa.), red Irish setter dog, 3yrs. (Frisco—Grouse II.).

Countess Rush (R. V. Fox, Harrisburg, Pa.), black, white and tan bitch, April, 1888 (Count Noble—Belle of Piedmont).

Whitie (Herbert Merriam, Weston, Mass.), lemon and white dog, March, 1887 (Gus Bondhu—Royal Myrtle).

Dick Tate (A. M. Tucker, Charlestown, Mass.), black, white and ticked dog, 2yrs. (Gus Bondhu—Lady Dixie).

Antoinette (E. O. Damon, Northampton, Mass.), lemon and white bitch, 2yrs. (Doncaster—Princess Pearl).

Rebel, Jr. (Adolph Dill, Richmond, Va.), black, white and tan dog, December, 1886 (Roderigo—Bo-Peep).

Prince Imperial (Ramapo Kennels, Ramsey, N. J.), orange and white dog, 5½yrs. (Emperor Fred—Bessie).

Tammany's Boy (Miss H. Wooster, Ansonia, Conn.). liver and white dog, November, 1887 (Tammany—Juno).

Rock II. (J. B. Wallace, Ansonia, Conn.), liver and white dog, July, 1887 (Graphic—Lady Belle).

Fan Fan (J. B. Wallace, Ansonia, Conn.), liver and white bitch (Graphic—Lady Belle).

Seldom (Nat Simpkins, New York city), liver and white bitch, 4½yrs. (Booth—Tuck).

CHAMPION STAKES.

Roderigo (Memphis & Avent Kennels), black, white and tan dog, 6½yrs. (Count Noble—Twin Maude).

Gath's Mark (Dr. Jas. N. Maclin, Mason, Tenn.), black, white and tan dog, 5yrs. (Gath—Gem).

INDIANA TRIALS ENTRIES.

Indianapolis, Oct. 12.—*Editor Forest and Stream:* The entries to the Indiana Kennel Club's All-Aged Stakes closed Oct. 1 with 43 nominations—28 English setters, 1 Gordon setter and 14 pointers. The Irish setter entries promised us failed to materialize.

I desire to call the attention of all who anticipate visiting our trials to the special arrangements made for transportation. The Central Traffic Association has granted special rates to Vincennes from all points in Indiana—full fare going and one aent per mile returning. The O. & M. R. R. will sell tickets to Vicennes from all of their terminal points and junctions at full fare going and one cent per mile returning, and will carry two dogs free if crated. The L. & M. R. R. will sell tickets to Vincennes from all points on their line at full fare one way and one cent per mile returning, and will carry all dogs free if crated.

Parties desiring to avail themselves of these concessions must secure from the agent of whom they purchase their tickets a certificate showing that they have paid full fare to Vincennes. This certificate when signed by the club's secretary at Bicknell, will enable the holder thereof to purchase from the railroad ticket agent at Vincennes a return ticket at the reduced rate. We are now trying to arrange for special round-trip tickets from Vincennes to Bicknell.

P. T. Madison, Sec'y.

ALL-AGED SETTER STAKE.

ENGLISH SETTERS.

Lufra's Mark (W. W. Titus, West Point, Miss.), black, white and tan dog (Gath's Mark—Lufra).

Hope (A. M. Young, Nashville, Tenn.), lemon and white bitch (Gath's Hope—Daisy F.).

Floe Windem (A. Thoman, St. Louis, Mo.), lemon and white bitch (Rebel Windem—Carrie H.).

Lady F. (A. Thoman, St. Louis, Mo.), black and white bitch (Rebel Windem—Carrie H.).

Blue Mark (Frank Richards, Stewart, Minn.), blue belton dog (Gath's Mark—Lufra).

Monarch E. (H. Hulman, Jr., Terre Haute, Ind.), liver and white dog (Grouse Dale—Stockton's Floe).

RANK (W. B. Stafford, Trenton, Tenn.), black dog (Manimus—Lady Pape).

REXIMUS (W. B. Stafford, Trenton, Tenn.), liver and white dog (Mainspring—Dell).

COUNT M. (W. B. Stafford. Trenton, Tenn.), liver and white dog (Croxteth—Trinket).

THE ALL-DAY FIELD TRIALS.

THE committee who have in charge the All-Day field trials are meeting with a hearty response from breeders, and quite a number of entries are already assured. Through the courtesy of Gen. W. B. Shattuc the grounds of the American Field Trial Club at West Point, Miss., have been secured, and the trials will begin Monday, Jan. 27, 1890. Birds are reported to be plentiful on the grounds selected, and there is no better place for holding such trials, as the fields are very large and open and the accommodations for visitors are ample. The event will be a sweepstake, open to all setters and pointers, with $50 forfeit and $100 additional to start. The winner will receive 70 per cent. of the stakes, the second 20 per cent. and the third 10 per cent. The rules of the Eastern Field Trials Club, modified to suit the conditions of the stakes, will be used. The heats in the first series will be "All-Day" heats of eight hours each, with an intermission of one hour at noon. In the remaining series the heats will be of four hours duration each, except the final heat, which will be of eight hours, as in the first series. The judges may run the best of the remaining dogs for second and third place or select the winners if they see fit. The object of these trials is to demonstrate the ability or inability of our field dogs to stay.

Since the inception of field trials in this country there has been, every season, considerable talk about the ability of the winners to stay out a long race, and at the same time it has often been claimed that many of the defeated dogs, as well as scores of others that did not compete, would, if given time enough, totally eclipse the brilliant but short-lived performers who carried off the honors. Several owners of dogs that have distinguished themselves at field trials have already signified their intention to enter them for this stake, and we presume that those who own the dogs that can down the champions in an all-day race, will not neglect so good an opportunity to demonstrate the truth of the claims made for their favorites. We have no doubt that the number of entries will be more than enough to make the experiment a success, and it will undoubtedly prove to be the most interesting and important field trial meeting that has ever been held.

The committee who have charge of the matter have the confidence of the public, and that they will receive a hearty support is beyond doubt. The entire amount of the stakes will go to the winners, the expenses being guaranteed by the committee. We hope to be able to announce the judges next week, they are sure to be capable, and we have no doubt that all will be satisfied with the selection. The address of the secretary is Mr. F. R. Hitchcock, 44 Broadway, New York.

DOG TALK.

THE list of entries for the All-Aged Stakes of the Eastern Field Trials Club are published this week. There are 59 in all, 34 English, 1 Irish and 1 Gordon setter and 23 pointers. The Champion Stake has but two entries, but there may be more, as the winners in the All-Aged Stakes this year will be eligible. At all events the stake will be well worth going a long distance to see, as the old competitors, Roderigo and Gath's Mark, will be sure to be at their best, and some grand work will be done without doubt.

S. E. Fisher, a well known deer hunter of California, lost his valuable dog Don, while hunting in the vicinity of Novato recently. The dog was attacked by a wounded buck and sustained injuries from which he died. Don was a prize winner in the recent bench shows.

The Eastern Coursing Association is having a hard time procuring jack rabbits for their proposed meet this fall, but nevertheless they hope to succeed in doing so, in which case the meeting will be held on Long Island some time next month.

Mr. H. W. Huntington, 148 South Eighth street, Brooklyn, N. Y., would like to learn the address of the gentleman who purchased a black greyhound puppy (Balkis—Cassandra) at the New York dog show of 1888.

Entries for the All-Aged Stakes of the Southern Field Trial Club close Nov. 1. The address of the secretary is Mr. T. M. Brumby, Marietta, Ga.

The London *Field's* comments on the Irish setter field trials, in type for this week, have been crowded out, and will be given next week.

The Denver dog show has been postponed to Dec. 5 to 7, as it was found to be impossible to secure a suitable building.

The winter show of the English Kennel Club will probably be held at Agricultural Hall.

A WORD FOR THE BLACK AND TAN.—Buffalo, Oct. 11.—*Editor Forest and Stream:* I would like to ask "Podgers" if he ever "owned and became acquainted" with a well-bred black and tan terrier. He says they are ungrateful, have no loyalty nor love of home. My experience with them has been very different. They are the best of friends and companions, and as for their loyalty, I have a bitch three years old that I have owned since puppyhood. When I am away from home for more than a day she is restless and uneasy. Last July I was absent from home for about two weeks. Poor Queen went about the place with a dejected air, refusing to be comforted. She would come up on the veranda and go to each of the family and whine, as if asking where I was. They could not coax her to lie down by them, but off she would go, around the garden, out to the stable, and back to the house, where she would repeat the same performance. When she first saw me after my return, she set up a shout of welcome that might have been heard a block a way. As to running away from home, no dogs appreciate home more than the black and tan terrier, as they know where home is as well as I do. For a loyal, faithful friend, give me the—BLACK AND TAN.

THE CROSS-BRED DOG.—Mechanicville, N. Y., Oct. 14.—*Editor Forest and Stream:* Will "Cross-Bred" please continue his remarks on "The All-Round Dog," and tell me what kind of spaniel to cross with the beagle? If any one ever has had such a dog, will he please give me his opinion of it. I am not an experienced breeder, and ask these questions through your paper because no one here can answer them. If a dog can be bred that will put up and retrieve a partridge, tree a squirrel, run a rabbit and bring in a duck, I want him.—NOVICE.

AMERICAN GORDON SETTER CLUB.—Baltimore, Md., Oct. 12.—*Editor Forest and Stream:* The annual meeting of the American Gordon Setter Club was held Oct. 9, at Baltimore, pursuant to call, and a total of twenty-six votes (representing over three-fourths of the membership) were cast for the following officers, who were declared elected for the ensuing year: President, H. Malcolm, Baltimore, Md.; Vice-President, Dr. Jos. Whitaker, St. Louis, Mo.; Treasurer, F. T. Washington, St. Louis, Mo.; Secretary, Isaac T. Norris, Baltimore, Md. Committee—J. W. E. Clarke, Oakdale, N. Y.; J. D. Sperry, Iowa City, Ia.; E. G. Asmus, Milwaukee, Wis.; Noys Billings, Dodgeville, Mass.; Isaac T. Norris, Baltimore, Md.; Harry Malcolm, Baltimore, Md.; Frederick M. Bennett, New York, N. Y.; Dr. John H. Meyer, New York, N. Y.; Dr. Joseph Whitaker, St. Louis, Mo. Delegate to A. K. C.—Fred M. Bennett, New York, N.Y. The treasurer's report was read and examined by the committee, and found correct. The American Field Cup, and any future specials to be donated by this club, were referred to the executive committee. The secretary was authorized to call the attention of delinquent members to the provisions of Sec. 6, Par. 2, of the constitution. On motion adjourned.—ISAAC T. NORRIS, Secretary.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Rifle and Trap Shooting

RANGE AND GALLERY.

THE RENSSELAERWYCK MEETING.

ALBANY, Oct. 10.—The twelfth annual fall meeting of the third Brigade Rifle Association began at Rensselaerwyck this morning. The weather conditions were good until along in the afternoon, when a pretty strong northwest breeze exerted a little effect on the shooting. The attendance of marksmen was good; in fact it was one of the best first days in the history of the organization, and some good work was accomplished. The matches which were begun continue through to-morrow.

Oct. 11.—The rifle shooting at Rensselaerwyck under the auspices of the Third Brigade Rifle Association was concluded this afternoon at 5 o'clock. The weather conditions were very fair, except for the pistol shooting and the fact that it grew dark rather early. The meeting has been successful in every respect, bringing out a good attendance and some excellent scores. Out of the seven matches all were continued both days, save the brigade team match, which was shot to-day.

The first match was the short-range continuous military match, open to all comers, at 200yds., standing and off-hand with the .50-caliber State model of the Remington rifle; the aggregate of the best two scores out of five to count. The first prize is a handsome bronze military figure, the second $8, the third $6, and so down to the eighth of $2. Col. Fitch won the first prize, with the others named in order:

Col W E Fitch	45555—24	45455—23—47
S Schrieber	5 455—24	54545—23—47
W C Gomph	44555—23	54455—23—46
Sergt J I Miles	54554—23	45554—23—46
Maj C H Gaus	44554—22	55534—22—44
Corp E S Hoag	54454—22	45444—21—43
Lieut C H Hitchcock	44545—22	44444—20—42
Corp A H Rennie	54554—21	44445—21—42

The standard American target re-entry match was the second event. This was also open to all comers, at 200yds., standing and off-hand, with any rifle, number of shots five, with the aggregate of the best three scores to count for the first three places, and the best two scores counting for all places below. A bronze shield, with military emblems, is the first prize. The other two prizes consist of cartridges and rifle powder. First prize taken by W. C. Gomph.

W C Gomph.	9	9	10	9	10—47	Col W Fitch.	8	7	10	6	10—42
	10	7	10	10	6—43		10	7	8	7	7—39
	6	9	7	10	10	8—41—131		10	9	7	7	5—38—119
J Newberry.	8	10	8	9	8—43	Maj C Gaus.	10	7	7	8	10—42
	9	6	10	8	8—41		6	10	5	9	10—40— 82
	8	9	7	8	9—41—125	J G Brown.	10	6	9	9	6—40
							5	8	7	10	9—39— 79

Event No. 3 was the champion marksman's badge match, open to all members of the National Guard of the State who have qualified at 100 and 200yds., and to members of the local rifle association. The distances were 200yds., at a third class target, standing and off-hand, and 500yds., at a second class target, prone. Five rounds were fired at each distance with the State model of the Remington. The prizes are from $8 down to $2 in this match, and scores made also count for the marksman's badge of 1889. Col. Fitch again was in the lead, and the other prizes won in the following order:

Col W E Fitch	55555—24	55555—25—49
D H Ogden	45545—23	54555—24—47
Major O H Gaus	54454—22	55455—24—46
Corp A H Rennie	54555—22	55554—24—46
W C Gomph	55454—23	44555—23—46
S Schreiber	45544—22	35555—23—45

No. 4 was the shoulder and muzzle rest match, open to all, at 200yds., on a standard American target, with any weapon and unlimited reëntries. Out of five shots the best three scores counted for the first two prizes, and the best two scores for third prize. James Mix offered a gold medal for first prize, 30 per cent. of the match receipts went for second, and 12½lbs. of rifle powder constituted the third prize. In this event Mr. Gomph also scored a second victory. The scores are as follows:

W C Gomph.	11 12 12 11 12—58	S Schreiber.	12 11 10 12 10—55
	12 9 11 12 12—55		11 11 12 12 9—55
	11 10 10 12 10—53—166		12 12 10 8 12—54—164
H C Milliman	10 11 12 10 8—51	9 9 10 9 9—46— 97	

Next in regular order was the Stevens target pistol match for all comers, on a reduced standard American target at 30yds., standing and off-hand, with unlimited re-entries. The best three scores out of five shots counting for first, and the best two scores for the balance. Open sights; standing position; one arm used; 10in. barrel used; ammunition, any. Day alternately cloudy and bright. Wind quartering and fitful. Three best scores given:

Maj Wm R Pryor, 22d Regt	45	44	43—132
M F Roberts	44	43	—— 87
Sergt J I Miles	38	37	—— 75

Revolver match, for revolvers only; conditions same as in pistol match. Any revolver allowed of 3lbs. weight and 8in. barrel:

Maj Wm R Pryor, 22d Regt	49	47	46—142
J C Newberry	43	42	—— 85
M F Roberts	41	41	—— 82

Major Pryor makes the best single target on record, and the aggregate of his three best targets constitutes also the best on record at the distances, beating Ira Paine's record of 139 made at Creedmoor.

The third brigade team match was the concluding event on the card, and it was begun and finished to-day. This was open to all teams of 6 officers and men of the brigade. The distance was 200yds. standing and 500yds. in any position with the head to the target; 5 shots at each distance with the State model of the Remington rifle. The first prize for the highest aggregate score is the $100 trophy from the State; the second, $30 in cash, and the third, 25lbs. of rifle powder presented by J. D. Van Buren. The team from the Twentieth separate company, of Binghamton, was the winner by 14 points from the Tenth battalion team, second. The scores in detail are as follows:

Twentieth Separate Company.		
Corp E S Hough	54544—22	44455—22—44

PENNSYLVANIA MILITARY MARKSMEN.

PHILADELPHIA, Oct. 12.—The rifle contest between 10 men from each of the 10 companies of the First Regiment, N. G. of Pa., took place at the Hartranft rifle range to-day. Eight companies reported with full teams, B and I not being fully represented. The day was very fine with a gentle breeze from the south, light in the morning was somewhat hazy, but brightened up about noon. Company D claimed to have a walkover but F loomed up and won first prize, having 37 points to spare, D coming second and E third:

Co H	142	92	234				

On Friday, Oct. 18, the line officers will compete for the diamond medal, value $500, as a team, three officers to shoot 7 shots each at 200, 500 and 600yds. As only six officers of the regiment have ever shot at 600yds., it will no doubt make it very interesting to the surrounding country and the cattle in the immediate vicinity of the range. SPRINGFIELD.

NEWARK, N. J., Oct. 11.—Almost every member of the Howard Rifle Club, Newark, was in attendance at the regular monthly meeting this evening. The following were elected for the year: President, Adam Burger; Vice-President, J. Meyer; Corresponding Secretary, Fred Dilly; Financial Secretary, A. Herman; Treasurer, F. X. Derivaux; Sergant-at-Arms, J. Amberg; Official Scorer, M. Amberg; Rifle Inspector, Frank Swing; Captain, Fred Laute; Assistant Captain, Tony Lutz; Executive Committee, H. Schroeder, R. Neundorf, and J. Burger; Tournament Delegates, W. Hollenbeck, M. Amberg and F. C. Dietz; Substitutes, R. Neundorf, Eli Slate and Adam Graef. After the meeting adjourned the members proceeded to the shooting range in the lower part of the club house, where the championship contest between teams A and B was decided, and resulted in the following scores being made by the marksmen: Team A—C. Derivaux 109, J. Burger 107, A. Graef 107, E. Theurrich 105, H. Schroeder 105, J. Herter 101, A. Berger 102, Fred Laute 100, Tony Lutz 98, F. X. Derivaux 83, C. Miller 75, and J. Schroeder 67; total 1,162. Team B—F. Dietz 110, J. Meyer 109, R. Neundorf 107, A. Herman 106, M. Amberg 106, E. Slate 103, H Wolfarth 101, A. Fish 100, F. Swing 100, J. Holle 85, Fred Dilly 83, and W. Hollenbeck 82; total 1,192. As can be seen by the totals, team B defeated team A by 30 points. After the shooting was concluded the members and their friends sat down to a bountiful supper.

BOSTON, Oct. 11.—Fine weather and a bracing October breeze rendered the 10th annual field day of the Boston Press Rifle Association, a successful and enjoyable occasion for the three-score or so members at Walnut Hill to-day. Aside from the keen interest taken in the team match, which annually decides the supremacy of some one newspaper office, there was much friendly rivalry over the handsome trophies provided by the Association and the valuable gifts offered for competition in the individual classification, military and rest matches, so that from early morn until the shadows of evening began to obscure the bullseye there was an almost continuous fusillade by the small army of amateur marksmen. What is technically known as an 8 o'clock, fairly steady wind blew during the day and the light was not the best. The team match was called at 1 o'clock P. M., and the result was exceedingly close as regards the three leading teams, the *Globe* finishing first with a score of 204, the *Advertiser* second with 200 points to their credit, and the *Herald* third, only four points behind. The *Transcript* men closed their shooting with a total of 180. The Boston Theater cup goes to Mr. Samuel Merrill. Mr. Rollins, of the *Herald*, makes the highest individual score ever made at any shoot of the Association, thus placing him first in the individual competition. His trophy will be announced at the annual dinner, to occur in about 10 days. The following tables will show the relative rank of the riflemen in the several competitions, the score published being subject to verification by the statistical officer.

Team Match.

Association prizes—To the newspaper team making the highest score, first prize trophies; to the second best team, second prize trophies; trophy to man making highest score on each of the other teams; distance 200yds.; position, off-hand; rounds, 10; highest possible score, 50; Creedmoor count:

Oct. 12.—The regular shoot of the Massachusetts Rifle Association was held at its range to-day. The weather conditions were very fine, with a light wind from 2 to 4 o'clock. A good number of riflemen were in attendance, among them Mr. P. B. Cuptill, of Cherryfield, Me., Rifle Club, and G. F. Ellsworth, from Gardiner. Mr. Frye won the gold champion medal, and Mr. Francis won the gold medal in the 20-shot rest match. Mr. Severance won the silver membership badge, and A. B. Frye and A. McCarthy each won the bronze military medal. Wednesday the trap shooters hold their regular prize and sweep shoot. Following are the best scores made to-day:

WILMINGTON, Oct. 7.—The first breath of winter struck Healdmoor Rifle Range, Wilmington, Del., this afternoon and threatened to make target shooting uncomfortable, but after the "office stove" was lighted up the shooting house became more homelike, and shooting was as pleasant as playing a game of billiards. With the exception of a gusty wind, which at times was rather troublesome, the day was very favorable for target shooting and resulted in a run of fine even scores. A few days ago a 50-shot pistol match was shot between E. J. Darlington and H. Simpson, which proved a very close contest. Following are the scores in detail, standard American target, off-hand:

50-Shot Pistol Match, Stevens's .22cal. Gould Model, 50yds.

E J Darlington																				87	87—426
H Simpson																				87	87—425

Pistol Match, 50yds.

Corp W Elliott	5445545434—43	Corp H Doan	4345444444—41

The following scores were made by the club at their gallery at 12½yds., standard American target, reduced from 50yds.: E. J. Darlington, 91, 88; H. Simpson, 87, 80; E. Jackson, 85, 79, 79; W. H. Johnson, 76, 76; H. Phillips, 71.

CREEDMOOR.—New York, Oct. 14.—The 12th Marksman's Badge and Sharpshooter's matches of the N. R. A. were shot at Creedmoor on Saturday, Oct. 12, under very favorable conditions, the weather being perfect and the wind from 3 o'clock. The following made scores of 42 and upward. Stuart won the gold badge for the second time:

J. Manz, Jr., Ass't Sec'y N. R. A.

PHILADELPHIA, Oct. 10.—The regular weekly practice of the Philadelphia Rifle Club was held at the club's park on Queen's Lane to-day, when the following scores were made at 200yds. on bullseye and honor targets:

	Bullseye.	Honor.		Bullseye.	Honor.
C Molter	19	35	E Stees	4	41
E Travis	13	55	M Briely	2	22
J M Green	13	55	E F Kohl	1	48
M Price	12	37	S Watson	1	9
W Gelzer	0	17	M Brehm	3	22
C Beeler	6	32	P Frederick	1	11
W Wurfflein	4	31	J Reist	1	53
C Bernhardt	4	34	P Sherman	1	10
L Thomas	4	21	Anschutz	0	10

NEWARK, N. J., Oct. 11.—This year the tournament of the United Rifle Clubs of New Jersey will surpass all preceding events, and it is the main thing that now interests the many marksmen. At the meeting of the United Rifle Clubs, held tonight, nine clubs were represented. The new constitution and by-laws were brought up for a second reading, adopted as a whole and ordered printed. The making up of a schedule having been delayed by clubs failing to enter promptly, the opening of the tournament was postponed from the 14th to 21st inst. A resolution was adopted providing that no man who is in arrears for any moneys whatsoever, to any club, shall be allowed to shoot on a club team until such arrearage be paid in full. The tournament shoots will be on Monday and Friday of each week, three matches to be shot on each night. The association decided on a set of valuable prizes. It was also decided to award a gold medal, valued at $10, to the member making the highest average, contestants for said medal to shoot in all matches during the tournament. The following officers were elected: D. J. Mahony, Lakeside, President; J. Hollenberg, North Wards, Vice-President; Gus. Widman, Monroe, Recording Secretary; M. Freidag, Essex Amateurs, Financial Secretary; F. C. Dietz, Howard, Treasurer; F. Weiler, Puritan, Sergeant-at-Arms; C. Kopf, Puritan; F. H. Roberts, Newark; F. Klinger, Lakeside, trustees. The clubs included in the proposed schedule are: Monroe, Annie Oakley, Excelsior, Oakland, Puritan, Newark, North Ward, Electric, Essex, Howard, Lakeside, Columbia and Sheppard. There are twenty gallery clubs in this city, with an aggregate membership of at least 750. Allowing each man 25 shots a week for the season (seven months) it will require about 665,000 rounds of .22cal. cartridges.

CINCINNATI, Oct. 8.—The Queen City Pistol and Revolver Club open its annual series of winter club shoots to-night at its club range. The club has now some 50 odd members, and out of that number can select a team of 5 or 10 men who will compare as off-hand revolver and pistol shots favorably with any like number of men in the States, with the exception, perhaps, of the St. Louis Club, which ranks as the leading one in America. The local club was organized about a year ago merely for winter nights' sport, no initiation fee being charged or dues of any kind demanded from the members. It suffered defeat as a team of 10 against a St. Louis representative 10 last winter, the first year of its existence, but produced two individual shots in Messrs. B. J. Robertson and Ben Copeland that virtually shot that same club's two representatives to a standstill in a series of three matches. The club will, in a few weeks, endeavor to arrange a series of team telegraphic matches with both the Conlin Club, of New York, and the St. Louis. The club shooting here is all done at a ¾in. bullseye, 12yds. range, off-hand, with center counting 10.

PHILADELPHIA, Pa.—At the annual meeting of the Gaiety Rifle and Pistol Club for election of officers for the ensuing year resulted in Mr. G. H. Perkins as President, Jos. M. Green, Vice-President; John J. Mountjoy, Secretary; Wm. Wurfflein, Treasurer; E. Travis, Captain. Three new members were elected: G. Atkinson, J. Hunsinger and W. Price.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

Secretaries of clubs and managers of tournaments are requested to keep us advised of the dates of their shoots, so that we may give due notice in our column of fixtures.

FIXTURES.

Oct. 15, 16, 17, 18.—Tournament at live birds and inanimate targets, Philadelphia. J. F. Kleinz, Secretary, 600 South Delaware avenue, Philadelphia.

Oct. 17, 18, 19.—West End Social Gun Club Tournament, Harrisburg, Pa.

Oct. 21, 22, 23, 24 and 25.—Second Tournament of the Mercer Gun Club, at Trenton, N. J. E. G. Updegrove, President.

THE MIDDLESEX TOURNAMENT.

ON Tuesday, the 8th inst., the fifth annual tournament of this popular club was opened on their grounds at Dunellen, N. J. The Middlesex Club is noted for its liberality and nerve in annually offering a large amount of guaranteed money, and their tournaments never fail to have as good an attendance as any event of the year. This may be said of the present one, for it compares well with all other tournaments this year, but in comparison with its tournaments of former years the attendance was light. Many familiar faces were missed from the ranks of the tournament rounders—men who never before failed to connect on a Middlesex tournament. The reason for this may be that there are too many tournaments—that they get too much of it; certain it is that there is no big money to be made nowadays, as a glance at the scores will show. When thirty-three men out of thirty-four in one event divide money, few, if any, of them get back their entrance fee, to say nothing of the cost of ammunition, etc. It is all very well to say that "trap-shooting is a sport, and that those who indulge in it expect to pay a certain amount for their fun;" so they do, but unless a little winning can be made once in a while it becomes altogether too expensive. When a man shoots through a tournament at an 85 or 90 gait and then quits a loser, he begins to think it time to stop. The fact of the matter is, there are so many good shots now—the growth in trap-shooting has resulted in increased skill for so large a number—that under the present style of shooting no one can win anything. It seems time now to inaugurate a change in the method of shooting; in some way, either by an increase of rise, throwing the birds harder or otherwise, to make breaking of them more difficult. Leaving the question of money entirely aside, it would be advisable to do this, and thereby make our trap experts still more skillful. Well—to the shoot.

Force's Hotel, at Plainfield, housed most of the visitors, among whom were Rolla O. Heikes, of Dayton, O.; John A. Ruble, "Bob White," of Beloit, Wis.; H. A. Penrose, of Corry, Pa.; Charles W. Budd, of Des Moines, Iowa.; A. G. Courtney and Harvey McMurchy, of Syracuse, N. Y.; A. R. Bowdish, of Oxford; Mass., E. W. Yerrington, of Norwich, Conn.; C. B. Manley, of Danbury, Conn.; Wm. and Jas. Wolstencroft, of Philadelphia, Pa.; Milt. Lindsley, of New York, and others. The shooting grounds are about twenty minutes drive from Plainfield, and every morning and evening a string of hacks were pressed into service to transport the shooters with their heavy load of ammunition, for during the week many thousands of shells were fired. The ride is a beautiful one on fine macadamized roads, with the undulating, autumnal-colored slopes of the Orange Mountain range in view to please the eye. The Middlesex grounds are admirably adapted for holding a large tournament. They are beautifully located on the crest of a hill and surrounded by a high, solid fence. Within the inclosure is a commodious club house, with racks and lockers for guns and shells. At its left is a well-built grand stand capable of seating many spectators. Adjoining the club house is a small building reserved for the use of the press and the cashier, who on this occasion was Sam Wilber. He did his work promptly and to the satisfaction of all. The Middlesex boys are all workers, and a commendable feature of their shoots is the system with which everything is run. Fred Quimby and "Tee Kay" hustled around lively for entries in the events, and as soon as each was finished it was handed to the cashier, who figured the divisions of the money, put each man's share in an envelope ready at his request, and then handed the score card to the press representatives, who were thus able to do their work properly, and to have it all done by the time the last event of each day was shot.

We want here to thank Mr. H. A. Penrose for the use of his Keystone score book, which greatly facilitated our work. It was gotten up for the special use of tournaments and clubs. By using carbon paper, it manifolds four copies, thus at the same time making a permanent record on the original sheet, which is retained in the book for reference, while the four tissue copies are detached, and may be sent out for publication.

The shoot occupied four days' time, of which two were devoted to inanimate targets and two to live birds. Bluerocks and Keystone targets were used under the Keystone system. Two sets of five traps were in constant operation and the events were rattled off in a lively manner. The tournament committee was W. Fred Quimby, T. H. Keller, M. W. Mulford, Wm. Sigler and Nev. Apgar, and it is due to their untiring efforts that all the guaranteed events but one filled, and most of them overfilled, all surplus money being divided with the purse. Tuesday, the first day, dawned bright and clear, and promptly at 9 o'clock the shooting commenced.

No. 1, open to classes A B and C, at 10 singles, $1 entrance:

W Wolstencroft	1111111111—10	C W Yerrington	1101111010—7

First $7.80, second $5.86, third $3.90, fourth $1.96.

Thursday, Oct. 10.—This was the first day at live birds, and from far and near the men who "wouldn't look at a clay saucer," flocked in to try their skill. There was Bob Welsh and Dick Irwin, of Philadelphia; Johnny Riggott, of Rockaway, N. J.; Geo. Cubberly, of Red Bank; Mahlon Fox and Chas. Van Camp, of Trenton; Capt. Jones, Al. Heritage and Wm. Hughes, of Jersey City; E. M. Cooper, of Red Bank; Fred Beal, of Long Branch; Frank Class, of Pine Brook; Ike Dukes, of Burlington, N. J.; L. J. Houghton, of Chepachet, R. I., and Jack Walton, of Mount Hope, Pa. It rained hard just before breakfast, but Middlesex luck carried the day, and ere the trip to the grounds was started, the sun was shining brightly. The birds were an average lot, some good, some poor, with a few corkers. The usual gang of scouters were on hand and bagged all but a few of the birds that escaped over the fence. In event No. 3 twenty men tied for first money, and eleven for second. It was too late when the event finished to shoot off the ties, and as some were not able to remain over, they were allowed to draw their share, and the others who wished to shoot off had to wait till Friday. All live bird events were shot under American Association rules, except a few extra sweeps from plunge traps.

No. 1, at 8 live birds, $100 guaranteed, entrance $6:

Budd	11111111—8	Penrose	12111220—7
Bob White	22221121—8	Manly	21111011—7
W Wolstencroft	11112221—8	C Smith	10211211—7

W S Cannon..... 0012221211212200w. —11

First money $180, second $142.50, third $95, fourth $47.50.

W. Wolstencroft, who won first money with the only straight score, is a young man of perhaps twenty-seven, who has made a reputation for himself as a steady, reliable shooter. His victory was greeted with applause, which was received with becoming modesty. Charlie Budd had the misfortune to have his old gun injured by being run over on Thursday night while going in from the grounds, and was somewhat handicapped with a new gun to which he is unaccustomed. He only dropped two birds, but was shot out in the tie for third money. The second and fourth moneys were divided and the third shot off as below. Tie for third money:

Bob White..... 12221 Budd..... 22220
C Smith..... 11112 Beal..... 10
Manly..... 11221 Daly..... 0
Lamberson..... 12112

Those who killed 5 straight took the pot.

We append a record of the guns and loads used in this race, also of the flight of all birds killed.

First div. by Penrose, Budd and McMurchy after a shoot off; second and third div.

At the conclusion of the big race, just enough time was left for a five-bird sweep, which was shot, and the Middlesex Tournament of 1889 was a thing of the past. FRANK MASON.

THE FODDE SHOOT.

ST. LOUIS, Mo., Oct. 11.—The second annual Fred A. Fodde amateur tournament took place at Compton Avenue Park, this city, on Oct. 8, 9, 10 and 11. Beautiful weather favored the shoot, but the attendance was rather light, except on Thursday, which was a partial holiday, owing to Fair week. Keystone targets were used for all events, 5 traps, walk-around system. Many strangers from a distance were present and expressed themselves thoroughly satisfied with the sport furnished them.

Mr. Fred. A. Fodde, assisted by Mr. W. A. Sherman, of Keokuk, Iowa, attended to the duties of referee. All ties div. unless otherwise noted.

First Day.—No. 1, 10 singles, entrance $1.50:

The above events were finished about 4 o'clock, and the remainder of the day was filled in with miss-and-out shoots, all of which had a fair entry. UNSER FRITZ.

VIRGINIA FIELD SPORTS ASSOCIATION.

WHEN it was announced that the Virginia Field Sports Association, which has its largest membership at Richmond and in the country below the mountains, would have their fourth annual meeting and shooting practice upon the grounds of the Baldwin District Fair Association, there was universal gratification expressed, says the *Staunton Spectator*. This was brought about through the activity and application principally of Messrs. C. Bargamin and W. F. Summerson, the first one of the vice-presidents of the V. F. S. A., and the latter a member of that organization, who was appointed Executive Committee, local secretary and manager of the tournament. The Staunton and other gun clubs were invited to participate.

The great interest was imparted to the V. F. S. A. by its late president, the Hon. John S. Wise, and how efficiently he promoted its objects will not be forgotten. The attractions it made for the amusement, and public benefit as well, at the great Virginia Exposition last year, drew to it a support which has accomplished a good work and for public benefit, too, as all will testify who will examine into some of its prime objects, among which are—to increase the game that contributes so much to the good living and comforts of the people; to observe the laws enacted, to aid the public authorities in their enforcement, and to prevent the slaughter and destruction of birds—in a word, as expressed by an eminent minister of the Gospel who is a member of the organization, it is a "humane institution," and deserves the generous support of the enlightened public.

The presence of Mr. Wise was expected, and it was his purpose to be here, but professional engagements prevented. He made this known as early as he could, and all deeply regretted that he could not fill the appointment.

The four days in which this tournament existed imparted the highest interest at the Fair Grounds, and the elegant medals and prizes offered by the Fair Association and our citizens were highly appreciated as the registration and exhibit in large numbers were afforded the public.

The fine attendance of members from Richmond and other sections of the State, as well as on the part of local gun clubs in this vicinity, was somewhat of a surprise, but it settled one important fact—that thoughtful and prudent men all over Virginia are now adding to their numbers in a good strong organization of 500 or more members, to advance the good objects already adverted to.

The shooting tourney was arranged for the four days of the fair. During the first two there were four events, and in the last two, three.

The splendid gold medal of the Baldwin District Fair, offered for the best average shooting, was awarded to C. Bargamin.

Participating in the tourney during the four days were many gentlemen from different organizations in the State, as well as other skilled marksmen and hunters, a few of whom are named. From Richmond, Polk Miller, the new president of the V. F. S. A.; H. B. Grundy, late secretary; Dr Lewis Wheat, —Stump, etc. The members of the Waynesboro Club were out in force. Among them were Patrick, Coyner, Stokes, Fishburne, Lambert and others. Of the Staunton Gun Club, and other gentlemen skilful in the field as crack shots, were Bargamin, Cooke, Sr., Summerson, the two Waymans, Ayres, West, Argenbright, Dr. Hawes, Bowling, Harman, etc.

The annual business meeting of the Association was held in the Council Chamber Thursday night.

Mr. Polk Miller, of Richmond explained the absence of Mr. Wise, the president, and moved that Mr. C. Bargamin, of Staunton, one of the vice-presidents, take the chair, which was agreed to. Mr. B. H. Grundy, the secretary, of Richmond, was present with his portfolio, and the Association proceeded to business. Among the papers read were the proceedings of the last annual meeting and the annual report of the president, with an exhibit of the financial affairs of the Association. In concluding his report Mr. Wise earnestly commended the Association, and encouraged its members to perseverance, and pronounced it the finest organization of its kind in the United States. He expressed his regret that he could not serve longer as president, and declined re-election.

Mr. C. L. Cooke, of Staunton, nominated Mr. [illegible] of Richmond, for president, and he was elected [illegible] taking the chair Mr. Miller delivered a [illegible] and pointed out the methods to pursue [illegible] and growth of the Association.

The following named gentlemen [illegible] Budd 9, Yerrington 9, [illegible] 8, Bowdish 8, Penrose 8, [illegible] 7, C. Smith 7, Courtney 6, [illegible]ond $3.37, third $2.25, fourth [illegible], Bowdish and Penrose.

[illegible] G. Smith 10, Budd 10, Heikes [illegible]croft 10, Apgar 10, Ruble 9, Yerton county. Tee Kay 9, Bowdish 8, Hall 8, E. [illegible] Houghton 7, C. Smith 7, Courtney 6,

The Executive Committee co[illegible]

kiss and W. S. Archer, Richmond, and R. G. Southall, of Amelia, and Hon. John S. Wise, of New York.

W. L. Boyd, of Richmond, was elected secretary, Mr. Grundy having declined in consequence of business engagements which required his whole time. He highly commended, as did other members, Mr. Boyd for the office of secretary, and also Mr. John W. Pierce, of Richmond, who was elected treasurer.

It was agreed to cancel all outstanding fees, and date the financial year for its close 30th of September. The entrance fee was fixed at $2, and the annual contribution $1.

The Association decided to have an annual trophy—a $25 gold medal—which would become the property of the winner at the annual practices.

A large number of members were added to the Association, among them, by complimentary resolution, the Reverends H. H. Hawes, D.D., and W. Q. Hullihen.

Mr. Grundy, speaking for the members from Richmond of their desire at the most convenient time to manifest specially their appreciation of the entertainment arranged by Mr. W. F. Summerson, manager of the tournament, on this occasion, proposed the thanks of the Association to him, which were most heartily voted.

On motion of Mr. Bargamin the executive committee was requested to appoint the time of holding the Lynchburg fair in 1890, when and at that place the annual meeting of the Association will take place.

After the adjournment of the Association the invitation of Messrs. Burke & Croghan to the gentlemen making the 10 best shots, with their guests, to partake of an oyster supper was accepted. A pleasant hour was spent in doing justice to the feast, and in a conversational way recalling the experiences and observations in bird hunting, and in suggestions promotive of the objects of the Association.

The scores were as follows:

Oct. 1.—Moore match, 9 bluerocks, gold medal first prize, three other prizes, entrance $1:

Ayres	010111100—5	West	111110001—6
Bargamin	111111101—8	Summerson	111011111—8
Cooke	111111001—7	Argenbright	011111111—8

Stokes	0011111111— 8	Coiner	1100001110— 5

McDaniel first, Wayman third, Harman fourth.

Boys' Match, Oct. 4, shot at bats by boys under 16 years old:

Kootes	0000110000—2	Jordan	0000110000—2
Hullihen	1000111001—4	Cooke	0110000000—2

Hullihen first, Kootes second, Jordan third.

UNKNOWN GUN CLUB.—The members of the Unknown Gun Club were very fortunate in respect to the fine weather of Oct. 10 for their regular monthly shoot for the club badge and extra prizes at Dexter Park, L. I. Fifteen went to the traps to shoot for the emblem at 7 birds each, club handicap, gun below the elbow. H. Knebel, Jr., 29yds., and J. Rankin 23yds., killed 7 birds each, and on shooting off the former won the medal. This makes the third time he has won the emblem during the season, and he will no doubt be the possessor of it at the close. A sweepstake followed, and three tied for the prize, which they divided between them. The score, sweepstakes, 25yds.:

G Ellerhorst	00	G Rankin	111—3
G Pfohlman	011—2	G Bohling	011—2
H Knebel, Sr	111—3	O Hill	111—3
M Brown	110—2		

CUMBERLAND CLUB OF CHICAGO.—At Cumberland Lodge, Sept. 21, for Herrick medal:

McFarlane (32)	2221112221210—14	Loveday (30)	2012121002121101—12
Eich (32)	1211101111102222—13	Hoffman (30)	0220020020102020— 7
Ashley (32)	2212110231220111—13	Gardner (30)	1111211010210112—13
Farmer (32)	2001111112201—12	Stephens (28)	2100201220020211—10
Shepard (30)	1112112311201—14	Blake (28)	1102002002001O1— 7
Low (30)	1011111222202—12		

Sweepstakes, 30yds., 10 birds:

Farmer	1111231102— 9	Stephens	0021210012— 6
Farland	1122112221—10	Hoffman	0012200102— 6
Ashley	1111101121— 9	Low	0100011012— 5
Eich	2111110111— 9		

Ties on 9, miss and out: Ashley 2, Eich 1.

TRENTON, N. J.—The second annual tournament of the Mercer Gun Club will be held at Trenton, N. J., on Oct. 21, 22, 23, 24 and 25. This tournament will be conducted in a first class manner, and nothing will be left undone to make it a great success in all respects. American Shooting Association rules and classification will govern inanimate target shooting. The same rules will govern live birds, with the exception of the boundary, which will be 80yds. from the traps or field inclosure. The Tournament Committee reserve the right to make any change in the programme that will better suit shooters present, with their consent. Birds are included in all sweepstakes. Tie birds are extra. Officers of the Mercer Gun Club: E. G. Updegrove, President; I. A. Shreve, Vice-President; A. S. Leigh, Secretary; C. W. Van Camp, Corresponding Secretary; A. R. Kuser, Treasurer. Tournament Committee: Charles Zwirlein, Charles O. Lutes, Michael Gaiser, H. Maddock, George D. Voorhees. Classification: W. Fred Quimby, J. Frank Kleinz, E. D. Miller, Wm. Sigler.

NEWARK, N. J., Oct. 12.—The old shooting ground of John Erb was the scene of a number of lively contests at live pigeon shooting this afternoon on the occasion of the semi-monthly shoot of the Newark Gun Club. To-day's shoot was not as well attended as former ones, the majority of the members having had a surfeit of shooting at the four-days' tournament at Dunellen. The main event of the day was the club shoot bt 10 live birds, Hurlingham rules. The score:

J Erb (23)	1111202111—9	Dr Hawk (28)	1112021002—7
Chas Heath (28)	1121111101—9	W Hollis (23)	0111012001—7
Sam Castle (30)	1111211012—9	G Freche (28)	1211001202—7
C M Hedden (30)	0022221111—8	A Wheaton (30)	2100101021—6
C Reinhardt (28)	1011101111—8		

Erb, Heath, Castle, Hedden, Hollis and Freche put $5 apiece in a pot on the result of their scores in the above shoot. Erb, Heath and Castle divided first, Hedden second, Hollis and Freche dividing third.

The Woodside and Maplewood gun clubs will cantest in teams of 10 men on Oct. 23 at the grounds of the Woodside Club.

MILLER—JOHNSON.—Springfield, N. J., Oct. 12.—The long talked of match between C. H. Johnson, of Union, and E. D. Miller, of Springfield, took place at the Union Club grounds this afternoon. Conditions, 100 bluerocks each, 3 screened traps, N. G. A. rules. Johnson came to the grounds loaded for bear and shot in his best form, and proved himself a hard one to down by finishing up with 95 out of his 100. But Miller proved to be the better shot by scoring 99, which was wonderful considering the fact that a greater part of the match was shot during a severe thunder storm. Both men shot Lefever 12-bore and stood at 18yds. Score:

Miller	1111111111111111111—20
	1111111111111111111—20
	1111111111111011111—19
	1111111111111111111—20
	1111111111111111111—20—99
Johnson	1111111111111111111—20
	1111010111011111111—17
	1111111111111111111—20
	1101111111111111111—19
	1111111110111111111—19—95

If Johnson continues to improve in the future as he has for the past year, he will soon be one of the best target shots in this country. A team shoot of three men on a side is arranged to take place at the Union Club on next Saturday at 2 P. M. Johnson is captain of one team and Miller of the other; each man to shoot at 15 pairs doubles and 70 singles, losing team to pay for turkey supper.—SPRINGFIELD.

EATON, N. Y., Oct. 12.—Eaton Gun Club. Match at 15 singles and 6 pairs, 5 kingbird traps, 18yds. rise, Association rules, badge prize:

Curtis	101011111101101	10 11 00 10 11 10—18
Cole	110011110110001	10 01 10 10 10 10—15
Fryer	101000100010000	10 10 10 10 10 10—10
Briggs	101110111101111	11 10 00 10 10 10—18
Stone	100110010101000	10 10 10 10 10 10—12
Richardson	111011111101111	10 00 10 10 00 11—18

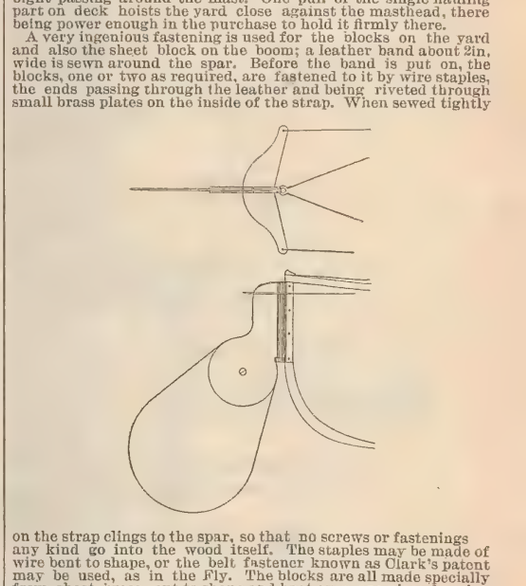
The club will give a tournament to-day.

NEW YORK SUBURBAN GROUNDS.—New York, Oct. 12.—The grounds of the New York Suburban Shooting Grounds Association at Claremont, Jersey City, N. J., are open every day to the shooting public. A competent superintendent is employed, who keeps the grounds in constant readiness for individuals or parties who desire practice or sweepstake shooting with the shotgun. A targeting and testing score is one of the features of these grounds. On Saturday afternoon, Oct. 19, there will be a grand rally of the old friends of these grounds. Uncle Billy Sigler, E. D. Miller, Johnson, Collins, Quimby, Lindsley, Tatham, Hathaway and others have signified their intention of being present, and a fair-sized one-day tournament will be the result. Trains from foot of Liberty street at 2 and 3 o'clock P. M. Shooting commences about 2 o'clock.—C. M. HATHAWAY, 291 Broadway.

TACOMA "GLOBE" CHAMPION.—A large crowd of gentlemen and ladies yesterday attended the live bird match for the *Globe* diamond trophy and championship of the Northwest, between E. S. Barlow and J. M. Bell, both of Tacoma. The birds were the hardest flyers that have yet been on the grounds; this is the unanimous opinion of the many sportsmen in attendance yesterday. Mr. Bell won the toss and sent Mr. Barlow to the score. He killed his bird, followed by a kill by Mr. Bell. Both men did splendid shooting. The excellent shooting of Mr. Barlow in this his first individual match for this coveted trophy, was loudly applauded by the spectators. He shot coolly and killed his birds in an excellent manner. Unfortunately he lost two dead ones out of bounds. Bell was the first to lose a bird, dropping his sixth bird, thus putting Barlow one in the lead, but he caught Barlow in the eighth round and from that to the end he forged ahead, killing 22 out of the 25, Barlow killing 19. Both are excellent scores for such hard birds. The trophy is again open for challenge. Although the sportsmen in the Northwest are all friends of Mr. Bell they are anxious to see the trophy change hands, for should Mr. Bell, by chance, hold it until the next tournament in Portland and win it there, it becomes his personal property. This Mr. Bell says is an impossibility for any man, hence no fears may be entertained.—*Morning Globe, Tacoma, W., Sept. 16.*

GRAND CROSSING, Oct. 5.—The South Chicago Gun Club shoot for medal at 20 Peoria blackbirds, 18yds. rise, two traps: E. Reeves 16 and wins medal, Geo. Kleinman 10, Lem. Willard 12, C. Templeton 12, F. Willard withdrew. Live bird medal shoot same day, 10 birds each, 30yds. rise, 80yds. boundary, Illinois State rules: E. Reeves 9, Geo. Kleinman 9, Lem. Willard 10, C. Templeton 10, F. Willard 7. Ties on 10 at 5 each, Willard 4, Templeton 5 and wins.—RAVELRIGG.

BEAVERTOWN, Oct 7.—The postponed contest of this association for the handsome silver challenge cup came off to-day, but on account of the unsatisfactory weather only thirteen members put in an appearance. The conditions of the match were: 200 and 400yds., standing or kneeling at 200, any position at 400; five shots at each range, Snider rifle. The highest possible was 50. Mr. J. A. Williamson, of Lindsay, was the successful competitor, making a score of 36. This, considering a bad wind which blew across the range, must be considered very satisfactory. The cup has to be won three times by the same member before it becomes his own property. This is Mr. Williamson's second win. The other competitions, extra series, etc., was postponed until Thanksgiving Day.



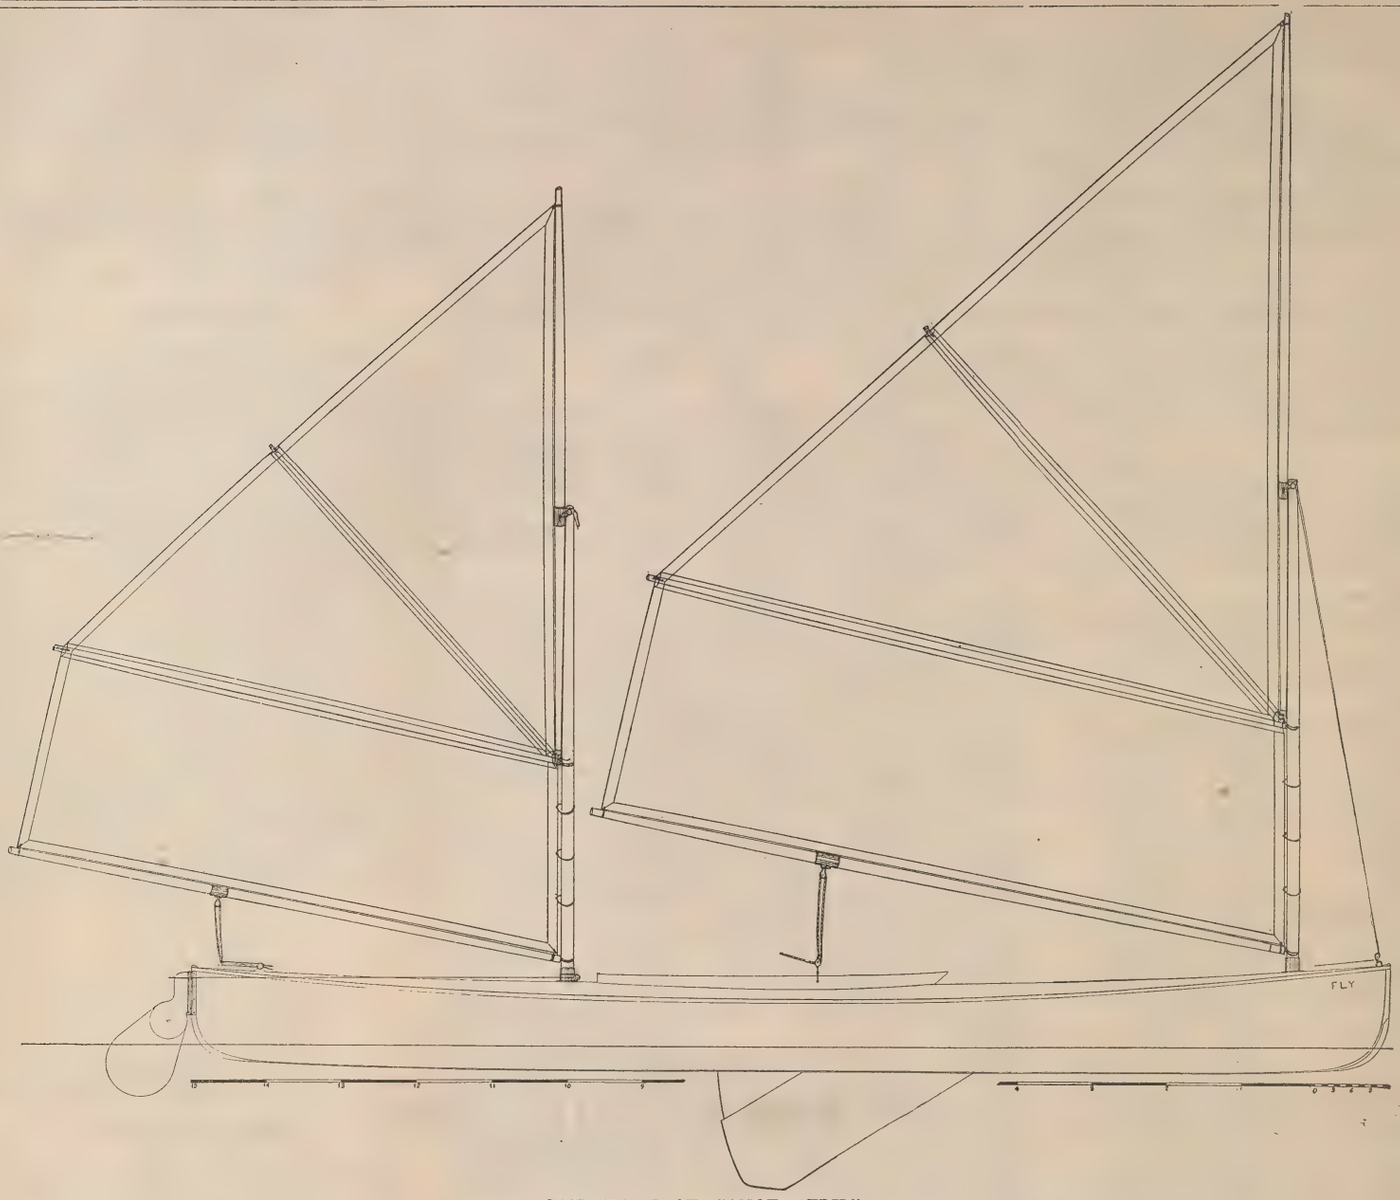
WELLINGTON, Mass., Oct. 12.—In the silver pitcher match at the grounds of the Wellington Gun Club to-day, Shumway won with a score of 14, the match being at 7 bluerocks and 8 clay-pigeons. The other score in this match were: Warren and White 13, Bond, Chapin and Edwards 12, Cowee 11, Melcher 9, and Stone 9. A number of sweeps followed.

Canoeing.

SAILS AND FITTINGS OF FLY.

THERE is probably no canoe in the entire American fleet which so thoroughly reflects the ingenuity and skill of her owner as does the Fly, whose lines have lately appeared in our columns. Not only does she possess a number of original and distinctive features, such as the rig, the sliding deck seat, the thwartship tiller and the mizen traveler, but every detail, however trivial, is carefully worked out under Mr. Butler's supervision. In spite of the furore that followed the introduction of the Pecowsic sails, and the general adoption of the standing rig, Mr. Butler has adhered persistently to the reefing rig, believing it to be the best, and trying in every way to prove it so. The accompanying sail plan shows the standard rig of the Vesper canoes, the shape, area and number of battens varying, but the general features of the rig being common to all the boats. The area of the mainsail is 68ft. and the mizen 44ft., or 112ft. in all, no spinaker being carried. The sails are of the old "batswing gunter" type, but most of the details are original with Mr. Butler. The boom and yard are each held to the mast by a jaw, that on the yard being faced with leather so as to allow it to slide easily, while a small strap, buttoning on to studs on the end of the yard, also passes around the batten and holds it and the yard together. The principal difficulty in a rig of this kind is the hoisting gear, as it is necessary to set the yard up very taut to hold it so. This is accomplished by means of a halliard doubled on the end, there being but one hauling part, running through the snatch-block on the stem, but a double standing part (a second short line spliced into the halliard) running over sheaves on each side of the masthead. On each side of the masthead is a single sheave, while on each side of the yard at the height of the masthead when the yard is in position, is a single block. Each part of the halliard is led through its corresponding sheave on the masthead and block on the yard, the bight passing around the mast. One pull of the single hauling part on deck hoists the yard close against the masthead, there being power enough in the purchase to hold it firmly there.

A very ingenious fastening is used for the blocks on the yard and also the sheet block on the boom; a leather band about 2in. wide is sewn around the spar. Before the band is put on, the blocks, one or two as required, are fastened to it by wire staples, the ends passing through the leather and being riveted through small brass plates on the inside of the strap. When sewed tightly



on the strap clings to the spar, so that no screws or fastenings any kind go into the wood itself. The staples may be made of wire bent to shape, or the belt fastener known as Clark's patent may be used, as in the Fly. The blocks are all made specially from sheet brass, cut to shape and bent over, one piece forming the two sides of the shell. They are a great improvement on the clumsy cast brass blocks commonly sold for canoes and boats. In place of a solid pin for the sheave to run on two pieces of brass tube are used, one inside of the other, the larger piece being a little longer than the thickness of the sheave, thus holding the sides of the shell from jamming, while the smaller piece, about ½in. diameter, runs through the sides, forming a pin, and is rivetted like the ordinary solid pin. The batten is fitted with the usual hand reefing gear, the hauling part leading to the well. The main sheet leads from the traveler, through a block on the boom, and then through a block on the traveler. Three rings are used to hold the luff in to the mast. The sail may be quickly set, lowered or reefed. The diagonal battens are not always used, being put in when the cut of the sail requires it. The largest sails used on the Vesper canoes are about 75ft. in mainsail and 50ft. in mizen, 125ft. in all, the mizen being about 65 per cent of the main

The spars of the Fly and Wasp are hollow, made after a method probably suggested by the manufacture of paper cartridge shells in the factory with which Mr. Butler is connected. In making these shells the paper is pasted and rolled on a solid mandrel, being allowed to dry before removal. The spars are similarly made, of three layers of veneer, each about $\frac{1}{16}$in. thick. The mandrel, of wood and tapering, is first covered with paper, then a layer of veneer is wound around it spirally, being glued fast. A second layer, laid in the opposite way, is then glued over the first and finally a third layer, laid in the same direction as the first, completes the spar. When dry the mandrel is removed and the masthead is plugged solid, while a second plug is glued in the lower end, reaching just above the deck. This plug, it has been found, must be rounded off at its upper end, as if cut squarely off the mast is apt to break where the end of the plug comes. Both boom and yard are constructed in a similar manner. These spars are very light, and when carefully made are strong also.

The mizen sheet traveler, shown in Figs. 1 and 2, is one of the most ingenious of Mr. Butler's inventions. The ordinary lead, through a block in the center of the deck, brings the mizen boom almost into a fore and aft line when the sail is sheeted down, making a very ineffective angle. To avoid this the traveler is used, swinging to one side when the sheet is trimmed flat, and holding the boom at some distance from the center-line. The traveler consists of a brass upright, turning in the socket plate *l*, which is set in the deck. Through the upright a brass tube about 6in. long and ½in. internal diameter is run, being brazed in place. The edges of the tube at each end are rounded with a bead so as to prevent any chafe of the sheet. The upright is held in place in the socket by a split washer, *m*, held down by screws. The upright is thus free to swing in any direction, the tube moving in a horizontal plane. A stop, not shown in the drawing, prevents the tube and upright from swinging through more than 120 degrees. The mizen sheet is double, with a brass block in the bight, which block is fastened to the boom. The sheet may be taken in or slacked off from either windward or leeward side, and when trimmed flat the boom is several inches away from the center-line. As already stated, in the Fly aluminum is used in place of brass for all fittings.

The sliding deck seat which now seems to be the proper thing in a canoe, is an invention of Mr. Butler's, he being the first to use it. In place of the ordinary fixed deck seat, in this one the seat is in two pieces, one fixed and one sliding, forming a seat well out to windward. A section of the Butler seat is shown in Figs. 11 and 12, in which *n* is the fixed part of the seat, a piece of hard wood about 5½in. wide and ½in. thick, running across the

FITTINGS OF CANOE "FLY."

28FT. STEAM LAUNCH.—DESIGNED BY MR. E. R. BOWDISH.

canoe and resting on the coaming. It is held fast by hooks and screw eyes, or by a knee, *s*, on each side with a thumb screw, *t*, which sets up under the coaming. An end bracket, *p*, is sometimes used, and makes the seat stronger, placing the strain on the canoe proper instead of the coaming, but it offers a drag when the boat is heeled. The sliding part of the seat, *o*, lies on top of the fixed part, being held in place by the slides, *qq*, screwed beneath it. The two parts are of the same length, from 30 to 34in. A small piece of rubber set in the fixed part serves to hold the sliding part in position, while a cord, with one end attached to each part, prevents the sliding part from running off the other entirely. In use the seat is shoved to leeward as the canoe goes about, thus projecting to windward and forming a support for the body when on the new tack. It is necessary that the slides, *qq*, and knees, *ss*, should be specially strong, as the leverage is very great and a broken seat means a bath, as many have lately learned.

Another good method of construction is shown in the Passaic deck seat, Figs. 8, 9 and 10, made by the Passaic River canoeist, Mr. J. T. Holden, Rutherford C. C. In this the fixed seat, *n*, is stiffened by the guides, *ww*, of hard wood, about 1×¾in. The sliding seat, *o*, slides on top of the other, being held down by a strap, *v*, of sheet brass, in the center. At each end of *o* is a bead, *u*, which serves as a stop to prevent the seat sliding entirely off. The construction is strong and simple. In each seat the sliding part *o* is stiffened by three pieces of hard wood about 3×¾in. set into the lower side and running across the grain, as at *rr*.

We do not know who first invented the thwartship tiller which is such a necessary accompaniment of the sliding seat, but if not the inventor, Mr. Butler was the first to perfect the device and make it a success. The tiller and the latest form of locking gear are shown in Figs. 3 to 7. The mast tube *a* projects 2in. above the deck, being fitted with the usual deck plate *b*. On the forward side of the tube is brazed a section of a rack, *c*. The sleeve *d* is fitted to turn freely on the mast tube, a part of the fore side being cut away, as shown, to permit it to pass over the rack *c*. The bottom of *d* is stiffened by a band *e*, which must be also cut away enough to pass over *c*. To the sleeve *d* a second tube *f* is brazed at right angles, forming a socket for the tiller, a round stick of ash or hickory, to which the rudder lines are attached. This represents the tiller in its simplest form, but it has been further improved by a locking attachment, holding the rudder in any position, and also by fitting the tiller so that like the seat it may be slid out to windward, within easy reach of the hand when lying out on the seat. The locking gear includes, in addition to the rack *c* already mentioned, a second rack, cut in a bar *g*, about ¼ ×3-16in. This bar is about 12in. long and at each end is fastened to a ferrule *h*, on which is a groove *i* for the rudder line. The bar *g* fits in a groove cut in the wooden tiller. When in place the rack bar *g* is run through the socket *f* and the ferrules *h* are rivetted or brazed fast, one on each end of *g*. The tiller is then slid through *f*, holding the rack bar firmly in place. The sleeve *d* and socket *f* are cut away where they cross, leaving an opening wide enough to admit the rack on *g*. The rack bar *g* is fitted with a stop at each end of the socket *f* which prevents any end motion in it. The tiller, sliding freely through the ferrules *hh* and the socket *f*, may be run out to windward on each tack, and at the same time a turn of the wrist brings the teeth of the rack bar *g* in gear with *c*, effectually locking the whole gear. A slight turn downward of the tiller throws the teeth out of gear and allows the sleeve to revolve and the rudder to swing freely. The lines are spliced rather loosely around the grooves *i*, allowing the ferrules to turn without tightening them. An extension tiller is absolutely necessary with the sliding seat, and this form is more convenient than the regular fore and aft tiller with a jointed piece on the handle.

CORINTHIAN MOSQUITO FLEET REGATTA.

THE Corinthian Mosquito Fleet sailed its fall regatta on Hempstead Harbor on Oct. 12, the starters being:

Unique	Open schooner	18ft. 9in.	F. B. Jones.
Vagabond	Canoe	16ft.	C. J. Stevens.
Gnat	Yawl	14ft. 7in.	Thomas Clapham.
Lestris	Yawl	13ft. 8in.	Dr. T. Ledyard.
Surf	Cat	14ft.	William Hicks.
Rita	Cat	11ft. 2in.	G. G. Clapham.

A triangular course was laid from the head of the harbor down to Mott's Point (two miles), over to the opposite shore (one mile), and back to start (two miles). Time reckoned on five miles. Order of sailing, to leave stakeboats on starboard hand.

The wind from start to finish was from the southeast, steady, and strong enough for small craft to keep lee decks awash.

The start was made at 1:20, the last of the flood, from a one-minute signal, the six boats going over the line in as many seconds, making a very pretty start. Down the wind they flew, each boat describing a curve of its own to the first mark, at which point the entire six endeavored to round at once, and so close were they that a general mix up seemed unavoidable, but only for a second, and away they went for the second mark with sheets trimmed half down, and each making its individual curve again. At this mark Vagabond was first, with Unique a close second, Gnat third, Surf fourth. From here it was almost a dead beat, with enough wind to give good sailing and a show for pointing and footing. On this leg Vagabond and Unique both held to the port hand going up, Gnat keeping in midstream, with Lestris working the starboard hand, in which work she soon crossed Gnat's bow, the former being on starboard tack. The Vagabond was declared to be handled beautifully; Gnat seemed to make a few too many tacks.

On the first leg Lestris had a mishap and lowered mainsail, and on the second leg parted windward stay; but after that good work was done, beating her rival over eight minutes.

Mr. Stevens gets the cup offered by Mr. Jones for fastest corrected time. Surf wins from Rita. Lestris wins Commodore Smith's cup to yawls and a pennant presented by Mrs. Thomas Clapham. Following is a summary:

	Start.	Finish.
Unique	1 20 00	3 13 50
Vagabond	1 20 00	3 14 00
Surf	1 20 00	3 17 10
Lestris	1 20 00	3 18 40
Gnat	1 20 00	3 36 14
Rita	1 20 00	3 27 45

CORINTHIAN MOSQUITO FLEET.—Proposals for membership: C. J. Stevens, 7 Bowling Green, N. Y.; C. M. Bird and G. G. Murray, Larchmont, N. Y.; F. B. Lewis, 218 Main street, Hartford, Conn.; J. A. Stow and G. G. Stow, 218 East Tenth street, New York. The last regular meeting for the season will be held at the Sturtevant House, New York, Oct. 21, at 8 o'clock.

BROOKLYN C. C.—Nov. 5, Election Day.—Paddling race for decked sailing canoes; paddling race for open canoes, single-blades; tandem paddling race, decked canoes double blades, and open canoes single blades; sailing race for canoes, cruisers, duckers, skiffs, etc.

A. C. A. MEMBERSHIP.—Northern Division: M. K. Dunlevie, Ottawa. Atlantic Division: Daniel B. Goodsell, New York.

STARTING SIGNALS FOR RACES.

Editor Forest and Stream:

I desire to raise the question whether it would not be a good idea to incorporate in the sailing rules of canoe clubs and the A. C. A. a general method of signalling a start in sailing or other races, so that every one interested may readily distinguish it.

The ordinary sailing rules are very generally understood by those participating in races, but in my experience it has frequently happened that the starters have had to depend on one another for information as to the signal; of course this is sometimes through carelessness and neglect, but not always. In the sailing race of the N. Y. C. C. on Oct. 5 the instrument used to sound the signals was so preposterously unfit for the purpose that the writer failed to hear a single signal of the three supposed to be given, and the winner of the race had to sail his boat up to the starters and hail them to know if the signal had been given; on receiving an affirmative answer he at once started off and left two of the boats waiting for what never came.

Our sailing rules are, I believe, derived from those of the N. Y. Y. C. Imagine, if you can, a yacht race, where, at the start, a yacht hails the regatta committee to know if the signal has been given. Aside from the question of unfairness to those entered, such a start is also unfair to the guests invited to view the sport, as of course the fairer the start, and the greater the number engaged, the more interesting must it be to the spectators.

Now, I propose as a remedy, a starting signal to be generally adopted, so that it may be recognized on any occasion just as easily as any other technical point in canoe racing, and I would suggest for the instrument a horn which can be readily heard at any distance likely to be covered in maneuvering for position, the first signal, five minutes before the start, to consist of three blasts; second, one minute before the start, two blasts; third, one blast, go!

If any one can suggest something better I should be glad to have it adopted, but I am satisfied that some general signal would save much trouble to the regatta committees and facilitate the starting of our canoe races. RANDOM.

NEW YORK, Oct. 9.

[We have learned since our report of the New York C. C. regatta was written that the reason why Random and Ellida did not start promptly was not on account of the tide, but because no signals were heard. Unfortunately, it requires no great effort of the imagination to picture a similar state of confusion at a yacht race, though in the leading clubs the starting arrangements have improved greatly in the past few years, and are now tolerably satisfactory, save in the fact that there is no uniformity, and the start of one club on Tuesday may be totally different from that of another on Monday. The signals should be given by means of flags, whatever other means, such as a horn or pistol, may be used. A certain flag signifies that the preparatory interval has begun, while a second flag shows that the start has been given. As flags are sometimes invisible, blowing directly toward the starters, they can be replaced to advantage by colored balls, two or three barrel hoops lashed together, with a cloth bag drawn over them. In addition to the flags or ball, a horn should be used; but the latter alone will not suffice, as there is nothing to tell a man whether the signal has been given without being heard, or whether the time has not yet expired. An addition to No. XIII. of the A. C. A. Sailing Rules, defining the signals to be used, flags or balls and a horn, would lead to one common system by all clubs.]

CANOES VS. SAILING BOATS.

TO those of our readers who have followed the many and lengthy discussions of the relative merits of canoes and small sailing boats that appear at intervals in the FOREST AND STREAM the race of Saturday last will be very interesting. But one canoe started against five boats of all lengths from 11 to 19ft. and of various models, including two of Mr. Clapham's wide and shoal craft. The course was on the home waters of the latter boats, which were sailed by Mr. Clapham and his son, while the canoe was in strange waters, and consequently handicapped by her crew's lack of local knowledge. In spite of this the canoe beat four out of the five boats on even time, while the fifth, a large sailboat with schooner rig, led her by only 10s. elapsed time, the canoe receiving an allowance of over 1m. The canoe, of course, was sailed by one man only, while the boats were allowed two men. The Clapham boats, we believe, were also sailed singlehanded. Their decisive defeat of nearly a quarter of an hour ought to settle the merits of the canoe, as Vagabond thus far has not shown herself equal to several other well known canoes.

Yachting.

A 28FT. STEAM LAUNCH.

THE handsome little steam launch shown in the accompanying drawings was designed by Mr. E. R. Bowdish, secretary of the Bowdish Mfg. Co., of Skaneateles, N. Y., builders of small steam and sailing craft of all kinds. Her dimensions are as follows:

	Ft.	In.
Length over all	28	0
L.W.L	25	9
Beam, extreme	4	8
L.W.L	4	3
Least freeboard	1	1
Sheer at bow	—	10½
stern	—	4
Draft, extreme	2	2

The motive power, also designed by Mr. Bowdish, includes a two-cylinder compound engine 3 & 5×4in., with a water tube boiler, the latter being arranged for either coal or oil as fuel. The propeller is two-bladed, of 21in. diameter and 34in. pitch. The yacht is of a very convenient size, seating 14, the machinery being well amidships and the seating space aft. The space beside the boiler is used for bunkers when coal is burned. The rudderhead is fitted with an iron tiller beneath the after deck, to which the lines are run in addition to the tiller shown above deck. As the drawings show the yacht is very graceful in sheer and outline, far more so than most boats of her class.

LEAD KEELS WITH IRON BOLTS.

THE little keel sloop Corinne, once well known as the Gael, of Boston, has lately lost her lead keel while lying in the basin of the Corinthian Y. C. at Tompkinsville. The lead keel of 2,000lbs., replacing an iron one of about 1,200, was put on about twelve years since, the bolts, twelve in number, being of ⅝in. galvanized iron. When the boat was sold to New York, in 1880, the bolts were backed out, being found sound and good; but since then they have not been examined. When the boat was hauled out a few weeks since it was discovered that the keel was missing, and a search showed it snugly tucked away in the mud in which the yacht had rested at low water. The bolts were eaten away about the joint of the wood and lead keel, the ends being tapered off like the point of a conical bullet or a cigar. The bodies of the bolts were badly rusted, all traces of the galvanizing being gone; but the heads and nuts were comparatively perfect, the galvanic action apparently having been confined mainly to the immediate vicinity of the joint between the wood and lead. The boat had been floating as usual to all appearances for some weeks after the keel had gone, simply rising a little out of water. She was uninjured, needing only new bolts, which will probably be of composition this time. The occurrence may serve as a warning to yachtsmen having iron bolts through lead keels.

MONTGOMERY SAILING CLUB.—Semi-monthly regatta, Sept. 29. Norristown to Indian Creek and return, 5 miles, wind light westerly:

	Length.	Corrected.
Nellie, tuckup	15.00	1 52 50
Volunteer, tuckup	15.00	1 53 20
Igidious, tuckup	15.00	2 02 00
Gracie, skiff	12.00	2 26 00
Iola, ducker	15.00	2 32 30
Pennsylvania, hiker	16.00	1 45 30

The tuckups Stranger, Playford, Priscilla, Vesuvius and Emma L. withdrew. Pennsylvania was ruled out for touching the mark at Indian Creek. Judge, William Alcorn.

The above race was the last of the series for the season of 1889. The standing of the boats for the season is as follows:

	Races.	Points.
Volunteer, tuckup	10	89.09
F. & W. Playford, tuckup	10	77.28
Nellie, tuckup	9	73.48
Igidious, tuckup	10	63.37
J. S. Frith, tuckup	7	50.64
J. S. Lever, tuckup	7	36.31
Gracie, skiff	9	32.53
Iola, ducker	9	31.60
Starlight, canoe	6	26.27
Pennsylvania, hiker	7	25.75
Priscilla, tuckup	8	24.85
Stranger, sharpie	7	20.01
Vesuvius, tuckup	5	16.17
Emma L., tuckup	5	8.10
Flying Eagle, tuckup	1	4.00
Josephine, tuckup	1	1.00
Cocktail, tuckup	1	1.00

Volunteer wins championship trophy.—E. A. LEOPOLD, Sec'y.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

J. S., Boston, Mass.—We have no record of Red Lassie.

KEONK, Harrisburg, Pa.—We know nothing of the dog mentioned.

A. W. S., Cortland, N. Y.—Dash Ranger was second at St. Paul, 1888. He is owned by Mr. L. C. Gould, St. Paul, Minn.

B. L., Santa Barbara, Cal.—Wet the canoe and paint while wet with boiled linseed oil and Japan dryer, using any desired color.

WM. H. FENDRICH, Columbia, Pa.—The catamarans are practically out of use in New York and Boston, and no one manufactures them for sale.

ROBIN, Staten Island, N. Y.—The law of 1880 permitting robin shooting was at one time repealed, but in 1887 (Chap. 641) it was declared lawful to shoot robins and blackbirds on Long Island and Staten Island from Nov. 1 to Jan. 1.

V. B. M., Raleigh, N. C.—I have a canvas gun case that I desire to render waterproof. Can you give me information? If I use paint will it not so stiffen canvas that when case is folded it will break or crack? Ans. See directions given "Camper."

KILLDEE, Richmond, Va.—A deep centerboard boat will be the most serviceable for your purpose. Though a small keel boat would have some advantages, you would probably have to build in order to get just what what you want.

W. H. M., Wilkesbarre, Pa.—Canvas canoes, if built for sailing, are much heavier than the cedar canoes. But few canvas canoes are used in the A. C. A., but they make a very good boat for paddling and river cruising, being strong and durable as well as cheap. A new cedar canoe, fitted complete, will cost from $150 to $200.

E. P., Philadelphia.—I am one of those unfortunate individuals who love to shoot quail, but whose business will not admit of absence during the shooting season in the North. Can you direct me to a place in the South, say within 24 hours ride of Philadelphia, where first class shooting can be had during January. Ans. The locality named in our game columns last week, Rocky Hill, S. C. will meet your desires.

CAMPER.—Can you tell me how to make my canvas tent water and mildew proof? Ans. The recipe given in "Hints and Points" reads: "Dissolve ½ pound each of sugar of lead and powdered alum in a bucket of rain water, and pour the solution into a tub. Soak your tent for twenty-four hours, and then hang it up to dry instead of wringing it dry. Rain will hang to it in globules, but won't go through the cloth. It will also prevent mildew."

A. N. C., Philadelphia.—I would be greatly obliged if you can give me any idea as to the quantity of nuts that should be provided for a squirrel for one year's consumption. I have a number to provide for, and, inasmuch as they are at large in a public square, I have no means of knowing whether they are always sufficiently supplied. I do not wish to provide an extravagant quantity, because the number of defective trees is limited, and to have them all filled with nuts in excess of the requisite quantity would result in having the depositories filled with rotted nuts. Ans. An allowance of six hickory nuts each per day will be sufficient. They will eat more than this and grow fat, but will thrive on the rations named.

INFORMATION WANTED.

M. R.—Information wanted by two gentlemen as to where they can procure one or two weeks good duck shooting after Nov. 5, Chesapeake or Virginia preferred. Full particulars asked for.

W. BAKER & CO.'S

Breakfast Cocoa

Is Absolutely Pure, and it is Soluble.

To increase the solubility of the powdered cocoa, various expedients are employed, most of them being based upon the action of some alkali, potash, soda or even ammonia. Cocoa which has been prepared by one of these chemical processes, can usually be recognized at once by the distinct alkaline reaction of the infusion in water.

W. Baker & Co.'s Breakfast Cocoa

is manufactured from the first stage to the last by perfect mechanical processes, **no chemical being used in its preparation.** By one of the most ingenious of these mechanical processes the greatest degree of fineness is secured without the sacrifice of the attractive and beautiful red color which is characteristic of an absolutely pure and natural cocoa.

SMITH & WESSON,

SPRINGFIELD, MASS.

Wanted.

WANTED.

To meet three or four gentlemen to go fishing for "TARPON" and hunting on the east and west coasts of Florida; trip to last from four weeks to two months. The cost for each person per day would be $4.50 to $5, including first-class board, bait, small boats, and attendance by experienced men. The yacht Tarpon, 52ft. in length, is now fitting out at Rock Ledge, Fla., especially for this cruise. Has power and sail, draws 2½ft., 6ft. headroom, cabin 14ft. long. Has one large double and three single spring beds. Toilet room with running water. Large deck room, with awning covering the entire boat, and an arrangement for keeping bait alive. Party to leave New York about Oct. 21 by steamer, to join the yacht at Rock Ledge, Fla., Nov. 1, as tarpon bite better in November than they do in the winter months. Having cruised in Florida for the last seven years, I am quite familiar with some of the best fishing and hunting grounds in South Florida, from Rock Ledge on east coast to Pine Island on the west. GURDON TRUMBULL'S

Names and Portraits of Birds

Which Interest Gunners; with descriptions in language understanded of the people.

Practically speaking, this is the first popular volume of ornithology ever issued from the press; a work which goes far to demonstrate that scientific accuracy may be as easily maintained in English as in Greek or Latin. Follows the game birds all over the continent and gives a glossary of all the local names in popular use. Illustrated with admirable portraits from the pencil of Mr. Edwin Shepard of the Academy of Natural Sciences, Philadelphia, which, with the clear descriptions in the text, will enable any man who can read to identify the contents of his game bag.

OPINIONS OF THE PRESS:

It is the first, so far as we know, of books of which the need is felt in every department of natural history.—*Troy Press.*

The book should find its way to a choice place in every sportsman's library.—*Chicago Inter-Ocean.*

I would much rather know what this book tells me, the various names by which the people call a bird, than the Latin, Greek or Hebrew name which science gave him for the sake of cataloguing him. * * * It is more value to me to have a description of a bird in plain English which I understand than in scientific language which I do not understand.—*W., in Journal of Commerce.*

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, OCTOBER 24, 1889.

VOL. XXXIII.—No. 14. No 318 BROADWAY, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, and Brentano's, 430 Strand, London. General subscription agents for Great Britain, Messrs. Davies & Co., Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, and Brentano's, 430 Strand, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, $5 per year; $2.50 for six months.

ANSWERS TO CORRESPONDENTS.

THE WILD PIGEON.

A VERY interesting paper by Mr. William Brewster, on the present status of the wild pigeon, in the current number of the *Auk*, points to the conclusion that this interesting bird is by no means extinct, but that driven and harassed by the assiduity with which it was pursued in the States it has betaken itself to uninhabited woods somewhere to the north of the Great Lakes, in British North America.

This argument is mainly supported by the fact that in the spring of 1888 almost every county in the southern peninsula of Michigan was visited by large flocks of this bird passing northward. A few isolated pairs stopped to roost in the wooded districts, but the main army disappeared across the Straits of Mackinac about the close of April, much to the disappointment of the oldtime netters, who, concluding that the birds had returned to their old haunts for the season, got out their nets and made preparation for the familiar slaughter.

Mr. Brewster having been informed that the birds had arrived in large numbers and were preparing to roost, set off at once to learn as much as possible about the breeding birds, reaching Cadillac on the 8th of May, and linggering there waiting for information as to the nesting site selected, until it was evident that the birds had gone North. Here he collected evidence of the flight, principally from Mr. S. S. Stevens, a resident of the place, a veteran pigeon netter, and one who has a high reputation for veracity and carefulness of statement. Mr. Stevens's testimony was to the effect that pigeons appeared that year in numbers near Cadillac about the 20th April. He saw fully sixty in one day scattered about in beech woods near the head of Clam Lake, and on another occasion about one hundred drinking at the mouth of a brook, while a flock that covered at least eight acres was observed by a friend, a perfectly reliable man, flying in a northeasterly direction. Many other smaller flocks were reported.

But how do these figures compare with the flights of fifteen or twenty years ago? Mr. Stevens, speaking of the great nesting of 1876 or 1877, says: "It began near Petosky and extended northeast past Crooked Lake for twenty-eight miles, averaging three or four miles wide. The birds arrived in two separate bodies, one directly from the south by land, the other following the east coast of Wisconsin and crossing at Manitou Island. We saw the latter body come in from the lake at about 3 o'clock in the afternoon. It was a compact mass of pigeons, at least five miles long by one mile wide." Again referring to the nesting season of 1881, Mr. Stevens estimates that five hundred men were engaged in netting pigeons, and that they secured on an average 20,000 birds apiece during the season. That is to say, ten million birds, equal in food food substance to a herd of thousands of oxen.

Mr. Brewster concludes: "It is probable that enough pigeons are left to re-stock the West, provided that laws, sufficiently stringent to give them fair protection, be at once enacted. The present laws of Michigan and Wisconsin are simply worse than useless, for, while they prohibit disturbing the birds within the nesting, they allow unlimited netting only a few miles beyond its outskirts during the entire breeding season. The theory is that the birds are so infinitely numerous that their ranks are not seriously thinned by catching a few million of breeding birds in a summer, and that the only danger to be guarded against is that of frightening them away by the use of guns or nets in the woods where their nests are placed. The absurdity of such reasoning is self-evident but, singularly enough, the netters, many of whom struck me as intelligent and honest men, seem really to believe in it. As they have more or less local influence, and, in addition, the powerful backing of the large game dealers in the cities, it is not likely that any really effectual laws can be passed until the last of our passenger pigeons are preparing to follow the great auk and the American bison."

In our issue of Sept. 5, Mr. Geo. Boardman reported that after an absence of some years the wild pigeons had returned in small flocks to the neighborhood of Calais, Maine. Last week a Massachusetts correspondent reported having observed scattering birds in that State. Now a report comes to us that many wild pigeons have been seen this year in Prince George's county, Md. On Oct. 11 Mr. Geo. Marshall, of Laurel, saw three and shot two of them, a third was picked up by Mr. Robert Ridgway. Mr. Marshall has noticed only five of these birds this season. He was told that a boy living near the Pecosin Swamp had killed three, and it is currently reported that there is a flock of twenty-five in the neighborhood.

HERE IS A MYSTERY.

ON a certain farm in New Jersey, not far from New York city, there was once excellent quail shooting. No special attention was paid to protecting the birds, they had to run all the risks and brave all the perils that beset the average game bird in its hard struggle for existence in New Jersey. Despite their natural enemies and the assiduous pursuit by enthusiastic and persevering gunners, the birds held their own, and year after year the farm covers yielded a reasonable quota of game.

It would appear to be a reasonable assumption that if such a natural quail ground were carefully preserved, the parent stock replenished, and the public kept off from it, there would be some return to furnish a commensurate reward for the pains of the proprietor. So at least reasoned one of the gentlemen who had shot on the territory. He converted the farm into a game preserve. It was surrounded on all sides by a fence of netted wire, five feet high, above which was a smooth sheathing of tin, and above the tin another wire netting; boards were sunk into the ground below the fence, and the entire inclosure was thus made proof against the inroads of vermin from without.

It is believed that nothing but snakes can get through the fence; and it is the testimony of the game keepers, who are constantly employed on the place, that the preserve is free from vermin. The land is posted, and trespassers are rigidly excluded. The shooting privileges of several adjoining farms are leased, and outsiders are also prevented from shooting on these tracts. For several years supplies of quail have been brought from Georgia and other Southern States and put out on the farm. They have evidently prospered and multiplied; at least there has been every evidence to that effect in the breeding season.

Now the puzzling fact remains, that with all the intelligent effort expended to better the quail shooting on this New Jersey farm, the exact reverse of what was to be anticipated has been the result. The shooting is not so good as it used to be in the old days when the birds were left to take care of themselves, and when the fun was shared with other gunners of the neighborhood. Why this should be so the proprietor is at a loss to explain. The grounds are restocked with new birds; they appear to breed well, but when the shooting season comes around they are not to be found; and to Bob White may not inappropriately be applied the boisterous refrain of De Quincey's Society of Connoisseurs of Murder, after they had kicked out Toad-in-the-hole:

> Et interrogatum est ab omnibus—Ubi est ille Toad-in-the-hole?
> Et responsum est ab omnibus—Non est inventus.

What adds to the mystery is this, that after the shooting season is over and it has come time to put away the guns, these elusive birds are said to reappear and once more to people the covers of the old farm. It may be that the birds actually do not come back, and that this alleged reappearance is only the apparition of unreal spook birds, presenting themselves as an uncanny hallucination of the mystified game preserver and his friends whose brains have been too severely taxed in grappling with the mystery; but all are stout in their assertion that the birds are to be found both before and after the shooting season, but never while their feathers might be lawful game.

The preserve proprietor is at his wits' ends to account for this mysterious disappearance or to circumvent the cunning birds. One theory is that the birds migrate to the South; that having come from Georgia they do not take kindly to New Jersey autumn weather, but follow other migrants to sunnier climes. This is a tenable hypothesis, but it leaves out of account the alleged materialization of the quail still later in the season and in harsher weather.

The most reasonable conclusion is that the quail are of an educated stock, "up to snuff" and altogether too cunning for New Jersey craft, even though it be backed up by wire netting, paid keepers and all the paraphernalia of modern game preserving; and if the proprietor of the farm wants quail shooting he must stock his preserves with unsophisticated birds. But in these days of shotguns universal, where shall one go for an uneducated strain of quail?

SNAP SHOTS.

"SPORTSMAN" is a better term than "nimrod" to designate the field shooter of feathered game or the hunter who pursues larger game. It is simpler, more natural, less affected, and in every way an appropriate designation. "Nimrod" is much more affected by the "lay press" than by a paper devoted to sportsmen's interests; and it usually appears in some such connection as this, "John Doe and Richard Roe, the well-known nimrods of our village, were out shooting this week and returned with a brace of bunnies each, one of which found its way to the editor's table. Thanks, Richard."

Mr. Wm. P. Seal's suggestion that it may be proved practicable to transfer some of the valuable salt-water species of food and game fish to inland waters, points to a new field of fishcultural enterprise as novel as if successful its results will be vast and important. The experiments in this direction will be watched with eager interest, for the possibilities are tremendous.

American types of small pleasure craft are making their way around the world. The publishers report repeated sales of Stephens's "Canoe and Boat Building" in Australia and Japan. In that particular line of boat building America leads to-day, and it is not to be wondered at that foreign nations should come to us for instructions.

We have known many a man to be so lavish of righteous indignation against game law breakers that he had none left for himself when he went into the woods and ran deer out of season.

We give to-day the story of "Comanche Chief," from "Yo's" "Pawnee Hero Stories and Folk-Tales," and we hope soon to announce that the book is ready for delivery.

The Sportsman Tourist.

COMANCHE CHIEF.

The Peace-Maker.

From advance sheets of a forthcoming volume of "Pawnee Hero Stories and Folk-Tales."

BY GEO. BIRD GRINNELL ("YO").

I.

MANY years ago there lived in the Ski'-di village a young man, about sixteen years old. His name was *Kut-a'wi-kutz* (the hawk). At this time the Pawnees wore their hair in the ancient fashion, cut as the Osages wear theirs; the whole head was shaved except a roach running back from the forehead beyond the scalp lock.

A war party went off to the south and he joined them as a servant. They went a long way and a long way, traveling far, but they got no horses and came back. Afterward another party started off on the warpath, and he went with it. They traveled many days, going to the southwest, and at length they came to a camp, and hid themselves to wait until it was dark. It was a camp of the Comanches.

When night had come they all went into the camp to steal horses. The young man went to a lodge near which stood three horses, two spotted horses and one gray. They were tied near the door of the lodge, and from this he thought they must be fast, for the Indians usually tie up their best horses close to the lodge door, where they will be under their eyes as much as possible. He went to the lodge to cut the ropes, and just as he was about to do so he thought he heard some one inside. He stepped up close to the lodge, and looked in through a little opening between the door and the lodge, and saw a small fire burning, and on the other side of the fire was sitting a young girl, combing her long hair. The young man looked around the lodge to see who else was there, and saw only an old man and an old woman, and the fire-maker. He cut the ropes of the two spotted horses standing outside, led the horses out of the camp, and met his companion. To him he said, "Now, brother, you take these horses and go to the hill where we were hiding to-day, and wait for me there. I have seen another fine spotted horse that I want to get; I will go back for it and will meet you before morning at that place."

He went back, as if to get the spotted horse, but returned to the lodge where the girl was. He went all around it, and looked at it carefully. He saw that there were feathers on the lodge, and rows of animals' hoofs hanging down the sides, which rattled in the wind, and to one of the lodge-poles was tied a buffalo tail, which hung down. Then he went back to the door and looked in at the girl again. She had braided her hair and was sitting there by the fire. He stayed there a long time that night looking at her. Toward morning he went to look for his companion. When he met him he told him that some one had taken the spotted horse before he got to it; he could not find it. When the party all met next morning, they found that they had taken a lot of horses, and they started north to go home. They reached the Pawnee village, and every one was glad of their success.

After this, whenever this young man saw anything that was nice or pretty, such as medals, ear-rings, finger rings for women, beadwork leggings, bracelets, necklaces, wampum beads—things that the Comanches did not have—he would give a pony for it. For one year he went on like this, gathering together these pretty things. When the year had gone by he had no horses left; he had given them all away to get these presents. He packed all these things up in a bundle, and then spoke one night to his friend saying, "I intend to go off on the warpath again, and I would like to have you go with me; we two will go alone." His friend agreed to go.

II.

Before the time came to start, other young men heard of it, and several joined them. There were eight of them in all. *Kut-a'wi-kutz* was the leader. He told his young men that they were going to a certain place where he knew there were lots of spotted horses to steal. They started out on foot. After traveling many days, they came to the place where the camp had been at the time he saw the girl. There was no camp there.

They went on further, and at length came to a camp and hid themselves. When night came the leader told his men to remain where they were hiding, and he would go into the camp and see if there were any horses to take. He went through all the camp looking for the lodge in which he had seen the girl, but he did not find it. Then he went back to where the young men were hiding, and told them that this was not the camp they were looking for; that they did not have here the spotted horses that they wanted. In the camp of the year before there had been many spotted horses.

The young men did not understand this, and some of them did not like to leave this camp without taking any horses, but he was the leader and they did as he said. They left that camp and went on further.

After traveling some days they came to another camp, and hid themselves near it. When night came on *Kut-a'wi-kutz* said to his young men, "You stay here where you are hiding, and I will go into this camp and see if it is the one we are looking for." He went through the camp, but did not find the lodge he sought. He returned to the hiding place, and told the party there that this was not the camp they were looking for, that the spotted horses were not there. They left the camp and went on.

When they had come close to the mountains they saw another camp. *Kut-a'wi-kutz* went into this camp alone, and when he had been through it, he went back to his party and told them that this was the camp they had been looking for. Then he sent the young men into the camp to steal horses, and he put on his fine leggings and moccasins that he had in his bundle, and painted himself and went with them. He took a horse and his friend took one. They met outside the village. He told his friend to get on his own horse and lead the other, and with the rest of the party to go off east from the camp to a certain place, and there to wait for him. "I have seen," he said, "another fine horse that I like, and I wish to go back and get it."

His friend looked sorrowfully at him and said, "Why are you all dressed up like this, and why is your face painted? What are you doing or what is in your mind? Perhaps you intend to do some great thing to-night that you do not want me, your friend, to know about. I have seen for a long time that you are hiding something from me."

Kut-a'wi-kutz caught his friend in his arms and hugged him and kissed him and said, "You are my friend; who is so near to me as you are? Go on as I have said, and if it turns out well I will tell you all, I will catch up with you before very long."

His friend said, "No, I will stay with you. I will not go on. I love you as a brother, and I will stay with you, and if you are going to do some great thing I will die with you."

When *Kut-a'wi-kutz* found that his friend was resolved to remain with him, he yielded and told him his secret. He said to him, "My brother, when we were on the warpath a year ago, and I took those two spotted horses, I heard a little noise in the lodge by which they were tied. I looked in and I saw there a little girl sitting by the fire combing her hair. She was very pretty. When I took the spotted horses away, I could not put that girl out of my mind. I remembered her. Brother, when we went back home, that girl was constantly in my mind. I could not forget her. I came this time on purpose to get her, even if it shall cost me my life. She is in this camp, and I have found the lodge where she lives."

His friend said, "My brother, whatever you say shall be done. I stay with you. You go into the camp. I will take the horses and go to that high rocky hill east of the camp, and will hide the horses there. When you are in the village I will be up in one of the trees on the top of the hill, looking down on the camp. If I hear shooting and see lots of people running to the lodge I will know that you are killed, and I will kill myself. I will not go home alone. If I do not see you by noon I will kill myself."

Kut-a'wi-kutz said, "It is good. If I am successful I will go up there after you, and take you down into the camp."

They parted. The friend hid the horses and went up on the hill. *Kut-a'wi-kutz* went into the camp.

III.

It was now the middle of the night. When he came to the lodge he saw there was a fire in it. He did not go in at once; he wanted the fire to go out. He stayed around the lodge, and gradually the fire died down. It was dark. He went into the lodge. He was painted and finely dressed, and had his bundle with him. He took his moccasins off and his leggings, and hung them up over the girl's bed; then strings of beads, then five or six medals, bracelets, ear-bobs, beaded leggings, everything he had—his shirt. He took his blanket and spread it over the bed where the girl was lying, stepped over the bed and crept under his own blanket, and lay down by her side.

When he lay down she woke up, and found that there was some one lying by her, and she spoke to him, but he did not answer. He could not understand her, for he did not know Comanche. She talked for a long time, but he did not speak. Then she began to feel of him, and when she put her hands on his head—*Pi-ta'-da*—Pawnee—an enemy! Then she raised herself up, took a handful of grass from under the bed, spread the fire and put the grass on it. The fire blazed up and she saw him. Then she sprang up and took the top blanket, which was his, off the bed, and put it about her and sat by the fire. She called her father and said, "Father, get up; there is a man here."

The old man got up, and got his pipe and began smoking. This old man was the Head Chief of the Comanches. He called the servant, and told him to make a fire. The girl got up and went over to where her mother was lying and called her. The mother got up; and they all sat by the fire.

The old man smoked for a long time. Every now and then he would look at the bed to see who it could be that was lying there, and then he would look at all the things hanging up over the bed—at the medals and other things. He did not know what they were for, and he wondered. At length the old man told the servant to go and call the chiefs of the tribe, and tell them to come to his lodge.

Presently the chiefs came in one by one and sat down. When they had come there was still one brave who ought to have come that was not there. His name was Skin Shirt, the father wanted him. He sent for him three times. He sent word back to the chief to go on with the council, and that he would agree to whatever they decided. The fourth time he was sent for he came, and took a seat by the chief, the girl's father. This brave spoke to *Kut-a'wi-kutz*, and told him to get up, and take a seat among them. He did so. The girl was sitting on the other side of the fire. When he got up, he had to take the blanket that was left, which was the girl's. He put it around him, and sat down among them.

When the chiefs came in, there was among them a Pawnee who had been captured long ago and adopted by the Comanches, and was now himself a chief; he talked with *Kut-a'wi-kutz* and interpreted for him, telling him everything that was said as each one spoke.

After the young man had seated himself, the chief filled his pipe, and gave the pipe to his brave to decide what should be done with this enemy. The brave took the pipe, but he did not wish to decide, so he did not light it, but passed it on to another chief to decide. He passed it on to another, and he to another, and so it went until the pipe came back to the Head Chief. When he got it again, he asked *Kut-a'wi-kutz*: "Why have you come here this night and lain down in my lodge, you who are an enemy to my people? And why have you hung up in the lodge all these strange things which we see here? I do not understand it, and I wish to know your reasons."

The boy said to him: "A long time ago I came south on the warpath to steal horses. I traveled until I came to your camp. I saw three horses tied outside a lodge, two spotted horses and a gray. While I was cutting one of the ropes I heard a little noise inside the lodge, and pushing aside the door, I looked in, and saw that girl combing her hair. I stole the two spotted horses, and took them out of the camp, and gave them to a friend of mine, and came back to your lodge, and kept looking at the girl. I stayed there until she went to bed. For a long year I have been buying presents; beads and many other things, for I had made up my mind that I would go after this girl. I came down here to find her. I have been to where you were camped last year, and to two other camps that I discovered. She was not in these and I left them, and came on until I found the right camp. This is the fourth place. Now I am here. I made up my mind to do this thing, and if her relations do not like it they can do as they please. I would be happy to die on her account."

When he had spoken the old chief laughed. He said: "Those two spotted horses that you stole I did not care much about. The gray horse was the best one of the three, and you left him. I was glad that you did not take him. He was the best of all." Then for a little while there was silence in the lodge.

Then the chief, the girl's father, began to talk again; he said: "If I wanted to decide what should be done with this man, I would decide right now, but here is my brave, Skin Shirt, I want him to decide. If I were to decide, it would be against this man, but he has my daughter's blanket on, and she has his, and I do not want to decide. I pass the pipe to my brave, and want him to light it."

The brave said, "I want this chief next to me to decide," and he passed the pipe, and so it went on around the circle until it came to the Head Chief again. He was just about to take it and decide the question, when they heard outside the lodge the noise made by some one coming, shouting and laughing; then the door was pushed aside and an old man came in, and as he passed the door he stumbled and fell on his knees. It was the girl's grandfather. He had been outside the lodge, listening.

The pipe was passed to the chief, and he gave it again to his brave to decide. While the brave was sitting there, holding the pipe, the old grandfather said, "Give me the pipe, if you men cannot decide, let me do it. In my time we did not do things this way. I never passed the pipe; I could always decide for myself."

Then Skin Shirt passed him the pipe, and he lit it and smoked. Then he said, "I do not wish to condemn to death a man who is wearing my granddaughter's blanket." The interpreter began to tell *Kut-a'wi-kutz* that the old man was going to decide in his favor, and that when he got through speaking he must get up and pass his hands over him, and thank him for taking pity on him, and so to all the others. The old man continued, "Now, chiefs, do not think hardly of what I am going to say, nor be dissatisfied with my decision. I am old. I have heard in my time that there is a tribe up north that is raising from the ground something that is long and white, and something that is round; and that these things are good to eat. Now, chiefs, before I die, I want to eat of these things, and I want my granddaughter to go and take her seat by this man, and for them to be man and wife. Since I was young we have been enemies, but now I want the two tribes to come together, join hands and be friends." And so it was decided.

The young man got up and passed his hands over the old man, and over the brave, and passed around the circle and blessed them all. The Pawnee, who was interpreter, now told him to get up, and get a medal and put it on the brave, and then another and put it on the chief, and so on until all the presents were gone. And he did so, and put on them the medals, and ear-rings, and strings of beads, and breast-plates of wampum, until each had something. And these things were new to them, and they felt proud to be wearing them, and thought how nice they looked.

IV.

By this time it was daylight, and it had got noised abroad through the camp that there was a Pawnee at the Head Chief's lodge, and all the people gathered there. They called out, "Bring him out; we want him out here." They crowded about the lodge, all the people, the old men and the women and the young men, so many that at last they pushed the lodge down. They shouted: "Let us have the Pawnee. Last night they stole many horses from us." The chiefs and braves got around the Pawnee and kept the Comanches off from him, and protected him from the people. The Cheyennes were camped close by, near the hill southeast of the Comanches, and they, too, had heard that the Comanches had a Pawnee in camp. They came over, and rode about in the crowd to try and get the Pawnee, and they rode over a Comanche or two and knocked them down. So Skin Shirt got his bow and arrows, and jumped on his horse, and rode out and drove the Cheyennes away back to their camp again.

The Cheyennes saw that the Comanches did not want the Pawnee killed, so they sent a message inviting him over to a feast with them, intending to kill him, but Skin Shirt told them that he was married into the tribe. While the Cheyennes were parading round the Comanche camp, they were shooting off their guns in the air, just to make a noise. Now, the young Pawnee on the hill, who was watching the camp to see what would happen to his friend, saw the crowd and heard the shooting, and made up his mind that *Kut-a'wi-kutz* had been killed. So he took his knife, and put the handle against a tree and the point against his breast, and put his arms around the tree and hugged it, and the knife blade passed through his heart and he fell down and died.

In the afternoon when all the excitement had quieted down, the Cheyennes came over again to the Comanche camp, and invited the Pawnee and his wife to go to their village, and visit with them. Then Skin Shirt said, "All right, we will go." Three chiefs of the Comanches went ahead, the Pawnee followed with his wife, and Skin Shirt went behind. They went to the Cheyenne camp. The Cheyennes received them and made a great feast for them, and gave the Pawnee many horses. Then they went back to the Comanche camp. *Kut-a'wi-kutz* never went up to the hill until the next morning. Then he went, singing the song he had told his friend he would sing. He called to him, but there was no reply. He called again. It was all silent. He looked for his friend, and at last he found him there dead at the foot of the tree.

V.

Kut-a'wi-kutz then stayed with the Comanches. The Cheyennes came north and east, and the Comanches went on west, nearer to the mountains. While the Pawnee was with the Comanches, they had several wars with the Utes, Lipans and Tonkaways. *Kut-a'wi-kutz* proved himself a brave man, and as the son-in-law of the chief he soon gained great influence, and was himself made a chief.

After some years the old man, his wife's grandfather, told the Pawnee that he thought it was time that he should eat some of those things that he had long wanted to eat that grew up north; that he was getting pretty old now. *Kut-a'wi-kutz* said: "It is time. We will go." So he had his horses packed, and with his immediate family and the old man, started north toward the Pawnee country. At this time he was called *Kut-a'wi-kutz-u*

si-ti'-da-rit, which means "See! The Hawk." When going into battle he would ride straight out to strike his enemy, and the Comanches who were looking at him would say, "See! The Hawk." So that became his name.

They traveled a long time until they came to the Pawnee ground. As they were traveling along, they came to a field where were growing corn, beans and squashes. The Pawnee said to the old man: "Grandfather, look at that field. There are the things that you have desired to eat." He got off his horse and went into the field, and pulled some corn, some beans and some squashes, and took them to the old man, and gave them to him. The old man supposed they were to be eaten just as they were, and he tried to bite the squashes. This made the Pawnee laugh. When they came to the village, the Pawnees were very glad to see him who had been lost so long. He told the people that he had brought these Indians to eat of the corn and other things; that they were his kinsfolk. He told them, too, about the young man who had killed himself. His relations went out into the fields, and gathered corn and beans and squashes, and cooked them for the Comanches.

They stayed there a long time at the Pawnee village. When they were getting ready to return, the Pawnees dried their corn, and gave a great deal of it to the Comanches, packing many horses with it for the Indians at home. Then the Comanches started south again, and some of the Pawnee young men, relations of *Kut-a'wi-kutz*, joined him, and went back with them After they had returned to the Comanche camp, the old grandfather died, happy because he had eaten the things he wanted to eat.

Soon after this, *Kut-a'wi-kutz* started back to the Pawnee village, and some young men of the Comanches joined him. Some time after reaching the village he went south again, accompanied by some young Pawnees, but leaving most of the Comanches behind. He had arranged with the chiefs of the Pawnees that they should journey south, meet the Comanches on the plains and make peace. When he reached the Comanches, the whole village started north to visit the Pawnees, and met them on their way south. When they met, the two tribes made friends, smoked together, ate together, became friends.

After they had camped together for some time, some Comanches stayed in the Pawnee camp, and some Pawnees in the Comanche camp. *Kut a'wi-kutz* was called by the Pawnees Comanche Chief. He would have remained with the Comanches, but when he went back with them his wife fell sick. The Comanche doctors could not help her, and he wanted to take her north to see the Pawnee doctors, but the Comanches would not let him. They kept him there, and his wife died. Then he was angry, for he thought if he had taken her north her life might have been saved.

So he left the Comanches, and went and lived with the Pawnees, and was known among them always as Comanche Chief, the Peace-Maker, because he made peace between the Pawnees and Comanches. He was chief of the Ski'-di band, and a progressive man of modern times. He sent his children East to school at Carlisle, Pa.

Comanche Chief died Sept. 9, 1888.

EN ACADIÉ.

1.

HOT shines the sun o'er the quivering land,
No wind comes up from the sea,
Silent and stark the pine woods stand,
And the mock-bird sleeps in the mayhaw tree,
Where, overhung with brier and vine
Thy placid waters slip and shine
And dimple to thy lover's view—
La belle rivière de Calcasieu.

Under the bending cypress trees,
Bedecked with pendulous cool gray moss
That woos in vain the recreant breeze
And silently mourns its loss,
With drowsy eye, in my little boat
I dreamily lie, and lazily float
Lulled by the thrush's soft *Te-ruc*—
On "*La belle rivière de Calcasieu.*"

A heron stands, like a ghost in gray,
Knee-deep 'mongst the bending water lilies,
And yellow butterflies lightly play
'Midst the blooms of fragrant amaryllis;
The swift kingfisher winds his reel,
Saying his grace for his noonday meal,
And a hawk soars up to the welkin blue
O'er "*La belle rivière de Calcasieu.*"

Across the point, where the ferry plies,
I hear the click of the boatsman's oar,
And his creole song, with its quavering rise
Re-echoes soft from shore to shore;
And this is the rhyme that he idly sings
As his boat at anchor lazily swings,
For the day is hot, and passers few
On *La belle rivière de Calcasieu.*

"I ain't got time for make merry, me
I ain't got time for make merry;
My lill' gall waitin' at de River of Death
To meet her ole dad at de ferry.
She gwine be dere wid de smile on her face,
Like the night she died, when all de place
Was lit by the moonbeams shiverin' troo
La belle rivière de Calcasieu.

"O sing dat song! O sing dat song!
I ain't got time for make merry!
De angel come 'fore berry long,
And carr' me o'er de ferry!
He come wid de whirlwind in de night—
He come wid the streak of de morning light—
He find me ready—yass, dass true—
By *La belle rivé de Calcasieu.*

"Den who got time for make merry, eh?
Den who got time for make merry?
De fire burn up de light'ood tree,
De bird eat up de berry.
Long time ago I make Voudoo,
An' I dance Calinda strong and true,
But de Lord he pierce me troo and troo
On *La belle rivé de Calcasieu.*"

LOUISIANA. H. P. UFFORD.

ON THE NORTH CAROLINA COAST.

NOT over a day and a half's journey from Old Point Comfort and Norfolk, Va., there is found not only the finest wildfowl shooting in America, but also a primitive people, isolated from the world on an out-of-the-way island, who have as distinct a personality as the soft-voiced Acadians of Louisiana or the uncouth mountaineers of East Tennessee.

Every Northern sportsman who ever took a shy at the waterfowl at Currituck or shot over the blinds at Albemarle and Croatan sounds, or sailed his yacht in the stormy waters of old Pamlico, has met the Goose Creek Islanders of eastern North Carolina, and found them as different from the average American as a Corsican from a Frenchman. Their idiom, their idiosyncracies, their carriage, their peculiar color, their expression, or rather lack of expression, all combine to make these islanders a race apart. They live and marry among themselves, and thus keep their individuality separate and distinct.

The Goose Creekers are all sportsmen of the Rip Van Winkle type, for they hate honest labor as does a Zingari gypsy, and the advent of the rich Northern sportsmen means to them food, drink and raiment, and they look upon these amateur sportsmen as the Niagara hackmen upon the verdant tourists and bridal couples—beings that are like an eel, to be skinned alive. Not that these islanders are dishonest. Far from it. They make admirable guides, and would scorn to steal; nor yet are they like Autolycus in the "Winter's Tale"—"a snapper up of unconsidered trifles." No; honesty is their best trait, and yet in their own manner they generally contrive to make away with all they want. They spend the summer in fishing, catching terrapin, collecting bird eggs; anything, in fact, that they can sell or trade off at a country store, and they can turn their hands to any craft except steady work. Fall and winter are their harvest months, and how they subsist will be told in this article.

There were four of us, a sight-seeing, duck-hunting quartette, comprising Messrs. Charles Hallock, William Wagner, one of the finest wing shots of America, George Ransdell, an old Black Horse cavalryman in the war days, who had spent the last quarter of a century roaming over the frontiers of the Far West and Mexico, and myself. A goodly company of Bohemians and sportsmen, who confidently went forth in the North Carolina sounds to slay vast quantities of waterfowl and to enjoy the pleasure that only a coterie of choice spirits can find in out of the way places far from the swirl of the "madding crowd." Most men have a touch of the savage in their composition or a tinge of the old Norse blood in their veins, and take keen delight in severing themselves from all the luxuries and charms of civilized life and roughing it in a way that a tramp would despise.

It takes some thirty hours to reach Pamlico Sound from Norfolk by way of a steamer. Half of the time the route is through narrow canals that connect the Currituck, Chowan, Albemarle and Pamlico sounds. The scenery is flat and unpicturesque, and consists entirely of swamps and pine barrens. Reaching Pamlico Island in due time, the steamer's whistle blew the warning signal and a boat put out from the place to meet us; its owner was the ex-lighthouse keeper, who, when the light was abandoned by the Government, found, like Othello, that his occupation was gone, and he still remained at his old quarters, simply because he was too lazy to move away. It was a small boat that came dancing over the waves, sufficient, perhaps, to have carried "Cæsar and his fortune," but certainly not capable of holding four men, one dog, a small arsenal of guns, boxes of provisions, several hundred pounds of ammunition, eight bags of decoy ducks with their weights attached, a half-dozen trunks, besides any number of traps, not counting a huge demijohn—a cure for snake bites, and the only cure for any accident, sickness or mishap that might befall us.

The wind was blowing great guns, and the whole sound as far as the eye could reach was full of white caps, and it was with great difficulty that the little craft could be made fast to the leeward side of the steamer, as we looked down from the gangway and watched the lantern rise and fall in the swell of the billows, some 8ft. from the crest to the trough, then arose a protest from us all.

"I am not prepared to leave the world yet," remarked the Professor, as we nicknamed Mr. Hallock. "Davy Jones won't get me in his locker to-night if I can help it."

"I'm rather timid of water anyway," said Wagner, whom we dubbed Major Clam because being a silent man he rarely opened his mouth except to take a drink, "I was on a yacht once in Lake Erie, and it was overturned and all hands lost on board, I'd just as leave commit suicide at once as to get in that cockle shell."

"Are you uns a coming?" cried the voice of the boatman, commencing in a high tenor, and then sinking in a low stomach note as the boat dropped from the crest deep in the hollow of a rolling wave.

"As for me," remarked Old Boreas, so called because Ransdell was always blowing his money about, "as for me, if you catch me inside of that coffin, then I'm a bigger fool than all the three wise men of Gotham who went to sea in a bowl."

The result was that the captain of the steamer launched the life boat and six stalwart rowers soon landed us on the island.

It was a barren sand bank in a wide waste of waters, and as we scrambled ashore we were prepared to see the ex-keeper's wife, and even a whole tribe of children, but the crowd of Goose Creek Islanders who stood crouched, leaned, reclined and slouched around the tower and house rather astonished us. They did not show any extravagant delight in the meeting; they welcomed us with a nod and a grunt, that was all. Their appreciation of rest was most patent, every man of them leaned or reclined against something, half a dozen or so were propping up the tower, apparently to keep it from falling, another squad braced up the house, while others ballasted their boats made fast to the shore, by lying at full length on the seats.

The typical Goose Creek Islanders are tall, most of them are fully six feet when they stand erect, a thing they rarely do except when yawning. Their hair is generally of that color known as carrotty, and combed every Sunday morning in honor of the day, their foreheads are receding, their organs of vision are protruding, and of that kind called out West the jackass rabbit eye; in color it is a dull blue; a sparkling black or clear hazel is rarely seen. The said eyes are generally as destitute of expression as Banquo's ghost, except, indeed, when their glance rests upon a roll of money or handful of coin, and then it is curious to watch them light up, and really scintillate for the nonce. The nose is nondescript, and the mouth is a real catfish one, like little Jack Gibbs' in the nursery ballads, who had

"A rainy new moon for a mouth."

The cheeks are lank and covered with a sparse beard, that grows in detached spots like clumps of wire grass in a run down field. The jaws are the best feature and are strong and firm, denoting tenacity, and if not courage, at least the absence of fear. The visage is always of a lead or saffron color. No one yet ever saw a rosy-cheeked, fair-faced islander. Their sickly hue is caused by generations of chills and blood tainted with malaria. Ague fever is the cross all have to bear, from the toddling child to the tottering grandsire. "Chills is bad," is the common and pathetic expression, as the unfortunate stricken one retires to some dark corner and alternately shivers and roasts. Their throats are long, and the Adam's apple especially predominant. They always stoop, simply for the reason that it is too great an effort to hold the backbone erect. That part of the body known as the abdomen is very long, a wise provision of nature, intended to allow a large storage of food within. The limbs are lengthy and the hand enormous, with knuckles as big as door-knobs. Clothe these figures in a mixed costume of sportsman's cast off garments of the finest material and the native's coarse butternut fashioned by the housewife at home, and the man will stand before you.

Take Tim Cignal, for instance. Tim was one of the crowd that awaited us, and the only one that abideth with us, to our sorrow. Tim wore a fashionable billycock hat, dogskin jacket, over which his homespun coat hung, fine corduroy breeches, with two gigantic brogans at their feet. Tim would have had his feet encased in India rubber boots, only no sportsman had ever yet appeared on the North Carolina coast whose pedal extremities took up as much real estate as Tim's.

They all have a lazy, drawling pronunciation that never includes what they consider a superfluous letter, thus for example, outing is outin', coming, meeting, going, is comin', meetin', goin', and so on.

While we busied ourselves in housing our stores and traps, not an islander moved; they kept their gaze fixed on vacancy, inert and motionless, except that their jaws moved regularly, and they spit ever and anon a long stream of tobacco juice from between their closed teeth. This was an art to be accomplished only by long practice; an amateur may discharge his nicotine saliva any way, but only the expert can expel it with his jaws clenched tight.

At last the ex-keeper, who had self-elected himself as host and custodian of our stores, stepped out on the porch and gave the invitation, "Boys, walk up and reef yer sails." The motionless figures were touched into life and motion, as were the denizens of Tennyson's sleeping palace, when the kiss of the Prince dissolved the charm. They all arose as one man and actually hurried in, and imbib d in a way to make the famous Major and Judge blush with envy.

To make a long story short, the islanders remained with us for three days, eating, drinking and lounging, and cleaned out our whole large stock of wet and dry groceries, and then all with the exception of Tim launched their boats, spread their sails and departed for their island home.

The morning after we arrived all our party started off on a reconnoissance, visiting many points in the vicinity; the result of our observations was that the black brant were fairly plentiful, and the ducks, such as the baldpates, mallard, shufflers, widgeons, sheldrakes, black ducks, silver backs and redheads were scarce.

We decided upon three points to place our decoys, and returning home spent several hours in loading shells and in getting our hunting paraphernalia in order.

The next day was more like a summer than a winter one, and we only killed enough ducks to fill up the yawning chasms in the stomachs of the perpetually hungry crowd at the lighthouse.

The morning after the weather changed, and as a stiff breeze was blowing we had very good luck, but we shot no brant. Our party spent several hours in constructing a cedar blind about a mile from shore, and hoped to have fine sport after the brant should have gotten used to the green-looking stockade on their feeding grounds.

"It 'pears like it' gwine to storm," said Tim, who had constituted himself our body guard, though he never did anything but lounge around, and Tim could hold his own against any man on this plane for lounging. "Ef the win' do blows then the ducks will come to sho' right smart, and you uns kin have all the shootin' you wants."

A happy inspiration struck Major Clam. "I'm going to build a Potomac River sinkbox," he said. "and if the ducks come this way I'll be ready for them."

The boat house on the island had been blown down by a high wind, and the materials were all there. First the Major made a coffin-like trough, or rather a burial-case some 7ft. long, by 2ft. deep and some 30in. wide. This box was corked and pitched until it was perfectly watertight. Then the wings or flooring made of pine planking some 12ft. wide were attached to the trough by hinges, and the affair was complete. Of course this device could only be used in calm water.

Several days passed before it could be utilized, for as Tim had prophesied, a severe storm had raged, and in consequence the ducks had been driven from the deep waters of the sound into the shallows around the island. We started off before day towing the blind behind us, and a hard enough pull we had to reach our destination, Porpoise Island, about three miles distant. We anchored the blind about 100yds. from shore, and Major Clam being the finest shot as well as an expert in that particular kind of shooting, scrambled in and stretched himself at full length in the case with his No. 10 lying across his body. The trough sank with his weight to the level of the water, but the platform floated buoyantly and well sustained the box an inch or so above the surface, sufficiently high indeed for keeping the water from trickling in. Then we arranged the decoys around him and paddled back to shore.

Of course the Major's sole business was to lie motionless and shoot the waterfowl as they circled around the decoys, our part in the programme was to remain on the beach and collect the dead ducks, and follow up and kill the crippled ones.

It was a very trying position that the Major had assumed, one that very few sportsmen had the patience, the nerve or the ability to fill. To make the sinkbox water-blind a success, one must remain absolutely motionless, lying flat on his back, and only moving when the ducks crossed the decoys, frequently so close as to brush him with their wings, and then to rise to a sitting position by a muscular motion of his body alone. He must pick out his particular bird coolly and fire as quick as a flash. Frequently he has to slue himself around and shoot in a most inconvenient position. Added to this every movement must be guarded, for a nervous or violent change of position causes the wings of the sinkbox to dip, thereby allowing the water to roll in; and once in, there is no possible way to bale it out. It often happens that sufficient water is shipped to sink the trough, and then the shooter has to hang on to the platform and shout for help.

It was cold, bitter cold, waiting for the sun to rise, but at last the monarch of the day raised his ruddy face above the rim of the waters of old Pamlico, and its beams made every detail of our work visible, and showed how comprehensive and cunning was the work of man, opposed to the wariness and instinct of the waterfowl. There in the midst of a placid calm was the flock, with not a sign of anything else, the decoys hid the edge of the platform entirely, and the sinkbox, weighted by the shooter, had sunk to the level of the water. The illusion was simply perfect, and had a hunter rounded the point suddenly he would undoubtedly have seized his gun and blazed away on what he would have thought was a rick of unsuspecting ducks.

See! across the silvered and golden waters there comes a stream of baldpates, heading directly for the decoys, around which they circle fearlessly; some even seemed to light on the platform. We held our breath; where was the Major? was he asleep, or what? Suddenly he rises up, two puffs of white smoke are followed by the report of the gun, and the astounded, frightened fowls scatter in every direction, giving us a chance to bring down a couple as they headed across the point. The waterfowl now came in quick succession, singly, in pairs, and in scores, and we sat there and beheld some of the prettiest fancy shooting we ever witnessed in our lives. The Washingtonian took all sorts of shots, in all sorts of distorted positions, but his unerring aim rarely failed to bring down his bird. We on shore, Boreas and myself, for the Professor would not rise before light to kill every duck on the sound, were kept busy in collecting the dead, and dispatching the wounded.

Just here I want to add a word to sportsmen going to Currituck and the vicinity, and that is, by all means, if you belong to a club, add the Potomac skiff to your collection, and the great labor of poling a keeled boat along shallows and over flats will be dispensed with. There is no craft ever built that can get along in low water as well as the skiff, and as a double paddle is employed, it can be handled with perfect ease. This little boat, which is used entirely by the duckers of the Potomac and its tributaries, is 12ft. long by 2½ft. wide, both bow and stern coming to a sharp point, and it is flat-bottomed. It easily carries two men, and with their double paddles they can make it fairly fly through the water. It is safer than a canoe, and can be used in deep water, provided a high wind is not blowing. Care must be taken not to let the waves strike broadside, for it is easily overturned in that way. For noiseless traveling and still-hunting ducks along shore, or drifting up to flocks with the creeping paddles or following crippled ducks, the Potomac skiff is incomparable, and yet I never saw one south of Point Lookout.

About noon the ducks ceased to fly, and the Major signaled us to take him to land. He said he felt as if every member of his body was asleep, but a run along the strand soon made "Richard himself again." Upon counting the spoils we found he had killed fifty-seven, counting, of course, the crippled ones, and had only fired about seventy shells. Both Boreas and myself were fair shots, but this performance was so far ahead of anything that we could do, that we simply acknowledged that this sporting Crichton was way ahead of us. Among the spoils was a magnificent sea fishhawk, whose keen eye had not detected the cheat, and skimming along the water had dropped among the decoys intent on securing his breakfast, but received a reception he little bargained for. He fell near shore with a broken wing, and fought his captors with beak and claw, defiant to the last.

As there was no way of shipping our game to our friends at home, we lived on ducks cooked in every imaginable manner, roasted, stewed, fried, broiled and hashed, until they became as unpalatable as the traditional partridge eating every day for a wager.

Several days of rainy, cold, foggy weather now ensued, which kept all hands closely confined to the house; our provisions were exhausted, and we started one evening to Goose Creek Island, some five miles distant, to replenish our store. There was a heavy head wind blowing, and soon the rain came down in torrents; the sails had to be lowered and we went to work with the oars; it was hard pulling and we made slow progress against both blast and tide, and not until night came did we make the landing. Then there was a tramp of two miles in our heavy rubber boots, along the causeways of the swamp and ox road through the pines. In single file our party stumped, slided and waded along the miry route, at one time almost stalled in the quagmires, another time up to our hips in some deep hog wallow. It was tough work, and when we finally reached the store wet and miserable, we were panting from our intense exertion like the winner of a four-mile steeple chase.

We found the store closed, so we hunted around for some place to get lodging. Tim led us to a house not far off, and in response to our knock we were civilly invited in. The picture in that room was full of interest to us, one of strong lights and shadows, such as painters of the Rembrandt school would have loved to have protrayed on canvas.

The apartment occupied the whole length of the cabin, the floor was of dirt packed hard, a large fireplace occupied one side, and the smouldering pine knots would occasionally flare up into a bright blaze, alternately glooming and lighting up the interior. A high four-post bed fronted the fireplace, which was half concealed from the rear portion of the room by a bed quilt suspended from a rafter. The walls within had been adorned with illustrated papers tacked to the logs, not only to keep out the wind, but also as art decorations.

On the bed sat one of the most aged beings that ever mortal eyes rested upon. Her stockinged feet rested upon a chair, her long disheveled white hair being in tangles down her back, but her face was one not soon forgotten; it was like "She" when her charm had failed, and looking every day her age. The visage was plaited with wrinkles, covered and entwined with lines, furrowed with creases and corrugated with crows' feet. Her age was subject for wild conjecture; she looked like the actual Cumæan Sibyl, to whom Apollo granted her prayer that she might live as many years as she had grains of sand in her hand, but as she neglected to ask for health and youthful bloom, she shows her antiquity very plainly.

Her wasted figure was clad in homespun, and she rocked her body to and fro like Sycorax uttering a curse, or Meg Merrilies invoking a tempest. Her eyes were still sharp and bright, and her glances elfin-like and uncanny. Suddenly she stopped rocking, felt around the bed with her skeleton fingers for her tin tobacco box, opened the lid, and then took out from the bosom of her dress a stick about the size of a lead pencil with one end chewed fine, this she rolled around in the snuff, next she lifted her lips with the fingers of her left hand, while with her right she rubbed the stick all along her blackened toothless gums, wiping the grains of tobacco from the outside of the orifice with her long, fexible, discolored tongue, then she wiped the saliva from her mouth with the back of her hand, which in turn was cleaned by rubbing it on the bed clothes. She then gave a sniff of content, and sat, sat, her senses steeped in a dreamy repose. This was the first time I ever saw the practice known as "snuff dipping," and the performance was simply sickening.

At the foot of the bed a little boy sat rocking a cradle, in which was an infant not over a week old. Thus the cradle and the grave were cheek by jowl.

The owner of the house of course placed his house at our service, but finding that we would have to sleep in the same room we were sitting in, the Professor demurred at remaining over night, saying that it was against his principles to sleep in the same room with a lady, even if she was a little elderly. Boreas demurred, too, because the infant would certainly cry, and its mother (who remained during our visit in a dark corner) would not be able to keep it quiet, besides a crying baby always made him lose his night's rest.

We all decided to try further, the real reason being that the atmosphere in that apartment was appalling and nauseating.

We met with success at the next house, and though they are mostly all alike, this one was clean. A huge fire was made, and our host sold us a gallon of Catawba wine. We decided to stay, though behind a hanging blanket was a trundle bed, wherein four daughters of the host, aged from about sixteen to twenty-five, lay snugly tucked in. Even the Professor, who was broken down and tired out, was fain to yield to the urgency of the case and crawl beneath the blanket of his shake down.

In the morning, before we awoke, the girls got up, dressed, and cooked the breakfast, and after we had made our ablutions at the branch just below the house, we found on our return the beds made, the floor swept and a hot meal of Johnny cakes, bacon and coffee awaiting us.

Goose Creek Island is one of the most inaccessible, uncome-at-able places to be found in the South. Its area comprises several thousand acres, and its soil is unusually fertile and admirably adapted for the raising of cattle. The island is surrounded for many miles inland by almost impassable swamps; access by water is had through a narrow, tortuous channel only navigable by the smallest of craft. For miles around the water outside of the passage way is only a few inches in depth, and a man in rubber boots could wade dry shod all day long this worthless stretch of water, which is too shallow for fish and too deep for agriculture. Hence the islanders lead a very retired and isolated life, practically as much shut off from the world as if they were in the midst of the Atlantic. There are about 250 houses on the place, mostly cabins, though there are several well to do planters who, educated and refined, keep aloof socially from the poor and illiterate inhabitants. The women of the latter class are buxom, but with no form to speak of. None of them wear corsets, their complexion is of the same muddy, unhealthy color as the men's. The girls are shy and retiring, but still they are daughters of Mother Eve, and in their way strive to keep up with the latest fashions. Their principal dress is of calico cut strait, and many of them use bustles, and as newspapers are scarce they employ dried sea grass bunched in a knot, and as their dress is not fashioned long behind, it tilts up in a most comical manner, and displays to a looker on an expansive view of their homemade yarn stockings.

The women are immeasurably superior to the men in everything, they are good, modest and hard working, and labor from morning to night; all of them have peculiar pathetic mournful-looking eyes, and all of them use snuff. These are the same people that Col. Byrd, of Westover, Virginia, wrote about, who first discovered them when he surveyed the Great Dismal Swamp over a hundred and fifty years ago. Col. Byrd, after exploring that veritable *terra incognita*, published an account of his adventures in what is known as the "Westover Manuscript," one copy of which is still preserved in the State library in Richmond, which was written in 1725. Col. Byrd says:

"The men for the most part are just like the Indians, and impose all the work on the women, they make their wives rise out of bed early in the morning, at the same time they lie and snore until the sun has risen one-third of its course and dispersed all the unwholesome damps. Then after rising, and stretching and yawning for half an hour, they light their pipes, and under protection of a cloud of smoke venture in the open air, tho' be it never so little cold they quickly return shivering to the kitchen corner. When the weather is mild they stand leaning with both arms upon a corn fence, and gravely consider whether they had better go and take a small heat at a hoe, but quickly find reason to put it off for another time. Thus they loiter away their lives like Solomon's sluggard."

The author of the novel called "Annals of a Quiet Neighborhood," should come here for inspiration. An occasional bark of a dog, or the cawing of a crow high in the air, is the only thing that breaks the stillness, even echo is silent. Around the village store the male denizens sit in the sunshine and solemnly puff at their pipes, as imperturbable as ever were the old Dutch burgers with Governor Wouter Van Twiller in their midst in the tavern porch at Nieuf Amsterdam, smoking their long calumets, and discussing the probable appearance of the English fleet off Spuyten Duyvil Creek.

One is apt to conclude that after all these listless people are the happiest of their kind, and barring chills their existence is one of passive content.

Nearly all the able-bodied Goose Creek Islanders own a boat, and nearly all of them have hidden away under the bow a box of some two feet square, one side of which is closed with a sliding lid; an inspection of its contents will reveal a kerosene lamp and a tin reflector.

A dark, calm night is chosen, and the boat is noiselessly propelled by a pole along the estuaries and creeks where the ducks congregate to sleep; the gunner sits in the bow, with his ears open, and so keen is a trained pot-hunter's hearing that he can detect the swimming of the ducks as they move away. The pusher sends his craft along with hardly a ripple, the gunner now opens the slide and a dazzling glare flashes over the water; the ducks, bewildered by the light, mass together and swim slowly in a circle, blinking at the blinding gleam. The gunner fires at point blank range, and dozens are killed at one discharge and as many more crippled, that flutter away and die on the marshes. The balance fly aimlessly away and the next morning migrate to distant parts.

Hunting waterfowl by firelight is a grave offense against the State laws, and heavy penalties are exacted if the offender is caught. But, ah! there's the rub. It is almost impossible to capture these pirates, for as soon as the shot is fired and the dead ducks gathered, the lid of the fire-box is closed, the craft glides away in the darkness, and the reflector is not used again until some remote point is reached. It is needless to add, this kind of shooting drives all the ducks from the neighborhood.

The creed of the Goose Creek Islander is that the wood, the water and the wilderness is free to all. In the late fall nearly every able-bodied man among them starts off to Currituck and other shooting grounds where the Northern sportsmen most abound, to serve as guides and hangers on. Most of the Northern club men are very wealthy and they scatter their money lavishly, and the Goose Creek Islanders receive so much for so little service, that they become spoiled, and charge enormously for everything they are called upon to do. They never hesitate to ask for what they want, and have about as much idea of delicacy as a Piute Indian.

Of course I am only speaking of that class known as "low downers," as for the planters and farmers of eastern North Carolina, a truer-hearted, higher-toned and more generous people never lived. They are famed all through the South for their State pride, their kindness and their unstinted hospitality. I think every sportsman who ever shot over the blinds at Currituck or vicinity will indorse every word I write about the grasping rapacity of these islanders, and I know that those who are yet to go there will be glad they have read these lines, that show them what to expect. To those contemplating a trip to these famous ducking grounds, one word of advice. Estimate the expense of your jaunt, then multiply the total by three, and you will then have enough left, if you are economical, to get back home.

Two of our party, the Professor and Major Clam, had had enough of sporting, so they, in company with the ex-keeper, took a boat bound for Newberne, N. C., and bade Boreas and myself a sad farewell. As the Professor is writing a novel, and went on this expedition to collect materials, we may in the course of time see the character of the Goose Creek Islander drawn to the life.

Having purchased our provisions our trio now put back to the light house. The wintry weather, interspersed with storms, kept us on the Point, and we found that our anticipated sport of brant shooting was illusive as a dream, for every one of them had suddenly disappeared. The solution was an easy task, some of the islanders had been shooting them in the night, and scared them off for good and all.

In a few days our situation grew desperate, our stock of food, thanks to Tim, was well nigh exhausted, bacon, hard-tack, flour, sugar, coffee, were all gone, and we were living on cornbread, rain-water and ducks. Oh, those ducks; we were sick of such diet. We felt like the Welsh vicar, when he said grace:

> "For ducks hot, and ducks cold,
> For ducks young, and ducks old,
> For ducks tender, and ducks tough,
> We thank the Lord, we've had enough."

The shipwrecked mariner, or lonesome mariner, was never more anxious to leave his abode than my comrade and myself to get off this desolate sandbank, but the winds still held high carnival, and a sail some twenty miles out in the sound to catch the Newberne boat was more than Tim was willing to undertake.

One morning we saw the U. S. tender Violet beating to windward, so we hastened to the top of the tower, and made frantic signals by waving a blue mantle to send a boat ashore. We could see by the spyglass the officers consulting on the quarter deck, but evidently the waves were too high for them to think of launching their pinnace.

At last, when our cupboard was almost as bare as Mother Hubbard's, and we were living on fat meat, meal and rain-water, the welcome sound of the steamer's whistle was heard, and we joyfully collected our traps and made ready to go. What was our astonishment, when Tim absolutely refused to sail about a half a mile out to meet the Manteo, unless we paid him fifteen dollars.

"Well," said Boreas indignantly, "if this don't take the rag off the bush, these people don't know what gratitude is. Just to think what I have given that man, all my spare underclothing, boots, hat, handkerchiefs, ammunition to last him half of his life, tobacco that will keep his jaws moving, and his pipe full the balance of the year, fed him like an alderman, wined him like a lobbyist, and now to be blackmailed in this manner, I won't pay, that's flat." So we sat there looking at each other too mad to speak. How I wished for the sandals of Vidar which sustained equally on the earth, air and water.

But it was no use to kick, Tim held the trump cards, and he knew it, for he reclined on the sent of the boat with an air of supreme indifference. We could not afford to remain, it would be days before another steamer would pass the place, and we were threatened with an absolute famine. All this time the boat was approaching

rapidly, and what must be done, must be done at once. So we were perforce compelled to submit to the extortion, and we paid the money, very much in the same spirit as the traveler in Spain, who, when wending his way along a mountain defile, heard a soft voice crying, "Charity, gentle stranger, for the love of God, charity!" and gazing around beheld a half a dozen long barrels of the musketoons leveled at his heart.

So we cashed up, Tim hoisted sail and in a few minutes we were safe on the steamer's deck. Tim shouted goodby most cordially, and said we must certainly let him know when we came to these parts again. CHASSEUR.

Natural History.

"IN A GARDEN."

Editor Forest and Stream:

If Miss Fannie Pearson Hardy will permit me to borrow the above caption from the first charming number of her "Out of Doors Papers," I will relate a little "episode" (as "Kingfisher's" friend "Old Sam" would call it) which I witnessed "in a garden" to-day, albeit I cannot approach Miss Hardy's felicitous style of treating such a subject. The "episode," though only a trifle, is perhaps worth relating.

I was walking along one of the streets of this village, and passed by a flower garden where a large bed or bush of salvia grew against the front palings. The plant or plants was filled with a great profusion of bright red flowers, some of which reached above the fence. Hovering over these were two hummiug birds, whose coats of metallic sheen glistened in the sun like burnished gold and silver. The little creatures darted hither and thither, inserting their long bills into the tube-like flowers with absolute precision and lightning-like rapidity, but all the while engaged in a fierce combat with each other. They constantly maintained a position facing one another, and only six or eight inches apart, suddenly rising a dozen feet into the air, where they would have a little battle, and as suddenly dropping like two bullets on one string back to the flowers, over and among which they would flit about like animated sunbeams.

Occasionally they would "hitch" and flutter all the way to the ground through the leaves and branches, where they would lie and pummel each other like two school boys, one on top and the other beneath, the top fellow pausing to take breath and then pummeling some more.

The under bird would appear to give up and look very dilapidated, with outstretched wings and disordered feathers; but the moment the top fellow let go and rose up to the top of the bush the bottom one would be there facing him again.

The most interesting feature of the performance was their utter obliviousness to my presence. As I stood near the palings watching them, which I did for a quarter of an hour, they would flutter around my head and about my face, occasionally striking me with their fluttering wings on face and hands, and one of them lighted for a moment on my thumb.

One now and again lighted on a picket within a foot of me and gave a quick side glance toward me, which was the only notice I appeared to excite from them. At last one of them retired, vanquished, and the other exultantly took possession of the flowers.

These birds had a greenish color on the back with dusky white underneath, and their bills were scarcely an inch long. COAHOMA.

CLARKSDALE, Miss.

THE HIBERNATION OF REPTILES.

(Concluded from Page 243.)

ONE particular toad (*Bufo vulgaris*) during a partial hibernation afforded me opportunities of making some observations, the recording of which may be of interest to batrachiologists. Not to weary my readers I will briefly state that this *Bufo* was an especial pet, and I had reason to believe that a good understanding existed between us. For example, when I saw it was restless and not able to find some snug corner in which to hide itself, I covered it over with moss or mould or some sheltering refuge where it remained content. Or, during very hot weather, when *Bufo* looked somewhat dry and dusty, I put him into a pan of water, out of which he would at first scramble once or twice just to show that he had a will of his own, but on being put back settled himself in real enjoyment, particularly if a tuft of grass or such like shelter screened him, where he would remain the entire day, and subsequently go into the water-pan of his own accord, which he had never done before, though it was always there. Consequently when on the approach of winter, this *Bufo* began to be sluggish, showing a disposition to retreat in corners which afforded no efficient shelter as hibernating retreats, I scooped out a place in some earth in one corner of the conservatory, and here, having discovered that his needs were understood, he readily established himself, working his way down with his hind legs as frogs and toads do, and burying himself entirely, excepting his snout and the upper part of his head. Frosty weather setting in, I covered him with a flower pot, thinking he was settled for the winter, but though he remained thus for five weeks his eyes were never closed when I cautiously raised it. Then came some very mild days, and one morning, on lifting the flower pot, the toad had disappeared. He had tunneled a passage out. He was in a drowsy, uncomfortable position, behind some plants. Next he was placed within a very large, deep flower pot, with a supply of earth and moss at the buttom, and here he again comfortably entrenched himself, making a cavity as before till half buried, but with his eyes still open. Not till the middle of December, during a hard frost, were his eyes quite closed as in true hibernation. At this period one was able to observe that the eyes, so prominent when open, now recede so as to be almost on a level with the surrounding parts, and that if the little animal were aroused, the eyes only by very slow degrees opened and resumed their prominence. This recession of the eyeballs—owing to a retractor muscle possessed alike by toads and frogs—is distictly protective. If disturbed when the torpor is not thorough, the creature extends its limbs in a helpless manner, and simultaneously you perceive the throbbing at the throat, showing that respiration, a moment ago suspended, begins at once and that air is being rapiply swallowed. The action of the nostrils at the tip of the snout is also seen, the valve which closes the small orifices working quickly, like a blinking eyelid. Should there be no other movement whatever, the toad remaining apparently insensible, the rapid breathing immediately betrays alarm. There is also a pulsation at the side of the head, where the gills formerly were. By degrees the eyes are then opened and the breathing becomes regular. After such interruption to its midwinter slumbers the toad does not readily compose itself again; and even when replaced in its bed the limbs remain uncomfortably extended.

The temperature where it was at first being seldom down to freezing point, and the toad never perfectly torpid, it seemed kinder to place it out of doors altogether, and also the frogs and newts in a similar receptacle. That toad having displayed remarkable climbing powers —though it seemed scarcely possible for it to reach the edge of that deep prison, where it now was—a heavy board was placed over it, and at the same time covering the others, and the entire family were then left "out in the cold," undisturbed for weeks. During a very hard frost by and by, curiosity prompted me to peep once more at my hibernating batrachians. The frogs and newts, as already stated, were—with the exception of the poor little *Molge vulgaris* that defied seasons—encased in solid ice, but *Bufo* was *non est*! When he had got out it is impossible to say. There had again been an interval of thaw; but that this persisting and persevering toad should have had strength to reach up and raise that heavy board sufficiently for his escape seemed absolutely incredible, but I am entirely convinced that he did this, and by his own exertions only, having witnessed his persevering struggles and achievements on several previous occasions, and that no other agent than himself accomplished that feat.

With the return of spring the little garden was again and again searched, and I had relinquished all hope of ever seeing my highly endowed *Bufo* again, when lo! one morning, April 10, 1888, there he was, sitting quietly meditating on the floor of the conservatory. Last summer he had discovered a little corner chink in the wall, and had used this as a private exit and entrance on various occasions, going and coming at his own pleasure. This gap he had evidently remembered, and had now made use of it to return to his old haunts.

CATHERINE C. HOPLEY.

THE WILES OF A MOTHER TEAL.—Lake Koshkonong, Wis., Oct. 14.—While we were going up to the slough after pike, late one afternoon in the early part of July, we saw a striking illustration of parental protection among our feathered friends. We were rowing leisurely along, when all of a sudden out of the weeds on the river bank fluttered a female bluewing teal. We stopped, supposing that the bird was hurt, for she acted as though her left wing was broken. She continued to flutter in this way until she reached the middle of the river, when she stopped, righted herself, and gave a peculiar call, which, to our surprise, was answered in a few seconds by eight young teal, who, while the mother had been manœuvering, had gained a distance of six or eight rods up the river. As soon as the call was answered, the old bird flew to them and hastened them along, talking to them as they swam, until they had gained a considerable distance further up. Then she swam across the stream with them, the young ones following in her wake. All this happened in a very short time and we were astonished at the skill and seeming reason which she displayed.—REX.

WADERS IN SANDUSKY BAY.—Cleveland, O., Oct. 13.—I had the opportunity yesterday of examining a number of wading birds shot by Mr. E. A. Brown, of Ashtabula, at Upper Sandusky Bay, Ohio. Among the lot I found a few so rarely met with in this locality that I thought the matter worth recording. Of the number most conspicuous was a pair, male and female, of the great marbled godwit (*Limosa fedoa*), eight red-breasted snipe (*Macrorhamphus griseus*) and four long-legged or stilt sandpipers (*Micropalama himantopus*). All of these birds were in perfect fall plumage. But few of this godwit have been met with on the south shore of Lake Erie. The first pair ever noted were shot here by the late Mr. A. Hayden, in 1837, and are now in the cabinet of the Kirtland Society of Natural Sciences. Of the red-breasted snipe, several have been noted in this locality within the last thirty years. Previous to this collection but one specimen of the sandpiper had been seen here. This was shot by Mr. R. K. Winslow, of this city, and is now in the above-mentioned rooms. —DR. E. STERLING.

"THE AUK" for October contains the following papers: "The Present Status of the Wild Pigeon (*Ectopistes migratorius*) as a Bird of the United States, with some Notes on its Habits," by William Brewster. "Some Account of the Birds of Southern Greenland, from the MSS. of A. Hagerup," edited by Montague Chamberlain. "Description of the Nest and Eggs of *Megascops asio maxwelliæ*, the Rocky Mountain Screech Owl," by Capt. Charles E. Bendire. "Notes on Birds Observed in the Vicinity of Englewood, N. J.," by Frank M. Chapman. "Notes on the Blue-Winged Warbler and its Allies (*Helminthophila pinus, H. leucobronchialis, H. lawrencei* and *H. chrysoptera*) in Connecticut," by Edwin H. Eames. "List of the Birds of Fulton County, Kentucky," by L. Otley Pindar. "A Second Specimen of Cory's Bittern (*Botaurus neoxenus*)," by W. E. D. Scott. "A Summary of Observations on the Birds of the Gulf Coast of Florida," by W. E. D. Scott.

ANOTHER BLACK FOX.—Winnipeg, Man., Oct. 12.—Feathered game, chickens and ducks, are reported plentiful in this Province, but extremely shy and hard to get at. Wm. Hine, Jr., one of Winnipeg's crack shots, was out yesterday after chickens. He saw plenty of birds, but they would not lie to the dog. Though he got no birds he bagged a fine black fox. "Blacky" was watching some pinnated grouse that were perched on a hay stack, and as he saw the team approaching he dropped into the grass and allowed Hine to come within close range. It is needless to say that the said fox was a male.—STANSTEAD.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price $2.50. For sale by FOREST AND STREAM.

Game Bag and Gun.

THE GAME SEASON.

Editor Forest and Stream:

To-day opens the shooting season with us, and the prospects bid fair for fine sport. There is a greater supply of quail than ever before; one day last week there were twenty quail on Main street; they walked around as unconcerned as if they were in a stubble field; and a day later I saw one sitting on top of a dwelling house. The report comes from the Territory of an abundance of quail and chickens, which speaks well for our shooting, as we can take the train and run down to the prairie country in the morning and have four hours of shooting and be back at six in the evening. The report comes of several good bags to-day. John Tobien with his red Irish setter Lara brought in 24, John Fetherstun killed 18, Murdock 10 and Jones 15. Ye writer was compelled to stay at home, and could only wish for time to go out among the birds for half a day. But my time will come in the future.

To-day four of our market-hunters leave for Oklahoma, to spend the winter shooting and shipping game. Their absence will save more than two thousand quail to be shot at by the sportsmen of our town. You will hear from me later when I can take time to write. F.

SENECA, Mo., Oct. 15.

Editor Forest and Stream:

I have found another skin hunter. A. G. Requa, of this place, has a steer skin mounted on a light wooden frame, which he and another man use for shooting geese. They get into it, button the leg-skins around their legs, and the imitation is so perfect that they are able to walk right into flocks of the poor unsuspecting birds. They are shooting for the market and have killed over 400 geese so far this season.

The birds are abundant here. I was out to Fresh-Water Lake, twelve miles north, one afternoon last week and the lake and surrounding wheatfields were literally white with Arctic geese. I presume we saw 10,000 of them during the afternoon. There were also a great many Hutchinson and Canada geese. I killed thirteen with a .32cal. rifle and could have been killing yet if I had been disposed to be piggish.

Prairie chickens were plentiful at the opening of the season, but most of them have been killed off. One local shooter killed forty-two in a day. Ducks are usually abundant in this region, but owing to the dry season, are scarce this fall. G. O. SHIELDS.

DEVIL'S LAKE, North Dakota, Oct. 13.

Editor Forest and Stream:

I have recently made several trips along the south and west coasts of this island, and have made it a point to find out as much as possible about the game prospects. From what I saw and learned, there is an abundance of fine game in many portions of the island, and if properly protected will afford sportsmen good shooting.

The new deer law, if strictly enforced, will prevent many persons coming into the country from abroad and slaughtering large numbers. At present quite a number are shot in season and out by the natives, who think they have a right to shoot as many as they like—to eat. At a small hotel on the west coast last July and August venison was put on the table quite frequently, shot within a few miles of the town. Bay of St. George and Bay of Islands on the west coast are the best localities for caribou shooting; and the steamer Harlaw makes fortnightly trips from Halifax to points where the game abounds. A number of English gentlemen come each season via St. John's in the steamer Volunteer.

Black bears are quite numerous at St. George Bay and other points on the west coast. CHESTER.

PLACENTIA, Newfoundland, August, 1889.

Editor Forest and Stream:

I laid down FOREST AND STREAM last night with real regret at the close of the "Kingfishers," and only hope we may have Douglass Lake in due season. What is "Ahwahsoose" up to? I enjoyed his "Hunting Without a Gun" much, for it is about the only kind I can indulge in now. Nature has issued her "statute of limitations" for me, but I think if your Pennsylvania correspondent would send some of those squirrels here, I might get the old gun out yet. The gray squirrel seems to have ceased to be an important element in our fauna. My friend Paris's factotum, "Jem," shot a ruffed grouse on his lawn a week ago, and I have heard of two more in the village. Are they yielding to civilization? VON W.

CHARLESTOWN, N. H., Oct. 7.

Editor Forest and Stream:

Now that the trap season has closed the sportsmen are turning their attention to field shooting. The open season for quail in this State went into effect last Tuesday, and the future promises grand sport. Ducks, teal principally, are in good numbers, and several fair bags have been made. Mallards also have made their appearance, but very few have been bagged. Snipe are here and some excellent sport has been had on them the past week. The marshes are dry, and they are found about the edges of the lake, which makes the pursuit of them very laborious. UNSER FRITZ.

ST. LOUIS, Mo., Oct. 15.

Editor Forest and Stream:

Wild goose shooting is at its best here now, and good bags of both Canada geese and wavies are in order for those who are experienced in this kind of shooting.

Canada geese, canvasback, redhead and bluebill ducks bred this season in Lake Manitoba, while the wavies raised their broods along the western shores of Hudson's Bay. The weather has come off warm and pleasant, which will keep the birds here, but make them wary and hard to approach. STANSTEAD.

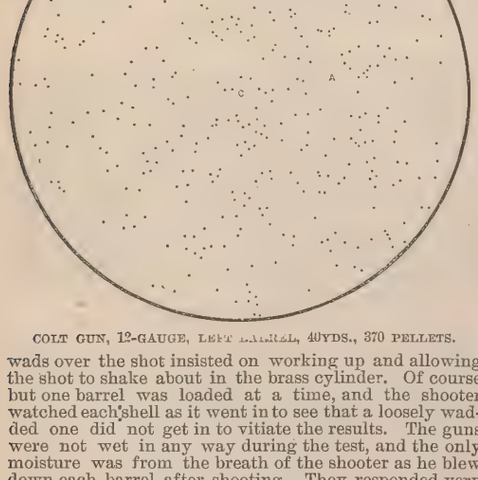
STILLWATER, Manitoba, Oct. 14.

TO HUNT LIONS.—Messrs. R. P. Carroll and H. A. Carey, of this city, left on the City of Rome last week, bound for Zanzibar, where they will hunt lions and other large African game.

PATTERN AND PENETRATION TESTS.

THE COLT GUN.

WHEN the Colt guns of Messrs. Merrill and Moss were tried in our series of tests the report brought a prompt protest from the Colt armory in Hartford. "They have been out of the armory for several years. Have been manipulated in various ways, perhaps rebored, and may not now fairly represent our output. We would like to try a gun or two of our own directly from the factory." "All right," said FOREST AND STREAM, "send along man, gun and charges, under the invitation which is open to every gun maker the world over." A test was made of a pair of Colt guns on Oct. 2. They were beautiful to look at, and expert Alex. McMullen, who brought down and shot the arms, had a right to the pride he felt



COLT GUN, 12-GAUGE, RIGHT BARREL, 40YDS., 405 PELLETS.

in handling them. The transparent finishing fluid used on the barrels brings out the steel and iron grain in the clearest possible fashion, and there is none of the dull browning generally found on barrels. This finish demands the nicest work from start to finish in making the barrels, as every blemish is brought out in a startling fashion. The smooth-working breech machinery was a pleasure to handle, while the bits of walnut used in the stock had the richest grain known to this fine finishing wood.

The day was fortunate for a test. There was a 2 o'clock wind, blowing a bit gustily at times, and freshening up as the 60yds. range was reached. Still, it was a good enough day to test any gun, and the two Colts, one a 12 and the other a 10-gauge, ran smoothly from start to finish.

The paper screens from the liberal way in which they were spattered with shot gave promise of a high percentage of pattern, but it remained to be seen what sort of charges were in the big brass shells which had come down with the guns. It was the first time that a brass shell had appeared on the range in connection with a test. They were not particularly handy or satisfactory. The

COLT GUN, 12-GAUGE, LEFT BARREL, 40YDS., 370 PELLETS.

wads over the shot insisted on working up and allowing the shot to shake about in the brass cylinder. Of course but one barrel was loaded at a time, and the shooter watched each shell as it went in to see that a loosely wadded one did not get in to vitiate the results. The guns were not wet in any way during the test, and the only moisture was from the breath of the shooter as he blew down each barrel after shooting. They responded very well and remained quite clean during the entire test.

When the three test charges were opened, the powder was found to be fairly even as to weight, though the greasy wads had formed a marked deposit of verdigris in the cartridge shell interiors. The shot charges, however, were very irregular, and the shot used was very far from being even or true. There were dumb-bell and pear-shaped shot by the dozen, and how the count and weight came out a glance at the record will show. In order to give the reader an idea of the entire performance of the guns we give the figures for each shot fired as follows:

COLT GUN, 12-GAUGE, 40YDS.

147	172	7½	7	147	191	7	7

It will be noted as a peculiarity of the gun, at least in comparison with many others tested, that in many cases the aimed circle is the best for that shot; often a shifting of the striking center to secure a better pattern only led to a falling off in the record. This makes our column of inches between center rather misleading, unless this fact is kept in mind. With this brief story of the day we learn the formal record of the two guns:

CLAREMONT, N. J., Oct. 2, 1889.

TEST MADE AT FOREST AND STREAM GUN-TESTING SCREEN.

Gun—Colt Hammerless. Cost, $—. No. of gun, 4,... Weight, 9lbs. Length of barrels, 30in. Gauge, 10. Ri... barrel, full choke. Left barrel, full choke.
Weather—Clear. Direction of wind, 2 o'clock. Force of wind, 8 miles per hour. Thermometer, dry, 59°. Do., wet, 53°. Humidity, 67°. Barometer, 30.1in.
Charge, as given by holder of gun:

BOTH BARRELS.

Shell—U. M. C. Brass.
Powder, Brand—No. 4 Ducking.
Powder, Quantity—3¼drs.
Shot—*Make*—Tatham's. *Quantity*—1¼oz. *Size*—No. 8 Chilled.

CARTRIDGE ANALYSIS.

Three Cartridges Taken at Random.

BOTH BARRELS.

Loading.		*Powder.*	*Shot.*	
P. E. wad over shot; two P. E. wads and card over powder.	1...	101 grs.	603 grs.	561 pellets.

NEW ENGLAND GROUSE.

THE October shooting is upon us, and best of all, the chances are good. Ruffed grouse are fairly plenty in Massachusetts, and some good bags have already been made, since the leaves began to fall, so as to make the brush shooting more practicable, especially as the birds are wilder than usual and take to wing at the first alarm. Every gunner has a dog; in fact, such an animal is indispensable to success in grouse shooting in this State. The gunners say that the birds lie fairly well to the dog, but they are remarkably shy when the gunner enters the woods alone. Boston sportsmen have been up into New Hampshire and they have brought back some fairly good bags. Partridges are scarce near the settlements in some sections, but in the old woods—the dense forests—they are unusually plenty. Bags are made of twenty a day by some of the market-gunners. I am sorry to say that there are still market-gunners, in spite of the game laws of any State, and that the birds are coming into the Boston market in greater abundance than last year. They are sent in to the commission dealers by the grocerymen of the towns. They come in all sorts of ways. If the game laws of the State prohibit their shipment, they are smuggled over the line in some way, and once they get into Massachusetts they are forwarded without restraint. The number of birds killed in Massachusetts, near the line, is a wonder. There are ten partridges killed on the Massachusetts side of the line where there is one killed in either Maine or New Hampshire.

In Maine grouse are plenty, as a whole, though nearer the settlements in some parts of the State they are very scarce, as early stated in the columns of the FOREST AND STREAM. But even in these sections the birds are more plenty than at first supposed, for the extreme density of the foliage up to very late in summer and the early autumn afforded such a shelter for them that they were not seen in such numbers as has been the case since. But it is in the far distant woods that the partridges are unusually plenty. Their tameness is also almost painful, and something to make the heart of anything but the pot-hunter relent—no, the market-hunter must not be forgotten. But this tameness of the ruffed grouse in the old woods of Maine is something unusual this fall. The birds do not seem to fear man. To shoot them on the ground is as easy as it would be to make game of the farmer's poultry, and equally as sportsmanlike. Some of the shooters are using rifles of small caliber and aiming at their heads. One Boston gunner claims to have taken five in one morning in this way as he followed up the old lumber road in Kingfield, in Franklin county. A party of gunners report that they shot twenty birds from a wagon as they drove through a wooded section only a few miles from Calais. In that section the shooting is reported to be especially fine. On the Penobscot, in the back towns and beyond the settlements, the partridge shooting is especially good. The birds killed by the gunners are coming into Bangor and the towns above in unusual numbers. The favorite method is for the gunner to follow up some old lumber or tote road as far as he can and get back the same day, and if the weather is suitable he is sure of some shooting. Shooting from wagons and teams is also a favorite method of gunning—more popular than ever this fall. A horse is selected that is not "gun shy," and he is driven up the mountain roads and roads through the woods that are little traveled, with results often very satisfactory to the gunner; for he is able to do a good deal of his shooting from the wagon, and without the trouble of alighting. Even the teamsters and the farmers have "caught on" to this sport, and they all carry their guns. The afternoon of a still, bright day is the best. Then the grouse come out of the thick woods into the roads to feed and to burrow in the sand. They are not very coy of a team till they have been a good many times shot at from a wagon; then they begin to fear what ordinarily they would allow to come very near them, and it is an easy matter for them to skulk away so quietly that the gunner is none the wiser for their presence.

It is a curious fact that these dense woods birds will not lie to the dog well at all, and it is explainable only on the theory that wild animals are the birds' most dreaded enemy. They quickly take to the trees at the first approach of a dog. A fact came under my own observation the other day that has since given me food for thought. We were partridge hunting some six or seven miles in the wood under the side of old Aziscohos, which towers above Richardson Lake on one side and the Magaallway Upper Settlement on the other side. We had followed up an old lumber trail a long distance, with fair success in shooting, when all at once we noted that every partridge quickly took wing and into the dense woods so suddenly that even a wing shot was almost impossible. Suddenly I had a glimpse of a dark animal some twenty rods ahead. It skulked around a stump and up the fallen trunk of the tree which had grown on the stump. None of us had more than a glimpse of the creature, but almost instantly several partridges took wing from the brush directly before where the creature was creeping. These we followed up and shot. They had each taken to high trees, where they did not seem to have any fear of us. The guide saw the animal plainer than any one of us, and he unhesitatingly pronounced it a fisher, or as the hunters of their region term it, "a fisher cat," the real name of which is the pekan, or the *Mustela canadensis*. In hunting for the partridges which had been put to flight by the fisher we noted several bunches of feathers, evidences of previous feasts of the animal. It was plain that the fisher was creeping upon the birds, with his body as far concealed by the brush and treetops, fallen by the lumbermen, as possible. The guide told us that formerly these animals were very plenty, and that it was useless to look for partridges in the old woods at that time. The birds come to be very shy of any animal on the ground, and hence they will not lie to the dog, as will the birds near the settlements where the fisher is unknown.

Oct. 21.—The recent beautiful October days have been welcomed by the sportsman with dog and gun, and the results are very satisfactory in many instances. Partridge shooting continues good, especially so in the remote districts of the New England States. But in Maine the trees begin to be nearly stripped of their unusually heavy burden of leaves, and the birds are more wary and difficult of approach. Perhaps this is well, for if the terrible slaughter of the earlier fall had continued, the results must have been disastrous to the stocks of birds that should be left to breed. Deer shooting is good in Maine, but it promises to be better as soon as the falling of the leaves is entirely over. SPECIAL.

CHICAGO AND THE WEST.

CHICAGO, Ill., Oct. 10.—Last week I said something about the Rising Sun Game Park Association, giving what I could learn from the literature submitted and from the correspondence with the projector, Mr. Hicks. It seemed probable, however, that there was something in the matter worth investigating, and accordingly on last Thursday went out to Ashton, which is only eighty miles from this city, to make such personal inquiry as would compass all the facts. The result of this inquiry I think worthy of notice.

I found Mr. Hicks a very pleasant and affable man, hardly showing the full tale of his more than sixty years. It required but a little additional time to learn that he was a man with a hobby, and a hobby that permitted him no rest. He poured forth copious information about the advantages of his country, and showed abundant reasons why his proposed game park should be a money-making project as well as a boon to sportsmen. It seemed to him easy to stock a portion of said park with buffalo, and he dazzled me with figures showing the immense profit in buffalo-raising, treating very lightly my modest reminder of the difficulty of first obtaining his buffalo, and assuming—what I don't personally for a minute believe—that he knew more about where to find buffalo and how to catch them than I did. He thought also that deer and antelope could be raised in great numbers in the park. Undoubtedly they could be if plenty of money were expended upon the attempt, but it would be a double-decade before land enough and deer enough could be obtained to make hunting such game in the inclosure a possibility for any right-minded sportsmen. He thought wild turkeys could be bred in numbers. This is probably true, but unless the adjoining four or five miles of groves and timberland could be secured the turkeys would be apt to wander off and be killed elsewhere. He thought that the draining ditches of the former great adjacent marsh could be dammed and the old marsh restored, with its former wealth of wildfowl. This is probably true, for this was once a wonderful marsh for ducks, geese, snipe, and even last spring, when the drained marsh was wet with heavy rains, there were thousands of wildfowl, and the snipe shooting was fine, 100 and 200 a day being made by market-shooters. Before the drains could be dammed, however, it would be necessary to buy or lease on long term a large acreage in the marsh, and this is not yet done. Mr. Hicks thought also that trout could be raised in the streams or ponds made by the cold springs of the bottom lands. I do not believe this practicable, for if the marsh were dammed the chief springs would be either overflowed or left with a very short stream of water between them and the shallow marsh. If a large pond was formed, doubtless the large-mouthed bass, native to all this country, would do well in it. Large pickerel were formerly taken on the marsh before the ditches were cut through. Mr. Hicks thought that quail could be again made plentiful in all this region, and beyond doubt this could be done with careful winter care. The quail is native to the region, and was once extremely abundant there. It has been mainly hard winter weather that killed off the quail. They can't stand the deep snows. There are only a few left in the locality, but no bird thrives better when "planted" in large numbers. It was Mr. Hicks's opinion further that prairie chickens could be made as abundant as would be liked. This is also doubtless true, for no country in all this State is naturally so good a chicken ground. The great marsh and its adjacent grain fields have always drawn the birds together here in large numbers, and even to-day, under the close law of three years, they have increased and show an abundance which is a positive delight to any lover of this grand bird, whose swift destruction in this State has been a disgrace to civilization.

In America all things are possible, and I certainly should not wish to be asked to set a limit for an enterprise of this kind if properly backed by money and energy. Certainly, too, FOREST AND STREAM would wish the boundaries of any such project placed as wide as possible, for it is all in the way of praiseworthy purpose in game protection. Suppose, however, we leave at one side the possibilities of this project and consider only the easy probabilities. It is beyond question true that the tract of land in view could be made a grand preserve for upland shooting. I do not know of any body of land so desirably located of which this is in any measure so true. Here the food is naturally abundant, and the past has shown that the upland birds naturally breed there in great numbers. The chickens come in on this ground in the late fall from all the country about, to a distance of probably fifty miles, and in the spring they have every requisite for a safe and roomy breeding ground. Ducks also once bred there in the marsh and snipe could be made to swarm there if the marsh were restored. I asked Mr. Hicks how much land he had secured by way of leased shooting privileges, and he said the amount was now about 20,000 acres, and that other land owners were willing to lease shooting privileges for little or nothing. The farmers are anxious to stop the depredations of the town market-hunters, which they realize to peril the existence of the last of the native game birds. Doubtless a very large body of land could thus be easily secured in the heart of what is now the best of the Illinois chicken country, and about as good as any chicken country further west, so far as reports for this year seem to go. Should a stock company be formed, as Mr. Hicks wishes, there are about 700 acres of farming land and a very good commodious stone farmhouse ready to be turned in as joint property, and as the capital grew it might be applied to the purchase and lease of other land. The question confronting the company would then be one of raising a revenue from the land sufficient to justify the purchase of expensive farming land for a game park. Mr. Hicks thinks that the revenue of the land devoted to farming and grazing would pay a premium on the investment. I can not see how it would pay a company any more than it does the present individual farmers, but it is very certain that the farming of the preserved lands would not in the least interfere with the raising of the game. Of course, any such scheme as stocking the company for $6,000,000, or even $1,000,000, makes the matter indubitably and purely visionary so far as sporting purposes are concerned. There must be a limited membership, or no one would care to go into an association of the sort. For instance, chicken shooting lasts but about 60 days of the year. Suppose there were even 200 members, and suppose one half of them were on hand. What ground could stand for any time the ravages of so many guns, even at a limit of say 10 birds to the bag? Upon the other hand, the holder of 100 shares ought not to have a single shooting privilege not accorded to the holder of a single share. No man would care to belong to a handicap hunting society, and that feature certainly must be cut off. It seems to me that the questions resolve themselves into the query whether a limited number of wealthy men can be found whose resources permit them to use farming land for shooting purposes, and who can afford to risk the mischance of the farming revenue paying them out on their investment. If such a body of men can be found, there never was so good a chance to found a grand American preserve for upland shooting; and if this hope is not outside the interest and the accomplishment of our wealthy sportsmen, how grand it would be to see this enterprise go on, and to see these noble native birds preserved that other generations may see them, here on what is so preëminently their native home!

Doubtless many would prefer to know exactly what amount of game there is now on this tract in question. To learn of this accurately I started out on the morning after my arrival in company with Mr. Hicks's son Wisner, not in the least sad to think that I was to have a day of October chicken shooting, which always seemed to me to be as elegant and gentlemanly a sport as any within the possibility of the shooter. This transpired after a night of bliss in a big feather bed, with what my old cowboy friends would call "goose-h'ar pillers," and after a breakfast which good Mrs. Hicks may be sure would touch a tender chord in the most callous newspaper bosom. We had along old Mack, a liver-colored pointer who would have scored minus nothing in a bench show, but whom I loved at first sight as one of the old-time race of what we used to call just plain "chicken dogs." Mack's legs had both been broken by a wagon, and they were crooked and lumpy and a little wabbly. His head was gray, his muzzle white and scarred, and his teeth worn down with age and many hunts for mice among the board piles. It seemed a question whether the old fellow could stand a long tramp, but he showed he loved a gun and was bound to go; so off he wabbled, in stiff-jointed trot or solemn, slow and wheezy gallop. Poor old Mack! He is a type of chicken dogs and chicken days gone by.

"I usually find a bunch of birds on the stubble just below the barn," said Wisner Hicks; and thither we turned. We did not find the covey, but not a quarter of a mile from the house flushed a big old cock that went rocking and cackling off in spite of Wisner's long shot at him. Then we turned west, crossed into some clover stubble and then entered a timothy stubble. Here the old dog made game, and won my heart entirely by the way he handled the trail. He was eager but careful, and in a moment he came down on a point which many of our high flyers might well copy. It had been years since I had shot a chicken, and my heart came into my mouth as we stepped quickly up, knowing the birds would jump wild. Then there came the same old bouncing whirr, and the same old flash of gray and brown, and mechanically I pulled down on what seemed to be the same old chicken I missed when I was a boy. The 12-gauge was too good this time, however. The little puff of feathers flew out, forty yards away, and down crashed Br'er Chicken. Up, too, went another bird right in front of me, and fell in a heap before it had started.

"Two down!" I sang out. "Three down!" cried Wisner.

"What? Did you shoot?" said I. And so he had, killing a bird to the right as I shot my first on the left, and firing also into the straightaway just killed.

We picked up two of our birds, and then hurried on to the old dog, who had again pointed. A corking old bird got up wild and teetering off, first one wing up and then the other, as a strong chicken often will in October. I held on this bird carefully, and was again surprised to hear Wisner say he had also fired at it. We got it, just the same, and in the same way got another that jumped close in. We had now started five birds, doubled on three of them, and bagged them all—for old Mack found my first bird when we turned back. We felt pretty good, and I began to think this wasn't such a bad world to live in, after all.

We passed over corn and stubble until nearly noon—we did not start out till 10 o'clock—but saw no more chickens. Wisner killed a snipe out of five that we started in the bottom lands, on a wet spot near a spring. After dinner we went east, and within a mile from the house Wisner jumped two or three chickens and got one. A half hour later I jumped two and missed the same bird with both barrels most ludicrously at ten or fifteen yards. Then I jumped another at long range and knocked it down all right, as I also did a third bird which I was nearly upon before it sprang. There was another went up with it, but this flew toward Wisner and I dared not shoot. He missed this at a long shot, and also another

in the corn. We both missed a big cock on stubble, and I missed a second which rose wild on another stubble field. At the report of this shot a great covey rose and went off wild. Wisner scratched down one with No. 4 shot. We now began to see a great many birds flying down from the hills into the bottoms to roost. We got two more, the last falling to my gun just at dusk. Our bag for the day was eleven chickens, all well earned, and a magnificent lot of game birds, plump, strong and well matured. We had had genuine sport in getting there, and sport very different from August shooting at squabs. During the day we covered five or six miles of territory, and saw probably 150 chickens, mostly in large bands near evening. The birds seemed scattered pretty much all over the country.

HUDSON RIVER WILD RICE.

Editor Forest and Stream:

I send you herewith samples of wild rice such as is quite common in the Hudson River in this vicinity, and it certainly is the same plant as that known as wild rice in Canada and the West. If not wild rice, it is so good a substitute for it that I would advise our Saugerties friend not to expend much money or trouble to get the real article. It is next to impossible so late in the season to get specimens showing the staminate flowers, although you will find some in this lot. If you will take the trouble to hull a few of the matured seeds you will find them to be wild rice without a question. This plant appears to have been first noticed here about fifteen years ago, and has been known as rice weed, wild oats, duck grass, etc. Hoping the specimens sent will help to solve the rice question, I am, M. SCHENCK.

ALBANY, N. Y.

Editor Forest and Stream:

I really think that it is largely a question of locality which makes an apparent difference in the seeds. Our plant has seeds which are many times smaller than those which you sent me as coming from Rice Lake, Ontario. I have seen larger seeds on the Delaware and Schuylkill, and at Elkton and North East at the head of Chesapeake Bay, than we have, but I do not remember to have seen anywhere such large seeds as those you sent me. I am convinced that our wild oats are the same as the wild rice of Ontario, or very closely resembling it, but think it would be of enough interest to gunners to forward to you specimens from widely separated localities of what they they take to be wild oats, wild rice or teal grass, in different stages of their growth. If they are practically the same, it might be of interest to note the slight difference of size of seed, stalk, leaves, etc., due to climate, soil and water. The authority you cite speaks of it as Indian rice, wild rice or water oats. As a matter of curiosity I would like to know which it most closely resembles, oats or rice. FRANK PIDGEON.

SAUGERTIES, N. Y.

The specimens sent by our Albany correspondent leave no room for doubt that the plant in question is the wild rice. Mr. Pidgeon's suggestion that a comparison of the rice seeds grown in different localities would no doubt lead to an interesting comparison. Much activity is manifested in the line of renewing the wild rice supply in various quarters and in introducing the seductive wild-fowl bait where it has not been planted by nature. Under date of Oct. 7 Mr. Charles Gilchrist, of Port Hope, Ont., wrote us, "I have sold all my rice, so you will please stop my advertisement. I have had a good many letters from Canada and from twenty-two States, saying, 'I saw your advt. in FOREST AND STREAM of wild rice.'" We would be glad to have reports from those who have planted the rice with or without success in past years.

TAXING THE GUN.

Editor Forest and Stream:

I have carefully read your editorial in the last issue of your paper, Oct. 10, on taxing the gun, and would like to express my views on the subject. There is much interest here on this subject. Your plan to restrict the number of birds killed by each individual will no doubt work to advantage in any locality where game is abundant enough to tempt the market-hunter. But here in southern New England, where the game has been depleted to such an extent that it does not pay to buy powder to kill them with, such a plan is useless. I do not agree with you that this question "can safely be put to sleep, etc." The birds are not all gone here yet, and we want to keep them, not for ourselves alone, but for our children after us. Here with us the birds are mostly in the thick covers, and are beyond the market or pot-shot.

It is the snare that we want protection from. In every market in the city can be found the evidence of its use on the birds exposed for sale. The authorities in power take up very slowly the protection of game. The first reason given for this hesitancy is, there is no money revenue from this quarter that can be expended in its protection. I believe the game to be the property of the people as a whole. As we stand to-day a few men get all the benefit. Why not take out a license on the gun? Say $2. Put a part of this money toward the payment of salaries for smart, active game wardens, part to pay the farmer for damage done him, and part to help restock our nearly depleted covers. The revenue from dog licenses is used after this plan. In nearly every other country a man must have a license to carry a gun, why not here? The principle is right. "In payment for value received." A few well paid men as game wardens would do wonders here, and every sportsman would do all in his power to aid them. Then the license would do away with the two worst of nuisances that we have to contend with, first, the foreign element nuisance. These loafers and trespassers who make their gun an excuse for all manner of deviltry, who plague the unprotected countryman nearly out of his senses, shooting around his house Sundays, killing pet squirrels and pigeons, robbing his orchards and making a man jeopardzie his life if he desires a day in the fields or woods. If you remonstrate with him he smiles and pretends that the use of the English language is beyond him. I think he would go less if he paid for it, and it would be much easier to catch him when he made trouble.

Then there is the "small boy and his rifle" nuisance. Would it not do away with him? I think it would. How many fathers (to-day) would be willing to pay a tax, and be responsible for the damage done? Very few. The small boy can be seen every day out in the fields and on the edge of the woods, shooting at every robin or bluebird that he can find, regardless of the fact that a barn or henhouse, perhaps a human being, may be on the other side of the bush he is shooting into. I have barely escaped the small boy myself several times. How many of the startling headings in the newspapers (like "Mysterious Disappearance," "A Skeleton Found," "Shot Dead," etc.) can be laid at his door? Why should a minor be allowed to use or buy a rifle, any sooner than rum or tobacco? Is it less dangerous? No! It is much more so. If the gun is taxed, then this nuisance will be stopped. With rum and tobacco a boy has examples of their careless use, held up before him, and if he disregards the same he hurts only himself. With the rifle it is different. He does damage he knows not of. A rifle carries too far to be handled by a careless boy. And who ever saw a careful one? Life is too precious to be risked through the carelessness of others. My own father never allowed me to have a rifle. He often said, "It may kill a man 200yds. off although you are shooting at a bird not fifteen." There is no game large enough to use a rifle on in this section of the country to-day, and no excuse for carrying the same into the woods.

I am in favor of taxing the gun. It will rob no one, but will equalize the sport more. I do not forget that I was a boy once myself, or that if I have a boy he will have a gun. But it won't be a rifle, nor will he be allowed out in the woods before he is ten years old, with the handling of a death-dealing weapon which full-grown men handle none too carefully. I may stand on untenable ground, but I give my convictions for what they are worth, and stand ready and open to conviction to contrary if wrong. I fail to see any reason why Massachusetts, Rhode Island and Connecticut should not levy a tax of $2 on every gun, forbid the use of the same by boys under fifteen years of age, demand the carrying of a license into the field, have a warden (with full power to search, arrest, etc.) in each county at least, and put out a small sum each year to restock, after the same plan that they are using with the fish. Our laws here (although not by any means beyond improvement) would answer well enough, only as they now stand with no one to enforce them they are useless. What good does the law on trespass do a man in the country? He is perhaps five miles from a sheriff, and when a half dozen young rowdies with dogs and guns come out and tramp through his garden, shoot his pigeons, and insult his wife and daughters, is it any wonder that he hates the sportsman? The only real sportsman he sees he does not recognize as such. To him the sportsman and rowdy are one. I do not believe we will ever see game protection until we have a revenue from taxation of guns to protect them with. However, as I said once before, I am open to reason, and if such can be said to the contrary, let us have it by all means. COHANNET.

Editor Forest and Stream:

Your position on the game preservation question is weak, as no provision is made for enforcing the laws.

A hunting license of $5 or $10 is best, as it will furnish the means to pay game wardens. A limit might also be placed on the amount to be bagged in one day, in addition to this, but it is doubtful whether it could be enforced.

I advocated the license system years ago, and such a system would not injure the gunmaker's business or burden the trap-shooter.

I have often been amazed that your great influence was not used to stop the spring slaughter of migratory birds; a question that is vitally important to nearly all of your readers, and yet be so interested in game preservation in the National Park, considering that not one in a thousand of your subscribers can ever visit it in quest of game. Impress on the minds of the sportsmen that "the end of the ducks means the end of all free shooting." REMO.

CHICAGO.

ILLINOIS QUAIL AND PRAIRIE CHICKENS.—On the Ohio and Mississippi Railway I noticed several coveys of quail in cornfields in southern Illinois as we flew along; but conductor Charles Bishop assured me that he counted 37 coveys from the baggage car, during the run between Vincennes, Ind., and Milan. This was after a rain and the birds were near the track. He says the flocks were large and that quail are more plentiful than he has ever seen them before; they are located in the corn and stubble and, indeed, in almost any kind of cover. The mild weather of last winter, Mr. Bishop thinks, will account for their abundance. It is a very common occurrence to find quail on the track after heavy rains. Many of the St. Louis sportsmen go to Carlisle, Ill. for prairie chickens and quail; this point and the country east for a distance of 10 miles furnish ample returns. Prairie chickens are greatly diminished in numbers at the present time, but quail are sufficiently numerous to satisfy the most exacting.—T. H. B.

AGGRAVATING.—A North Woods correspondent, commenting on a big deer slaughter by a hounding party in his district, feelingly remarks: "You can readily imagine that it must be at least aggravating to me to do without venison all summer and try to protect the deer, only to see those deer massacred in the fall. There are doubtless some sportsmen that like to hunt in this way; and if there were only such it might do. But most that hunt here with hounds are a low set who have no idea of game protection and who will kill all the deer they can and in any way they can."

CALIFORNIA QUAIL.—In San Francisco the gunners were preparing for mountain quail shooting. During the dry season it is difficult to find this bird because it ceases to be gregarious; but now that the first rain has fallen excursions out the narrow gauge road to San Rafael for a distance of 40 or 50 miles will begin at once. The birds are to be seen in coveys anywhere after that distance from the city.—T. H. B.

TIONESTA, Pa., Oct. 5.—Since the season opened it has been discovered that pheasants are unusually scarce. The continuous wet weather of May and June last is supposed to have been too much for the young broods just hatched; at least this seems to be the only cause assignable for the scarcity.

"SILENTLY COCKING THE GUN."—How many scores of times you read this in these pages. How silently cocking the gun he did so and so. Now it struck me that a word to the uninitiated might be appropriate, knowing how many shots have been lost through the click, click, or cling of a good pair of locks. It can be done and many a head of game bagged by knowing how. It is in this way: Simply hold back the trigger with the forefinger while you raise the hammer with your thumb. Now a word of caution is necessary. First, let go the trigger and then the hammer, and be sure and practice well with an unloaded gun, and be very careful with an old one with worn locks, or a premature discharge will be the result.—COLLECTOR.

THE ACCIDENT RECORD.—Sedalia, Mo., Oct. 13.—*Editor Forest and Stream:* A grand idea you have in publishing cases of accident caused by carelessness in handling of firearms; your readers should be benefited by it. An editor in Fayette, Mo., was out gunning for quail about three weeks ago with a friend. The birds were found by the friend and flushed. Instead of bagging his unlawful game the editor stopped the charges from both barrels with his face, neck and breast. He is not expected to live. This was two weeks before the open season begins.—L. S. E.

Camp-Fire Flickerings.

"That reminds me."

283.

ONE morning in the month of March I arose about 4 o'clock and started for the lake, distant about four miles as the crow flies. I had been suffering with the buck fever for several days, and I was bound to get relief. When I arrived at the lower end of the lake, it was just light enough to see pretty distinctly two or three hundred yards up the shore. Looking over the tops of the flags which border the lake at the south end I discovered some black objects moving up and down along the east shore about 150yds. away. My first thought was that they were mudhens, but just then I saw a flash or two of white, and I made up my mind that they must be bluebills. I did not stop to look long, but began to devise plans for their immediate destruction. The only feasible plan seemed to be to get down and crawl on hands and knees, keeping low behind the rushes which fringed the east shore. I had done some crawling for ducks in my time; but I observed that I had seen a great deal better ground to crawl over than this was, as every few rods I would strike a small patch of half-frozen overflow about an inch or two deep. But this was nothing, considering the fun I would have when I showed the boys my bag of ducks at night. So I smiled app ovingly to myself and mentally calculated how I would get such a thundering string of ducks home. After a tedious meandering and groveling over wet sand and other equally agreeable substances, I brought up behind a large clump of rushes just opposite the place where I had located my bluebills. I could catch occasional glimpses of them through the weeds, as they bobbed serenely over the light waves; and knew they had not taken any notice of my presence. Drawing in a full breath I slowly poked the muzzle of the gun around the clump of rushes, and following with my eye, drew bead on the thickest of a bunch of about 25—wooden decoys, painted black and white, which some lazy vagabond had left out over night to fool the guileless and unsuspecting "town feller." My sportsman friend, were you ever there? If not, my word for it, you have missed something. My first thought was to look around to see if any one had observed the occurrence, inwardly resolved to give the fellow a dollar to keep his mouth shut until I got away, but finding I was alone in my glory I sadly dropped down on a wet log, to meditate upon the extreme probability of an early visit of the fool killer to our neighborhood. C.

Sea and River Fishing.

THE PLEASURES OF FLY-FISHING.

OFTEN the mind turns longingly to the wooded streams, creeks and runs of dear old Michigan, the lower peninsula leaves an impress on the angler's mind that age does not dim nor time efface.

A few miles back from Traverse City, beside a rapid winding stream, stood one log cabin and a frame shanty bearing this inscription, "Hotel." The stream at this time was famous for its trout, and the trout for their gaminess and coloration. These two shanties composed a city of the future, its streets as yet the woody labyrinths of grand old forest trees, as yet unshorn by the pioneer of civilization. We pulled a rowboat twelve miles to get to this stream. Once in the mouth the oars were dropped and the pushing pole taken up. The stream is narrow, swift and tortuous, along its bottom could be seen stumps, old trees and roots, and at intervals could be seen fishlike forms. The surroundings were trouty, the only question came up, are they big ones?

Let us push on up stream as far as the rapids, we can try for these fellows as we drift down. A sharp push and tug for an hour and we cover the mile, then rest at the foot of the rapids with the boat tied to the arm of a fallen tree, but we are warm and feel the mosquito buzzing at us. The sharp poling up stream has started the perspiration from every pore, and as we rest, trout can be seen rising to any object coming from the rapids. Quietly putting together a handsome Orvis split-bamboo rod that had to be baptized and dedicated to the elegant art of fly-fishing, opening a book filled with Orvis gems, we turn the overflowing pages. What shall I use? Grays, whites, red browns, yellows, black and gold, silver and tinsel in almost every shade and hue, and names known in fish-lore. Hackles! these trout are barbarians anyhow, they know nothing of flies, a brown maple leaf brings them to the surface by the half dozen; vicious little fingerlings; but the big fellows! Ah! there's one of them rising to a big brown chafer or buzz-bug that frequents oaks and maples.

My nine feet looped leader has been soaking in a tin can for an hour. I bend it on my line, put on a big brown-hackle for a tail-fly and a gray-professor for a

dropper; take seat in the stern of the boat and cast out in the whirling waters at the foot of the rapids. Something rose! the flies drifted on; we saw a trout rise again, but somehow we hadn't caught on. While retrieving the line a good-sized trout jumped clear from the water, missed the flies, but we missed the trout.

Never mind, it was fun; no need to get nervous; plenty more in that hole; they don't know what flies are; keep cool, we'll get them yet. Thus we soliloquized.

How pleasant to sit here alone and listen to the droning hum of nature's bass, to watch the coming waters. Here's a big green caterpillar coming down stream; will the dainty trout rise for it?

Ugh, the beast; a big trout rose almost under the tip of my rod and quietly sucked the fat monster in. My very skin creeps along my back as I think of it.

Laying out thirty feet of line as gently as we knew how, and watching how the tail-fly fell as it came down. Ah, that's perfection; "No snowflake ever kissed the water prettier." Wh-i-r-r, b-u-z-z, a miniature leviathan must have taken my tail-fly and is bound for Lake Michigan, twenty miles distant. "Never be in a hurry except when going for a doctor," so my reel still whistled and screamed; let her scream; if the fish is so big that I am likely to be pulled into the rapids, why I can swim. The thumb gets some pressure on the revolving plates, and we get hold of the handle and begin to fight him. Inch by inch he contests our claim and won't yield; the little rod bends and springs until we imagine the creek must have a pike in it, and we have got the pike, and it's a big one; but as the fish comes to the surface there is no question about *fontinalis*. Quickly slipping the landing net under him we land him in the boat, as handsome a fish as ever came to a fly, and a pound and a half in weight.

It made no difference what fly—yellow mays, Portlands, grasshopper, hooker, coachman, Seth-Green, oriole, hackles, anything else—the little fellows jumped for all of them. I used big lake flies, even some salmon flies, and caught a creel of trout weighing from three-quarters of a pound up. I had small midgets in my book and could have caught and counted my trout by the hundred, but I did not kill a single small trout. Drifting down stream I cast ahead of my boat and had just the same grand sport—no need to use worms; trout came to every cast if I wanted them.

Two days after this I was in another stream where I used every kind of fly in my book, and could not raise a single trout. I could see one lying on a sandwash. I fished for him two hours. During that time I lay hidden behind the maple brush and watched him rise at every leaf that came down stream. It was a handsome trout of 10in. length, and I was going to have it if I stayed there all day. I sat and watched until I saw it rise to every green leaf and float down underneath it as if in search for something.

I have it, my beauty! You're mine, unless you get sight of me.

Taking out my penknife I cut a small maple leaf across to the center vein, bent on a small black fly, and switched out into the stream, my snell run through the leaf, leaving the tiny hook underneath. I cast about a yard above him. He rose instantly and went for that leaf; but no examining this time. He struck; I was head of him, and though the gut was as fine as the finest hair, I landed him at my feet a victim of his own inquisitiveness.

Coming down stream I dropped my flies about twenty feet ahead and took in once in a while a nice trout. My creel held a dozen weighing about 7lbs. My friend with whom I was staying fished up stream. We met; he had twenty trout, all killed with worms, none of them averaging mine in size or weight.

Said F.: "There's a big fellow in a hole down here I've been fishing for—spent a full hour at him. He skinned my hooks of about half a dozen worms. I broke two hooks in the hole; wish you would try him."

I tried him; he tried me, and beat me. The hole was waist deep, the waters ran swiftly through it, and curved around the roots of an old cedar tree.

Taking the tip of a worm, so that it would squirm, I fastened it to a big fiery brown-hackle and let it drift under the root of a tree. A gleam of white shot up through the darkening waters. I felt a sharp tug and struck. Away the fish bolted like a racer down stream. With lightning rapidity the thought flashed through my brain. How deep is that hole? Can I keep my feet in those sharp waters? My friend was jumping. "You've got him! Take to the creek! You'll lose him if you don't!"

My line was running out at a rate that indicated the approaching end, when I plunged in to wade—wade did I say? The second step I could find no bottom. Throwing myself forward the stream carried me across the hole, about 15ft. wide. I kept my rod out of the water, and the moment I struck bottom I began reeling in; but the line came in slack for some feet. My friend on the bank consoled me, "You will lose him! He has your leader around that bush." Too true, I found to my sorrow, he had made straight for this piece of brush, and with a sharp jerk turned up stream again. I saw him as he darted past me, a big fresh-run trout, just come in from the lake. Wading down I unloosed my leader, found the gut snell broken at the hook. 'Twas no use storming or saying cuss words. Poor Anglo-Saxon never improves an angler's temper. I registered a vow that *S. fontinalis* was not going to beat me again. I proposed to have him if it took me all the next day. My dozen trout furnished supper for the family. I spent the evening boating in the bay with my wife and retired to rest none the worse for my wetting.

The first rays of light streaming in our room woke me. Hastily jumping into my fishing suit, and without putting on wading boots, I took my rod and started on a run down the trail leading to the creek. I stood above the hole, the scene of last evening's ducking, bending on a big white-miller that had just come from the maker's hand, and putting my landing-net together I drew about 30ft. of line from the reel and dropped the fly into the broken waters. It floated grandly; foot by foot I watched it, giving line as freely as the stream carried it along. My eye was peeled; every nerve ready to respond to sight or feeling. Amid the music such a stream will always make when compressed into such a small area, I heard a distant "chug" and saw a flash of white. I struck sharp and drove the hook home. The trout turned to the snarled roots. "Softly, my beauty; you beat me yesterday, my turn to-day." I played him carefully against the rush of waters and in two minutes he lay under my rod, drowned by the very elements he had so long sported in, mouth wide open and gasping, the white-miller fast at the corner of his mouth in the upper jaw. Slipping the net under him I scooped him without even wetting my feet. I killed him with my knife and at once started for the house.

"Well, Grandpa Norton, what do you thing of this?"

"Well, well, well, is that the fish that gave you a ducking yesterday? He's a handsome fellow; weighs over 2lbs.; the biggest trout I ever saw come from that creek. Caught with the fly, too. You may well feel proud of him." I was proud of him.

In one of the feeders of the Manistee River I was dropping flies for grayling. Once in a while I would find enough standing room to use a short Bethabara-wood rod, and by skillful manipulations spring my fly under the bushes overhanging the stream where the current ran, using some small Foster flies sent me by the editor of an English sportsman's paper, all of them black or dark brown, so minute that when they touched the water I could not see them; but the grayling did. If I could find a place where the sun's rays came through the foliage and sent an orange ray athwart the stream, there I could find grayling. By getting up stream above this spot I could drop a fly across the light ray, instantly a grayling arose. I could see them rise, and waiting to strike them, by a sharp spring of my rod I drew them to me without alarming the balance of the fish in the pool.

I had a red-tag, a strange-looking fly with a fuzzy red tail. In one spot I think I caught all the fish there were in that one pool—six of them. In a large open pool where I could see grayling I did not raise a single fin; they would not even deign to come up and look at it, but did take a bumble-bee.

In August of late years, when business does not press, we sometimes spend a day on a Lake Superior stream within a few miles of Duluth. Here the conditions are different; water is wine-colored, free from clay or mud; the trout are wild and vicious, snap at any and everything—salt pork, grubs, larvæ, worms—even a big bass spoon skittered across a pool will raise them by the dozen. Climbing the hills and striking the stream miles away from the mouth, we have found pools that seemed alive with trout; but the big boulders made such splendid hiding places you had to find the trout. I have stood in the water thigh deep and cast all around me, when my friends declared no trout were in the pool, until a yellow-may or a grasshopper would bring up a trout from under their rods when they were fishing with worms. After finding the trout they could catch them with worms. They would outnumber me every time, but the pound-weight trout came to my fly. After heavy rains I have stood at the mouth of a stream and cast into a rush of waters. I could see no trout, but thought some ought to be there. Casting out, I found my line and flies going lakeward. The Seth-Green and deadwing-coachman are taking flies with fresh-run trout. Try them miles up stream and trout scarcely look at them. Put on big fuzzy hackles and you will get trout in any water and in any kind of weather. W. D. TOMLIN.

DULUTH, Minn.

CANANDAIGUA ANGLERS' ASSOCIATION.—Canandaigua, N. Y., Oct. 19.—The annual meeting of the association was held last Wednesday evening, with the following election of officers for the year: President, Dr. C. T. Mitchell; Vice-President, J. S. Crawford; Secretary, Mark T. Powell; Treasurer, Frank M. Durand; Executive Committee—Marvin Sutherland, James Menteth, W. H. Fox, Dr. C. T. Mitchell and H. Seymour Cooley. The banquet was held in the Webster House. Exquisite *menu* cards were photographed by Crandall Bros. from a crayon drawing by Fred D. Crandall. At the conclusion of the feast Dr. C. T. Mitchell, president of the association, delivered as his annual address a beautiful poem entitled "The Unlocking of the Streams." The delivery was listened to with interest and close attention throughout, and the author was applauded vigorously at the close. Monroe A. Green, of Caledonia, superintendent of the State fish hatchery and brother of the late Seth Green, was then introduced, and in response to queries by different members, expressed an affirmative opinion upon the advisability of stocking Canandaigua Lake with alewives for food and bait. The discussion of this question was participated in by many different members, and the preponderance of opinion was in favor of the experiment. It was noted by well-posted anglers that in waters stocked with alewives trout fishing has been excellent. There were a couple of skeptics, however, who informed the members that their experience with alewives for bait was far from successful. An expression of the meeting was largely in favor of the experiment, and the executive committee was empowered to investigate the subject and act in their discretion. Mr. Green also advised putting German trout into the lake. He described them as one of the most handsome of the finny tribe as well as the most palatable. He mentioned the fact that he recently caught a German trout weighing 6½lbs. He said they grew rapidly and were very gamy. He informed the association that an application for 50,000 of these fish for Canandaigua Lake would be honored.

ABUNDANCE OF HUMPBACK SALMON.—The smallest salmon of the Pacific is the humpback or garbusche (*Oncorhynchus gorbuscha*) of authors. In numbers, however, this species surpasses all the others, and statements of facts concerning its advent into streams read, to the uninitiated, like wild romances. Photography has been employed, with partial success, to give an idea of the struggling masses of fish as they are about to enter certain rivers; but only those near the surface of the water can be shown. Mr. Charles Hirsch, of the Karluk Packing Company, San Francisco, has recently described to us an unusual run of this salmon in Karluk River. About the 6th of July, 1880, a glut of humpbacks came into the Karluk and continued five weeks, during which time no other salmon could enter the river. It was impossible to pull a boat across the stream. A seine 90ft. in length, hauled at 6 A. M., took an enormous draught of fish. About 140 barrel, or 7,000 salmon, were dressed out of it from that hour to 6 P. M., and afterward the men were occupied three hours in clearing the seine. The remainder of the fish were in a mass about 4ft. deep. At the end of the run the humpbacks begun dying, and those that did not get up to Karluk Lake were floating down dead or dying for one month. The banks of the stream were strewn with dead fish, and the stench was more easily imagined than endured.

LARGE BROWN TROUT.—Mumford, Oct. 15.—Monroe A. Green, superintendent of the State hatchery, was busy around the hatchery on Friday, and hearing some disturbance in the wild pond just north of the hatchery, he went there and found a very large German or brown trout trying to get up the raceway to spawn. Mr. Green and his men caught the fish. It weighed 6½lbs., measured 25in. in length, and contained 6,000 eggs, which can be seen in the trough at the hatchery now. This fish is 6oz. larger than the one caught by Messrs. Hart and Babcock last spring. One caught one year ago by F. J. Amsden weighed 5lbs. 6oz., but the one caught by Mr. Green is the largest on record in this country. It can not be over five years and eight months old, for the only German spawn that has been imported reached the hatchery Feb. 18, 1884.

SUPPOSED FOSSIL TROUT.—The *Portland Oregonian* recently published a note on the discovery, by William G. Dillingham, of a fossil trout in Gordon Creek. The fossil is 15in. long and in a state of perfect preservation, "every scale of the fish as plainly marked in the rock as if cut by a skilled artist." We hope that Mr. Dillingham will at once take steps to secure this valuable specimen, for, as already stated in FOREST AND STREAM, the salmon family is not represented in America by fossil remains except by the genus *Rhabdofario* of Cope, and the exact relations of this form are doubtful. Will some of our friends in Portland keep us advised of the steps taken with regard to this interesting subject?

APPEARANCE OF KING SALMON.—In the Nushagak River, Alaska, in 1888, Capt. H. E. Nichols, of the U. S. Coast Survey, found king salmon running June 17, and they had been observed a few days earlier. He saw two of these salmon at St. Michaels June 28; they were said to be the first of the season. The species is perhaps best known as quinnat, Sacramento or Columbia River salmon. The Sacramento is the southern and the Yukon the northern limit of this well-known fish. A few king salmon enter Karluk River, Kodiak, late in May, and spawning fish can be found in that stream until the end of August.

HONEOYE LAKE.—Bristol Center, N. Y.—Heneoye Lake is four miles long and one wide, very shallow with mud bottom; there are some very large bass of the large-mouth variety. I have taken one of 7½lbs.—L. J. R.

VINCENNES, Ind.—Crappies are found in abundance in the spring in ponds about one and one-half miles from here.—B.

REV. ABNER P. BRUSH.

PERHAPS, in the judgment of a majority of people, the fitting place to record the good qualities of a clergyman who has passed away from this life would be the religious press. But I can conceive of no better medium than FOREST AND STREAM through which to say a few words regarding my dear friend, Rev. Abner P. Brush, rector of St. Thomas's Parish, Bath, N. Y., who died at the rectory, Oct. 8, 1889, in the fifty-ninth year of his age.

I had known him for eleven years, and although many years my senior, his heart was as young as mine. I am free to confess that the affinity born so long ago, and fostered and strengthened through all these years, was brought about by mutual tastes along the line of the gun and rod. With but two exceptions, for nine consecutive Junes we have taken a fortnight's outing along the Loyal Sock and tributaries in Sullivan county, Pa., after trout. Very bright spots in the calender have these trips been, and now that they have gone forever the sweetness of their memories will largely recompense for their non-recurrence. Our farewell "meet" was in June last, when, although prevented from angling very much by the floods, we still had a pleasant time at the cottage of a mutual friend who had come up the mountain to visit us. A brief account of this trip was published in FOREST AND STREAM.

Thrown from his carriage in April, 1888, Mr. Brush sustained a fracture of the hip, that kept him in ordinary for months, and did away with Sullivan county for that June, to his great regret. Last June, although walking with a cane, he was bound to visit the old fishing grounds again, and it was a surprise to me how well he stood the trip. His bad hip did not affect his rod arm, and our scores stood about as of old, two to one in favor of the rector. Possessed of great nervous energy, with a conscientious view of his duties toward his large and busy parish, he plunged into work again, only to find his vitality failing, and a complete cessation of labor imperative. But it was too late; he gradually became weaker, and in spite of everything being done that kind hearts could suggest, he died.

What more need be chronicled than the universed remark of every one, young and old, rich and poor, church people and others, in the large circle of his acquaintance, when they heard the sad news, "He was a good man." He was a friend to every one. A most genial and whole-souled companion. Unselfish, generous, the crucible of camp life never discovered any dross in his composition. He would divide his last biscuit on the weary home stretch, and go halves on some prolific trout pool he had discovered, with a generosity that fishermen in general are not endowed with.

There is a beautiful cold spring, clear as crystal, welling up near the mouth of a little tributary of the Loyal Sock. Many's the time we have quaffed at its head while eating our lunch after a hard day's fish. Six good miles it was to the cottage, and here we would put up our rods, light our pipes and take a long cool draught before starting. We were just ready to climb the mountain on our homeward way, when Mr. Brush said, "Come, pard, let's go back and take one more drink at the old spring, we may never have another chance together."

I wonder if there are springs somewhere where they who drink may drink and drink again through endless years?

DANSVILLE, N. Y., Oct. 15. H. W. DELONG.

Fishculture.

DIMINISHED MACKEREL CATCH.—A falling off is reported in the catch of mackerel in the vicinity of the Magdalen Islands, and it is said that the New England fleet, using hook and line, has returned to Prince Edward Island, to continue fishing while the weather permits. The decrease in the yield is ascribed to the use of purse seines "and other devices for the wholesale slaughter of fish," referring, perhaps, to the utilization of steam to replace sail power and hand work. There is no doubt that the take of mackerel this season will figure as the smallest known for many years, and that the fishery will bring disaster to most of the fleet. The purse seine is justly styled a destructive appliance in the present depleted condition of our mackerel schools, for it ensnares and destroys myriads of fish too small to be saleable. Chapters might be written, however, on wasteful and injurious methods in the fisheries against which there is no adequate protection. What shall we do when mackerel become too scarce to make the fishery profitable? Some of our adventurous merchants will send vessels to the Irish and Norwegian coasts; others will, perhaps, chase the frigate mackerel in southern waters, while it is possible that the "tbimble-eye" of the coast of California will have its followers. In the meantime we trust that the efforts of the Government to multiply this useful food fish through the medium of its Fish Commission will be rewarded with abundant success.

NEW YORK FISH COMMISSION.

THE seventeenth report of the Commissioners of Fisheries of the State of New York has just reached us. With the principal statements contained in this document the readers of FOREST AND STREAM have already become acquainted through its columns and the daily press. The period covered is from November, 1887, to November, 1888, and the amount of the appropriation for the general purposes of the Commission was $30,000, most of which was applied to the construction and maintenance of the hatching stations. From the hatcheries were distributed about 14,000,000 of young fish, nearly one-third of which were shad and most of the remainder smelt, trout, salmon and whitefish. The "frostfish," a small species of *Coregonus*, was represented by two and one-half millions of fry.

"It will be the policy of the Commission, while not abandoning the propagation of trout, to concentrate its efforts upon the production of food fishes, the stocking of the great lakes with whitefish, the hatching of shad in the Hudson and the planting of salmon trout and muskallonge throughout the interior of the State. In this way the work of the Commission can be made of the utmost practical benefit to the public generally, and repay a thousandfold the appropriations made for its support."

The Commissioners express their sense of obligation to the United States Fish Commission for the free gift of millions of eggs and fry, and for hatching and distributing eggs without expense to New York. Attention is drawn to the increasing number of shad caught yearly in the Hudson, and to the growth of public interest and confidence in the work of the Commission as expressed by letters from prominent sportsmen and fishermen.

The report of the engineer of the shellfish department, Mr. Ford, is a lasting tribute to his ability and efficiency. The reports of the oyster protector and the chief game and fish protector show the gratifying results following a vigorous prosecution of offenders against the laws.

Mr. Mather's account of the salmon in the Hudson River, which was referred to at some length in our minutes of the meeting of the American Fisheries Society in May, is here reproduced in full.

Mr. Green's description on page 45 of the young muskallonge is full of interest; we are at a loss, however, to understand the process of taking eggs from male fish as stated on page 44.

From Mr. Mather's report on Cold Spring Harbor hatchery we learn that eels, kingfishers, minks and turtles have been destructive in the rearing ponds, and especially the first. The brown trout began spawning Nov. 11 and ended Nov. 27, with the exception of one ripe female found Dec. 9, another Dec. 11 and three Jan. 14. Golden ide spawned for the first time and the young reached a length of 4in. in seven months. Smelts were obtained in a gravid condition from March 5 to March 23.

The Commissioners recommend new legislation for the better protection of lobsters, shad and salmon, and the interests of the oyster growers. For the work in 1889 an appropriation of $44,500 is estimated to be necessary.

THE FISHING INDUSTRIES OF OREGON.

WE have before us the report of special committee to the legislative committee investigating the fishing industries of Oregon. It was prepared by Senator L. T. Barin and Representatives J. W. Maxwell and M. Pomeroy. The other members of the committee were Senator J. C. Allen and Representative Bilyeu.

The committee left Portland July 8, making a thorough examination of the Cascades, thence to the Dalles and to other points up the river as far as Celilo. Astoria and vicinity, including Baker's Bay, was next visited. Sept. 28, 1887, the Yaquina Bay and vicinity was investigated. The committee reports that "the great difficulty that we met with, and perhaps the greatest obstacle that the Legislature will have to surmount, is the feeling that exists more or less among the fishermen that the particular mode of fishing in which they are engaged is the only proper one and the one least injurious to the fish industry of the State, and that all other modes of fishing are, therefore, far more detrimental. In fact, many of the fishermen of each locality judge of the question solely with the view to what is most advantageous to them, and argue as to the mode of fishing employed by them wholly from the standpoint of self-interest."

In their investigations they have endeavored to reach conclusions such as would, if embodied in legislative enactments, stimulate the fish industry and keep up and increase the supply of fish food in the State.

This report goes on to say that the first salmon to ascend the Columbia River and its tributaries are the largest and best quality of the chinnook (*Oncorhynchus chouicha*). The run commences in March and lasts until July or later. The July run continues through August, and some even run up during September. The July run of Chinnook salmon are of a small size, but of very good flavor.

The blueback (*Oncorhynchus nerka*) begin to run in June, but do not enter tributaries of the Columbia until they have passed the Cascades. The next species that ascends the river is the silver salmon (*Oncorhynchus kisutch*). The first run of this fish takes place about the first of September. The steelheads (*Salmo gairdneri*) enter the river in July, but do not run into the tributaries until the middle of October. This species is usually called salmon. Many of these are taken during the close season for salmon by fishermen, who claim that they are not salmon, but trout, and, therefore, are not entitled to protection under the law for salmon. The Commission suggests that a specific clause be inserted, in any new fish law enacted, for the purpose of protecting this species during the close days and seasons. The Columbia River chinnook range in weight from 3 or 4lbs. up to 70lbs. The spring and July runs are the best for canning purposes, finding the best market abroad. The silver salmon are found from 2lbs. weight up to 18 or more. It is a fair table fish and is canned, but it is inferior to the chinnook. The steelhead varies in weight from 8 to 20lbs. It is used for table and canning purposes, and is considered an excellent fish both for shipping and smoking. The blueback salmon weighs from 3 to 6lbs., and is, consequently, the smallest salmon of the Columbia. It is an excellent fish for canning and for table use.

The spawning season of the different species is given as follows: Chinnook salmon commence to spawn toward the last of August and continue up to the first of November, silver salmon spawn from Dec. 1 to Feb. 1, the steelheads from about April 1 to the middle of May.

The committee states that every species of salmon ascending the Columbia and its tributaries has a distinct time for spawning, and that the assertion so often made that the inferior kinds of salmon might be bred or mixed with the chinnook salmon or one species with another at the established hatcheries or breeding stations, is absolutely without foundation. Gill-nets, pound-nets, seines, traps, fish-wheels and dip-nets are generally used for the capture of salmon. A great deal of complaint has been made against fishing with traps, wheels, seines and similar appliances, as they are said to destroy many small fish, causing a gradual falling off in the supply of salmon. After a thorough investigation of the subject the committee found that the small fish or salmon caught by these appliances consist principally of small chinnook salmon weighing from 3 or 4 to 7 or 8lbs.; these run at the same time and with the best chinnook, here called royal chinnook. The other small fish are bluebacks and a very few small steelheads. The smallest female salmon found by the committee was caught near Astoria. This fish weighed 9½lbs. Of the hundreds of small salmon (chinnook) examined by this committee all were males. These ranged in weight from 3 to 7 or 8lbs. The committee goes on to state that "The question that now arises is whether or not the taking of them is injurious to our fish industry. If those small salmon referred to ascend the river and return to the ocean, and again ascend the river a larger salmon, then of course it is injurious to our fish industry to take them while they are small, but if on the contrary they ascend the river, perform their functions the same as the large salmon and then die, in that case the taking of them while small is not hurtful to the fish industry of the State, but to the contrary, beneficial."

The committee investigated the subject of the spawning of salmon with a view to determine whether all of the fish die after the act of spawning or if some of them return to the sea. They state that after making a thorough investigation, they had to conclude that the chinnook salmon after spawning dies. They state that: "The most conclusive evidence by far was brought to light by the building of the fish rack across the Clackamas River to keep those salmon from ascending that were to be used for propagatory purposes at the State hatchery there during the year 1887. That year the rack was not put into the river until after middle of June, consequently all the run of chinnook salmon from February until the rack was put in had passed up above the rack. After the spawning season was over we caused the rack to be watched to see whether the salmon that had passed up the river for spawning would return. The president of the State Fish Commission and parties employed at the State hatchery watched that rack continually for the purpose stated, and here be it understood that no salmon from above could pass through that rack, and every salmon, whether dead or alive, that came down to the rack could be seen. The chairman of this committee also went there several times to investigate that question, and the result of all these investigations was that all the salmon that came back to the rack—salmon which in their prime would have weighed from 4 to 70lbs.—were found to have come back dead, in fact were washed down by the current. While the rack has proven without a doubt that the chinnook salmon die after spawning, it has also proven without a question or doubt that the steelhead does return to the ocean after spawning." The committee think it possible that a few of the late runs of chinnook, which are compelled by force of nature to spawn within a few miles of the ocean, may return again to the sea.

Again referring to the small salmon, taken in the nets, traps and wheels, they say that these males are prematurely developed, that in impregnating eggs upon the spawning grounds they deteriorate the species: that they are not needed for propagating purposes, as there is an excess of large males over the female salmon. They, therefore, conclude that the taking of small salmon (chinnook) is not injurious to the fish industry, and that every small salmon that escapes is so much loss to the commercial interests of the State, as they sell well, and are preferable for family use on account of their size and delicious flavor.

The trap and wheel fishermen are generally riparian owners, resident citizens and taxpayers, while many of the gill-net fishermen are not residents of either Oregon or Washington, but come from abroad to stay merely through the fishing season.

The committee recommend a close season during which all fishing should be prohibited. They state that the close season, which now extends until April 1, should be extended to April 15, and the open season should extend from April 15 to Aug. 15, ard that from Aug. 15 to Sept. 15, or Oct. 1, all fishing should be stopped; also, that the close days, Saturday evenings to Sunday evenings, should be retained. This, the committee thinks, would give ample opportunity for a sufficient number of chinnook salmon of the spring run to ascend the river to their spawning grounds, and to breeding stations. They also say that one hatchery should be established by the State of Oregon, and another by the State of Washington on the tributaries of the Columbia, and that the State should extend aid to the hatchery on Rogue River. They further state that a hatchery can be established and put into good running order for a sum not exceeding $10,000, and that the cost of maintaining and operating it would not exceed $5,000 per annum. To the objections urged by some persons against the hatcheries, and the belief of these persons that if the salmon were permitted to ascend the river in sufficient numbers to their spawning beds, and there allowed to spawn in a natural way, better results would follow, and the expense of the hatcheries be avoided, the committee say, "But we cannot agree with that view of the matter, for while that might be the case if salmon were not taken in such large numbers as must necessarily be taken to make our salmon industry of any great importance, it is easy to be seen that while fishing is carried on to the extent that it is now, in order to keep up even the present supply, nature must be aided."

The spawning beds of the salmon are infested by hordes of fishes which devour the eggs almost as fast as they are spawned. This report states that of these spawn-destroying fishes the trout are by far the most ravenous. This committee strongly favors artificial propagation and say that, "We deem it doubtful whether an average of more than a half dozen young salmon are propagated in the natural way from one female salmon, while a sufficient number of experimental tests has been made to prove that by the artificial method of propagation at least 90 per cent. of the eggs of a female salmon—or an average of 4,500 young salmon—can be hatched out and kept until they are large enough to take care of themselves and then turned into the river. Three hatcheries on the tributaries of the Columbia River would, with proper management, turn into the river at least 15,000,000 young salmon annually, and that number turned into the river each year, in addition to those that spawn naturally, would more than keep up the supply, and the number could be gradually increased as the salmon increased at the propagating stations, until at least 40,000,000 or 50,000,000 could be supplied annually, which would be greatly in excess of the requirements of the fishing industry on the Columbia River, and many young salmon could therefore be turned into our coast rivers and thus keep up the supply in those streams. Besides, in addition to chinook salmon, silver salmon and steelheads could be propagated at the hatcheries and thus keep up the supply of those fish in the bays and the rivers of the State, and especially in the coast rivers."

Neither Oregon nor Washington, say the committee, should hesitate to expend a mere trifle on an industry so beneficial to both. They also say that a rigid observance of the close seasons is absolutely necessary for the successful operation of the hatcheries, but that the fine now imposed for the violation of the close season law is excessive, making it almost impossible to secure the conviction of parties violating that law; that a fine of one hundred or two hundred dollars, part to go to the informer, would work to greater advantage. The State Commission should have the power and means to place watchers along the river during the close season, and the committee fully believe that a good law could be enforced. They would also deem it well to offer a small bounty for the destruction of seals and sea lions. They further state that there should be a law prohibiting the throwing or discharging of sawdust into the Columbia or any of its tributaries, as well as into any of the other streams of the State. The levying of a small tax is recommended upon all salmon caught, and upon cases of salmon put up at the canneries, the income from this tax to be used toward defraying the expenses of protecting the salmon and for a hatchery. They also state that all fishing for salmon within one mile of any salmon hatchery should be prohibited, and racks necessary for the successful operation of the hatcheries should be protected by law. They would further deem it advisable to prohibit by law the carrying of salmon in or out of the State during the close season from March 1 to April 15, or any of the close days during the year; also, prohibiting all persons from selling, or having in their possession, salmon during the close days and seasons just mentioned. In this connection they further say, "It would not, however, be so easy to enforce a law to prevent public or private carriers from carrying salmon during the close season from Aug. 15 to Oct. 1, for at that season the fishing commences and is carried on to its prime in our coast rivers, and it would not be just to bar the fishermen from those rivers from sending their fish to market in or out of the State, or selling them in Portland or other cities."

The principal fish found in the coast rivers of Oregon, according to this report, are fall chinnook and silver salmon, and steelheads. These begin to run from the 1st to the 15th of August, being about the commencement of the fall close season on the Columbia.

The fish and time of fishing on the Rogue River, especially in the spring, is said to be similar to that on the Columbia; and the seasons of the Rogue River could be made to correspond with those of the Columbia.

The report concludes, viz.: "To avoid all question or debate as to the law regulating salmon fishing on the Columbia being a local law, and therefore unconstitutional, there should be passed by the Legislative Assembly of Oregon one general law to regulate the fishing and the time thereof in the different rivers and bays of the State. * * * Should a law be enacted for the protection and preservation of salmon, each species of commercial salmon should be specified as follows: 'Chinook salmon,' 'silver salmon,' 'bluebacks' and 'steelheads'; and for the purpose of properly enforcing the law, all those species named shall be deemed salmon within the meaning of this act."

The fishing season for salmon on the coast rivers and bays should be from the 15th of August to the 15th of November of each year. The close days, Saturday to Sunday evenings, should be observed on all waters throughout the State.

SCARCITY OF OYSTERS.—The receipts of oysters from Chesapeake Bay for the last fortnight have been very small. Prices in Washington and Baltimore are higher than they were in September. The processes of canning and refrigeration have greatly reduced the supply for shipment in the shell. Eastern oysters are sent in great quantities across the continent and sell readily, notwithstanding the loss of flavor occasioned by transplanting. The fishery will be diligently operated, for the Maryland Controller has already issued more than six hundred licenses for dredging.

The Kennel.

FIXTURES.

DOG SHOWS.

Dec. 5 to 7.—First Dog Show of the Continental Kennel Club, at Denver, Col. Claude King, Secretary.

Jan. 13 to 18, 1890.—First Annual Dog Show of the Georgia Pet Stock and Bench Show Association, at Augusta, Ga. A. H. Vonderleith, Secretary.

Jan. 27 to Feb. 1, 1890.—Dog Show of the Colorado Poultry and Pet Stock Association, at Denver, Col.

Feb. 11 to 14, 1890.—Fourteenth Annual Show of the Westminster Kennel Club, American Institute Building, New York. James Mortimer, Superintendent.

March 11 to 14, 1890.—Second Annual Dog Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

March 25 to 28, 1890.—Second Annual Dog Show of the Mass. Kennel Club, Lynn, Mass. D. A. Williams, Secretary.

April 1 to 4, 1890.—Sixth Annual Dog Show of the New England Kennel Club, at Boston, Mass. J. W. Newman, Secretary.

April 15 to 18, 1890.—Second Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Secretary.

FIELD TRIALS.

Nov. 4.—Third Annual Field Trials of the Indiana Kennel Club. P. T. Madison, Secretary, Indianapolis, Ind.

Nov. 11.—Inaugural Field Trials of the Canadian Kennel Club, at Chatham, Ont. C. A. Stone, Secretary, London, Ont.

Nov. 18.—Eleventh Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Saratoga Springs, N. Y.

Dec. 2.—Inangural Field Trials of the Central Field Trial Club, at Lexington, N. C. C. H. Odell, Secretary, Mill's Building, New York, N. Y.

Dec. 15.—Second Annual Field Trials of the Southern Field Trial Club, at Amory, Miss. T. M. Brumby, Secretary, Marietta, Ga.

Jan. 20, 1890.—Seventh Annual Field Trials of the Pacific Coast Field Trial Club at Bakersfield, Cal. H. H. Briggs, Secretary, 313 Bush street, San Francisco, Cal.

Jan. 27, 1890.—All-Day Field Trials, at West Point, Miss. F. R. Hitchcock, 44 Broadway, New York, Secretary.

Feb. 11, 1890.—Fourth Annual Field Trials of the Texas Field Trial Club, at Marshall, Tex. W. L. Thomas, Secretary.

NATIONAL COURSING ASSOCIATION.

[*Special Report.*]

HUTCHINSON, Kansas, Oct. 15.—The meeting on the home grounds of the association, the third in the series, began Tuesday, Oct. 8. The weather was favorable, and the preparations being complete, nothing was wanting to make this, the most important meeting of the season, a grand success, and so it proved until it was interrupted by the rain that commenced on Saturday after the first series of the second stake had been run off.

The programme as published left the entries for the National Derby open to the world, the American Sweepstakes excluding imported dogs.

Several days previous to that named for the entries to close, the nominations came in so rapidly that the management was obliged to limit the stake to thirty-two dogs in the National Derby, and was further obliged to decline a large number of entries, among which were several imported dogs whose owners intended to enter them, but were debarred by their own tardiness and neglect. The entries were free, but one-third of the winnings were reserved by the association for a general entrance fee, and for this reason no excuse could be offered for the delay in making entry.

There is a tendency among coursing men to improve the quality of their dogs, for as proven at the meeting the smaller and speedier type will carry off the honors every time. A 40lbs. greyhound is preferable to a 70lbs. dog for coursing purposes, but the happy medium will come nearer meeting the demand than either extreme. A dog from 55 to 60lbs. in weight and a female from 50 to 55lbs., other conditions being equal, will win more stakes than their much heavier competitors. The feet of the heavy dogs are liable to suffer, and when it comes to "getting about" at the turns the big ones are wanting.

The morning of the 8th all of the greyhounds to compete at the meeting were brought out on the main street for a grand parade, and the display was certainly the finest ever seen at a coursing meeting in this State, and as they marched up the street with their proud owners at their side "one was reminded of the old days in England," as a big-hearted old Yorkshireman expressed it.

Prominent among the lot were Trales, the imported son

of Wandering Tom and Little Emily III., a grand fellow imported in 1888 by Dr. G. Irwin Royce, of Topeka, Kansas, with three Glendyne bitches, in company with D. N. Heizer and G. N. Moses, of Great Bend, Kansas. He is just coming to himself after getting acclimated. He is a white and brindle in color, weighs about sixty pounds and is very symmetrical throughout; especially strong in loin and quarters, good bone, and has most excellent legs and feet. His main faults being a little too much fullness in the head above the eyes, and a neck too short. This latter is a more common defect in greyhounds than any other one fault. He went down before the grand old imported bitch Dick's Darling, but a couple of days previous to the meeting was not himself from some disturbance of the bowels. He is undoubtedly the best all-round coursing dog in the West at the present time.

Dick's Darling, a rather blocky black bitch, imported in 1888 by Mr. D. C. Luce, of Great Bend, Kansas, is worthy of more than a passing notice. She is by Coleraine Diamond, out of Daylight, and her pedigree carries back to a large number of the Waterloo winners. She won some minor stakes before coming to this country, and in one event she stood to win a big stake, but was snagged on a picket in the fourth round. She is rather low on her legs, very muscular, strong in loin and quarters, well sprung in ribs, and weighs about 58lbs. Although beyond the age for coursing, she still goes honestly about her work, with all the fire and vim of an untired youngster. She divided the stake after being seriously injured by jumping the fence into the corral in the course with Hand Maid.

Her daughter, Lady Barton, a thirteen-months-old puppy, went to third place worthily. She is a little red brindle weighing about 40lbs., but goes away like a fiery flame, works her hare as fast as a terrier a rat, and apparently has great staying qualities. She is a very pretty little thing, symmetrical throughout, but with the fault of both parents, too much fullness over the eyes. Were she three months older and 10lbs. heavier, she would certainly be a dangerous competitor in the Great Bend Derby, the 24th of this month.

Among the little American-bred greyhounds may be mentioned Bar Maid, who divided the first with Dick's Darling. She is from what would be called unknown stock, but in makeup shows good breeding. She is coal-black, weighing 47lbs., and is of a rather delicate type, a little rangy, well up on legs, and a little light in bone. She has a long stride, but gathers quickly, and when slipped goes away at a grand pace. In working the hare she rather lacks fire, but with a little more experience will stand well in any company.

Another little bitch very noticeable was Hand Maid, a pretty little white bitch with blue markings. She is nineteen months old, will weigh about forty-eight pounds, is symmetrical throughout, is fit for a place at any bench show, is built on running lines, and has that determined fire in her eye that brooks no obstacles. She only went down before the old courser Dick's Darling in the third round, in what should have been an undecided course. Spring, the winner at St. Louis, Sept. 22, was in place, but in the first round on a long hare, was carried through the half mile course without a turn, breaking a nail, and being down in the second series with Bar Maid was thrown out in a close course. Holly, a brother of Hand Maid, a compact and nicely made fellow, solid blue in color, weighing about 52lbs., was working to the front, and only met defeat by Bar Maid.

Miss Rare, Minnehaha and Melodrama, of the Lexington Kennels, were entered in the second stake and were all in good form, but Miss Rare went down in the first round with Hand Maid, and Melodrama with Ariel, a half sister of Hand Maid.

There were others worthy of notice, but space will not allow of a detailed description. Mr. D. M. Sidle and Wm. Dunn came from southern Kansas with a string of seven, confidently expecting to win, but after the first fast brace went from the slips they were a little shaky. They are both pleasant gentlemen, and went home filled with knowledge and enthusiasm.

Mr. Alfred Haigh, of Cable, Ill., nominator of Bar Maid, is a gentleman of very large proportions, weighing over 320lbs. He is from Yorkshire, England, and is jolly and kind in his make-up and enters into the sport with enthusiasm. It was a sight to see him with his face all streaming with perspiration and flushed with excitement as Bar Maid went to the slips for the last round, and after the second course was called "undecided" he collapsed, and was only too willing to divide the first and second money.

Mr. E. T. Vernon, a prominent attorney of Larned, Kan., was seen for the first time on a public coursing ground. He is a gentleman of Southern birth, 6ft. 4in. tall, big-hearted and genial, a valuable addition to the coursing interests.

Every year brings a new lot and a better class of coursers, and let me say that the interest demands that clubs be formed in different localities throughout the country, and a class of men called to the ranks with a practical love for the sport; men of independence in finance, but not extremely wealthy, as men of this class are apt to encourage exclusiveness.

Clubs can be formed with little expense, and the practical furnishing of rabbits and material for coursing can be done by parties who are adepts at the business, and a round of meetings in the spring and fall can be successfully arranged for. This is in perfect harmony with the original ideas of the inaugurators of coursing in this country.

Make a large stake, open it to the world, and especially invite foreign competition. It will yet come to this, and we hope to soon see a movement put on foot looking to organization in various localities of coursing clubs. The sport is attractive in itself, and is enduring; the personal interest increases with each experience, and it is thoroughly before the public, will rapidly gain in public favor, and in time is destined to divide the interest with horse racing if it does not become the national sport.

There are greyhounds through the country which, if well trained, by which we mean exercised and hardened for coursing, and if only trained on cottontails, will stand a good show at any open meeting, as instanced by the work of Bar Maid at the meeting here in Hutchinson, Kansas. She had never seen a jack-rabbit, but was fit and went to her work like an old courser.

At Louisville and St. Louis there was a good lot, and most of them worked gamly.

The running ground in the Association Park is the longest in the world, and in fact it is too long. It is 900yds. long, by 75yds. in width; at the end of the course there is an escape for the rabbit into a forty acre field, being a part of the half section of ground devoted to the rabbits; the escape fence is composed of a board fence 4ft. high, with 4ft. of strong wire netting above it, and was supposed to be all sufficient to check the dogs, but proved insufficient for two of them, Dick's Darling and Hand Maid, both of which cleared it at a bound.

The rabbits mostly ran well, but true to their obstinate disposition, a few of them would wait till pressed by the dogs, and then with a fast pair after them, would wait too long. In the open they will often do the same, and it is no uncommon thing to pick up four or five in succession, in runs not averaging 300yds. Had the distance been only a quarter of a mile, three out of five would have escaped. On Friday when the first series of the second stake was run, seven out of twelve escaped.

As the new entries for the second stake were made, the subject of muzzling the dogs was taken up, and by unanimous consent of the dog owners the dogs were all to be muzzled, and by action of the association it was decided to muzzle the dogs on all occasions whenever and wherever meetings were held in an inclosed park. The racing is just as satisfactory, and instead of killing the rabbit, they are only mussed over by the dog, and an attendant being ready at hand secures the game, which runs away with little apparent injury as soon as released.

The field officers of the meeting were as follows: Dr. Chas. Halloway, judge; Arthur Massey, slipper; G. Irwin Royce, field steward; D. C. Luse, slip steward.

It was fully 3 o'clock when the first brace was brought to the slips, but with little further delay the races were run through in rapid succession. D. M. Sidle's Little Katie was drawn with D. N. Heizer's imported Trales. The English fellow left the slips in his masterly way, led to the hare by four open lengths, turned to Katie, but she failed to hold possession, Trales leading again for a turn and a kill. Trales won.

M. E. Allison's Reno Rex and M. Walsh's Maggie went to the slips. Rex cut out the work, turned, made a go-by, and killed, beating Maggie pointless.

D. M. Sidle's Pearl Sidle was next slipped with Mrs. C. K. Phillips's Bender. Pearl led from the slips, wrenched several times but failed to turn, the hare escaping. Pearl won.

John R. Price's Reno Pilot a bye.

M. Mullen's Sport was next down with Mrs. D. C. Luse's Little Thought Of. Little Thought Of raced away from the slips like a flash, lost sight by the rabbit starter's horse, letting Sport in without merit, and the remainder of the course was but a follow my leader to the escape; undecided.

M. E. Allison's Reno Redwood drawn with G. Irwin Royce's Haud Maid. Maid led up with a rush, turned the hare, fell, rolling over twice, but regaining her feet made a grand go bye and killed, again falling, but held the hare as she came to her feet. Maid won.

Wm. Dunn's Don Pedro a bye.

J. R. Cochran's Bridget and D. C. Luse's Dick's Darling were slipped to a good hare. Dick's Darling went away with her usual meteoric style, wrenched several times, turned again coming in, held possession for several wrenches, and killed, beating Bridget pointless.

D. N. Heizer's Lady Graham Glendyne slipped with W. W. Carney's Jessamine. Lady Graham went away in a style worthy of her noted sister, Miss Glendyne, the Waterloo winner, made a beautiful run up, turned, placed Jessamine for several wrenches and a turn; gave Lady G. an opening for a go bye, which she was not slow in accepting. Again turned to Jessamine, and the white and red took the work for a moment for four wrenches, and in the rapid exchanges following Lady G. won with credit, but being out of condition showed the effects of a hard course. She has never been herself since having pups, and will require another year to get on her feet again.

D. C. Luse's Lady Barton with A. A. Tanner's Rena. Lady Barton raced away to the hare with speed worthy of her old mother, Dick's Darling, turned in a quarter, placed Rena, who failed to hold possession for a point, letting Lady Barton in for a go bye and turn, and then some pretty work followed, in which Lady Barton had decidedly the best of it, beating Rena with much to spare.

T. Coke Eberly's Cousin Frank being delayed the course with Lady in White was postponed by consent till the morrow.

Mr. Phelps's Ace of Spades and Mr. Alfred Haigh's Nip next in order were placed to complete the running for the day. Nip ran away from Ace of Spades, only allowing him to kill without merit. Nip beat pointless.

The next was the undecided heat between Sport and Little Thought Of. L. T. O. raced away to the hare in her usual style, turned, placed Sport, took the work away from him again, made repeated wrenches and tripped, but the hare escaped.

WEDNESDAY, OCT. 9.

Cousin Frank and G. A. Walkup's Chicago, Bell being absent, Arthur Massey's Lady in White, Arthur Haigh's Bar Maid, two bye dogs, were by consent placed together: Bar Maid led from the slips, turned to Lady in White for the kill; Bar Maid won. A. F. Walsh's Kate M. with Mrs. E. A. Rowell's Holly: Kate M. was favored in the slip, but Holly drew up for a go by, turned to Kate, but she falling, gave away her opening to Holly, allowing him to score a turn and a kill; Holly won.

Wm. Dunn's Clothes Horse came down in the drawing with the St. Louis winner Spring; Spring led to the hare in a masterly way, wrenched repeatedly, but failed to turn, the hare being a strong one carried the eager fellow to the escape, Spring winning pointless.

J. R. Cochran's Ariel was next slipped with Arthur Massey's Savina. Ariel led from the slips with Savina close up, turned to Savina, who wrenched twice and turned to Ariel for the kill. This closed the series in the sixteen-dog stake.

Second Series.

Trales placed with Pearl Sidle to open the second series: Trales showed more of his old form than yesterday; leading up with a rush he turned his hare, and having considerable the advantage in the run up, again turned, placing Pearl for a turn. Trales killed, winning with much to spare.

The best course of the day was the one next drawn. Little Thought Of and Hand Maid, two quick, active workers and very speedy, and the crowd was on tiptoe as they were called to the slips. They went away to a good hare, Maid having the stride, but being unsighted for a moment let L. T. O. up, but recovering, Maid raced away, turned the hare, placed L. T. O., and then was seen some of the quickest and prettiest work of the season, Maid having the best of it, raced around L. T. O., wrenched twice and killed. Hand Maid won.

Don Pedro, Dick's Darling in the slips, the old lady went to her hare like a rocket, turned, went back to her work, turned, let Don Pedro in for two wrenches and a turn, again taking possession rolled up several points, turned to Don Pedro for a kill without merit. Dick's Darling won.

Lady Barton beat Lady Graham Glendyne in a short course.

Nip and Holly were in for the next course, Nip leading to the hare, turned to Holly, and the blue brother of Hand Maid, getting to his work in great style, rolled up points rapidly, winning easily.

Again the St. Louis crack, Spring, was in, but with a bustler, the Illinois black Bar Maid, with his broken toe nail scored against him. They went away at a rattling, rushing pace, keeping the spectators in a dizzy whirl, Bar Maid slightly in the lead. Racing to the quarter Bar Maid wrenched several times, turned to Spring, he again placing the black. Bar Maid tripped, Spring killed. It was a close course and a pretty one. This course showed Bar Maid a good one, and went a long ways toward placing her as favorite.

Ariel a bye.

Third Series.

Again the imported white and brindle, Trales, was let in to down Pearl Sidle, which he did in a short course, winning easily.

A tremor of excitement went through the large crowd, and dog men were anxious, as Hand Maid and Dick's Darling were called out. The old lady had won all her courses handily, and the little white had plenty of points to her credit; they were slipped to a demon hare, Dick's Darling getting away in the lead in the first two hundred yards, but only held her advantage to the quarter, when Maid drew up, lessening half the distance in the last quarter to the escape. It was simply a straightaway run with not enough points to make a course, and certainly should have been declared undecided, but Dick's Darling was awarded the course.

Over the first or temporary escape they went, falling as they struck the mesh wire, but away they raced to the permanent escape, the two owners of the dogs groaning as they saw them going to the escape, knowing the persistency of both. Coming to the escape, Dick's Darling, after the second effort, cleared the fence and was racing away down the corral after the fleeing hare. She carried him to the end of the field and back, killing as her owner secured her. Hand Maid, in her effort to scale the fence caught in the wire and was secured. This heat was the sensation of the day.

Lady Barton won over Holly in a short course. Ariel went down before Bar Maid in a short but close contest.

Fourth Series.

Trales and Dick's Darling, the two imported dogs came down for a rattling course, and even though the old lady had injured her legs and feet in jumping the fence, she was game and eager, and to a good hare she spun away, leading Trales, but becoming unsighted, let Trales up, but as Dick's Darling became sighted again she raced up, turned to Trales, and rapid exchanges took place, the hare turning toward the judge, separated the dogs for a moment, unsighting Trales. Dick's Darling killed and won, but in the judgment of your reporter Trales should have had the course.

Lady Barton, the little red 13mos. old daughter of Trales and Dick's Darling, had worked gamely to third place, but went down before the "dark horse" Bar Maid from Illinois. This brought the running to the final course. The two blacks were still left in, Dick's Darling, the imported, and Bar Maid, the unknown, and they were placed in the slips amid great excitement, Dick's Darling the favorite, but as they were loosed to a good hare Bar Maid shoved to the front; the injury to Dick's Darling's leg had made her sore in spite of her great gameness. Bar Maid turned in 200yds. and Dick's Darling killed; undecided. Again they were placed in the slips, only to repeat the performance. Again to a short hare, and again undecided. As they were taken back for a third trial the two owners, Mr. D. C. Luse and Mr. Alfred Haigh, after a hasty consultation, agreed upon a division of first and second money, Lady Barton third, Trales fourth.

FRIDAY, OCT. 11.

The second stake, the American Sweepstakes for American-bred dogs only, brought twenty-four entries, most of the dogs in the first stake being re-entered, but there were several well-known good ones present, including Miss Rare, Minnehaha and a young one, Melodrama, belonging to the Lexington, Ky., Kennel, and Duke of Dodge, a son of Needle, the runner up in the young dog stake at the first American Coursing Club meeting in 1886.

The dogs were muzzled, and rabbits seemingly ran better, and the first day of the new stake was rather the best of the meeting. The weather had been everything desired up to the present, Saturday being a trifle cooler than the days previous, and twelve courses were rattled off in quick succession.

Ariel and Lexington Kennel's Melodrama raced to the escape, Ariel leading by four open lengths, reaching the escape. Ariel being but a bit of a body, went through the small space for the rabbit to pass through and ran herself to a standstill, but won the course over Melodrama pointless.

Kate M. had a walk away over Little Katie in a long strung course to the escape; Lexington Kennel's Minnehaha beat Holly in a closely contested course, Holly apparently having the best of it, but falling, lost ground for a moment, but was soon at his work and should have been named winner.

Mr. E. T. Vernon's Beauty ran a bye.

The Lexington crack, Miss Rare, went down before the little white Hand Maid in a pretty course. In the run up Hand Maid showed four open lengths, worked closer, and won handily. As they reached the escape Hand Maid jumped the temporary escape, went to the permanent escape like a ray of light, the attendants trying to check her, but evading them she cleared the eight-foot fence without touching, turned the hare, brought it to the escape and killed.

Miss Rare's owner, Dr. Van Hummell, attributed the defeat to the muzzle, and in his usual confident way offered to wager a hundred against Hand Maid in a trial on the open within the week following.

In the heat between Rena and Lavina, Rena had the best of it from the slips, but Lavina made a go bye in the two hundred yards, forcing the hare to the escape in a culvert.

Duke of Dodge beat Bender without an effort. Nip beat E. T. Vernon's Jack pointless on a good hare which escaped. Pearl Sidle beat Duke B. in a short course. Bridget made merry with her hare before her kennel mate Stonewall Jackson. Don Pedro, in a close course, beat Bar Maid, winner in the first stake; but she was apparently sore and worked sluggishly. Jessamine beat John Walton's Newton Bell.

The following day the rain interfered with the conclusion of the stake and running was postponed until Monday, but the rain continued without interruption, and with no prospect of ceasing, and after mature deliberation and consultation by the officers of the association and nominators in the stake, it was decided to divide the money equally between the winners, and call the stake closed. This, as it has proved, was a wise move, for up to Wednesday night it was still raining, and this in droughthy Kansas.

Thus closed the largest and most successful inclosed park meeting ever held in this country.

NATIONAL DERBY.

Open to the world, $200 to first, $100 to second, $50 to third, $25 to fourth.

First Series.

D. N. Heizer's (Great Bend, Kan.) brindle and white dog Trales beat D. M. Sidle's (Winfield, Kan.) brindle bitch Little Katie. M. E. Allison's (Hutchinson, Kan.) red dog Reno Rex beat A. F. Walsh's (Nickerson, Kan.) red and white bitch Maggie. D. M. Sidle's red and white bitch Pearl Sidle beat Mrs. C. K. Phillip's (Greensburg, Kan.) red dog Bender. J. R. Price's (Topeka, Kan.) fawn dog Reno Pilot a bye. G. Irwin Royce's (Topeka, Kan.) white and blue bitch Hand Maid beat M. E. Allison's Reno Redwood. Don Pedro a bye. D. C. Luse's (Great Bend, Kan.), black bitch Dick's Darling beat J. R. Cochran's (Winfield, Kan.) fawn bitch Bridget. D. N. Heizer's white and black bitch Lady Graham Glendyne beat W. W. Carney's (Great Bend, Kan.) white and red bitch Jessamine. D. C. Luse's red bitch Lady Barton beat A. A. Tanner's (Jamestown, N. Y.) white bitch Rena. Alfred Haigh's (Cable, Ill.) black bitch Bar Maid beat Arthur Massey's (Great Bend, Kan.) white and black bitch Lady-in-White. Alfred Haigh's blue dog Nip beat Mr. Phelps's Ace of Spades. Mrs. D. C. Luse's (Great Bend, Kan.) brindle bitch Little-Thought-Of beat M. Mullen's (Nickerson, Kan.) brindle dog Sport. Mrs. E. A. Rowell's (Great Bend, Kan.) blue dog Holly beat A. F. Walsh's Kate M. E. Burger's (St. Louis, Mo.) fawn dog Spring beat Wm. Dunn's Clothes Horse. J. R. Cochran's white and blue bitch Ariel beat Arthur Massey's fawn bitch Lavina.

Second Series.

Trales beat Reno Rex, Pearl Sidle beat Reno Pilot, Hand Maid beat Little-Thought-Of, Dick's Darling beat Don Pedro, Lady Barton beat Lady Graham, Glendyne Holly beat Nip, Bar Maid beat Spring, Ariel a bye.

Third Series.

Trales beat Pearl Sidle, Dick's Darling beat Haud Maid, Lady Barton beat Holly, Bar Maid beat Ariel.

Fourth Series.

Dick's Darling beat Trales, Bar Maid beat Lady Barton.

Fifth Series.

Bar Maid and Dick's Darling divided first and second; Lady Barton third; Trales fourth.

AMERICAN SWEEPSTAKES.

Open to American-bred dogs only, $100 to first, $50 to second, $25 to third, $15 to fourth, entries free, but one-third of winnings retained by the Association for general entrance fee.

Ariel beat Williams and Van Hummell's (Lexington, Ky.) black and white bitch Melodrama. Kate M. beat Little Katie. Williams and Van Hummell's (Lexington, Ky.) white and fawn bitch Minnehaha beat Holly. Beauty a bye. Hand Maid beat Williams and Van Hummell's (Lexington, Ky.) white and brindle bitch Miss Rare. Dr. O. H. Simpson's (Dodge City, Kan.) white and black dog Duke of Dodge beat Bender. Nip beat E. T. Vernon's (Larned, Kan.) black dog Jack. Pearl Sidle beat Duke B. Bridget beat Stonewall Jackson. Don Pedro beat Bar Maid. Jessamine beat John Walton's (Newton, Kan.) fawn bitch Newton Belle. Stake $190, divided.

THE A. K. C. FINANCES.

Editor Forest and Stream:

Replies to the open letters of Messrs. Vredenburgh and Belmont seem hardly necessary, but the attention of the dog public may properly be called to the drift of affairs that will be inevitable if these letters are not promptly censured in the only practical way. The letter of Mr. Vredenburgh completely begs the question; he asks for a committee to investigate whether his books are correct, and any practical business man knows how *books* may be correct, and a statement made from them that contains no falsehood, and yet is utterly delusive. The point is that Mr. Peshall and Mr. Shotwell both say that appearances indicate that the A. K. C. will not have funds at the end of the year with which to publish the Stud Book. As treasurer, Mr. Vredenburgh has received moneys in payment of entries in the Stud Book not yet published; if he cannot show an unquestionable reserve fund, out of which the expense of publishing the next volume of the Stud Book will be borne, then all money thus received should be classed as accounts payable. If Messrs. Peshall and Shotwell are correct, the A. K. C. is unquestionably insolvent. Any business man will admit this on sight. Whether these gentlemen are correct, I am not fully prepared to say, but that they have abundant ground for their opinion is shown by the reports made by the Stud Book Committee. Now, I do not see wherein the use of a committee to explain (or state) what nobody has denied comes in. A detailed report from Mr. Vredenburgh is asked for by the circumstances themselves, and nobody has said that Mr. Vredenburgh's report will not be accepted as truthful.

Now as to the desirability of such a detailed statement being made at this time. Mr. Belmont has a lot to say about the "regular time," "usual custom," and that such a detailed report will be furnished when called for by proper authority, etc., etc. Who can there be that has a better right to ask for this information than the creditors of the A. K. C., those who have advanced money on the pledge of receiving the entries and stud books in return? I take it that Mr. Shotwell is in this category, as is Mr. Hopf. Rightly or wrongly the solvency of the A. K. C. has been questioned, and the doubts expressed are supported by figures that on their face conclusively support the charge of insolvency. Does not any business man, in such circumstances, want something more than a mere generalization from his debtor? And when he gets a statement, what does he think of the debtor when the inventory of stock contains unsaleable goods, valued at full prices? Mr. Vredenburgh's report shows stock on hand to something like $1,840. Does any man believe that the whole lot would be sold for $140? There are plenty of mercantile men among the delegates of the A. K. C. I just ask them to apply the state of this case to one of their debtors and what their impression would be as to the chance of their getting their money? So far, the lesson of the reports and letters thereon is that the A. K. C. is hopelessly insolvent.

Now as to the spirit of the letters, the prospect they hold out for future dignified and harmonious courses in canine affairs. Honestly, I am grieved at Mr. Belmont's letter. I know nothing whatever of the gentleman but what I gather from his public expressions; I never had a particle of private expression of opinion as to him from anybody, and I am sincerely sorry that any man can be at the head of American canine affairs and fail to realize the shocking impropriety of his indulging in what appear to be vindictive personalities, over his official signature and in the official organ of the body he represents. This may be consistent with perfect uprightness, but it certainly shows complete unfitness for the position. There is no use in mincing words; the frank truth is the only thing to save us, and I ask all American dogdom how they relish the prospect of their officers using their official signatures and the A.KC. official organ to promulgate charges of "hypocrisy" against gentlemen who differ from them? Just stop and think what this will inevitably lead to? Mr. Belmont would have a perfect right to publish anything and everything he has written, if he did it in the public press and over his private signature; but to throw the weight of his reprsentative character into the scale against some one with whom he differs, or to use the official organ of his club for this purpose, is simply destructive of every good purpose for which the club was instituted. Remember that not a single particle of evidence was produced to support the wild charge of hypocrisy against Mr. Peshall, it being entirely an assumption of Mr. Belmont's.

It would probably be impertinence in me to say to Mr. Belmont that I have no personal feeling against him in this matter, but to the public at large such a disclaimer may be necessary as a preliminary to my saying that, under its present management, nothing but wreck and ruin is in store for the American Kennel Club. W. WADE.

HULTON, Pa., Oct. 19.

Editor Forest and Stream:

After reading the published correspondence between the secretary and president of the A. K. C., which appeared in your last issue, it is very evident that the management will not permit a detailed statement to be made showing the exact financial condition of the club, and the members must be satisfied with the statement made by the secretary during the last meeting, which showed for the first eight months of the year that over $6,000 had been collected from the breeders and dog men of this country, and about the same amount had during the same time been expended by the officials of the club; and that if the members are not satisfied with this statement they must estimate for themselves and therefrom arrive at their own conclusions. No one for one moment has ever questioned the integrity, honesty or ability of either the secretary or his assistant, that the amount has been received and the amount disbursed, no one has ever doubted, or in any way questioned, and all the members of the club who have written on the subject ever asked for is a detailed statement by the secretary showing from what sources the income was derived and the items of expense, or "from whence it cometh and whither it goeth." The secretary has been asked in the most kindly, and I might say almost in an affectionate manner for this information. This is a voluntary association, and every member of a local club is a member of this association, and is entitled to this information when reasonably requested.

What I claim is this, that under a reckless and extravagant management thousands of dollars have been taken from the dog men and expended under this management without a resulting benefit to the breeders and members of the club, and that this costly and extravagant management is the result of an idiotic hobby, adopted by a majority of the delegates, for the issue of the monthly publication, the *Kennel Gazette*, and the fastening on to the local clubs that fungus, the associate membership. The *Kennel Gazette*, with its expensive attendants, its costly attachments and magnificent surroundings, worthless in itself, useless to the breeder and a standing menace to the sporting press, is useful only to hold within its forms the outpourings of venom, and the aroma which arises from the literary product of an illiterate, ignorant writer, directed against members of the club, as will more fully appear from a personal perusal of the September issue. The associate membership comes upon us from the same source in its wake, sapping the very foundations and vitals of the local clubs. Under the old constitution about forty clubs were built up and an interest awakened in dog matters extending from the near East to the far West; and during the year 1888 and the early part of 1889 most of these clubs gave bench shows, the Stud Book was regularly issued every three months, and the breeders saw the registration of their dogs published in the Stud Book, which gained their confidence and obtained their respect.

Now let us take a look at 1889 and the prospects for 1890. If a party desires kennel recognition now he must become an associate member, he must join the club through the office door of 23 Broadway, and while there is no compulsion for him to either open or read the organ of the club, the *Kennel Gazette*, he must receive it, not only with its unsavory odor, but with its unpedigreed long list of mongrel curs therein contained as registered by the A. K. C. The local clubs have poured into the coffers of the club, through their members, thousands of dollars, which together with their show losses has so impoverished them that we are now informed that most of these local clubs will not be able to open their shows next year, and it is not only the small clubs, but the Philadelphia Club and the club in the great city of Boston have about concluded to succumb, while the New York show will perhaps be the only successful one of the season. The Stud Book for 1889 lies folded within its primitive leaves in the kennel office, the fifty cents which has come down from the hills and up from the vales to pay for the registration in the club's official book has long since been absorbed by the munificent surroundings from without, and according to the Stud Book Committee, there is no money to that account to now get these within. However, we are informed by the official organ that notwithstanding all these gloomy outlooks, health, wealth and wisdom reign supreme within the charmed No. 44 Broadway, and that there are members of the A. K. C. who have been termed hypocritical because they have the courage to express not only their views, but who refuse to truckle and bend the knee to the many wiles growing out of this idiotic hobby, even if bolstered up by the health of a Hercules, the wisdom of a Solomon, or the golden wealth of an ass.

So the management of the A. K. C. is not a rabble, nor is it controlled by a rabble. It is not so elevated, for the facts will convince any one that it has descended to the control of a clique. History teaches us that good government has at times grown out of the actions of the rabble, but never an instance can we remember where good government has ever resulted from the intriguing of a clique. The rabble can exist without the assistance of the clique, and the clique does not desire the advice, aid or assistance of the rabble, excepting in this, that the clique will accept from the rabble or any member thereof any contributions of money that may be sent them, and which will be used by the clique in furtherance of their adopted motto, "Health, Wealth and Wisdom." PESHALL.

JERSEY CITY, Oct. 19.

THE IRISH SETTER FIELD TRIALS.

WE publish below the comments of the *London Field* upon the recent field trials of the Irish Red Setter Club:

"When we say that every one was heartily glad as the last course was being run on the evening of Thursday, Sept. 19, no disparagement of the gathering is intended; simply the meeting was a day too long, when the severe nature of the ground over which the various trials were run is taken into consideration. There were too many stakes, too many entries, and greater interest would have been shown in all, had fewer of the dogs been entered in more than one of the competitions. Two or three good stakes, with the number of entries in each limited, would be quite as many as could be satisfactorily concluded in a couple of days on any grouse mountain in Ireland in the middle of September. Birds then are wild and considerably scattered, and though they lie much better to dogs there than they do in England and the south of Scotland, still many of them are away from the hill points and hillocks long before the dogs come within scenting range. Grouse generally were found to be fairly numerous after the first day; but on the terribly rough and dangerous moor of Sir W. McMahon's, gone over on Tuesday, they were by no means so plentiful as could have been wished. Still they lay well under the tussocks of old heather, and it was rather peculiar that on that day every bird we saw was utilized in some way or other, either a good or bad point being had from it. This was by no means the case later on in the meeting, when far more birds were found, but they were wilder. Mr. W. F. Black's mountain is an exceedingly pretty one from every point of view; heather in profusion, in all stages of growth, is to be found, and with an abundance of grouse there is a fair sprinkling of blue hares, with a snipe or two now and then. There are a few sheep on the shootings, but not nearly so many as would be found on the same extent in Scotland.

"Taking all things into consideration, this last field trial meeting of the Irish Setter Club must be set down as a great success, inasmuch as, in addition to several well-known celebrities, there also competed two or three brace of Irish setters almost, if not quite, equal to anything of the kind previously seen. Indeed, the work of the native red setter throughout was of such a character as cannot fail to enhance the value of the variety in the opinion of sportsmen, especially those whose shootings lie in wild and exposed situations. Although the chief honor of the meeting did not actually fall to an Irish setter, this may be said to have arisen more through inadvertence than otherwise. To Mr. Heywood Lonsdale's liver and white pointer bitch Mopsa went the cup for the best pointer or setter in the competition, a bad or mistaken rule, we think, allowing her, although only one of an entry in the brace stakes, to compete against the dogs entered in the ordinary single competitions. Thus Mopsa, when she met Devonshire Sall in the finals, had previously run only a single short trial of about twenty minutes, and so was comparatively fresh. She was well handled by Brailsford, who, if not able to go quite so fast over his ground as some of the more juvenile breakers, still was always about the place when he was wanted, and he never allows any of his animals to lose a point through want of attention on his part. Devonshire Sall, the Derby winner, run by Messrs. Bulled and Bruette (the latter we believe an American partner of the Devonshire man), and handled admirably by Turner, who proved so successful with Mr. Ellis's Irish red setters last year and the year before, is a good-looking bitch, a prize winner on the bench. She goes a rare pace, carries her head well, and seemed to be an untiring worker; still, on the trials she can scarcely be brought into comparison with some of the red setters that had run so many more times than she; but of them more anon. Devonshire Jack, her brother (they are by Molton Baron—Village Star, and 20mos. old), is equally good, perhaps better, and a thorough show dog in appearance; he has likewise won prizes, and is a good one to go. We were particularly pleased with the style in which he carried his head, and the showy manner in which he galloped and stood his game. The best English setter at the meeting was undoubtedly that smart liver and white bitch Ightfield Rosa (winner of the puppy stakes at Shrewsbury in the spring), who ran second for the Derby. She is a little one, but a rare one to gallop, and, so far as one could tell, went quite as fast over the rough heather as the red dogs. She was smarter than anything at the meeting in her pointing, turning and dropping, as she struck the wind of birds—as quick as a flash of lightning. The good-looking brace, Master Sam and Merry Dick, did not work so well as we have seen them, the first named especially—perhaps attributable to the fact that neither has been on the moors this season; so they went somewhat tamely on grouse over the mountains in comparison with what they might have done after partridges in the low country. Still, Dick went excessively fast at times—a right merry goer, that on a future occasion may be seen to better advantage. This was Nicholson's first appearance at an Emerald Isle meeting, and regrets were expressed that he was not more successful. Thomas Armstrong, too, was there for the first time, and he pleased all by the quiet way in which he worked his dogs, and their non-success cannot be laid to his door.

"No doubt the honors of the meeting went to R. K. Armstrong, a son of Edward Armstrong, of Danby Lodge, and now engaged as trainer to Mr. W. H. Cooper, of Ashbourne, who has got a kennel of Irish setters together which, with a little further improvement, will be almost unbeatable. Young Armstrong had his dogs nicely broken, but he worked them too quickly, himself running over the ground at a pace with which the judges failed to keep up. Merritt, who is now with Mr. C. C. Ellis, did likewise, and on this account, when competing together, the two trainers had to be spoken to by the judges, and cautioned as to their rate of procedure. No doubt both will in future bear this in mind, for they are excellent, steady fellows, painstaking and hard travelers, and their good sense will lead them to benefit by their experiences at this meeting in county Tyrone. Of the new red setters, precedence must be given to Henmore Sure Death, a bitch that was unfortunately entered in all the stakes. We should like to have seen her and her half-sister Woodbine run by an Irish sportsman; but there was the next best thing to this—they were bred by one, viz., Mr. J. G. Hawks, of Kenmare, County Kerry. They are fair-looking bitches, both of them are directly descended from the blood of Captain Hutchinson's old celebrity Bob, and have not a drop of anything but pure Milesian blood in their veins. To Sure Death would undoubtedly have gone the champion cup had she not been so hard run; how she went over the ground, even in the earlier part of her last course, after running during the last three days no fewer than ten trials, some of which were prolonged ones, must have been seen to be believed. Armstrong had taken great pains with her, and she was a vast improvement on the form she had shown in the spring at the Kennel Club's trial, no doubt owing to the fact of her having had a fortnight immediately preceding this meeting over some of the roughest mountains in Tyrone. We fancy she is faster than Mac's Little Nell if both were down on similar ground; her style is smart and clean; she knows where to look for game, possesses a fine nose, and, if kept well under command and made to back properly, will prove a hard nut for the celebrities to crack in the spring of 1890. We do not expect to find such a prodigy as a dog that can gallop around her or take the outside beat. Next to her of the young unknown ones must come Woodbine, already mentioned; she is extremely smart, and may even possess a more delicate nose than her half sister, and there was little to choose between her and Mac's Little Nell when the latter was given the trial in the puppy stakes. We believe at home Woodbine's reputation is as high as Sure Death's, and here she appeared to back better than any Irish setter we have yet seen—a duty in which most of the cracks of this variety seem to fail. They, however, worked the ground scent less than is usual, and in most cases these red dogs had an ugly, houndlike habit of putting their noses to the ground and making out the line in that manner, rather than by holding high their heads and catching the tainted air. When Irish setters will altogether cease this low style of hunting and condescend to acknowledge a point of an opponent, they will have lost the two defects which have alone prevented the taking that high rank they deserve at field trial meetings. Another good young dog is Henmore Shotover, a son of the bench winner, Mr. Perrin's Hector. Not a bad-looking dog, he too has pace on his side, and stamina in abundance; indeed, one-half of the work he and Sure Death went through would, we fancy, have quite tired out a moiety of the ordinary dogs we see running at the spring trials, and after what we saw at Omagh last week, we are sure that the Irish setter for rough land such as the trials were run over cannot be excelled. One drawback he, however, possesses. This is his color, so difficult to see against the dark background of the faded heather as it is in the autumn. This was especially to be noticed when one of the variety ran against a pointer or English setter, nor did we find that birds lay better to the one than to the other. The pointer certainly looks to best advantage on these high ranges of mountains; but when the sharp rain storms came on, they scraped a bed, crouched and shivered in the cold, at the same time that the native dogs appeared warm and contented.

"We have said the trials throughout were a great success, so was the judging; and to Mr. J. H. Salter, Capt. Milner, and Mr. T. H. Richardson, of Crumlin, the club is greatly indebted for the excellent manner in which they performed their duties. They walked well and worked hard—the latter as a steward, and also when he took Mr. Salter's place as judge. The arrangement of the beats the first day was not good; but when they came under the superintendence of Capt. Hugh Stewart there was no going over the same ground backward and forward to get the wind, and so a fair amount of work was done for no more than a maximum amount of walking.

"On the conclusion of the meeting, some surprise was expressed that the winners of the various stakes had not been given separate and distinct trials for the champion cup, in accordance with the rules. As a fact, the judges were not aware of any such rule, and they would have been quite within their rights, in the absence of such knowledge, in awarding the cup to any dog at the meeting without giving any extra trial at all. However, they decided to run Henmore Sure Death, Mopsa, and Devonshire Sall, with the result published last week. Mac's Little Nell had won the All-Aged Stake, and beaten Sure Death in the second round of it; so her worker was clearly justified in his complaint that Mr. Ellis's favorite and excellent bitch had not been given another run for the trophy. We hear that Mr. Ellis has formally protested against the award, and a letter from him appears in another column. Under the circumstances no blame can attach to the judge in the matter; and Mr. Giltrap's absence from the ground was owing to an accident on the first day. This was the grumble at the meeting, and the secretary (Mr. Giltrap) may well feel delighted at the result of his labors, and every one was full of praise to him for his kindness and the welcome he gave to all.

"Some of the members of the Irish Setter Club intend, if possible, to secure a mountain of their own, over which the field trial meetings may be held. If they succeed in doing

this, the trials can come off in August, before birds have been either driven or shot over dogs, when they will be less wild than in September, more numerous, and so afford better and more satisfactory trials, with not so much of the first-point wins as had to be followed on the occasion of which we write."

CENTRAL FIELD TRIALS ENTRIES.

ALL-AGED POINTER STAKE.

BOUNCE (Bob—Sal), G. W. Amory.
REMUS (Mainspring—Dell), Castleman Kennels.
ROD'S GAL (Rod—Juno), Castleman Kennels.
COUNT M. (Croxteth—Trinket) Castleman Kennels.
FLIRT (Mainspring—Merry Legs), O. W. Donner.
PONTIAC (Milton Bang II.—Climax), Edward Dexter.
RIP RAP (King of Kent—Hops), Edward Dexter.
LORD GRAPHIC (champion Graphic—champion Daphne), John R. Daniels.
DUKE OF VERNON (Glendale—Spotless), L. Gardner.
COUNT FAUSTER (Mainspring—Dolly Fauster), Dr. J. G. F. Holston.
DUKE OF HESSEN (Luck of Hessen—Blarney), F. R. Hitchcock.

COUNTESS FLO (Heather Roy—Molly), Dr. John H. Meyer

IRISH SETTERS.

DESMOND II. (Frisco—Grouse II.), Chas. T. Thompson.

THE ALL-ROUND DOG.

MT. VERNON, N. Y.—*Editor Forest and Stream:* In reply to "Novice," I intended to write more at the time, but was afraid of taking too much space. The spaniel should, as a rule, be the dog, and the beagle the bitch, and she should whelp in the spring. Fall puppies don't, as a rule, do well, being weakly and stunted. It should be a medium-sized cocker spaniel and as small a beagle as can be got.

As to what this dog will do. There is a saying about "wanting the earth." For instance, some sportsmen would want their dog to carry their gun and overcoat too; then they might expect them to load it. What I mean to say is, you must not expect too much from your best friend. But I think the spaniel-beagle will do everything "Novice" enumerates. For all ground work he is simply *par excellence*. His nose is all that could be wished, but for retrieving partridges and ducks over water he must be more carefully trained. If the shooting is more over water I would advise the retriever-spaniel cross, putting a spaniel to a retriever (curly-coated for preference).

Then there is the terrier-beagle cross, largely used for rabbits and squirrels, a very handy little dog. Of course every one knows the dropper, about which there is some discussion, some (principally judges) voting him a nuisance, while others (Captain Bogardus, for instance) swear by them, and I think that for rough work and only one dog they are better, on account of their not tiring so easily.

CROSS-BRED.

THE NEW YORK SHOW.—Westminster Kennel Club, Babylon, L. I., Oct. 19.—The next show of the Westminster Kennel Club will be held at the American Institute Building, Third avenue, New York, on the 11th, 12th, 13th and 14th of February, 1890.—JAS. MORTIMER, Supt.

THE GORDON SETTER CLUB.

ST. LOUIS, Mo., Oct. 15.—*Editor Forest and Stream:* I am pleased to learn that we have members in our Gordon Club that will look after the interest of the same. Shall I say for all or only a few of its members? or perhaps it is neither; only just to be writing, to let the country know that we own Gordon setters. For several months our sporting journals have had the very best of letters printed on almost every breed of hunting dogs except the Gordon setter. But he has come to the front again. On Sept. 20 we find a long letter from Dr. J. H. Meyer on the Gordon Club, its officers and for field trials. Again on Oct. 11 the same writer appears in print with a rehearsal of his first letter of Sept. 20 (except a little more personal).

On Oct. 3 I replied to same, defending the club and its officers. I have no apology to offer in behalf of Mr. Malcolm; he is able to defend himself. There is not a club in existence to-day in this country or any other country, that a member cannot get followers. Let him write a long letter to the different papers telling the members that a radical change is wanted, by saying they have star chamber meetings, and it is ruled by a clique and all is secrecy with them. How many members belonging to such a club would kick? Why, most of them. Have not nations been divided, father against son and the whole civilized world shocked from one end to the other. Why? Because some man or men have led the people to believe that they were unjustly treated.

With regard to not dissecting the constitution, let the members see when the club was formed and when admitted into the A. K. C. in form. Now would it be wise for any one member so interested in the club to make it weaker in place of stronger? I leave that to the public.

As there are only a few that are breeding the pure Gordon setter of to-day as classed in the A. K. C., my object would be, make more breeders; and nothing can stop the Gordon from coming to the front, both on the bench and in the field. It always appears to me when a person opens up a public correspondence, that his second letter always construes his opponent's letter, that is if he wants to keep before the people. For instance (quoting), Dr. J. H. Meyer, he says in regard to secrecy referred to in Dr. Whitaker's letter. Now let us quote Dr. Whitaker as he wrote it; the words are: "I do not see the consistency of any member making his troubles known to the public; as in all matters where a wrong exists the club should have the first right to act (and not the press)."

How laughable it is for Dr. Meyer to tell me and the press that all is published what the A. K. C. does monthly. Why it answers for itself, for I never see what the A. K. C. has done until after they have had a meeting and not before. I say again the club must have the first right to act and not the press. (Club first, and press second.)

I shall not go into details about officers of any organization, as some are only figureheads and can only act when so ordered. A president of a club has no power to do anything only what the club orders he shall do. Can an officer of a club have an opinion of his own? or shall one member tell the officer how he must think and act individually? If a member belonging to a club should have such ideas of a president that he must not write or think on what the member thinks for him, then I say do away with the president.

Now one word on field trials. If Dr. Meyer was so anxious to run his dog, why did he not run his dog against Mr. Sperry's Stubble, when this dog was open to run any Gordon setter in America, or does he want to force Little Boy to run, a dog that is gun-shy by being shot at. I am not saying this to injure Little Boy, far from it, I am only showing the position of our friend Meyer. The voting of the so-called fake ticket by the St. Louis members will explain for itself without my reply on that point.

One word to friend Meyer and then I have finished. I thought when our club was formed that all those old feelings would be done away with that existed in forming it and so fought against it. I would say to the members not to listen to men that are outside of the club, as this is no one man's country, and we all know that one man cannot nor shall not rule our Gordon Club. J. WHITAKER, M.D.

THE SOONER DOG.

Editor Forest and Stream:

Mr. Charles Hallock's investigation of the question as to the significance and origin of the term "sooner dog," the result of which is contained in your number of Oct. 10, deserves credit for the ingenuity displayed, although the subject hardly merits the attention which he bestows upon it, when the true explanation of the expression is known.

I could not repress a smile while reading his dignified disquisition on the subject, and being forcibly reminded of Mr. Pickwick's antiquarian find in the shape of a paving stone on one of the London streets, which bore what he determined was a very ancient Roman inscription. He had the stone dug up and carefully preserved and afterward presented it to the antiquarian society, of which he was president, as a great treasure. The inscription was as follows:

BILLJ
ONE
SHISM
ARK

But the beautiful theory which Mr. Pickwick had constructed as to its age and significance was effectually exploded by the interpretation given by an irreverent and matter of fact member, who declared that it should be read "Bill Jones—His Mark."

As to Mr. Hallock's "sooner dog" theory, I am afraid it is fated to a similar explosion. There is a current ribald and silly catch which is worked in this way: A "knowing" member of a party will "give the wink" to some of the others and then remark, "Why that's a sooner dog, the first one I've seen in some time." Then the "sucker" of the party inquires, "What do you mean by a sooner dog?" The reply is, "He'd sooner stay in the house than go out doors."

COAHOMA.

CLARKSDALE, Miss.

A TROTTING IRISH SETTER.

KANSAS CITY, Mo.—*Editor Forest and Stream:* Early last week a gentleman with his son and dog arrived in this city, stopping at the Hotel Woodland to visit friends. It soon transpired that the dog, a fair specimen of the Irish setter, was used very differently from what such dogs are supposed to be kept for, viz., that of pulling his young master hitched the same as a horse to a sulky. Getting on some of the smooth streets of the city he was noticed distancing all horses that came his way, and at the same time trotting horse-fashion. The president of the driving park learning of the wonderful feats performed by the dog, invited the owner to show him at the track, where he made the half mile in such good time that an engagement was made for a public exhibition, which was given on Saturday afternoon.

The novelty of the race brought out a good crowd, especially quite a number of the youths of the land, who took advantage of the matinee to gaze for the first and possibly the last time upon a genuine trotting dog which can lay claim to speed.

Everybody was on tip toe to see how the dog was to be hitched and how big he was, and all felt relieved when he was harnessed and the driver was seated and he had the word go! at which he gave a jump and then settled into a good trot, which he maintained all the way to the finish, increasing his speed at the wire. The tickers recorded the good time of 1.52.

When unhitched the dog did not appear worried, but jumped and frisked about his master as though delighted with his own accomplishment.

After a short rest he was again started, this time making a better record, reaching home long before supper time in the excellent time of 1.50½, thus beating all previous dog records.

The Exposition Driving Park is something new, only completed about two months ago, but it is already, like the ball park and the exposition building, a very popular resort, and it should be, as there are three cable-line roads running direct to the park, making it easy of access to all parts of the city. RUSTLER.

THE CANADIAN TRIALS.

Editor Forest and Stream:

Have just returned from Chatham, near which place the first annual field trials of the Canadian Kennel Club will be held. The club has secured and posted a tract of land some two miles square and have also secured two other grounds so that should anything happen to the one of the grounds they have another to fall back on. The grounds are first class in every respect, being free from dense covers and heavy woods. Birds are plentiful and everything looks promising. Entries are coming in, but we would like to see some entries from your side as we are anxious to test the quality of our dogs against some of your cracks. This being our first trials we can't afford to make our purses as large as we would like, but with good support this year we hope to make them larger next year. Entries close Nov. 1, and should be sent to the secretary, C. A. Stone, London, Ont.

C. A. STONE.

DOG TALK.

MR. COSTER informs us that arrangements have been made with Southern railroads whereby all who attend the Eastern or Central field trials from points south can, by applying to ticket agents and paying full fare to Greensboro or Salisbury, obtain a certificate entitling them to return at one-third the regular fare. The railroad company will also transport three dogs free when accompanied by handler, upon presentation of card from the secretary of either club. Negotiations are now in progress with Northern roads, and it is probable that the same arrangements will be made with them. The address of the secretary of the Eastern Field Trials Club is W. K. Coster, Saratoga Springs, N. Y. Of the Central Field Trial Club, Col. C. H. Odell, 19 Broad street, New York.

In his letter to Secretary Vredenburgh, A. K. C., published in our last issue, President August Belmont, Jr., asserted that Mr. L. C. Bruce had sought to have his paper appointed to the paid and exclusive organship of the A. K. C. We have received a letter from Mr. Bruce in which he denies this. The unimportant subject then resolves itself into a simple question of veracity between Mr. Bruce and Mr. Belmont.

The Norfolk & Western Railroad Co. announce that during the hunting season, i. e., from Oct. 15, 1889, to Jan. 15, 1890, the company will take free in baggage cars, when accompanied by owners, and at their risk, the dogs of sportsmen or hunting parties, not exceeding one dog to each man. After Jan. 15, 1890, the regular dog tariff to apply in all cases.

The annual dog show of the Westminster Kennel Club will be held Feb. 11 to 14 instead of a week later as previously announced. Arrangements have been made with the American Institute for the use of their building on Third avenue, between Sixty-third and Sixty-fourth streets.

Mr. H. P. McKean, Jr., of Philadelphia, has recently purchased from Mr. Chas. Kemp, London, England, the brindle and white bulldog Hodge. He was whelped July 2, 1886, and is by the well-known British Monarch and out of Roselle (Surplice—Nell Gwynne).

At Newcastle, England, a man was recently fined under the Cruelty to Animals act for docking the tails of fox-terrier puppies.

The All-Aged Stakes of the Central Field Trial Club have 77 entries, 32 pointers, 43 English, 1 Irish and 1 Gordon setters.

We have it straight that a Tammany puppy will win both the Eastern and Central Derbies.

GREAT DANE IMPORTATION.—Brooklyn, N. Y., Oct. 19.—*Editor Forest and Stream:* Mr. Laibacher arrived last week with eight more specimens of great Danes from the kennels of Messrs. Burger, Essig, Ulrich and Watzger, including champion Harres, one of the noblest of his breed, and other prize winners. We have now one of the largest and best kennels of this breed in America, including harlequins, blue, golden and tiger brindles.—WELZ & ZERWECK, Proprietors High Ground Kennels.

INDIANA TRIALS.—Ohio & Mississippi Railway Co., Cincinnati, O., Oct. 19.—*Editor Forest and Stream:* Dogs entered in the Indiana field trials (in crates) will be transported free over this road, at owners' risk, on presentation by owner or keeper of a ticket reading to or from Vincennes or to or from Bicknell. There was a misunderstanding on the part of one of our subordinates in limiting the number of dogs to be transported free to two.—W. B. SHATTUC, Gen. Pass. Agent.

CENTRAL TRIALS.—New York, Oct. 16.—Will you kindly call attention in your issue of next week to the fact that the Free for All Stake, four-hour heats, of the Central Club, closes Nov. 1; also that the forfeit is $50, and $50 additional to fill, and that the first money is $1,000.—C. H. ODELL, Sec'y and Treas. Central Field Trial Club.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Forest Rock, Forest Thunder, Forest Monk, Forest Tatton, Forest Heather and Forest Vine. By C. A. Stone, London, Ont., for blue belton English setters, four dogs and two bitches, whelped Oct. 7, 1889, by Sir Tatton (Sir Alister—Belle of Furness) out of Forest Fern (Prince Royal—Forest Ruby).

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Lady Bess—Thyrass. Mohican Great Dane Kennels' (Albany, N. Y.) great Dane bitch Lady Bess to E. Johnston's Thyrass, Oct. 17.

Nydia—Edwy. Shugart & Hamilton's (Council Bluffs, Ia.) mastiff bitch Nydia (Clement—Queen of Ashmont) to Dr. George B. Ayres's Edwy (champion Orlando—Countess of Woodlands), Aug. 13.

Wacouta Donna—Edwy. C. N. Powell's (Omaha, Neb.) mastiff bitch Wacouta Donna (Ilford Chancellor—Ilford Comedy) to Dr. Geo. B. Ayres's Edwy (champion Orlando—Countess of Woodlands), Sept. 13.

Wacouta Rose—Edwy. Dr. Geo. B. Ayres's (Omaha, Neb.) mastiff bitch champion Wacouta Rose (champion Montgomery—The Princess) to his Edwy (champion Orlando—Countess of Woodlands), Sept. 1.

Ilford Comedy—Edwy. Dr. Geo. B. Ayres's (Omaha, Neb.) mastiff bitch Ilford Comedy (champion Orlando—Idalia) to his Edwy (champion Orlando—Countess of Woodlands), July 25.

Dolly Varden II.—Lord Raglan. Dr. Geo. B. Ayres's (Omaha, Neb.) mastiff bitch Dolly Varden II. (champion Hero II.—champion Dolly Varden) to his Lord Raglan (champion Crown Prince—The Lady Rowena), Sept. 2.

Lady Price—Duke. Elms Kennels' (Forest Lake, Minn.) pointer bitch Lady Price (Graphic—Mealy) to Dr. J. Hanson's Duke (Sensation—Rose), Oct. 4.

Flora—Boycott. John Moran's (Cincinnati, O.) pug bitch Flora (Douglass I.—June) to Eberhart Pug Kennels' Boycott (Duke—Bonnie), Oct. 17.

Mamie—Douglass II. Mrs. N. Sykes's (Norfolk, Va.) pug bitch Mamie to Eberhart Pug Kennels' Douglass II. (Douglass I.—June), Sept. 22.

Judy—Bradford Ruby II. F. Homan's (Cincinnati, O.) pug bitch Judy (Douglass II.—Beauty) to Eberhart Pug Kennels' Bradford Ruby II. (champion Bradford Ruby—Puss B.), Oct. 11.

Muzz—Bradford Ruby II. A. B. Porter's (Chicago, Ill.) pug bitch Muzz to Eberhart Pug Kennels' Bradford Ruby II. (champion Bradford Ruby—Puss B.), Oct. 11.

Pearl Laverack—Monk of Furness. H. E. Thompson's English setter bitch Pearl Laverack to Elms Kennels' Monk of Furness, Oct. 8.

Gyp Dot—Monk of Furness. M. A. Callahan's (Williston, M. T.) English setter bitch Gyp Dot to Elms Kennels' Monk of Furness, Oct. 13.

Knight's Belle—Monk of Furness. Elms Kennels' (Forest Lake, Minn.) English setter bitch Knight's Belle to their Monk of Furness, Sept. 8.

Zylla—Glenmar. St. Cloud Kennels' (Mott Haven, N. Y.) Irish setter bitch Zylla (St. Cloud—Princess Ida) to their Glenmar (champion Glencho—Mavourneen), Sept. 27.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Ilford Comedy. Dr. Geo. B. Ayres's (Omaha, Neb.) mastiff bitch Ilford Comedy (Orlando—Idalia), Sept. 20, eight (three dogs), by his Edwy (champion Olando—Countess of Woodlands).

Vesta. C. A. Altmansperger's (Minden, Ia.) mastiff bitch Vesta (Diavalo—Madge), Aug. 18, seven (three dogs), by Dr. Geo. B. Ayres's Edwy (champion Orlando—Countess of Woodlands).

Nydia. Shugart & Hamilton's (Council Bluffs, Ia.) mastiff bitch Nydia (Clement—Queen of Ashmont), Oct. 11, ten (seven dogs), by Dr. Geo. B. Ayres's Edwy (champion Orlando—Countess of Woodlands).

Juno. M. C. Thomas's (Jersey Shore, Pa.) mastiff bitch Juno, Sept. 14, fourteen (eight dogs), by W. H. Gray's Prince (Zulu—Dolly).

Forest Fern. C. A. Stone's (London, Ont.) English setter bitch Forest Fern (Prince Royal—Forest Ruby), Oct. 7, seven (five dogs), by Item Kennels' Sir Tatton (Sir Alister—Belle of Furness).

Countess Flo. Beaumont Keunels' (New York) Gordon setter bitch Countess Flo (Heather Boy—Molly), Oct. 9, seven (one dog), by their champion Floss (champion Ronald III.—champion Floss).

Julia. St. Cloud Kennels' (Mott Haven, N. Y.) Irish setter bitch Julia (Duke II.—Peg II.), Sept. 23, three (two dogs), by their St. Cloud (champion Elcho—champion Noreen).

Fan. L. Wister's (Philadelphia, Pa.) black and tan terrier bitch Fan, Oct. 3, eight (four dogs), by A. W. Smith's Buffalo General (Halifax General—Lady Lottie).

Flo. Chas. N. Symonds's (Salem, Mass.) Yorkshire terrier bitch Flo (Bright—Fan), Oct. 5, three (two dogs), by P. H. Coombs's Bradford Harry (Crawshaw's Bruce—Beal's Lady).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Bonnie Comedy. Fawn, black marks, mastiff bitch, whelped March 24, 1889, by Edwy out of Ilford Comedy, by Dr. G. B. Ayres, Omaha, Neb., to E. L. Marston, same place.

Doctor. Liver and white pointer dog, whelped Aug. 1, 1887, by Don Juan out of Alameda, by W. S. Bidwell, Monterey, Mass., to Wm. Hawkins, same place.

Dan. Fawn pug dog, age and pedigree not given, by Eberhart Pug Kennels, Cincinnati, O., to R. D. Gray, Richmond, Va.

Count Howard—Princess Phœbus whelps. Blue belton English setters, whelped May 12, 1889, by F. Windholz, New York, a dog to John Yewdell; Philadelphia, Pa., and a bitch to Joe Lewis, Canonsburgh, Pa.

Count Howard—Princess Beatrice II. whelp. Blue belton English setter dog, whelped May 29, 1889, by F. Windholz, New York, to John Yewdell, Philadelphia, Pa.

Crickett. White and tan fox-tertier bitch, whelped Aug. 18, 1889, by Beverwyck Trap out of Lilly Belmont, by Jas. E. Unks, Muncie, Ind., to Geo. Will, Pittsburg, Pa.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

E. B., Boston.—My setter is afflicted with chronic eczema. I use nearly all the remedies prescribed in "Ashmont," both external and internal. Can you help me? This time it is very stubborn. Is there any cure or remedy that will be permanent? Ans. Keep bowels open with compound cathartic pills, two at a dose. Conceal the pills in a bit of meat. Give Fowler's solution, beginning with four drops night and morning and running up one drop daily to ten. Then down again to four drops in the same way. After this omit ten days and begin again. Use zinc oxide ointment for external application. It may take two or three months to cure.

A. H. C., Albany, N. Y.—As you have kindly answered me several times when I have written to you for information, I again wish for help, which you will probably be able to give me. My brown water spaniel (3yrs.) is afflicted with what I have lately thought to be mange, but the symptoms do not tally with any I have read. His health is generally good, as is his appetite. I have washed him frequently through the summer with Buchan's carbolic soap, let it dry on, per directions, and let him bathe usually once a week, which he enjoys very much. He seemed to scratch and bite himself a good deal and I treated him for ticas, which I know he had. These I think I've gotten rid of, but he still continues scratching. He has two bare spots on his rump bones, but I accounted for these by his biting and drawing himself along on the ground when he happened to be costive. One of these spots is entirely healed and the other nearly so. His skin is free from eruption and dry. Some dandruff or dust. Hair in tail somewhat turned whitish. Sleeps well. Ans. Give your dog two compound cathartic pills each morning for three days. You can conceal the pills in a morsel of meat. Put five drops of Fowler's solution of arsenic in the food night and morning. Keep this up for three weeks, then omit ten days and begin again.

See advertisement of Messrs. Harvey's rough-coated St. Bernard stock.—*Adv.*

Rifle and Trap Shooting

RANGE AND GALLERY.

THE NEW WIMBLEDON.

AN English letter, dated early in September, says: "For several days past the large number of 1,700 men have been hard at work upon the butts at Bisley in preparation for the next prize meeting of the National Rifle Association to be held in July of 1890, and already some idea of the ultimate appearance of the New Wimbledon can be formed from the position of the two principal butts, which are fast approaching completion. The larger of these, to be used for the firing between 200 and 600yds., is intended to provide so many as 90 targets, and the whole of the earth for this long embankment is being dug out and filled up by military labor. The latter comes entirely from Aldershot, the plan adopted being to march out a brigade of three half battalions of 500 men each, these remaining at work for ten days at a time, and camping on the spot. As yet but two brigades of half battalions have been so engaged, and the third has still to take its turn, and after this the other half battalion will be called in, until all the Aldershot infantry have had 10 days on the work, the men being allowed extra working pay of 6d. per day. The remaining 200 men to complete the 1,700 at work at one time are supplied by the Royal Engineers, who, however, are occupied with the more important duty of surveying the land and marking out the ground upon which the unskilled military laborers are to be employed. The great butt for the short ranges, already referred to, back toward Brockhill, which affords an excellent stop for any long traveling bullets which may pass over the butt, the firing here, as in other ranges to be constructed for the great annual contest, being in a northwesterly direction. The only other butt as yet in course of construction is that for the 1,000yds. range, to provide about 30 targets. The firing point is almost in a line with the 600yds. targets, but all danger to the men firing from the 1,000yds. point is avoided by the ridge called Hog Lees, which runs between the two. The 1,000yds. range will also be used for firing at 800 and 900yds., so that all the ranges ordinarily used at the old Wimbledon will be fully provided. During the last few days the engineers have been marking the site for the Running Deer range, which is to be in a sheltered nook of Hog Lees between the two ranges already mentioned, and close to the spot on which the offices and other principal structures of the camp are to be pitched. To the right of the long 600yds. butt the land has been marked for the construction of a 1,500yds. range, a distance not hitherto used at the National Rifle Association prize meeting, it being proposed to provide six targets. The firing will again be toward Brock-hill, but in this case the ground will require more preparation than elsewhere, there being many bushes and trees to be cleared away. As yet no commencement has been made in the case of the 36 targets which it is in contemplation to provide for the ordinary musketry purposes of the Metropolitan volunteers, but the intention is to place these still further to the right and beyond the 1,500yds. range, the firing here being almost directly to the westward and therefore under conditions entirely different to those attending the firing of the July fortnight. Toward the left of the general site pool targets for 200, 500 and 600yds. ranges are to be placed alongside the 1,000yds. range, but here again the work of making the butts has not yet made much progress. A great effort is now being made to get the earth for all the butts heaped up before the fine weather ends, when it will no longer be possible for the soldiers to remain out under canvas. None of the offices or other permanent buildings have been started, but the ground has been planned for them, and it is expected that considerable progress will be made during the winter by the Royal Engineers, who, in order to be close to their work, are to occupy the huts in Pirbright Camp so soon as the Foot Guards complete their annual summer training. The 1,500 infantry now at work are to return to Aldershot on Thursday, and their places will then be taken by three half battalions of the Third Aldershot Brigade."

PHILADELPHIA, Oct. 15.—The Gaiety Rifle and Pistol Club met for usual weekly practice and contests for gold and silver medals at their headquarters, 818 South street, this evening. Mr. A. McManus winning the gold medal, and Mr. Geo. Atkinson winning the silver medal for this meeting. Standard American targets (reduced), 30 ds., Wurfflein rifles, plain open sights, off-hand, 10 shots per man, official score as follows:

E Travis	10	9	6	9	10	10	9	10	8	6—87
A McManus	10	8	9	9	7	10	9	8	6	8—84

A Simon	4	4	3	7	8	6	3	5	5	6—51

Oct. 18.—The officers' match of the 1st Regt., N. G. P., took place at the Hartranft rifle range to-day. This match was originally for 200, 500 and 600yds., 7 shots each distance, but owing to the inability of a number of the officers to shoot at 600yds. (as some of the scores at 500yds. will show) it was decided to shoot 10 shots each at 200 and 500yds., the first prize for three officers of each company, the Baily medal, valued $500; special prize of handsome sword belt, best individual score. Officers from Co. D were the winners of the medal and Lieut. Crump won the special prize:

Co. D Team.	200yds.	500yds.	
Capt Hastings	4512445344—39	4443444445—49—79	
Lieut Crump	4338444344—36	4544555445—45—81

BOSTON, Oct. 19.—A pleasant fall day greeted the members of the Massachusetts Rifle Association as they gathered in the prize and practice matches to-day. A light breeze was blowing from 6 to 9 o'clock, making the shooting conditions good. Some fine scores were made. Mr. Eames won the gold medal in the 20-shot match, and Mr. Frye won the champion gold medal. Mr. Kelley won the silver, and Mr. Foster won a bronze military medal, and Mr. Frye won the gold membership badge. Following are the scores in detail:

Twenty-Shot Rest Match.

J N Eames	111 109—220	W Pomeroy	83 95—178
F J Rabbeth	100 103—203		

Champion Medal Match.

J A Frye	78	A Newman	68

Silver military medal—Won on 10 scores of 42 or better by

J E Kelly	45	42	46	43	44	43	42	42	44	46

Bronze military medal—Won on 10 scores of 42 or better by

W M Foster	40	40	42	39	39	41	37	38	38	39

Gold membership badge—Won on 10 scores of 81 or better by

J A Frye	82	85	81	88	84	83	81	82	83	84

Military Medal Match.

W O Burnite	46	44	S Washington	42 41
J E Kelly	46	44	F Lovell	40 39
C E Wiggin	43	42	A S Field	37 35
W M Foster	42	41		

All-Comers Off-Hand Match.

M Summerfield	8	8	10	6	9	6	9	10	9	7—83
E Mohrstadt	8	10	10	6	8	8	8	6	9	10—83
G Alexander	6	8	10	8	8	7	8	10	10	7—82
W Mackwitz	6	7	10	10	7	6	5	8	7	8—74
W J Lord	9	10	7	8	7	6	8	4	5	8—72
A E Bengel	7	8	10	9	9	8	9	6	6	5—66

WILMINGTON, Del., Oct. 14.—The weather to-day at the Healdmoor rifle range was about as unfavorable for target shooting as could be furnished. The wind was very gusty, blowing at times like a gale, at others settling down into a calm, and, to the unpleasant features a cold, raw, drizzling rain set in, lasted nearly all afternoon. The marksmen felt blue and growled with disappointment, but took the matter philosophically, a "went in" to have a good time. The discomforts of the weather were somewhat lessened after the parlor stove was lighted and the windows of the shooting house tightly closed. The competition brought out some fine shooting and the detailed scores are as follows, Standard American target, off-hand:

Pistol Match, 50yds.

E J Darlington	9	10	10	9	9	8	9	9	10	10—93
E Jackson	10	9	9	10	10	6	7	9	7	8—87
H Simpson	8	10	8	8	9	8	8	8	9	9—82
W H Johnson	9	9	8	7	10	7	7	8	8	9—82
J Evans	9	9	8	7	7	5	9	7	6	8—75

Diamond State Match, 200yds.

H Simpson	8	5	10	5	6	9	9	9	7	7—75
W H Johnson	5	8	5	5	8	6	6	8	8	9—67
H Philips	5	5	7	8	4	7	5	6	8	7—62
H Doan	6	7	8	7	6	6	6	4	5	7—61
W Floyd (mil.)	4	8	6	4	4	7	5	5	5	7—55
U Fuller (mil.)	4	5	2	4	5	5	7	5	4	5—43

Military Match, 200yds., Creedmoor Target.

Lieut W Floyd	4	5	4	4	4	4	4	4	4	4—41
Corp U Fuller	5	4	5	3	3	3	4	4	4	3—38
Pvt F Williams	2	2	4	4	5	4	2	2	2	4—33
Sergt H Doan	3	3	4	0	3	3	3	3	4	3—29

The following scores were made by the Wilmington Pistol Club at their gallery, at 12½yds., Standard American target, reduced from 50yds:

H Simpson	10	7	10	10	10	10	9	10	8	9—93
E J Darlington	10	10	9	10	7	9	10	8	9	7—89

W Floyd	4	7	10	6	3	5	7	8	5	5—60

WORCESTER, Mass., Oct. 19.—The Central Church (Congregational) of this city, Rev. Daniel H. Merriman, D.D., pastor, about 18 months ago organized what is known as the Central Church Cadets, an independent military company, made up of members of the Sunday school. To-day they went out to the militia range, at Peat Meadow, for their second shoot and field day. One year ago there was offered a gold medal as a prize to be contested for annually. Last year the medal was won by E. A. Richardson; score 19. To-day he surrenders it to W. Burshaw, who makes a total of 17. The medal will not become the property of a member until he has won it three consecutive times. The shooting was off-hand, 200yds., with a possible 25:

The Cadets' Score.			
W Burshaw	24344—17	S Tilden	43222—11

VILLISCA, Iowa, Oct. 15.—To-day being the day for the second series of matches of the Villisca special rifle team, a large crowd was at the range long before the shooters arrived. The dollar to enter was divided 50, 30 and 20 per cent. The appointed rifle inspector failed to appear, and another was appointed in his place. At 50yds. Harris and Dunn tied for first money; in shoot-off Harris won. At 100yds. Harris and Ferris tied for second; in shoot-off Ferris won. At 200yds. Dunn and Moore tied for first and div. Next match Oct. 29. Five shots at each match, 6 o'clock, wind 10 miles per hour, Creedmoor targets. Score:

First Match, 50yds.			
Arbuckle	34444—19	Poston	43223—14
Luce	33542—17	Harris	54544—22
Ferris	45444—21	Bradfield	34343—17

Gourley	03324—12	Moore	43334—17
Mitchell	00330— 6	Bradfield	30230— 8
Third Match, 200yds.			
Luce	33243—15	Arbuckle	42443—17
Moore	54414—20	Harris	44441—20
Dunn	33544—21		

REDDY.

NEW MILFORD, Conn., Oct. 17.—The third annual prize shoot of the New Milford Rifle Club held yesterday and to-day was very successful, owing to the fair weather and large number of riflemen present. Some of the best shots in the State were present, and the different prizes offered were closely contested for. Although some good prizes were taken by the visiting riflemen, yet the members of the club were generally successful and are well pleased with the result of the shoot:

Match No. 1, Off-Hand, 200yds.

W H Beardsley	45 46 43—134	E P Hill	35 36 36—108
W B. Wheeler	43 43 43—129	Geo B Calhoun	33 35 34—107
A H McMahon	41 41 40—122	M W Hill	36 34 32—102
G C Canfield	38 38 37—113	Wm Schoverling	34 32 32— 98

Match No. 2, Rest, 200yds.

Wm Schoverling	53 50 49 49—201	C E Brinton	49 49 47 44—189
W H Beardsley	51 49 48 48—196	A H McMahon	48 45 41 38—172
Frank Evitts	50 49 48 47—194	H L Randle	41 40 43 43—167
B E George	51 48 47 46—192	J P Forbes	47 40 41 36—164

Match No. 3, Pistol.

W H Beardsley	44 39—83	A H McMahon	33 31—64
M W Hill	39 39—78		

MERIDEN, Conn., Oct. 51.—Inclosed are the scores of those taking part in the first open rifle match for cash prizes amounting to over $200, given by the newly organized Citizens Rifle Club of this city. The management and range were very satisfactory to all, and had the shoot been properly advertised the club would have had a large attendance and made some money. The tournament was wound up by the string of three fired by B. Jahn, of New Britain, 62 points, for which he took a $5 prize. Nobody was able to catch S. J. Lyon and his score of 71, and he carried off the big prize of $40, besides $17.96 on the point target, $5 for the most bullseyes and $2.50 in extra prizes, his total winnings being $65.46. Meriden men showed up decently, S. W. Foster, with his score of 65, standing highest among the local shooters. Scores on the prize target are as follows: S. J. Lyons, Collinsville, 71; W. H. Beardsley, Bridgeport, 70; W. B. Wheeler, Bridgeport, 69; E. T. Stephens, Springfield, 67; W. M. Farrow, Holyoke, 65; S. W. Foster, Meriden, 65; H. M. Pope, Hartford, 64; T. F. Bailey, Meriden, 64; C. I. Foster, Meriden, 64; W. E. Watkins, South Manchester, 63; J. N. Lane, Meriden, 63; A. A. Merriman, Meriden, 62; B. Jahn, New Britain, 62; G. E Betts, Hartford, 62; H. B. Wood, Hartford, 59; A. Danakin, Meriden, 58; Wm. Allemier, Meriden, 58; J. B. Covell, Hartford, 55; W. A. Webber, Meriden, 55; J. S. Russell, Hartford, 48; P. Maurer, Meriden, 48.

The points made on the other set of targets are given: A. H. Merriam 114, W. B. Wheeler 213, S. W. Foster 28, W. H Beardsley 135, T. F. Bailey 49, A. Danakin 13, H. B. Wood 27, G. E. Betts 6, J. N. Lane 30, B. Jahn 20, S. J. Lyon 449, F. E. Watkins 50, W. A. Webber 22, H. M. Hall 16, C. I. Jones 22, W. Allmeir 14, P. Maurer 4, J. Thomas 25, G. A. Foster 8, W. Halm 6, J. S. Russell 17, F. E. Sands 11, C. I. Foster 33, F. B. Corell 60, H. M. Pope 102, E. T. Stevens 82, W. M. Farrow 63, B. W. Norton 20, J. F. Ives 3, W. J. Muller 4, J. Theison 1. Ten dollars was divided for those making most bullseyes on point target. S. J. Lyon, with 16 to his credit, took $5; Wheeler with 6, took $3, and Bailey and Farrow, with 5 each, took $1. Ten dollars was offered for the best string of three shots on the point target. Beardsley, of Bridgeport, took $5 of this, and Lyons and Wheeler divided the other $5.

CINCINNATI, O.—In the revolver match for the championship of Ohio, Indiana and Kentucky between Messrs. L. B. Copeland, of Dayton, Ky., and B. J. Robertson, of Covington, Ky., Mr. Copeland scored a victory, defeating his opponent by 29 points. The conditions of this match were 100 shots per man with a Smith & Wesson .44cal. Russian model revolver, distance 50yds., standard target, under the rules of the Massachusetts Rifle Association offering revolver shooting:

SAN FRANCISCO, Oct. 13,—Notwithstanding the furious wind which blew across the bay to-day made shooting difficult a large number of marksmen assembled at Shell Mound Park to try their skill. Companies C and G of the 1st Infantry held their regular shoot, the best scores being as follows, 10 shots at 200yds. Creedmoor count: Meyer 44, Ruddock 38, Johnson 43, Klein 42, Young 45, Waltham 44, Fennel 43, Slitor 39, Stewart 45, Peterson 43, Snook 41, Nolte 45, Hult 41, Klein 41, Alexander 41, Taylor 42, Eyre 41, Harper 40, Parmalee 39, Kelly 38, Dumbrell 37. Two teams of 6 men each of the Nationals, led by J. E. Klein and A. Johnson, then held a very interesting contest. Though each man fired 10 shots the shooting was so close that the winning team only won by one point. Following was the score:

Johnson's Team.		Klein's Team.	
Johnson	5444454545—44	J E Klein	5545544444—44
Young	5445445145—44	Meyer	4444555344—44
Nolte	4555444444—42	Stewart	4444445555—44
Hult	4554445444—43	Waltham	4545443455—43
C Klein	4444454545—43	Fennell	5444454544—43
Robertson	4454554444—41—257	Taylor	5444434444—40—258

The San Francisco Fusileers, Co. C, of the Second Artillery held its nineteenth annual prize shoot at the park. The scores at the shooting range were as follows: Capt. Huber 18, Lieut. Boxton 18, Lieut. Wessling 18, Sergt. Huber 19, Sergt. Woodall 20, Sergt. Siebe 19, Sergt. Tobin 21, Corp. Ruthger 15, Corp. Ringan 18, Corp. Sheupback 19, Corp. Borton 13, Corp. Vietrock 23, Corp. Menke 21, Drummer Meyer 15, Drummer Likins 16, Pvt. Albrecht 13, Brooks 20, Deutchman 19, Drieschman 17, Gios 14, Hastedt 16, Koch 22, Kallman 13, Lemke 16, Lemeyer 16, Monroe 11, Osborn 15, Petrie 19, Paul 12, Richter 21, Schulken 17, Schwaner 13, Wiegemann 17, Woodall 16, Wellert 15, Ringen 12.

At the honorary target the following scores were made: Chas. Tierbock 22, J. H. Mangels 19, O. Lemke 19, C. Young 16, H. Goetjen 13, J. H. Winter 11, J. Hensing 8, D. Dunker 7.

The Independent Rifles were out in force and made the following scores at 200yds., off-hand, 10 shots. Creedmoor target: Fred Staude 41, H. L. Edson 39, H. Staude 38, Geo. Miller 37, E. Peters 35, J. Hensing 35, C. Fiescher 32, C. L. Weost 30, J. Wurthman 30.

The well-known shots, A. Johnson and P. Robertson, shot a match with military rifles, resulting in a victory for Johnson by a score of 239 to 220.

Oct. 15.—Many of the marksmen of the National Guard in this city believe that if a portion of the Presidio would be set aside by the Government for the use of riflemen the percentage of the different companies would be materially increased. By having a range at the Presidio they would be enabled to have targets at 200, 500, 800 and 1,000yds. As there is no other place in the vicinity of the city they believe an effort should be made by the commanders to see what the representatives in Congress can and will do about the matter.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

Secretaries of clubs and managers of tournaments are requested to keep us advised of the dates of their shoots, so that we may give due notice in our column of fixtures.

READING TOURNAMENT.

THE first annual tournament of the Reading Gun Club was held last week at Fleishman's Agricultural Fair Grounds, about two miles from the center of the city. The regular programme commenced on Tuesday the 15th inst. On Monday a team match was shot at 25 live birds each, between H. A. Penrose and Miles Johnston against Bob Welch and Dick Irwin, the latter team winning as shown in score below. Ben. Fleishman's hotel, located right at the entrance to the grounds, was the headquarters of most all visitors, and very handy it was, too. Mine host Fleishman and his good wife exercised all their ingenuity and skill for the comfort and pleasure of their guests, and succeeded in making their stay very enjoyable. There was no hustling for a pick up lunch, but every day a good substantial dinner was served, every one taking time to eat it comfortable. A few of the events called for could not be shot on account of the absence of some who were confidently expected to be here, notably the race between Budd and Kleintz. As Kleintz is still confined to his bed with pneumonia, Budd started westward after the Dunellen tournament. A few of the visitors during the week were W. Fred Quimby, M. F. Lindsley and Chas. Richards, of New York; H. McMurchy and H. A. Courtney, of Syracuse; H. A. Penrose, of Corry, Pa.; Phil Daly, Jr., of Long Branch; Richard Irwin and Bob Welsh, of Philadelphia. Not many local shooters put in an appearance, and in truth the attendance throughout the week was rather light. Those who came, however, had a good sociable time and no doubt will be on hand at the next tournament here.

With the exception of Tuesday morning, when the sky was overcast and the wind very raw and piercing, the weather was simply delightful. None better could be wished for on such an occasion, and in view of that fact it is somewhat strange that so few shooters appeared. Both live birds and inanimate targets were used each day, the latter being all Keystones from 5 Keystone traps under Keystone rules. The live birds were, taken all in all, a good average lot, some poor ones, but more that were good, and on Wednesday, as a strong wind across the traps was in their favor, they were exceptionally hard, especially the right quartering birds, which had to be hit very hard to stop them from getting beyond the boundary. Miles Johnston supplied and trapped the birds, and Hurlingham rules governed all contests. On Thursday the wives of a number of the shooters visited the grounds, and at the close of the day were persuaded to shoot a sweepstake race, in which Mrs. Irwin, Mrs. Welch, Mrs. Fleishman, Mrs. Lindsley and Miss Bechtel were opposed against each other. A press representative volunteered to keep the score, which is given below, and as an excuse for possible mistakes pleaded his inability to resist the bright eyes and pleading tones of the fair ones, who after each shot approached him with, "Oh, I hit it!" "Didn't you see that piece?" etc. At any rate, according to his score, Mrs. Welch was the winner, though we have an idea that the purse was liquidated rather than paid by the stakeholder. Another impression we have is that arnica, Pond's extract, etc., were in great demand that night for bruised shoulders and arms. Of the positions taken at the trap Mrs. Lindsley's was the most businesslike, showing that she has profited by her husband's tuition, and had the referee's eyesight been sharper she might have won the race. The scores of all the events are given in full. Ties div. unless otherwise noted.

Monday.—Team race at 25 live birds per man:

R Irwin	2112210111112121212121122—24
R Welch	1211111111211111110111011—23—47
H A Penrose	2121121112021212022222210—23
Johnson	1110210201211111111111102—21—44

Tuesday, Oct. 15.—First event, at 10 Keystones, $2 entrance, 3 moneys:

Roberts	1111111111—10	Grover	0010101111— 7
Goodman	1011111111— 9	Hepler	0110111010— 6
Fleishman	1111110111— 9	Daly	1000110100— 4
Morter	1011101111— 8	Matz	0001011010— 4
Coldren	0101111111— 8	Miller	0100010110— 4
Leonard	1110011101— 7		

No. 2, at 7 live birds, entrance $7:

Irwin	1111221—7	Motler	2202221—6
Roberts	2111222—7	Matz	1111220—6
White	1122211—7	Leonard	0116112—5
Shively	1112212—7	Daly	0220212—5
Welch	1111111—7	Goodman	0120021—4
Hepler	2121122—7	Miller	0102020—3
Fleishman	2112110—6	Couldron	2000110—3

Ties for first money shot off and div. by Roberts, White and Welch; second and third div.; Goodman won fourth alone.

No. 3, at 15 Keystones, entrance $3:

Ruble	111111111101111—14	Miller	001010110111101— 9
Daly	011110111101101—11	Leonard	010001010111111— 9
Fleishman	111011100101111—11	Motter	001000010101110— 6
Goodman	010111010111111—11	Matz	011000000001001— 4
Coldren	101100101011111—10		

No. 4, at 10 Keystones, $2 entrance:

Ruble	1111111111—10	Irwin	1011011110— 7
Daly	1111001111— 8	Goodman	1011010111— 7
Fleishman	1111101101— 8	Leonard	0000101011— 4

No. 5, at 5 live birds, $5 entrance:

Daly	12111—5	Hepler	02121—4
Miller	11211—5	Kimmel	01011—3
Shively	21110—4	Roberts	22020—3
Eley	10111—4	Williams	02012—3
White	11011—4	Motter	20110—3
Matz	22101—4	Irwin	01200—2
Leonard	12210—4	Brobst	20002—2
Fleishman	10111—4	Welch	00210—2
Goodman	22101—4		

First and fourth divided. Tie on 4: White 2, Fleishman 2, Goodman 2, Matz 0, Shively 0, Eley 0, Hepler 0. White, Fleishman and Goodman div. second. Ties on 3: Kimmel 6, Roberts 6, Williams 4, Motter 3. Kimmel and Roberts div. third.

Extra No. 1, at 10 Keystones, $1 entrance: Fleishman 9, Leonard 9, Grover 6, Martz 6, Miller 1, Goodman 5, Molter 8, Ruble 8, Coldren 5, Hepler 3.

Wednesday, Oct. 16.—Regular event No. 1, at 8 live birds, $8 entrance:

Quimby	11111111—8	Ruble	10121210—6
Smith	11112121—8	Welch	12022012—6
McMurchy	11112117—7	Irwin	12101012—6
Ely	11111210—7	Lindsley	10012102—5
Mack	12110221—7	White	01122020—5

Daly	10222101—6	Matz	01112000—4
Coldren	11012110—6	Leonard	11000200—3
Goodman	11022021—6		

Third shot off and div. by Tredway, Daly, Coldren, Goodman and Ruble; fourth shot off and won by Lindsley.

Regular No. 2, at 10 Keystones, entrance $2:

McMurchy	1111111111—10	Leonard	0111011111— 8
Miller	1111111111—10	Coldren	1101111101— 8
Ely	1111111011— 9	Courtney	1001110111— 7
Ruble	1111101111— 9	Treadway	1110101011— 7
Lindsley	1110101111— 8	Matz	1011001111— 7
Quimby	1111100111— 8	Irwin	1111111000— 7
Daly	1010111111— 8	Smeck	0101101100— 5
Mack	1111101101— 8	Goodman	1001100101— 5
Smith	1101101111— 8	Clinton	0011101010— 5

Third shot off and div. by Lindsley and Coldren; fourth shot off and div. by Treadway and Irwin.

No. 3, at 5 Keystones, $1:

Ruble	11111—5	Miller	11100—3
Treadway	11111—5	Lindsley	01010—2
McMurchy	11111—5	Smeck	11000—2
Ely	11111—5	Mack	00101—2
Daly	00111—3	Coldren	10100—2
Smith	11001—3	Clinton	10000—1

No. 4, at 7 live birds, entrance $6.75:

Quimby	2211122—7	Daly	0201211—5
Ely	2112111—7	Miller	2223001—5
McMurchy	1121112—7	Lindsley	2100102—4
Ruble	1222111—7	White	0202201—4
Smith	1111110—6	Clinton	2101010—4
Treadway	0222111—6	Ford	2010021—4
Welch	1012111—6	Brobst	2001001—3
Irwin	1120121—6	Matz	0000111—3
Mack	1210112—6	Goodman	2000202—3

Second shot off and div. by Smith, Treadway and Welch, fourth shot off and won by Clinton.

No. 5, at 10 Keystones, entrance $1.50:

Miller	1111111110—10	Matz	1111100111—8
Lindsley	1110111111— 9	Coldren	1111110011—8
Ely	1111101111— 9	Grover	0110101101—6
Quimby	1111111011— 9	Goodman	0111001110—6
Smith	1011111111— 9	Irwin	0100101011—5
McMurchy	1111011111— 9	Daly	1101000110—5
Richards	1111111111— 9	Smeck	0110010010—4
Treadway	1111111001— 8		

Second shot off and div. by Smith, McMurchy and Roberts.

Extra event, at 10 Keystones, $1 entrance: Miller 9, McMurchy 9, Ruble 9, Smith 9, Grover 5, Irwin 8, Treadway 7, Lindsley 7, Couldron 6, Hanck 6, Matz 6, Ford 5, Smeck 3.

Extra event, at 5 live birds, entrance $5: Quimby 5, McMurchy 5, Lindsley 5, Ely 5, White 5, Miller 5, Mack 4, Smith 4, Ford 4, Probst 4, Clinton 4, Irwin 4, Daly 4, Welch 3, Treadway 3, Fleishman 3, Hanck w. Second shot off and div. by Mack, Smith and Ford; third shot off and won by Welch.

Thursday, Oct. 17.—No. 1, 7 live birds, entrance $5:

Quimby	1112122—7	Mack	1110112—6
Daly	1122211—7	Lindsley	0220211—5
Miller	2121221—7	Clinton	2021011—5
Ely	1121111—7	Irwin	0210122—5
McMurchy	1121111—7	Welch	1102011—5
White	0111111—6		

Ties on 7: Quimby 9, Miller 9, Ely 9, McMurchy 9, Daly 7. Ties on 5: Lindsley 3, Irwin 3, Welch 3, Clinton 2. First shot off and div. by Quimby, Miller, Ely and McMurchy, after killing 9 more straight; second div.; third shot off and div. by Lindsley, Irwin and Welch.

No. 2, at 10 Keystones, $1.50 entrance:

Ruble	1111111111—10	Irwin	0110010111—6
Lindsley	1111011111— 9	Fleishman	0000000001—1
McMurchy	1111101111— 9	Daly	0000110w.
Richards	1100011111— 8	Grover	0100101010—4
Miller	1101111101— 8		

No. 3, at 15 Keystones, $3 entrance:

McMurchy	111111111111111—15	Grover	001001111101111—10
Ruble	111111111111110—14	Richards	010101110101010— 9
Miller	111111111111110—14	Lindsley	111001010101001— 8
Ely	101100011111111 —11		

No. 4, at 5 live birds, entrance $5:

Irwin	12222—5	White	21101—4
Ely	11211—5	Clinton	20221—4
Mack	22111—5	Lindsley	13220—3
Daly	21211—5	Welch	03110—3
Miller	21212—5	McMurchy	00110—2
Ruble	21121—5	Fleishman	01000—1
Quimby	10121—4		

First shot off and div. by Ely, Mack, Daly and Ruble, second shot off and won by Quimby, third div., fourth won by McMurchy.

No. 5, at 7 Keystones, entrance $1:

McMurchy	1111111—7	Daly	1011110—5
Miller	1011111—6	Irwin	1101001—4
Ruble	1111110—6	Welch	0011000—2
Lindsley	1001111—5	Fleishman	0000000—0

No. 6, at 7 live birds, entrance $7:

Ely	1211111—7	Mack	0111211—6
McMurchy	1111211—7	Daly	2012220—5
Miller	1111112—7	Clinton	0021222—5
Fleishman	2111112—7	Lindsley	2210102—5
Quimby	1022212—6	Welch	0211022—5
Irwin	0112112—6		

First div., second shot off and div. by Quimby and Mack, third shot off and won by Daly.

No. 7, at 5 live birds, entrance $5, two moneys:

Ely	11111—5	McMurchy	01211—4
Ruble	12111—5	Irwin	01121—4
Miller	21222—5	Welch	20211—4
Daly	22112—5	Lindsley	21021—4
Quimby	12101—4		

Tie on 4: McMurchy 13, Quimby 12, Irwin 2, Lindsley 2, Welch 1. Second money won by McMurchy after a long and interesting shoot off.

No. 8, 10 Keystones, entrance $1.50:

McMurchy	1111111111—10	Lindsley	1111010111—8
Ruble	1111011111— 9	Irwin	1111011011—8
Miller	1111101111— 9	Stout	1011111011—8
Daly	1101111011— 8	Matz	0110011011— 6

First won by McMurchy, second shot off and won by Ruble third shot off and won by Stout.

Ladies' race, at 5 Keystone targets, sweepstake, 25 cents entrance:

Mrs Irwin	11011—4	Mrs Welch	11111—5
Mrs Fleishman	11110—4	Miss Bechtel	10111—4
Mrs Lindsley	01111—4		

Friday, Oct. 18.—No. 1, at 5 live birds, $5 entrance, 2 moneys:

Penrose	11112—5	Roberts	12022—4
Quimby	11111—5	Goff	12012—4
McMurchy	11112—5	Irwin	22020—3
Welch	11111—5	Fleishman	03001—1
Daly	12110—4		

No. 2, at 5 live birds, $5 entrance, 2 moneys:

Penrose	11211—5	Goff	12012—4
McMurchy	12121—5	Daly	11210—4
Welch	11121—5	Quimby	00w.—0

No. 3, at 6 live birds, miss and out, $5 entrance: Penrose 6, Welch 6, Goff 6, Daly 5, Quimby 3, McMurchy 1. Ties on 6 div.

No. 4, at 10 live birds, $10 entrance, two moneys:

McMurchy	1111112111—10	Van Camp	1101111011—8
Daly	0112211112— 9	Brobst	1110202122—8
Welch	1021112121— 9	Goff	1012000012—5
Irwin	1110112212— 9		

No. 5, at 5 live birds, $5 entrance, two moneys:

McMurchy	11111—5	Daly	20022—3
Van Camp	21101—4	Goff	02002—2
Ruble	11220—4	Welch	12100—3

No. 6, at 10 Keystones, $2 entrance, two moneys:

Ruble	1111111111—10	Van Camp	1010011110—6
McMurchy	1111111111—10	Gehringer	0110101000—4
Daly	1011111101— 8	Irwin	1000100100—3
Penrose	1111001111— 8	Goff	0100000110—3
Jamison	0111011110— 7		

Even at live birds, miss and out, $5 entrance: McMurchy 17, Ruble 17, Penrose 16, Van Camp 9, Welch 8, Daly 2, Irwin 2, Goff 3. McMurchy and Ruble div.

FRANK MASON.

THE NICKEL PLATE GUN CLUB TOURNAMENT.

LINCOLN, Ill.—The Keystone tournament of the Nickel Plate Gun Club of this city, held on Thursday, Oct. 10, proved a financial success, although the number of shooters was not as great as could have been wished. The traps worked excellently, and the Keystones were thrown out as lively as possible. All matches were shot under the Keystone system. The presence of C. M. Powers, of Decatur, made many hold back, and it was difficult to get entries in matches at times. Unpleasant as it was, it finally became necessary to bar Powers out of some matches and to handicap him three yards when he did get in. Powers is a very fine gentleman, and the only mean thing about him is that he is an unerring shot. Once in a while he will accidentally (?) drop a bird so as not to get it all, but nevertheless he shoots too well for the ordinary amateur, and consequently he is a scare-crow in a tournament. Just why this should be carried to the extent it is I cannot see, as he can take no more than his share of first money, and usually the fellow that kicks the hardest cannot get more than second, though he shoot his best. It has been determined, however, hereafter to bar all class "A" men whether they have been classed by the American Shooting Association or not. I append the scores:

Shoot No. 1, 6 single Keystones:

Powers	111111—6	C E Schroeder	111100—4
Schwerdtfeger	111110—5	Gayle	011110—4
L Hahn	011111—5	Stansell	001011—3
T Ryan	110111—5	Wildman	100101—3
Ed Gibson	110111—5	W W Stinnett	001001—2

Shoot No. 2, 9 single Keystones:

Powers	111111111—9	Wildman	110010111—6
Hahn	111111111—9	Stansell	111100010—5
C E Knorr	111111011—8	Stinnett	100100011—4
Schwerdtfeger	110111101—7	J T Gelsthorp	000001000—1
Gibson	011111011—7		

Shoot No. 3, 9 single Keystones:

Powers	111111111—9	Hahn	110110101—6
Schwerdtfeger	111110110—7	Wildman	011011110—6
Jerry Parker	011101111—7	Smith	001040111—4
Thos Ryan	110101111—7	Schroeder	000100111—4
W D Gayle	011011111—7	W Stinnett	000001001—2

Shoot No. 4, 9 single Keystones:

Davidson	111111111—9	Lineberger	111101100—6
L Hahn	111111111—9	Pharis	110101101—6
Wolcott	111111101—8	Thos Ryan	101111001—6
McCurdy	100111111—7	Jamison	111011001—6
Jerry Parker	110101111—7	Isabell	101101110—6
Will Davis	111001111—7	Schroeder	001011111—6
Gibson	101111110—7	Stansell	001101011—5
W D Gayle	101011111—7	Geo Cayle	011000111—4
Powers	101111110—7	E Jennings	110010100—4
Wildman	101110111—7	Charles Dady	000010010—2
Pharis	110101101—6	Gelsthorp	100001010—3

First money Davidson and Hahn; ties on second shot down and divided by Powers and Wildman; ties on third shot out and taken by Lineberger. In this match Powers stood at 21yds.

Shoot No. 5, 15 single Keystones:

Schwerdtfeger	111111111111111—15	Schroeder	101111011101101—11
Hahn	111111111111111—15	Wolcott	111110110000111—10

Schroeder	111011101—7	Stinnett	101000000—2
Schwerdtfeger	101011011—6		

Shoot No. 9, 15 single Keystones:

T Ryan	111111111111111—15	W D Gayle	111000111111101—11
Schwerdtfeger	111111111111101—14	Pharis	011110111010111—11
Gibson	111101111111111—14	McCurdy	101000101111111—10
Lineberger	111111111111101—14	Isabell	110011100011110— 9
J Parker	111101111011111—13	J J Armstrong	000010111001110— 7
Davidson	100000111111111—12	Schroeder	111111001011ow.

Shoot No. 10, 7 single Keystones:

Wildman	1111111—7	R Schuster	1011100—4
Schwerdtfeger	1101111—6	Wm Davis	1100011—4
G Atwell	1111011—6	T Moran	0100011—3

Wildman first, Schwerdtfeger second, Davis third.

Shoot No. 11, 9 single Keystones:

Wildman	111110101—7	Stansell	001100110—4
Davis	101111110—7	T Moran	101100110—5
Atwell	111100101—6	C Dady	000011000—2
Schuster	001111110—6		

A special match of 3 pairs was shot between Powers, at 21yds., and Schwerdtfeger, at 18yds., as follows:

Powers	10 10 10—3	Schwerdtfeger	11 11 11—6

It is but fair to say that on the second pair Mr. Powers, who shoots a Lefever, found that his right hammer was not cocked, and instead of letting the birds go he broke his gun, closed it again and broke the first bird, the second was a few inches from the ground, and it was a question whether he had hit it or not, but the referee called it a lost bird. For quick work this little act of Powers's can not easily be equalled. SACHEM.

ST. LOUIS, Mo., Oct. 18.—*Editor Forest and Stream:* Major J. M. Taylor, manager of the American Shooting Association, spent last Friday in this city. His visit was to ascertain the prospects for holding a tournament next spring. Quite a number of prominent trap shots used very strong arguments to have the Association give a shoot under its popular classification rules. There are a large number of trap-shooters in this city and vicinity who, it is believed, will turn out and attend such a shoot. Before departing for Kansas City the Major apparently was favorably impressed with the outlook, for as promised to use his influence upon the Board of Directors, which meets shortly, to have them put St. Louis on the list.—UNSER FRITZ.

SPRINGFIELD, N. J., Oct. 19.—*Editor Forest and Stream:* On the ground of the Union Gun Club situated here, one of the nicest team races took place this afternoon that it has ever been my good fortune to see. For over six months a great deal of rivalry has existed between several of the members as to who had the best team, Capt. Miller with Sickley and Sopher as partners or Capt. Johnson upheld by Conover and Roll. Many an evening has been spent discussing their respective merits and finally about ten days ago an agreement was drawn up and signed that the match should be shot to-day rain or shine. Everything seemed to smile on us this afternoon, as the day was delightful with just enough air stirring to blow the smoke away, in fact it was an ideal day for trap-shooting. The match was to commence at 3 o'clock sharp but owing to the non-appearance of the Miller team it was nearly half past three before it was in full blast, the delinquent having shown up in the meantime. Capt. Johnson pulled out a quarter from his pocket, tossed it in the air, Miller called out "heads" and tails it proved to be, so Johnson decided to go to the score first followed by Miller and so on down, a man from each team shooting alternately. I is a wonder that either team could do any shooting as every man at the score was most unmercifully guyed with such remarks as this: "Ding-a-ling-ling, I knew he would miss it." "Next time pull a little further ahead." "You shot behind that, Roll." "You shot over that, Sopher." "Now see Sickley miss three straight." "Don't you do that again Doc." "About time Johnson would slip up." "Stick to them Judge." "That's the stuff," and so on. When all the singles had been shot it was found that Johnson's team led by 15 birds, but this was none too much as Sickley and Sopher are noted for their double shooting, while the rest of us are only passable. Everything went well until the last five pair all around when it was so dark that it was almost impossible to see the first bird, let alone the second, but the scores were shot out. Johnson's team winning by a score of 238 to Miller's 235. This from all accounts is far from satisfactory to the losing team, and I hear that there is a challenge being written to have it all over again at no very remote date. There is also some talk of a series of matches between Sickley and Roll, and if all the sand does not run out of one or the other before next Saturday great sport is expected, as both say they will come loaded for bear, née bluerocks. Following are the conditions and score of to-day's shoot. Teams composed of three men each, each man to shoot at 100 bluerocks (70 single and 15 pairs) thrown from 3 screened traps, American Association rules. Benj. Pudney, referee; Al Snow, scorer:

12-BORE.

WALNUT HILL, Oct. 16.—High scores were the rule in all the matches to-day. In the thirteenth competition for the gold coin match the shooting was exceedingly close, and Perry's score of 29, which stood at the head, was only one point higher than the figures reached by three other competitors. In the shooting for the Standard Target Company's gold medal, some very fine scores were shown, and no less than four of those who shot in this match succeeded in gaining full scores and winning each a point in the race for the trophy. Below are the scores made in the two main events of the meeting, as well as a summary of the work done in the minor sweepstakes.

Gold coin match, 15 clay birds and 15 standard targets, Keystone system of squad firing:

	Clays.	Standards.
Perry	111111111111111—15	111011111111111—14—29
Gale	111101111111111—14	101111111111111—14—28
Wheeler	111011111111111—14	101111111111111—14—28
Curtis	111111111111111—15	101101111111111—13—28
Black	111011101111111—13	111011111111011—13—26
Nichols	111111111010011—12	111100111110111—12—24
Snow	100111111111111—13	111101111011001—11—24
Hosmer	111101101101011—11	010011111111111—12—23
Holder	000030011110101— 6	111111001011111—12—18
Nelson	110100010011111— 9	101001101111010— 9—18

Standard Target Co.'s medal, 20 standard targets, handicap by classes: Black, A, 20; Wheeler, A, 20; Hosmer, B, 20; Gale, C, 20; Nichols, C, 19; Wheeler, A, 18; Nelson, C, 18; Snow, C, 16; Holder, C, 13. Six Chicago tin birds: Wheeler 4, Perry 3. Six Chicago tin birds: Nichols 4, Perry 3. Six standard targets: Wheeler 6, Nichols 5. Six standard targets: Black and Perry 6, Wheeler 5, Gale 4. Fifteen clay birds: Gale, Perry and Wheeler 14, Black 13, Nichols 12. Fifteen standard targets: Perry 15, Gale and Wheeler 14, Black 13. Twenty standard targets, handicap rules: Black and Hosmer 20, Nichols 19, Nelson and Wheeler 18. Six Chicago tin birds: Hosmer and Wheeler 5, Black 4, Snow 3. Three pairs clay birds: Nichols 6, Black, Curtis and Wheeler 5, Gale and Perry 4. Ten standard targets: Black and Hosmer 10, Gale and Nichols 9. Six standard targets: Nichols 4, Gale 3. Six standard targets: Black 6, Nichols 4. The next shotgun meeting at Walnut Hill is scheduled for Wednesday, Oct. 30, when the gold coin match and the competition for the Standard Target Company's medal will be open, in addition to the usual sweepstake shooting.

MADISON COUNTY TOURNAMENT.—Thursday morning, Oct. 17, opened bright and the members of Eaton Gun Club were astir, especially President Richardson, who was over anxious to have meeting a success. The 10 A. M. train brought the boys from Oneida and Canastota, but the club from Cazenovia failed to appear. After a business meeting of the Association the shooters faced the five traps each with a determination to do his best. Soon it became dark and smoky, with a 4 o'clock wind, which made the birds fly low and irregular. The trophy had been won by Eaton at the previous shoot on 80, and now it was captured by Eaton's first and second teams on a tie of only 70. The most interest centered on contest No. 3, the first prize of which was a superb Parker hammerless. There were 20 contestants, but it soon became evident that the fight lay between Markham, of Oneida, and Cole of the Eaton Club. But Markham won with 18 to Cole's 17 out of a possible 20. The members of the Association seemed pleased with the management of the tournament and also for the partial donation of the fine gun by Parker Bros., and donation of FOREST AND STREAM. The entire programme of six events was successful carried out. The following scores were made in the two leading events: First, $140 trophy, 4 men per team, at 15 singles and 6 pair doubles, each club allowed as many teams as desired:

Oneida, 1st Team.	S	D	Eaton, 2d Team.	S	D
J F Tuttle	7	3—10	Geo Cole	14	11—25
T A Deverux	8	8—16	G B Palmer	6	10—16
J M Maxwell	11	7—18	Geo Fryer	9	7—16
J M Markham	12	10—22—66	F L Briggs	7	6—13—70
Eaton, 3d Team.			Canastota, 1st Team.		
C A Stone	9	8—17	E B Roberts	10	8—18
D F Parsons	10	3—13	H H Lansing	9	8—17
F E Short	8	7—15	W Salisbury	9	7—16
F Sacket	7	6—13—58	W Suits	4	4— 8—59
Eaton, 1st Team.			Oneida, 2d Team.		
R J Peet	9	9—18	M S Markham	5	9—14
A E Richardson	8	7—15	H T Carter	7	4—11
Wm Hall	13	7—20	F B Cheeny	3	2— 5
S A Curtis	10	7—17—70	R Clark	10	10—20—50

Gun contest with numerous specials, 20 single kingbirds, 5 traps, Association rules: J. Markham 18, won $85 Parker gun and individual championship of the county; Geo. Cole 17, watch; R. J. Peet 15, FOREST AND STREAM; H. Lansing 14, E. Roberts 14, 100 loaded shells; E. A. Richardson 13, F. L. Briggs 13, J Maxwell 13, flannel shirt; S. A. Curtis 12, F. A. Deverux 12, oil stove; W. Salisbury 10, Geo. Fulmer 10, whip; Dr. Bailey 8, Geo. Fryer 8, R. Clark 8, W. Hall 8, F. B. Cheeny 8; H. T. Carter 7, C. A. Stone 7, tie for ham, flipped cent and Carter won.

Every week we are obliged to defer to the next week trap scores which come in too late for publication in the current issue. It is particularly requested that scores be sent us as early as possible.

HOOSICK FALLS, N. Y., Oct. 19.—The grand kingbird tournament so long talked of took place yesterday at Webster's Glen, under the auspices of the Independent Gun Club, of Hoosick Falls. The day was very fine, with no wind. There were 10 events at kingbirds, thrown from 5 traps, Keystone system. The shooters came from Troy, Albany, Cohoes, Saratoga Springs, Lansingburg, Cambridge, N. Y. The new trap pulling machine, invented and managed by "P. K.," worked to perfection.

First event, 10 kingbirds, entrance $1:

Woodstock	0111001100—5	Goggin	0011111111—7
Beck	0100111111—7	Thoene	1111111010—8
McGinniss	0111101101—7	McVicker	1111101100—7
Shepherd	1111010110—7	Patten	1110001111—7
White	0110101010—6	Levengston	1101111111—9
Ramsdill	1010010111—6	Johnston	1110111101—8
Harkness	0100000000—1	"P K"	1100011111—7

Second event, 10 kingbirds, entrance $1:

Beck	1110111110— 8	McVicker	0101011101— 6
White	1001110111— 8	Woodstock	1001111001— 7
Ramsdill	1111111111—10	Johnston	1011101111— 8
Shepherd	1011110000— 5	Patten	1111010111— 8
McGinniss	1101111111— 9	Thorne	1111011011— 8
Levengston	1111111111—10	Mills	1111111101— 9
Harkness	1111001100— 6	Williams	0001011110— 5
Goggin	1110101101— 8		

Third event, 15 kingbirds, entrance $1.50:

Woodstock	110101011111111—12	Mills	111011111111111—14
White	110011010100000— 6	Williams	111110011001111—11
Ramsdill	011111101011111—12	Patten	111111111010110—13
Goggin	011100111111100—10	Beck	110111111001100—10
McGinniss	111111101011000—12	Thorne	111111101111111—14
Shepherd	111101110010011—11	Johnston	111111111111101—14
Harkness	000000010001009— 2	Levengston	111111111111100—13

Fourth event, 15 kingbirds, entrance $1.50: Woodstock 13, McGinniss 12, Ramsdill 14, Beck 12, McVicker 7, Goggin 12, Patten 8, Mills 12, Williams 12, Levengston 14, Thorne 12.

Fifth event, entrance $2, 20 kingbirds: McGinniss 17, Beck 15, Ramsdill 18, Goggin 16, Woodstock 15, Levengston 19, Mills 16, Williams 17, Johnston 17, Thorne 14, "P. K." 14.

Sixth event, 10 kingbirds, entrance $1: McGinniss 10, Woodstock 5, Ramsdill 9, Beck 8, Shepherd 6, White 4, McVicker 10, Goggin 9, Mills 6, Williams 7, Patten 10, Groesbeck 7, Johnston 8, Levengston 9, Thorne 9.

Seventh event, 15 kingbirds, entrance $1.50: McGinniss 13, Stockwell 9, Ramsdill 14, Beck 15, McVicker 14, Levengston 12, Goggin 11, Patten 9, Mills 14, Williams 12, Johnston 14, Thorne 11.

Eighth event, 15 kingbirds, entrance $1.50: McGinniss 14, Woodstock 10, Ramsdill 14, Shepherd 9, Beck 13, Goggin 13, Mills 14, Williams 12, Levengston 15, Johnston 12, Thorne 11, McVicker 13.

Ninth event, 20 kingbirds, entrance $2: Woodstock 15, Beckford 18, Ramsdill 20, McGinniss 17, Mills 18, Williams w., Johnston 19, Thorne 16.

Tenth event, 10 kingbirds, entrance $1.50: Woodstock 9, McGinniss 9, Ramsdill 10, Goggin 8, Patten 8, Beck 9, Mills 7, Williams 7, Johnston 10, Thorne 7.

The following is a list of averages of shooting out of a possible 140: Ramsdill 127, Johnston 124, McGinniss 120, Beckford 115, Goggin 113, Thorne 110, Woodstock 100.

SUBURBAN SHOOTING GROUNDS.—New York, Oct. 19.—*Editor Forest and Stream:* The crowd at Claremont to-day was not as large as expected owing to several causes. E. D. Miller and C. H. Johnson were engaged in a team shoot at Springfield, N. J., Fred Quimby and Milt Lindsay were not yet in sight from Reading, and others were detained by business. The dozen who were there had what all called a good shoot, and are to be on hand next Saturday afternoon. With the closing of many clubs for the season, and the winding up of the tournaments, will come the harvest time for these grounds. Last winter as many as forty shooters were engaged in the Saturday afternoon shoots, and some days the traps were kept busy all the afternoon. The base ball and rowing clubs must soon cease operations, and their sport-loving members will, many of them, be found here. The public are welcome. Below will be found some of the scores. Ties div. unless noted:

Sweep No. 1, 10 bluerocks, 50 cents entrance:

Tatham	1111011111—9	Nixon	1101001111—7
Simpson	0111111111—9	Howard	0001010110—4
Lyons	1100110111—7	Borland	0010010100—3
Sigler	1011110111—8		

Lyons third on shoot off.

Sweep No. 2, same:

Tatham	1111111011—9	Sigler	0111111110—8
Simpson	0110110010—5	Nixon	0101111100—6
Lyons	1111011010—7	Howard	0111101010—6

Sweep No. 3, same:

Tatham	1011010110—6	Sigler	0101111111—8
Simpson	1101110010—6	Nixon	0101110101— 6
Lyons	1100110011—6	Howard	0100010001—3

Sweep No. 4, same:

Tatham	0111101111— 8	Nixon	1111101100— 7
Simpson	1010111111— 8	Howard	1110000001— 4
Lyons	1111110010— 7	Hathaway	0010111101— 6
Sigler	1111111111—10		

Sweep No. 5, same:

Tatham	1111111111—10	Nixon	0001010111— 4
Simpson	1011111111— 9	Howard	1100110011— 5
Lyons	1111110010— 7	Hathaway	1101101101— 7
Sigler	1111111111—10		

Sweep No. 6, same: Tatham 9, Simpson 10, Lyons 7, Sigler 8, Nixon 5, Howard 9, Hathaway 7.

Sweep No. 7: Tatham 9, Simpson 9, Lyons 5, Sigler 10, Nixon 8, Howard 5, Hathaway 9.

Sweep No. 8: Tatham 10, Simpson 8, Lyons 8, Sigler 9, Nixon 7, Howard 6, Hathaway 8.

Sweep No. 9: Tatham 8, Simpson 8, Lyons 5, Sigler 10, Nixon 7, Howard 7, Hathaway 7.

NORTH BRANCH VS. WHITE HOUSE.—North Branch, N. J., Oct. 19.—To-day witnessed the third shoot between the White House and North Branch gun clubs. The weather was warm and delightful, with a hazy atmosphere, none the best for trap-shooting. As the White House boys started in with a grim determination to do or die, and the result shows what such a determination can accomplish. The North Branch men bewailed the absence of their champion, Mr. Frank Cramer, but even Frank with his 15 straight could not have saved them from defeat, as the scores will show. This victory gives the White House boys a chance, as the series was to be the best of five, but they will have to look well to their laurels, for the North Branch men say they are coming to White House next time "loaded for bear." Next shoot Nov. 2. Match at 15 Lockport bats, 18yds. rise, 3 traps, Keystone rules:

North Branch Gun Club.		White House Gun Club.	
E Lever	111000011110111—10	H Bishop	100111101111111—12

PHILADELPHIA, Oct. 12.—The Wayne and Frankford gun clubs shot a friendly challenge match at Keystone targets, 25 per man, at Frankford, and the home club won by a score of 221 to 207. Officer Wm. Johnson, of the Frankford police force, a member of the Frankford Club, broke 24 straight and missed his 25th target when it was quite dark. John Blair, of the Frankfords, broke 20 straight, all that he shot at. Frank Hessler, of the Wayne Club, broke 24 out of 25. Darkness came on before all could shoot their full score, three men on each side getting but 20 targets each.

RED BANK, N. J., Oct. 18.—The Riverside Gun and Rifle Club held their regular monthly live pigeon shoot to-day. Two hundred pigeons were on the grounds and most of them were shot in the two events. American Association rules govern the matches, the boundary being 50yds. The first event was the club shoot at seven birds, in which there were 12 entries. A. Ivins and John Cooper won first money, each killing 7. The second money was divided between Edmund Throckmorton, Jas. Cooper, Mel Cornwell, Edward Cooper, Wm. Conover and Asa Whymer, each killing 6. John Bergen and Charles Noble won third money, killing 5 each. Dr. Edwin Field won fourth money with 4. The last shoot was a sweepstakes at 8 birds. Ivans won first with 6, John Cooper second with 5, Edward Cooper third with fourth.

HARRISBURG, Pa., Oct. 14.—The regular monthly shoot at live birds came off Oct. 10, and 12 shooters faced the score for the first time under American Association rules. The birds were a lively lot and gave the boys the slip very unexpectedly, as the score will show. The gold medal was won by Mr. H. B. Shoop for the second time with a clean score; he will have to win it only once more to own it and wear it for good. If the weather be favorable the club expect a very large attendance at our tournament on the 17, 18 and 19th inst., of which I will send you scores. Match at 10 live birds, 5 ground traps, 30yds. rise, 80yds. boundary, American Association rules, gold medal:

M. H. B.

SAN JOSE, Cal., Oct 9.—The opening day of the eighth annual meeting of the California State Sportsman's Association was well attended. The Selby trophy, including the division of the entrance fee and seven additional prizes was the first match. H. H. Briggs, of the *Breeder and Sportsman*, was the referee, Keat Bascom scorer and Louis Denaldo trapper. The entries were: California Wing Club of San Francisco, Bluerock of Oakland, Pacific of Sacramento, Colton Club and Garden City of San Jose. The trophy was won by the Pacific Gun Club of Sacramento by a score of 89 out of a possible 100. Colton took the second prize with a score of 84. The California Wing Club and Bluerock Club made 81 each and divided their money. The Garden City Club took the fifth prize with 78 individual. The scores were: Pacific Club—J. W. Morrison 20, C. E. Mack 19, William King 19, Louis J. Nicholas 17, Adam Damm 14. Colton Club—Dr. O. P. Britton 19, M. Chick 19, E. Unger 16, Gus Knight 16, B. Willey 14. California Club—C. J. Haas 18, C. Robertson 18, Dr. Slade 16, E. Fay 15, C. W. Osborne 14. Bluerock Club—F. B. Norton 18, S. I. Kellogg 18, H. C. Golcher 19, A. F. Adams 14, C. F. Boardman 13. Garden City Club—Joseph Delmas 20, F. E. Coykendall 15, Geo. C. Anderson 5, S. A. Childs 14, James Tams 14. A sweep was made up after the trophy match and 10 birds shot at. Sixteen were entered at $2.15 each, and divided the money into five prizes. W. Chick took first money with a score of 9.

TRENTON TOURNAMENT.—In our announcement of the Trenton tournament in last week's issue we questioned the accuracy of the statement made in their programme that Chas. W. Budd and J. Frank Kleintz would shoot a match there on Monday, the opening day. In doing this we simply questioned the fact, not the honesty of purpose of the management in making the announcement, and we are now glad to be able to say that it was made on the strength of a positive statement to them by Mr. Kleintz, who firmly believed that he would be well enough to shoot the match and that Budd would remain East to meet him. On the strength of this assurance from one of the contestants the programme and bill were printed announcing the match. Now that it has fallen through, the management express their regret for thus unintentionally making an incorrect statement, but hope to present enough other attractions during the five days of their tournament to offset this disappointment.

TORONTO, Oct. 16.—The West Toronto Gun Club's annual tournament concluded to-day. The weather was all that could be desired, and there was a good attendance. The following are the results: First Class, ties of 14 birds—S. Staneland 7, D. Beldon 6, D. Blea 3. Ties of 13 birds—E. Brown 1, G. H. Briggs 2, W. A. Clarke 3, W. Bugg 4, G. Carruthers 5. Second Class—G. Davies 13, D. C. Walton 12, W. McDowell 12. C. Kemp, E. Dye, P. Wakefield, C. Hinton and W. Smith took the next five prizes in the order named without shooting off. Third Class—W. Skey 12, G. Oakley 7, A. Royce 5. Fourth Class—W. Blea 8, E. Gabel 6, A. Lascelles 3, T. Griffith 2. W McDowall won the first money in the sweepstakes at 5 birds, with D. Blea second, C. Emond and D. Beldon divided third and fourth. C. Kemp won the merchandise match at 9 artificial birds with a score of 8, E. Brown took second, E. Emond third, and W. McDowall and W. A. Clark divided fourth and fifth.

Yachting.

CLASSIFICATION BY CORRECTED LENGTH.

DURING the unusually active season that has just closed, a season remarkable both for the number of races and the strong winds in which many of them were sailed, there has been little time for any discussion or study of the measurement question; the great points have been "Who won," and how the winner might be beaten in the next race. Now, however, with the racing over and the fleet laid up, it becomes necessary to take up again the subject so generally discussed in the early spring and postponed by common consent until the close of the racing season. The fact long recognized by the more thoughtful yachtsmen, that spars and sails were rapidly developing to a most undesirable extent, was brought home to the majority last winter by the construction of several yachts in which draft and sail area were carried to an extent never before reached on either side of the Atlantic; the result being very much like a panic. The stories that were told, and with good foundation, of a draft of nearly 11ft. in the forties Helen, Tomahawk and Liris, and of sail spreads such as had previously been seen on nothing less than two classes higher, gave a strong impulse to the movement for further restrictions on some of the elements of design which has been quietly but persistently pushed for a long time. Among the proposals which were made was one to place an arbitrary limit on draft, another to tax sail more heavily than at present, retaining the same basis of classification, waterline length; and a third, to change to a system of classification, as well as measurement, on a basis of corrected length.

As has always been the case, this agitation for a more or less radical change of the rules was not made at a time when it could be discussed with the care and deliberation which its importance demands, but it came so near the beginning of the racing season that any action would necessarily have been hasty and incomplete, while much injustice might have been done to the large fleet of new yachts whose sails were just being bent. It would probably have been an easy matter so to have excited and directed the popular clamor last spring as to have hurried through a radical change in the rules at the spring meeting of some of the clubs, but fortunately wiser counsels prevailed and the whole question left in the hands of committees, with the distinct understanding that some definite action, one way or another, be taken as soon as possible after the season closed. It was confidently expected that the many promised races and the very large fleet, especially in one class, would afford a basis for some positive conclusion; and although this expectation has not been fully realized, though there are many loose ends to the record, and much that is unsatisfactory and incomplete, there is at least more to work on than has ever been offered to yachtsmen in the past. The present time is of all the year the most favorable for the consideration and execution of a task of this kind, as, though active work on the water has stopped, the interest in yachting has not yet been temporarily deadened by the demands of business and society, as will be the case by December, and the subject still has a firm hold on the attention of yachtsmen. Though as yet nothing definite, the indications are very good for a fleet of new yachts next season, the forties are by no means done with yet, and both the 53 and 70ft. classes are likely to experience a revival. In order to encourage building and to induce men to begin in season, it is most essential that the measurement question shall be settled within the next few weeks, at least by the end of November, either by the adoption of the such changes as may seem desirable, or by a determination to do nothing at all for the coming season. If the matter is left until after New Year, it must go by default until the following autumn.

At the present time three important committees are at work on the subject, in the New York and Seawanhaka clubs, and the Lake X. R. A., all of them to report within a couple of weeks. There seems little prospect of any direct increase of the one on sail, and if any change be made it will be in the adoption of a classification by corrected length, such as was favored by many leading yachtsmen last spring. Without attempting to analyze the rather complicated records of the races, or to draw any conclusions from them as to the advisability of a change, we propose at present to consider the subject of classification by corrected length in its application to the American fleet, in order that the attention of yachtsmen may be called to the many points involved.

As every yachtsman knows, by the system in use now by the principal American clubs the yachts are grouped in classes by their waterline length, time being allowed between those in a class according to the "corrected length" while by the proposed method, instead of classing by a fixed quantity, as the waterline, the basis of classification as well as measurement will be the "corrected length."

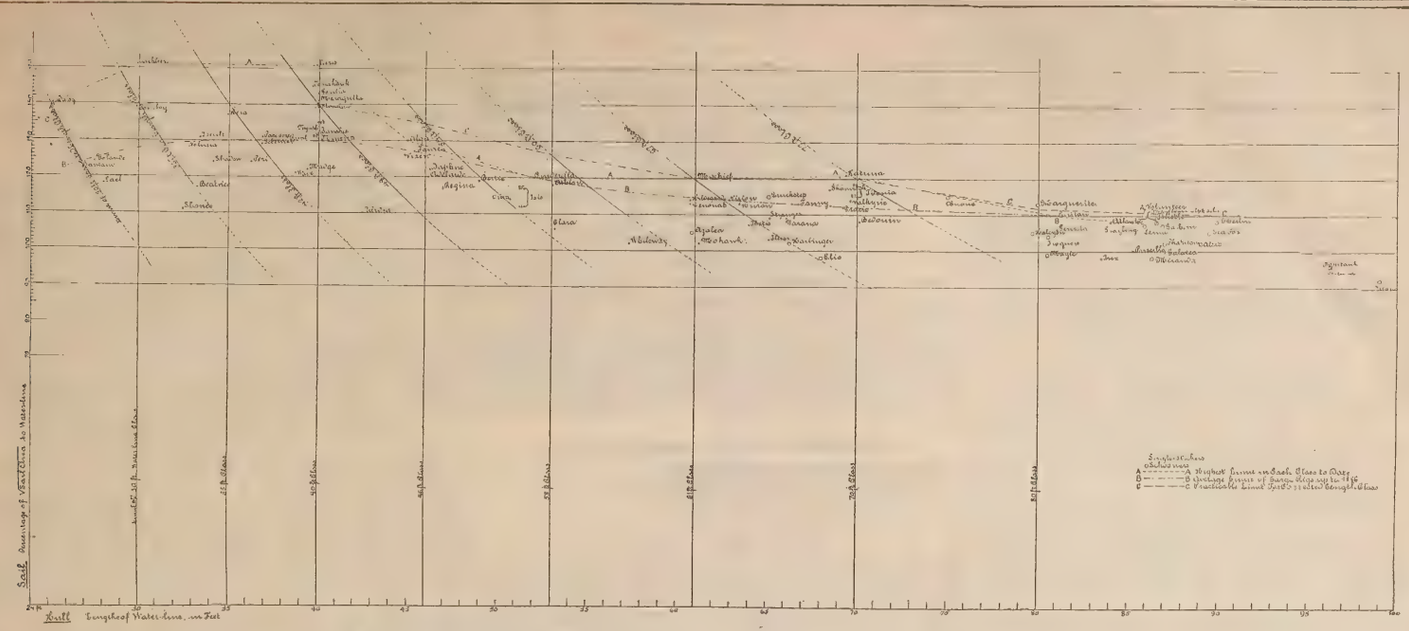

DIAGRAM SHOWING RATIO OF SAIL TO LENGTH IN THE RACING FLEET.

The vertical lines indicate the present limits of classes by waterline length; the inclined lines indicate the limits of classes by corrected length. The relative position of each yacht in its class, near the upper or lower limit, is shown by its proximity to lines indicating the class limits.

The operation of the former system is familiar to all, yachts are built to the utmost limit of waterline allowed for their class, the leading feature of the design being the power which is obtained from beam, draft and ballast; and then sail is piled on according to the judgment, or often the lack of judgment, of the designer. Under this system both waterline and sail may be considered as constant for each class, in spite of the fact that the latter has steadily and rapidly increased of late with the improvement in mechanical features, such as build and ballast; but under the other system both are variable, increasing and decreasing in inverse ratio according to the particular formula in use. Thus, as length is increased the sail is decreased, leaving the designer at liberty to select his dimensions freely for any given class. Under such a rule the present forties would come, for instance, in a class whose maximum limit would be 48ft. corrected length by Seawanhaka rule, or $\frac{L+S}{2}=48$.

If we substitute 40 for the length (L) in this formula the corresponding sail area (S) will be 3,156sq. ft.; and if a length of 45ft. be taken the corresponding sail area will be but 2,601. In the 40ft. boat a beam of 13ft. 6in. and a draft of 9ft. 6in. would probably be taken; in the 41ft. both would be reduced a little, while in the 45ft. craft, if such a length should be desired, the beam would be about 10ft., with 9ft. draft. In theory the three yachts would be of the same size, and would race on even terms with no time allowance from one to another, and whether or no such a result is reached in practice depends on the proportions of length and sail in the rule. It is easily seen that the designer or owner cannot eat his cake and have it too; if he prefers the comparatively wide model with large sails, such as the forty, he is at liberty to build it; if he wishes less extreme dimensions, more fore and aft accommodation and a small rig, he can just as well have that; but what he cannot do is to take the length, 45ft., and with it the proportionate beam and sail of the 40ft. boat in order to beat the latter through mere size.

Such is briefly the theory of that "classification by corrected length" that has been so much talked of for a couple of years or more. In order to consider its practical application to the American fleet it is necessary to know something of the elements of the yachts, to which end we have prepared table A. As the most convenient and accurate basis for the comparison of the sail areas we have taken the ratio of the square root of the sail area to the waterline, as given in the fifth column.

The rather nebulous and indefinite unit, "corrected length" is in the various forms of what is called the "length and sail area" rule, made up of the waterline and some function of the sail area, in varying proportions; by adding twice the waterline to the square root of the sail area and dividing the sum by three; by adding the waterline and square root of the sail area together and dividing by two; or else the measurements of the principal spars are combined in such a way as to avoid that terrible bugbear, the square root, the sum being used in connection with the waterline to make up the "corrected length."

In the actual measurement of the sails by New York and S. C. Y. C. rules the sail plan is considered as a triangle whose base is the distance from the intersection of the luff of the jib with the bowsprit to the end of the main boom, with ¼ of the gaff added; and whose perpendicular is the distance from the upper side of main boom to the topsail block or sheave in topmast. The merits and demerits of this method of measuring sail offer in themselves a wide field for discussion, but without going into it now we shall assume that the measurement is as fair to one yacht as another, and shall use it in all our investigations, as it is the only one obtainable. The figures which we give are compiled from the racing measurements in the various club books. By the English method of measuring the actual area of mainsail and topsail is taken, the latter being sometimes a club and sometimes a sprit topsail, consequently the measurement is a little larger than by the American rules, and in cases where the measurements of British yachts are given in the following tables a correction has been made in the official Y. R. A. measurement to bring the figures down to an American basis in connection with table A.

The accompanying diagram shows very plainly the decrease of sail with the increase of length, and at the same time the great extreme to which some of the latest yachts have gone in the matter of sail and power. The horizontal scale represents the lengths of waterline in feet from 25 to 100, while the vertical scale shows the ratio of the square root of the sail area to the corresponding waterline; thus in the case of Pappoose, the waterline is 36.90ft., the sail area is 2,334sq. ft., the square root being 48.31ft., consequently $\frac{48.31}{36.90}=1.31$, or 131 as plotted on the vertical scale at the point equal to 36.90 on the horizontal.

Besides much that pertains to the immediate subject in hand there is a text for a very interesting discourse in the diagram and figures, showing as they do the great increase of sail in the new yachts, Liris and Kathleen, for instance, overtopping everything with a ratio of 151 per cent., while in the schooners the new Quickstep shows a proportion of 115 per cent. compared with 98 per cent. of the old racer Clio, of nearly the same length. The main purpose of the diagram at present is to illustrate the law by which the proportion of sail to length decreases as the yachts increase in size; for instance, in Pappoose of 36.90ft. waterline, the ratio is 1.31, while in Volunteer, of 85.88 waterline, the ratio is but 1.12. The line BB shows very nearly the average of the existing fleet up to the last two seasons, the ratio being nearly as in Table B for each of the established classes. A point well worthy of notice is the varying degree of development of the different classes, in the past as well as at present; for instance, the highest point to-day is reached in the 30 and 40ft. classes, the 45 and 53ft. classes as yet having comparatively small rigs. Further on the old Mischief, 61ft., shows up with a very large rig, far above the average of her day in either of the adjoining classes, but she is now overtopped by Titania in the 70ft. class, to say nothing of the still bigger rig of Katrina. In the schooner division the new boats Quickstep, Œnone, Marguerite and Merlin stand far above the older, or even the comparatively modern boats of their classes. In making a comparison it is necessary to bear in mind that theoretically the greatest ratio would be found on the smallest yachts (about 130 per cent. for 25ft.), decreasing from this down to nearly 110 in the largest, or 86ft.; and similarly in the schooners. Instead of this gradual incline the line jumps up at 30 and 40ft., falls at 46 and 53ft., and rises at 70ft., showing that the development is by no means even, depending largely on the fashion for certain classes. It is worthy of note that the Daisy, with the very high percentage of 140, is an imported Itchen boat, the prototype of the modern thirties and forties with their enormous rigs.

In order to change from a classification by waterline to one by corrected length it is necessary to determine first a starting point, common to the two systems; second, the desirable class limits under the new system, and third, the proper formula on which the corrected length is to be based. If, as some believe, it is desirable to tax sail more heavily than is now done, it would be an easy matter to lay down arbitrary limits for each class and work out a rule to correspond, having no regard to existing boats, but such a sweeping measure is unnecessary and undesirable; instead of taxing sail a similar end may be reached in a much more satisfactory manner by taking a part of the tax off of length; and it is in every way desirable that if a change be made it should be accompanied with the least possible friction and disturbance to existing interests. The following table, B, giving the average ratio of sail area to length in each of the existing classes, has been compiled from the diagram, the average being a high one and including all but half a dozen of the singlestick fleet.

TABLE A.

ELEMENTS OF MEASUREMENT AND CLASSIFICATION OF RACING YACHTS.

TABLE B.

ELEMENTS OF MEASUREMENT AND CLASSIFICATION IN EXISTING CLASSES.

L.	$\frac{\sqrt{S}}{L}$.	$\sqrt{S}$.	S.	Corrected Length. $\frac{2L+\sqrt{S}}{3}$.	Corrected Length. $\frac{L+\sqrt{S}}{2}$.
25ft.	1.37	35ft.	1225sq. ft.	28ft.	30ft.
30ft.	1.40	42ft.	1765sq. ft.	34ft.	36ft.
35ft.	1.40	49ft.	2401sq. ft.	40ft.	42ft.
40ft.	1.40	56ft.	3136sq. ft.	45ft.	48ft.
46ft.	1.30	60ft.	3600sq. ft.	51ft.	53ft.
53ft.	1.22	65ft.	4225sq. ft.	57ft.	59ft.
61ft.	1.20	73ft.	5329sq. ft.	65ft.	67ft.
70ft.	1.186	83ft.	6889sq. ft.	74.3ft.	76.5ft.
80ft.	1.12	90ft.	8100sq. ft.	83ft.	85ft.
90ft.	1.10	100ft.	10000sq. ft.	93ft.	95ft.

The first column, L, contains the waterline length, the second the ratio of square root of sail area to this length, the third contains the square root of the sail, the fourth the actual allowance of sail, and the last two columns the corresponding corrected length by the formulas now in general use. Fractions have been omitted as far as possible in order to give an even number for the class limit, the only exception being in the 70ft. class. With one point in each class fixed upon, it is a simple matter to work out the allowances for the whole class on the basis of corrected length. For instance, in the 40ft. class, by the New York rule, the calculation would be $\frac{2L+\sqrt{S}}{3}=45$, and by substituting different figures in turn for the length we get the corresponding allowance of sail. With the starting point for each class fixed, as in the above table, the present fleet with their large rigs would be left practically undisturbed, the allowances between them under any given rule would be the same as now exist, while each boat would be as firmly fixed in its new class as it now is in the old one. The important question would be to determine the allowance of sail to the new boats to be built under the rule, in which the length, instead of being fixed, as now, would vary at the will of the designer. Under a system of classification by corrected length almost any tax may be placed on sail with the same rule, as shown in Table C, which gives the various classes possible under either formula that should include the present forties.

TABLE C.

COMPARISON OF POSSIBLE CLASSES BY CORRECTED LENGTH APPLIED TO PRESENT 40FT. CLASS.

Waterline length.	$\frac{2L+\sqrt{S}}{3}$. 44ft. Class.	45ft. Class.	46ft. Class.	48ft. Class.	$\frac{L+\sqrt{S}}{2}$. 46ft. Class.	48ft. Class.	50ft. Class.
	Sail allowed for each length.						
38ft.	3136	3481	3844	4624	2916	3364	3844
39ft.	2916	3249	3600	4356	2809	3249	3721
40ft.	2704	3025	3364	4096	2704	3136	3600
41ft.	2500	2809	3136	3844	2601	3025	3481
42ft.	2304	2601	2916	3600	2500	2916	3364
43ft.	2116	2401	2704	3364	2401	2809	3249
44ft.	1936	2209	2500	3136	2304	2704	3136
45ft.	1764	2025	2304	2916	2209	2601	3025
46ft.	1600	1849	2116	2704	2116	2500	2916
47ft.	1444	1681	1936	2500	2025	2401	2809
48ft.	1296	1521	1764	2304	1936	2304	2704

From this table, if we take a class limit of 44ft. corrected length by the first rule the allowance of sail for a forty would be but 2,704ft., or less than Minerva, while any longer boat would be still more restricted. If, on the other hand, a limit of 48ft. be taken for the class, the normal boat, the present forty, would be allowed the ridiculous amount of 4,096ft. Similarly under the second rule for a class of 46ft. corrected length, only 2,704ft. would be allowed, while for a 50ft. class a forty might have 3,600ft., the sail plan of Liris. An inspection of the table will quickly show that the practicable classes would be 45 or 46ft. if the first formula is followed, and 48ft. under the second.

Assuming that the starting point in each class would be about the amount of sail now carried by the existing boats that would go in the new class, of from 3,000 to 3,200 for a forty, the next thing is to determine the form of rule and the particular class under it which is likely to produce the most wholesome type of boat in the future. The 40ft. class will serve very well as a basis for calculation, as it would occupy too much space to carry out the comparison for all the different classes. Referring to table C

and to the first formula, the two practicable classes would be 45 and 40ft. corrected length. In the former the allowance of sail for 40ft., 3,025sq.ft., is less than is carried by several of the new yachts, but still in excess of anything seen before this season, being more than is now carried by Nymph, Verena, Baboon, Xara and Chiquita.

Going to 41ft. length the allowance of sail would be but 2,809ft., the present rig of Banshee on a hull 1ft. longer, which would not be bad, but for a length of 42ft. the sail would be cut down to a figure that would only permit a very narrow hull, such as the old 10-ton cutters. Going up now from 40ft., a length of 38ft. would be allowed 3,481ft. of sail, or more in proportion than Liris. The effect of this class then would be to confine all experiment practically to lengths of 39 to 41ft., changing the existing order of things but little; unless a man wishes to try his luck with a narrow cutter of about 43×8½ft. with 2,401ft. of sail. Similarly the 46ft. class under the same rule, though starting with a very large rig on a forty, 3,364ft., would at 43ft. allow less sail than Minerva has. The action of the first formula applied in this way, with the corrected length fixed and the length and sail variable, is to cut down sail very rapidly as length increases, taking off over 200ft. of sail for an increase of 1ft. of length, and adding sail as rapidly as length is decreased. The second formula, on the contrary, though taxing sail more heavily when used as at present, is much more liberal than the first when applied to a classification by corrected length, the difference of sail for each foot of length, as shown in the seventh column of table C, being about 100ft.

With a class of 48ft. corrected length by the second rule, as in the column referred to, the starting point for a forty would be 3,136ft. of sail, about that of Maraquita. There would be a place at the upper part of the class for a boat of the extreme proportions of Liris, 38ft. length and 3,364ft. of sail, but further than this a wide field of experiment in more moderate craft would be opened in the lengths from 41 to 45ft., the allowance of sail even for the latter length being such as to permit of 10ft. or more beam. The average beam of the present keel forty with 3,100ft. of sail is 13ft. 6in., and roughly speaking it would decrease about 6in. for each foot of extra length, giving 12ft. 6in. beam for a 42ft. yacht and 10ft. 6in. to 11ft. for a 45ft. In comparing the action of the two rules it would seem that the second, with its more gradual changes and the greater allowance of sail for the larger boats, would be much superior to the first, the latter offering still a strong premium to the very wide boat with the big rig, and practically confining all experiment to a few lengths of nearly the same type.

One leading feature of the system is that there is theoretically no limit to any class, a man may build a yacht 60ft. long for the 48ft. class corrected length, but he can take only 1,300ft. of sail; and on the other hand he can build a 30 footer for the same class, taking 4,300ft. Both of these boats would be absurdities, and practically the class would be confined to the limits of 39ft. length with 3,249ft. of sail and 44ft. length with 2,704ft. It would be possible to build a reduced Clara of 46ft. length for the class, but such a boat would hardly frighten the present fleet in racing on even terms.

One objection that has been urged to the system is that it would never be known in what class a yacht belonged, that she would race in the 42ft. class one day, the 46ft. class on the next, and again in the 53ft. class; but such a misapprehension is founded only on an ignorance of the subject. A yacht would be as firmly anchored in the class she was built for as under the present system. For instance, the present 46ft. class, such as Daphne, Fanita and Alga, carry about 3,300ft. of sail, giving a corrected length of 51 to 52ft., while the limit of the class which included the present forties would be 48ft., consequently the larger boats could not go down into the smaller class. This is shown in the diagram, in which the inclined lines show the proportionate sail allowed for each length in any class. The limits of each class are, as before explained, infinite; but the practical working limits are indicated by the heavier line; thus in the 48ft. class the lengths would run from 39 to 45ft., and the sail from 3,249 down to 2,601ft.

While the classes overlap they do not intersect or conflict, and a yacht must be designed for a particular class, remaining always in it. It would be possible for a 40ft. yacht to go in the 42ft. corrected length class, but to do so she could have but 1,936ft. of sail, about the rig of the modern 30-footer, consequently she would be of an extreme type that would have little show of success against the more moderate boats of her class. Similarly, a 53ft. boat for the 48ft. class could have but 1,849ft. of sail, in other words such a boat would be impossible.

Our object thus far has been merely to make clear the leading features of a system that our readers are likely to hear a good deal of in the future, even though nothing should be done at present toward its adoption. The first thing to be settled is the merit of the principles embodied in the new system compared with those of the present one; when this is settled it will be time enough to discuss the many points of detail, such as the best formula, the proper classes, and the boats likely to be produced under them.

VIPER AND AIDEEN.—A match was sailed at Hamilton, Ont., on Oct. 12, between the two 20ft. yachts Viper and Aideen, one round of the regular triangular course, 10½ miles, for $50 per side. Both are new yachts, built last spring, Viper being designed by Mr. Æmilius Jarvis, who sailed her in the race, while Aideen was built by Mr. Luke Thompson. The start was made at 2:30 in a heavy wind and sea, Viper carrying one reef and Aideen two. Aideen gained on the run to first mark, but after that Viper headed her and finally won by a large margin. The times were:

	Start.	Finish.	Elapsed.	Corrected.
Viper	2 30 39	5 10 38	2 44 08	2 44 08
Aideen	2 33 18	5 26 41	2 53 23	2 53 10

F. E. Kilvert, judge; R. A. Mathesius, timekeeper. The wind was blowing 30 miles per hour during a part of the race. The following challenge has resulted: "Having been defeated on Saturday by the Viper, and being anxious to have another race, I hereby challenge Mr. Jarvis to sail the Aideen against the Viper a series of three races for $50 a side. The first race to take place next Saturday, when the Aideen sails the Stella, and I am satisfied to sail the race on the old conditions, with the exception of the wind, which will have to be taken as it comes.—Wm. Burnside, Captain Aideen."

GALATEA.—This cutter yacht, with her owner (Lieut. Henn) and Mrs. Henn, arrived in the Shannon on Oct. 3 from Plymouth, after a wild passage. She got the first of Sunday's hurricane-like wind, and was fortunate enough to be able to fetch an indifferent harbor on the Kerry coast—Smerwick by name. The holding ground was none of the best, and there was a heavy swell setting into the harbor. In the height of the terrific squalls which swept down from the high mountains, grave doubts were felt as to whether she could hold on; however, with two anchors ahead, 75 fathoms on one and 60 fathoms on the other, she rode it out all right. But it was an anxious time for those on board, for if the ground tackle failed us, it was all up with them, and no chance of saving life. Outside the harbor is a small island 90ft. high; the sea was making a clean breach over it, and the rebound from cliffs 600ft. high was something to see.—*Field, Oct. 12.*

THE INTERNATIONAL MARITIME EXHIBITION.—On Nov. 9 there will be opened in Mechanics' Hall, Boston, an exhibition of everything pertaining to shipping and yachting. Among other interesting features will be a large canal, in which Lawley & Son have built a reproduction of the topsides of the Burgess schooner Quickstep. The canal will also contain lifeboats, launches and small craft of all kinds. The exhibition will be open for two months.

THE INTERNATIONAL MARINE CONFERENCE.—The International Marine Conference, including delegates from twenty different governments, met at Washington on Oct. 16, and will continue in session until Jan. 1. The programme of subjects which will be discussed was published in the Forest and Stream of May 23.

WONA.—This fast little cutter, whose lines were published in the Forest and Stream of Nov. 22, is offered for sale in another column, her owner having purchased the 28ft. cutter Marguerite, designed by Mr. J. Borden, of Boston.

GORILLA.—Mr. R. P. Carroll, owner of Gorilla, sailed last week for Europe en route to Zanzibar, whence he will start with two friends on a hunting expedition in the interior of Africa, returning next season.

SCHOONER WANTED.—Attention is called to the advertisement for a schooner yacht in another column.

NEW YORK Y. C.—The regular October meeting will be held to night at the club house.

Forest and Stream, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

Canoeing.

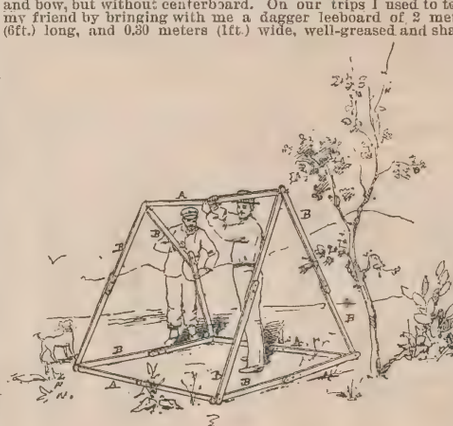
Secretaries of canoe clubs are requested to send to Forest and Stream their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to Forest and Stream their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1887-88.

Commodore: H. C. Rogers, Secretary-Treasurer; Geo. W. Hatton } Peterborough, Can.
Vice-Com. *Rear-Com.* *Purser.*
Central Div..W. R. Huntington. E. W. Masten.....T. H. Stryker, Rome, N. Y.
Atlantic Div. W. P. Stephens.....L. B. Palmer.....F. L. Dunnell, 186 Jerolemon St., Brooklyn.
N'thern Div..Robert Tyson.....S. S. Robinson.....Colin Fraser, Toronto.
Eastern Div..H. E. Rice, M. D.....Maxton Holmes.....H. D Marsh, Springfield, Mass.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of $2.00 for entrance fee and dues for current year. Every member attending the general A. C. A. camp shall pay $1.00 for camp expenses. Application sent to the Secy-Treas. will be forwarded by him to the proper Division.



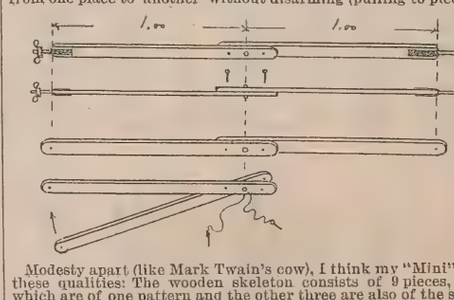
Persons residing in any Division and wishing to become members of the A. C. A., will be furnished with printed forms of application by addressing the Purser.

WESTERN CANOE ASSOCIATION.

Commodore—C. J. Stedman, Cincinnati, Ohio.
Vice-Commodore—T. J. Kirkpatrick, Springfield, O.
Rear-Commodore—Thos. S. Gates, Columbus, O.
Secretary-Treasurer—J. B. Keogh, Chicago, Ill

THE "MINI" TENT.

Up to the day when my dear friend and partner bought a beastly, worn out steamer, which he (an old bachelor) named Freya (goddess of love), our trips to our plantations of poplars and willows in the Paraná Mini* were made in his flat-bottomed boat named No hagas daño (*i. e.* don't commit nuisance). These boats of the Paraná Delta are a kind of sharpie with sharp stern and bow, but without centerboard. On our trips I used to tease my friend by bringing with me a dagger leeboard of 2 meters (6ft.) long, and 0.30 meters (1ft.) wide, well-greased and sharp-



edged. This boat did not sail any worse for it nor did we sleep worse, for the reason of my tent, than we used to do before my having it made.

I'll never forget one night we slept, or rather did not sleep, at the mouth of Paraná de las Palmes, moored to a willow, with water in the boat and on shore, and any amount of mosquitoes in the air. We alternately covered our dear good selves with rugs and ponchos against the mosquitoes and uncovered ourselves on account of heat and perspiration. It was that very night my plan for the "Mini" tent ripened to about 75 per cent. of what it

is. Once ashore I began to think, and draw, and think, (I am an architect, mind) until I hit upon the thing of which I send the accompanying designs. I have tried it and think it is a success. (Mark Twain says, "Every cow thinks the same of her own calf.")

The requirements to satisfy were: (1), room for two men to sleep; (2), easy setting up and stowing by one man; (3), woodwork not over 1.20 meters (3ft. 8in.) long; (4), no pegs or poles to be set into the ground; (5), absolute security against mosquitoes; (6), ventilation or absolute watertightness, according to weather; (7), entrance to close automatically against mosquitoes; (8), easy shifting from one place to another without disarming (pulling to pieces).

Modesty apart (like Mark Twain's cow), I think my "Mini" has these qualities: The wooden skeleton consists of 9 pieces, 6 of which are of one pattern and the other three are also of the same pattern. Put together they form a prism whose basis is an equilateral triangle of 2 meters (6ft.) side and whose length is also 2 meters. All wood parts are jointed together like scissors and are made rigid in the expanded position by means of two pins.

The frame is put together in one minute, the thumb-screws setting everything rigid. The cloth is then thrown over the frame and the two lower edges tied to the foot beam from the inside of tent. The gable sides of tent have their halves overlapping and tied crossways so that a person wanting to enter or exit pulls cloth apart in the inside line and shoves himself through; the sides close immediately on account of elasticity. The oiled floor-cloth is tied at the four corners, or if preferred, all along the four edges. I think the drawings explain the whole better than words, especially when written by people who, like myself, are not masters in the language they make use of. Carlos Altgelt.

Buenos Ayres.

*"Mini" means "small" in Guarani language.

SOME MORE SNIPS FROM AND ANOTHER SNAP AT THE '89 MEET.

PART I.

The tents at an A. C. A. meet, like the men who inhabit them, are of all sorts and conditions, but that is where the resemblance, coverings and covered, ends, for the men all have an affinity for the canoe, and that is exactly what the great majority of the tents have not. The tents at the '89 meet were no exception to the general rule; there were A tents, wall tents, round tents, round-ended tents, pavilion tents, pyramid tents, tents as big as a house and as small as a dog kennel, and there was little that was new and less that was admirable about the whole lot. The heavy rains of the first week searched out the weak places in the tents very effectively, however, and it is not improbable that a good many men who have been aroused to the necessity of paying some attention to their tents by a wet bed, will during this winter waste a certain degree of the gray matter of their brain in devising new camp shelters.

Scott, of Ottawa, brought the fine big round-ended wall tent which he had at Lake George last year, down the Rideau with him, and it was perhaps the best tent of its kind in camp. This tent has buttons pole, and yet it is big enough for half a dozen. It has a high wall, a steeply pitched roof, and Scott manages to carry it all over the country in a sixteen-foot open canoe.

The Torontos' pyramid tent is simple enough in all conscience; it has but one pole, a bamboo, light iron or steel pins, and it furnishes room for two. As matters now are it is probably the most serviceable shore canoe tent in use. It is certainly a better tent than the square-headed oiled affairs the Ubiques use, and it is simpler, lighter and better adapted to turn a heavy rain than the Brooklyn square, header, even if this last is provided with Mr. Carter's extending joint expansion gear. One thing ex-Commodore Wilkin has about his tent gear that is quite admirable, and that is a steel tent peg that will drive anywhere and hold in anything. It is made from a piece of three-quarters by three-sixteenths flat steel, and has a looped head and a cannulated shank. Like all good pegs it is not easy to draw, but it drives easily and it will hold in sand.

The Jabber had a very pretty little wall tent in camp that he says he made himself, and if the fittings were fined down I believe such a tent as this could be made that would be, as an all-around tent, superior to the Toronto pyramid. The way the Jabber had that tent set up was as ingenious as simple. He had a floor—everybody had floors this year—and on top of this floor a wall one board high the size of the tent was erected. The upright poles were nailed to this wall, and the edge of the sod cloth was attached to it all round, so that the Jabber slept in a box with a cotton roof. This was a very comfortable arrangement the Jabber found, but there were certain jealous ones in the camp who envied him his serenity, and they did plot and conspire to destroy it. These evil ones waited until the famous night came when "the Commodore was in New York," and then they gathered to themselves many kindred spirits, picked up the tent, floor, walls, trunk and all, and carried it bodily up Yonge street to the headquarters pavilion. After much trouble it was placed within that structure, and with many a chuckle at their ingenuity and many an admiring glance at their handiwork the conspirators were gathering about the camp-fire, when the Jabber, who of course had been over at Squaw Point all the evening, appeared, and took in the whole situation at a glance.

When the Jabber began, "Well, now, if moving me up to headquarters is not showering honors upon my unworthy shoulders to an extent that," etc., the plot dissolved into thin air, and it was the conspirators, not the new vice-commodore of the Central Division that were sold.

There were quite a number of one-pole pavilion tents, with striped sides, gaily painted poles and very flat roofs, in camp, and I think I am safe in saying that not one of these tents proved watertight during the heavy rains of the first week. The pitch of their roofs was not sufficient to permit the water to run off from the upper side of the canvas, and in consequence it dripped down into the tent from the line of juncture between roofs and walls. This was particularly the case with those tents, the roof of which were extended by a square frame, and I do not believe that this description of tent can do other than leak in wet weather. In my opinion, a canoeist's shore tent should have plenty of room for two, not more, and be high enough in the walls to permit of the use of low cots. It should be small in bulk, with the shortest and lightest poles possible, have plenty of ventilators, a steeply-pitched roof, so as to be dry under all conditions without being waterproofed or of too heavy material. If it is of such a form as will permit of its walls being raised to allow of the interior being thoroughly dried by wind and sun, and of an awning being set up in front of it, so much the better. An awning or fly may be a luxury, but it is one that adds much to the comfort and completeness of a meet camp. How to get all these good qualities into one rather small tent without making it a hard camp to set up, is the problem for the inventive geniuses to solve. So far as I know there is not a tent extant that combines all of these good qualities, and there are but few who have more than two or three of them.

This year, several events that formed an important part of the old-time meets were omitted from both the general and the regatta programme, not as far as I can see with a good effect upon either. The illuminated parade, one of the most enjoyable features of a meet, had this year to be abandoned, because of bad weather, and the review of the fleet, which was dropped in '88 because the regatta spread over its allotted time, was not even spoken of this year. It would I think be a decided loss if these two events, perhaps the most picturesque portions of a meet, should be definitly abandoned. The fleet review is in particular an event that works only for good, it is the only possible recognition by the fleet as such, of the authority of its commodore, and it brings the canoes of the A.C.A. together for once on a friendly footing. The two principal omissions from the regatta programme were the club and the maneuvering races, and I do not think that the programme was the better because of this. The maneuvering race is a particularly good race, quite as good if not a better race than the sailing upset, and it always brings out a full list of entries. The club race is also a good race in every way, and has a tendency for good, in that it encourages clubs to come to the A. C. A. meet as clubs, and is an incentive to club *esprit de corps*. Although it would be perhaps better for the club race that it should be in the future what it was in the past, a special race, there is nothing to prevent the prize for it being given upon the result in the unlimited. The maneuvering race should, however, be a special race, that is unless it is considered advisable to sacrifice a good race in the hope of making a better one by combining the maneuvering and upset sailing, and so making a species of general expert race of it. The tournament had also to be abandoned owing to the absence of lances, and although the tug-of-war and the gymnastics of this year were decidedly good, they do not replace the great game of splash.

Wednesday of the racing week is by time-honored precedent the day when the A. C. A. abandons its comforts in order to give amusement and perhaps some useful lessons to all and sundry who care so visit it, and it is in consequence a day that is spoiled for anything like hard work. If this visitors' day was deliberately set apart for the annual review and the expert events, such as the upset paddling, upset sculling and maneuvering races, the tournament, gymnastics, the tug of war and perhaps the hurry scurry also, the visitors would be given something to look at besides the tent interiors, the A. C. A. men would get something to do, close to camp, and in such a way that they could still show every attention to their visitors, and what is now, to put it mildly, a very wearisome day, might be converted into a very enjoyable one.

Canoeing is in all its phases one of the most picturesque of sports, and it is therefore natural that the canoe and the camera should become close allies. This year every second man in camp had a camera of some kind or other, and the snap of the shutter was heard in the camp from morning till night. There is every reason why this alliance should be preserved, the canoe gives the camera plenty of good subjects, the camera furnishes the canoe with enthusiasm-producing pictures, and therefore one assists the other mightily. I know from personal experience that all the canoe talk which a possible novice can be induced to give ear to, will have less effect in bringing him to the canoe-buying point, than one photograph such as Stoddard's plate of the Dimple, of last year, and a set of A. C. A. views has an effect upon the uninitiated that in some cases is a little short of magical. The alliance has now become so close that I think the camera should be recognized by the A. C. A. at least to this effect, that a simple but effective dark room be built by it for the benefit of the camera man. Such a room would cost little; it would be a great convenience to all photophiends, and through them to the camp.

The picturesque appearance of the camp owes a good deal to the strings of flags that decorate every available vantage ground

id now that the scalp system has been adopted as a method of
e Association, the display of flags is beginning to mean some-
ning as well as to look well. Now, although there must have
een two dozen commodores and ex-commodores of all kinds and
egrees in camp, there was hardly an officer's flag other than the
ommodore's to be seen. As the commodores of the past have, I
uppose, no right to fly the flag of office and the officer's flags are
I hard to make, neither effective nor pretty when made, and
he differences between the flags of the different ranks are of such
nature that not one out of ten A. C. A. men knows what it is.
he absence of the officers' flags from the scalp line is no great
ss to any person. If it is worth while having officers' colors at
l, however, they should be of such a character as to be worth
ying in camp, and if their design was such as to make them
mple and effective, not merely as a flag, but as a means of
wing both the rank and the year of office of their owners, this is
xactly what they should be.
By an adaptation of the method of the Royal C. C., which the
oronto C. C. has adopted with great success, this could be done
asily and simply. The commodore's flag under this system would
e a swallow-tailed A. C. A. pennant, with the year of his office
pon the red field in blue; the vice-commodore's would be pre-
isely the same, with the addition of a blue ball, and the addition
f another ball would designate a rear-commodore. The ex-
fficers would then all have a scalp to fly, as the numbers on their
ags would show them to be past, not present, rulers of the desti-
ies of the canoeing republic, and the reproach of ingratitude
hich can now be brought against the Association would be re-
oved. The addition to the flags of the vice and rear-commo-
ores of the initial letters of the name of their division would
..ke the system more complete. RETAW.

THE SITE FOR THE A. C. A. MEET.

Editor Forest and Stream:
The following was passed after the adjournment of the B. C. C. meeting on Oct. 8: "Mr. Ward moves that in the opinion of the A. C. A. members of the B. C. C., here assembled, that it is perfectly feasible to hold a meet on Huntington Bay or vicinity, and that they strongly recommend the committee to confine themselves to these waters (preferably the west shore of Eaton's Neck account of the prevailing wind). In our opinion these waters are the only accessible ones to visitors from the north and west. The fresh-water difficulty can be overcome and the ground can be obtained. Bases of supplies are within reach, Northport and Huntington. Communication is sufficiently close with New York. Quad is abundant. The beach is as good as elsewhere, and the ite remarkable for natural scenery; and further, we consider he Association is expected and almost pledged to be near New ork, if not indeed to this locality. The prevailing winds being outherly and westerly insure comparative freedom from mosqui-oes."

ROBT. J. WILKIN, Chairman.
M. V. BROKAW, Secretary.

I. V. Brokaw, Esq., Secretary Brooklyn Canoe Club:
Your favor of the 11th inst., inclosing a copy of a resolution dopted at the meeting of your club on the 8th inst., concerning untington Bay as a site for the next A. C. A. meet, is received. The resolution will be referred to the Camp Site Committee as oon as that committee shall be appointed.
In regard to the recommendation contained in the resolution hat the committee confine their selection to Huntington Bay and icinity, if the recommendation is intended for the Camp Site Committee I do not see how they can comply with it. It appears o me to be the plain duty of the Camp Site Committee to examine he several places that have been suggested in order that they may lay before the Executive Committee the facts concerning ach, so that that committee may intelligently pass upon the uestion as to which place is most suitable for the meet.
As to the suggestion contained in the resolution that something in the nature of a pledge has been given that the meet should be at Huntington Bay, I think there must be some mistake about this, as no one has the right to give such a pledge nor anything like it. The whole matter is to be determined by the executive committee upon the report of the camp site committee and upon such other facts as may be furnished to them from other sources.
I have examined Huntington Bay and the bays in its vicinity, namely, Oyster Bay and Hempstead Harbor, with a view to finding a camp site for the meet, but without seeing any place which seemed to me fit for the purpose, yet the very positive statement contained in this resolution, namely, "It is perfectly feasible to hold a meet on Huntington Bay or vicinity," leads me to believe that, notwithstanding my inability to find it, a suitable place for the meet exists on or in the vicinity of that bay and is known to the gentlemen who voted for this resolution. I quite agree with them that Huntington Bay should be selected, if a suitable camp site can be found there, and I feel sure that gentlemen who take so lively an interest in this question, and who, judging by this resolution, possess a knowledge of the subject, will be willing to assist in the real work of finding a site, and, acting on this belief and in pursuance of the power vested in me by Article 7 of the Constitution of the A. C. A., I hereby appoint the mover of the resolution, Mr. Henry C. Ward, a special committee, with power to add other members from among gentlemen who voted for this resolution, charged with the duty of making an actual and careful examination of Huntington Bay and its vicinity, with the view of ascertaining if there is on that bay or in its vicinity a suitable place at which to hold the next meet of the A. C. A., and to report the result of such examination in detail and in writing to the Camp Site Committee ten days before the meeting of the Executive Committee, which will be held in New York on the 23d of November next.
I inclose by way of suggestion to this special committee an excerpt from an article published in the FOREST AND STREAM of Sept. 12, 1889, containing some valuable suggestions as to what is required for an A. C. A. camp, and I beg leave to express the hope that their report will be based on actual knowledge gained from a personal examination of the ground, and that their labors may be crowned with success.
May I ask that you will be kind enough to notify Mr. Ward of his appointment and furnish him with a copy of this letter.

HENRY STANTON, Commodore-Elect A. C. A.
NEW YORK, Oct. 14.

BROOKLLN C. C.—A series of winter camp-fires has been arranged by the Brooklyn C. C., the programme being: Oct. 24, 199 Montague street (basement), "Knots and Splices," I., by Mr. H. C. Ward; Nov. 21, 648 Prospect Place, "Our Cruise on the Delaware," by Dr. G. R. Butler, on invitation of Mr. W. H. Cameyer; Jan. 11, annual club dinner; Jan. 30 170 Sixth avenue, Lantern Exhibition, by Dr. R. N. Denison; Feb. 27, 199 Montague street, "Knots and Splices," II., by Mr. H. C. Ward; March 21. 186 Joralemon street, Lantern Exhibition, by Mr. F. L. Dunnell; April 24. Public Lantern Exhibition, Canoe Life, in Camp and Racing, by Dr. Denison and Mr. Dunnell. The club invites its membes to the above camp fires, and each member may invite one friend to accompany him.

CANOES VERSUS SAILING BOATS.

Editor Forest and Stream:
While thanking you for your most excellent account of the Mosquito Fleet regatta at Roslyn last Saturday, let me correct some errors you make in your comments concerning my boats. In the first place there were not "two Clapham boats" in the race, as the Rita was built by a house carpenter. I have had nothing to do with either designing or rigging her, nor do I approve of her model. In the second place, my own boat, the Gnat, was not "one of Mr. Clapham's wide and shoal boats," but on the contrary she is a narrow keel boat, drawing 2½ft. of water, carrying several hundred pounds of lead in her keel and having no centerboard. She was soundly and most deservedly beaten by everything in the fleet, because I chose to experiment on her with a view to seeing how a narrow sharpie would act with a lead-loaded keel. So the poor little craft is a victim to the teachings of our good friend, the FOREST AND STREAM. Only two days before the race Gnat had 5in. in depth and 500lbs. of lead added to her keel, then went into the race, untried, with the result as reported.
As to the comparative merits of sharpies and canoes it is pertinent to inquire if such a matter was ever settled by one race in a very moderate breeze?
The same sharpie with less keel and less lead easily outsailed a far larger and more powerful canoe than Vagabond in the N. Y. Athletic Club regatta two or three weeks ago, the canoe in that instance being sailed by one of the most skilful canoeists in America. Did the FOREST AND STREAM think that settled the relative merits of canoe and sharpie? THOMAS CLAPHAM.
ROSLYN, L. I., Oct. 19.

Editor Forest and Stream:
I wish to say a few words bearing on the short article in last week's issue on "Canoes vs. Sailing Boats."
To begin with, Unique, the boat that beat the canoe over the course at the Corinthian Mosquito Fleet regatta, is not "a large open sailboat with schooner rig." The dimensions of Unique are 18ft. 2in. over all, 18ft. 10in. l.w.l., 52in. beam and 12in. draft. The rig is more like a sharpie than a schooner, there being two hoisting gaff sails, 120 sq. ft. in foresail and 100 sq. ft. in aftersail. This is not a very large boat, you will admit. As for the race itself, I desire to present the following facts which do not appear in the published account of the event:
First—The canoe Vagabond had about ¾ of a minute the best of all the boats on the start, and was not overhauled by Unique running until about a quarter of a mile from the lower mark.
Second—Mr. Stevens used the sliding seat on Vagabond, which gave him a greater advantage than the other boats had in carrying two men.
Third—The race was sailed in comparatively smooth water throughout, what sea there was running behind the boats from outside was affecting them in the windward work.
Fourth—It is only fair to call attention to the fact that Vagabond is 2ft. longer than Mr. Clapham's and Dr. Ledyard's yawls, both of which are keels. The advantage gained by this extra length is considerable in such small craft.
Though I do not wish to take from Mr. Stevens and Vagabond any credit which is due (for the canoe sailed fast), I wish to have the conditions which I have called attention to considered in forming an opinion of the merits of the different types of boats represented in the race.
Finally, it is my firm conviction and I judge from considerable experience in sailing Unique in competition, that had a fast catboat within the class limits and sailed under the disadvantageous rules, been entered in this race, that she would have beaten the entire fleet easily. While canoes are very fast sailers in smooth water, I have yet to see the canoe that can hold her own with a good catboat in a beat to windward in a breeze, the conditions that bring out the real sailing qualities of a boat.
FRANK BOWNE JONES.

THE PADDLING TROPHY.

Editor Forest and Stream:
After reading Mr. Putman's letter about paddling canoes in the A.C.A. and the championship race, I agree with him when he says: "Let a man race in the fastest canoe he can build;" but within certain limits, say Class III., 16ft.×28in.×9in., with a minimum weight of 40lbs., so as to prevent matchwood construction. This would give the open Canadian canoe, which is the paddling canoe *par excellence*, a chance in the race; for it is the canoe which nine out of ten paddlers use. If it is to be a paddling event let it be for paddling canoes, and not for the mongrel paddling-sailing canoes they have been trying to bring to life during the last two years, with what success any one who was at the last A.C.A. meet might see. With a minimum weight of 40lbs. the open canoe would have no advantage over her decked sister.
There is another very important point which should be considered, viz., the "one man, one canoe" rule, as regards this race. There are many canoeists who, like myself, go in for paddling to some extent for the fun, exercise and excitement there is in it, and who also do some sailing, but who would not like to forego the pleasures of the sailing and the other general events for the sake of getting into the championship paddling race, and on the other hand would not think of going into it in a heavy sailing canoe. I would therefore suggest that this race be exempt from the "one man, one canoe" rule, as by so doing we would have a larger number of entries and would encourage canoeing in its broadest sense; not sailing alone, but as it is enjoyed by all around canoeists, as fond of swinging the blade as of sitting out on the piazza and hanging on to the main sheet. HARRY F. MACKENDRICK.
TORONTO.

THE EXECUTIVE COMMITTEE MEETING.

NEW YORK, Oct. 21.—*To the Members of the A. C. A.:* Please take notice. First—A meeting of the executive committee of the A. C. A. is hereby called to be held on Saturday, Nov. 23, 1889, at 10 o'clock A. M., in the city of New York, in such place in that city as shall be selected by the committee of arrangements. The following named gentlemen are hereby appointed such committee, the first named being the chairman, viz.: Edward W. Brown of the Knickerbocker C. C., William Whitlock of the Brooklyn C. C., and Henry C. Bailey of the New York C. C. Second—The following named gentlemen are hereby appointed the committee on camp site and arrangements, the first named being chairman, viz.: R. B. Burchard, of the New York C. C., and Paul Butler, of the Vesper C. C. Under the constitution of the A. C. A. this committee has power to add to its number. Very respectfully yours, HENRY STANTON, Commodore-Elect.
By the Commodore-Elect, F. L. DUNNELL, Secretary-Elect.

CORINTHIAN MOSQUITO FLEET.—The fall meeting of the Corinthian Mosquito Fleet was held on Oct. 21, Com. Smith presiding. Sixteen new members were elected, making a total of 60 and a fleet of 44, a very good showing for the first season.

A. C. A. MEMBERSHIP.—Atlantic Division: Edmond Chable, Jersey City, N. J.

UBIQUE C. C.—The annual meeting of the Ubique C. C. was held at Stave Island. Two new members were elected. The following officers were elected for the ensuing year. Com., R. W. Waters, Norwood; Vice-Com., Colin Fraser, B. A., Toronto; Purser, John. N. McKendrick, B. A., Galt; Steward, Richard Lees, Brampton; Boatswain, Will A. Fraser, St. Thomas. A resolution was passed that the next annual meeting of the club should be held on salt water during the time of the annual meet of the A. C. A.

IANTHE C. C.—The Ianthe C. C. will hold record races next Saturday, at 4 P. M. These races will probably be the last of the season.

Answers to Correspondents.

☞ No Notice Taken of Anonymous Correspondents.

E. P., Philadelphia.—Send us your address.

CORNER, Albany, N. Y.—There is no Irish setter that is "champion of the world."

C. H. S.—We can send you a copy of FOREST AND STREAM containing the Illinois game law.

H. C., Lynn, Mass.—Mollie (Prim—Nell) was the only bitch of the name bred to Elcho. She was owned by Mr. John Develin, New York, and was bred in 1879.

W. H. P., Memphis, Mich.—1. The shellac recommended by a correspondent will no doubt accomplish the purpose you desire. 2. Your subscription will expire March 6, 1890.

R. L. M., Minneapolis.—Beaufort, South Carolina, is a highly recommended point to make one's headquarters for winter quail shooting. The birds are abundant, and other game with good fishing may be added to the attractions. See "Piseco's" papers, "The Charms of Beaufort," in our issues of Dec. 6 and 20, 1888.

E. S., Chicago, Ill.—Messrs. Hartley & Graham, of Maiden Lane, this city, can supply you with the Lee .43 or .45 caliber. We do not know where you will find the Vetterli or Mannicher rifles in this country, but they might be imported for you by any of the principal importing houses.

R. D. W., St. John, N. B.—Kindly inform me through your columns the best way to clean brass shells. I notice "J. R. T." in your last advices the use of shellac to fasten wads in brass shells. Would not shellac injure the barrels? Is there any better method? Ans. 1. Clean the outside with vinegar. The inside needs no cleaning. 2. The shellac will not injure the barrels.

J. W. P., Stoughton, Mass.—I desire to know through the columns of your paper, if you can give me the information, as to where I can obtain wild rice packed in mud as it grows for replanting. Ans. There would be no advantage in having the rice packed in mud; it is sent dry like other grain, and should be soaked in water over night so that it will sink when scattered on the water.

H. L. N., Guanajuato, Mexico.—I should be greatly obliged to your fish editor for any information he may be able to give as to the nearest point to Laredo, El Paso, or Eagle Pass, that it is possible to buy carp or carp spawn. Also for any information he can give as to what fish can be cultivated in a small deep pond of still water in a climate that rarely or never gets to freezing point and never gets higher than 80° Fahrenheit in the shade. Ans. The persons named below have obtained carp, mainly from the U. S. Fish Commission, and it is likely that one or more of them can supply young fish. Mr. Radam expressed his intention in 1883 to make carp raising and selling a business. E. S. Stover, Albuquerque, New Mexico; John Menaul, Laguna, New Mexico; I. N. Lerich, San Antonio, Texas; Wm. Radam, Austin, Texas; Wm. Elliott, Taylor, Texas. The report of the U. S. Fish Commission for 1884 contains much information about carp in Texas and elsewhere, including useful hints as to their care. We believe that large-mouthed black bass and crappies would thrive in the pond described. The former can be obtained in streams of Texas and northern Mexico, the latter from the Mississippi Valley.

J. W. G. D., Philadelphia.—1. While up in Maine I shot a few ducks which I could not find the name of. They were quite plenty and rather wild, feeding on the same ground with the black duck. Their flesh was very tender and juicy and very nice tasting. When on the wing the white spot on the wing was very noticable. The description of one noted in my note book is this: White breast, large white spot on each wing, about 2 or 1½in. in diameter; neck, head, top of body, tail and wings of a dull slate color, tail short, extent of wings 23in., length from tip of bill to tip of tail 16in., weight 1¼lbs. The guides called them wood ducks. What were they? 2. Are there such a thing as black foxes? Where are they found? Ans. 1. The description as far as it goes applies best to a duck which is generally supposed to be extinct, the famous Labrador duck. There is a possibility that it may have been the young of Barrow's golden-eye, but this always has a brown head, which would have been observed by our correspondent. Would it be possible to send us a specimen of this bird? If it should prove to be the rare species first mentioned, ornithologists would be highly delighted. 2. Black foxes are occasionally found in New England and Canada; see our natural history columns to-day, also issues of April 7, Sept. 1 and Sept. 29, 1887, and July 12, 1888. For answer to other queries see next number.

125 Maiden Lane, New York.

No Chemicals.

W. BAKER & CO.'S Breakfast Cocoa

Is Absolutely Pure, and it is Soluble

To increase the solubility of the powdered cocoa, various expedients are employed, most of them being based upon the action of some alkali, potash, soda or even ammonia. Cocoa which has been prepared by one of these chemical processes, can usually be recognized at once by the distinct alkaline reaction of the infusion in water.

W. Baker & Co.'s Breakfast Cocoa

is manufactured from the first stage to the last by perfect mechanical processes, **no chemical being used in its preparation.** By one of the most ingenious of these mechanical processes the greatest degree of fineness is secured without the sacrifice of the attractive and beautiful red color which is characteristic of an absolutely pure and natural cocoa.

FIELD TRIALS AND FIELD WORK.

IT is a common saying of many who are ignorant upon the subject that field trial winners are only good for field trial show, and that they are unfit for the ordinary work such as is expected from every-day dogs. In rare instances this may be the case, but there is no doubt whatever that a very large majority of our field trial cracks are as good dogs for the sportsman to use in the field as can be found. They have demonstrated their ability to do good work quickly, in a stylish manner; and in most cases they are very intelligent and obedient. But, the doubter will say, they cannot keep up their speed for any length of time, and consequently are worthless for ordinary shooting. Of course it is impossible for them to maintain the phenomenal speed which they exhibit at the trials for even half a day; but no one wishes them to do this, since for ordinary field work, except on the prairies, a much more moderate rate will be far more satisfactory. Speed, as is well known, is largely a matter of training, and the course that makes perfect the quarter-horse would break down the four-miler. So it is with dogs in training. As a rule the heats at field trials are comparatively short and the dog is worked accordingly and taught to put forth his best efforts in short spurts, and consequently he is unable to stay the pace for all-day work; but when the same animal is properly trained for continuous work he is as able both to go and to stay as any of his race, and in most cases both his speed and work are superior to those of the much vaunted all-day dogs that we hear so much about. This opinion is not guess-work nor hearsay. We have often had the pleasure of a day's shooting over field trial winners, and without exception we have found them to be intelligent, pleasant companions, as well as killing dogs, and able to do as much and as good work as any animals we have ever seen.

THE ADIRONDACK FORESTS.

THE Fish Commission of the State of New York is preparing to make a strong stand against the tremendous devastation which is being perpetrated in the Adirondack forests.

Of the three million acres of land and water embraced in the Adirondack forest, the State owns about seven hundred and fifty thousand acres, or about twenty-five per cent. of the whole. A great deal of this land has been in private hands, has been denuded of its most valuable timber, and has again lapsed to the State for arrears of taxes. It is not by any means a compact block, but is distributed irregularly through the whole area, small areas being sometimes surrounded by private holdings, while in other cases the continuity of considerable State tracts is broken by the intervention of small private holdings.

The Commissioners aim at the gradual resumption of the whole area of the region to be set aside as a great public park for the people of the State, whose right to it should be kept inviolate, and this matter is to be urged upon the Legislature in the annual report of the Commission, with special recommendation for legislation for the establishment of a great public park, rendering the present scattered area compact and continuous by the purchase of the connecting tracts.

The recommendation of the Commission is not for any considerable outlay at the outset; it proposes to make experimental purchase of small tracts, "and if the experiment proved a success other tracts could easily be added from year to year."

There is nothing experimental about the measure. The whole region as a pleasure resort, as a hunting resort and as a timber-producing reserve is capable of being made the source of a considerable permanent public revenue, and if the State can add to its present holding by purchase of adjoining tracts on favorable terms, we have no hesitation in indorsing the language of the Commissioners when they say: "We believe no investment made by the State could produce greater or better results."

This is not that we see any reasonable hope of the State reserves being prudently and economically administered for the next decade or two. There is nothing in forest conservancy for the politicians; but because the character of the Adirondack region is such that if it be once denuded of its forests and the soil burnt off it would cost as much to restore an acre as to acquire a hundred acres by purchase to-day, and because looking forward to the future when the price of timber in this country, as in Europe, will have to carry cost of production including interest, and recognizing from the experience of European countries that State control of the forests of a country is an essential feature of their satisfactory administration, we should be glad to see the State secure control of a tract so considerable in area, so desirable as a pleasure and sanitary resort, and capable of being rendered of such vast economic importance, as is the Adirondack region.

But, alas! this recommendation of the Fish Commission is no new project, and we fear that this eminently respectable body wields no such influence as will result in giving practical effect to its recommendation, in so far as that involves the appropriation of funds for the purchase of the two and a quarter millions of acres now in private hands. Our legislators will never do it of their own motion; they must be first urged to it by popular clamor, and for that we must wait until we begin to import pine from the Baltic.

Moreover, it is a mistake to suppose that all the jobbery and corruption of the country must be sought inside of legislative halls. There are some people outside quite capable of putting up a job even on the Legislature itself, and it is not safe to open the public purse and invite these outsiders to come and dip in it. It is only necessary to make it known that the State has decided to secure possession of any given tract of land to increase its value many fold.

Most of the timber dealers in the Adirondacks, after cutting off the spruce and pine from their holdings, are willing to let the land lapse for taxes. It would be many years before they would find pine or spruce on it fit for the axe again, and five years ago the most prudent policy for the State appeared to be one of masterly inactivity, that is to sit still and wait for the lands to become forfeit. But of late years conditions are being modified, game clubs are securing large tracts and inclosing them for game preserves, and this system now in its infancy is growing with such vigor that forest land promises to increase rapidly in value to meet the growing demand. Under these new conditions the best practical direction which could be given to the proposed recommendation of the Commission would be to bring in a bill empowering the Forest Commission or other properly constituted authority to purchase any tract of forest land adjoining lands held by the State at a maximum price to be fixed by the Legislature. The State can certainly afford to pay as high a price as a club of sportsmen, and could do so if the possession of the forest involved no higher consideration than utilizing it as a game preserve, and raising a revenue by lease or license.

We do not build any exalted hopes upon the proposed recommendations of the Fish Commission, but we hail its pronounced interest in the matter as evidence of a growing public sentiment that it is, in the language of their report, "A shame and a disgrace" that this beautiful and economically important region "should be devastated and destroyed like the section along the Chateaugay Railroad or the Sacondaga country."

SNAP SHOTS.

THE Long Island deer hunting season, which extended from Oct. 1 to Oct. 10, offered an instructive and encouraging instance of the tenacity of our game and the readiness with which the supply may be fostered if only intelligently cared for. The deer range embraces a district of only ten by twenty-five miles, and it is within an hour and a half of New York city. This range has been well protected; hounds discovered running deer out of season have been killed; the local sentiment has been such that no one would dare to show venison illegally killed; and taking it all in all the deer have been practically unmolested. During the nine hunting days of the season seventy-five deer were killed. Sayville hunters scored thirteen, one of them said to have been a ten-year-old buck, which weighed 225lbs. No one knows how many hunters these seventy-five deer gratified and disappointed, but one estimate puts the number at between 400 and 500 each day, posted along the line of the railroad, across which the deer passed, when driven by the hounds. One driver averred that he saw twelve deer at one time ahead of his dogs. In the deer range are the preserve of the South Side Sportsmen's Club and that of Mr. Cutting. These properties were harbors of refuge for the pursued game, which seemed instinctively to flee to them; and once on these grounds the ægis of protection was over them. We have already pointed out that such preserved tracts of territory benefit the general public by thus protecting game which does not remain at all times on the territory, but gives sport to the public as well.

The contents of the FOREST AND STREAM this week afford an index of the wide range and interesting diversity of this journal's correspondence, and are not less noteworthy as an indication of the wealth and variety of the game and fish resources at the command of the American sportsman. There are accounts of wildfowl shooting in California and bear hunting in the new State of Washington and salt-water fishing at San Diego. Then leaving the sports of the Pacific coast, one may read of big game hunting amid the Rockies in Wyoming, wildfowl in Idaho, and deer in Montana. Stories are told of rabbit, duck, quail and prairie chicken shooting in Illinois, and deer in Michigan. The East is well represented by chronicles of adventures with the deer in Maine, the elusive grouse among the wilds of Pennsylvania, and deer in the Adirondacks of New York. The South is represented by correspondents who report favorably on North Carolina quail grounds, and by a story of wild turkey hunting down in the palmetto swamps of Florida. Taking it all in all, with its records of shooting and fishing activities, its hints and suggestions, its friendly discussions, and the happy spirit which pervades all departments, the FOREST AND STREAM furnishes not only an animated picture of American field sports, but also a reflection of the character and qualities of the men young and old who constitute the great army of outers.

The Sportsman Tourist.

EN ACADIÉ.

II.

FROM out of that group of magnolia trees,
Whose waxy blossoms scent the breeze,
Shaking their perfumes far and wide
All up and down the country side,
Whose is that call, with its rhythmic beat
Of "Sweetheart, sweetheart, sweetheart, sweet?"

Ah! that is Gabriel, in search of his mate—
Lonely and loving and desolate—
Seeking his lost Evangeline
From Calcasieu to Lacassine,
Calling, to tempt her flying feet,
"Come, Sweetheart, sweetheart, sweetheart, sweet."

Because he heard she had proved untrue,
And believed the lie, without more ado,
For this lack of faith in the maiden's truth
For a thousand years he must suffer ruth,
Must wander and search, until he can meet
His "Sweetheart, sweetheart, sweetheart, sweet."

So he's taken the form of this little brown bird,
With the saddest note that ever was heard,
And he follows still in a bootless quest,
Calling in vain, in wild unrest,
Through winter's cold, and summer's heat,
"Oh, Sweetheart, sweetheart, sweetheart, sweet!"

Such is the tale the Acadian maid
Repeats to her love, 'neath the cypress shade,
And she crosses herself in loving fear
As she hears the flute-like notes so clear,
The same sad burden still repeat—
"Oh, Sweetheart, sweetheart, sweetheart, sweet."

III.

Puck and Ariel and sprite,
Symphony in black and white—
Saucy varlet, jocund wag,
Tramp, Bohemian and vag—
Most incorrigible joker,
Of thy fellow-birds a mocker,
Scoffer at humanity,
Jeerer at man's vanity;
Bubbling o'er with riotous mirth,
At all things in Heaven or earth,
Bandit of the southern pines,
Despoiler of my choicest vines;
Happy when you slyly prig
Choicest pomegranate or fig—
Or devour with mocking japes
All my ripening Tokay grapes;
Gorging on my finest berries,
Drunken with the wine of cherries,
Laughing at my futile wrath
As I glean thy aftermath.
Still, bold sinner, all's forgiven,
And thy direst sin is shriven,
When, from out the orange grove
Ring thy vibrant notes of love,
While the very heavens rejoice
In the music of thy voice,
And the palpitating air
Seems thy ecstacy to share!

IV.

Oh! the dew lies fresh on the clover,
And sweet is the morning air,
The sky hangs lovingly over
And smiles at a world so fair.
The birds and the crickets are singing
To welcome the morning light,
And up from the meadow comes ringing
The musical call of "Bob White!"

"Bob White! That's my name!
I'm not ashamed to own it!
I'm plucky and I'm game.
Fear? I've never known it!
Bob White! That's my wife there
In the mayhaw thickets;
We have spent our life there
Happy as the crickets.
Bob White! enjoy to-day,
Care not for the morrow,
Be jolly while you may,
And laugh at care and sorrow—
Bob White!"

Oh! bonny brown bird of the meadow,
Ring out, unmolested, thy call;
Thou 'rt safe, for the pot-hunter's fell shadow
On "The Pomegranates" dares not to fall.
In orchard, or meadow, or vinery,
Still welcome to me is the sight
Of thy simple, yet dainty brown finery,
My brave little neighbor, Bob White!

V.

Come out upon the gallery
When the sun has gone down,
And hark to the voices
As the night comes on.
Hear that bull 'gator
With his hoarse, sullen bellow!
'Tis his call to his mate, or
A challenge to 'tother fellow.
Ha! there is the answer!
Now there'll be trouble!
Hark! how they roar,
Now single, now double!
"Fight?" of course they will.
They just love to fight;
Keep it up sometimes
All day and all night.
"*Te-rue, te-rue, te-rue!*"
How shrill and sweet and clear!
That's the swamp thrush, calling
To his love and dear.
"That must be a young 'gator?"
Sounds like one, I know,
But it really is a bull-frog—
Weight, ten pounds or so.
"*Ba-a-a!*" That's another frog;
Used to think 'twas sheep;
Many a time I've wakened
From a midnight sleep
Heard those beggars bleating—
Rushed frantically out—
Had my trouble for my pains—
Nary sheep about.
"Where's that church bell ringing?"
That's no bell you've heard,
Only the lonely voice
Of the shy cathedral bird.
Some say it's the ghost of the bell
That hung in the chapel de l'Eau,
That was wrecked in seventeen-ninety,
The year of the terrible blow.
Blown clear out of existence—
Bell weighed a thousand pound—
Went like the walls of Jericho—
Never a trace of it found.
Some say the angels received it
As it crashed down from out the steeple;
Some, that *le Diable* carried it off,
For the sins of priest and people.
But all make the sign of the cross
As they hear it solemnly toll,
For they know that Purgatory
Is glad o'er another soul.
And—"*B-z-z-z!*" Ah, here he comes!
'Tis the Louisiana 'skeeter!
The congregation is dismissed!
Scatter! in short metre.

LOUISIANA. H. P. UFFORD.

OLD TIMES IN CALIFORNIA.

THE early hunting experiences of California pass from man to man, but seldom reach the dignity of print. It is only forty years since the whole State was a wilderness and overflowing with game. Almost every county has its old veteran grizzly hunter; every valley is full of pioneer farmers who shot elk, deer and antelope in the wild oatfields, and wild geese from the doors of their squatter shanties. Some of these stories seem worth gathering up to illustrate the changes which a few years witness.

In 1849 the finest winter shooting then known in California was "along the Contra Costa shore," on the east side of the Bay of San Francisco, a region now the most thickly settled rural portion of the State. The "bay shore," a strip of country thirty-five miles long, consists of sloughs, low islands, willow swamps, tulé and cat-tail fastnesses, an occasional fresh-water "creek," and a few rocky hills set in the midst of the wide marshes. West was the open bay; east was the broad valley, over which Spanish cattle roved, and still further east were the mountains of the Coast Range.

There were eight or nine professional hunters in the region, sending wildfowl to the San Francisco markets, where mallards sold for $5 a pair. In February, 1852, four of these hunters shipped from San Lorenzo Creek, and sold as the result of four old-fashioned muzzleloader shotguns, in twenty-five days actual shooting, the following amount of game, 125 pairs of wild geese, 53 pairs of canvasback ducks, 60 pairs of small ducks, 13 pairs of widgeons, 41 pairs of spoonbills, 27 pairs of teals, 63 pairs of broadbill ducks, 192 curlew, 207 plover, 48 dowicthers, 156 "peeps," 48 snipe and 1 rabbit. This makes a total of 1,428 head, which sold for over $800. These men made so much money that they bought farms and retired from the business of pot-hunting. In 1853 an old sea captain, Jonathan Mayhew, went out one November morning to a field near his house and fired two shots into a flock of wild geese which had settled there. He picked up 59 geese as the result of the operation.

In the early sixties, the whole region of which I write was still full of game, but the pot-hunters had nearly deserted it, and had gone to the Solano, San Joaquin and Sacramento regions, where the wildfowl were so abundant that the farmers poisoned hundreds of thousands of them. Although so near to San Francisco, there were as yet no clubs of wealthy sportsmen. The "Alameda shore," as it was now called, became the favorite resort of dozens of noted hunters of the time. For ten years there was always good shooting to be had; then the ground was overworked, and being rented in very extensive tracts to clubs, is now slowly recovering some of its reputation.

All through the sixties, every man who went to the schooner landings, or *embarcaderos*, on the salt-water creeks, took his gun with him. The climate is most exquisite here after the first showers. Then comes a warm and perfect Indian summer, dry, clear and beautiful often till Christmas. With the first rains, which seldom last more than a day or two, the wildfowl crowd the waterways and nightly descend on the farmers' stubble fields. In those halcyon days of the early sixties, which every sport-loving son of Alameda county remembers with a regretful sigh, the veriest farmer lad could often shoot wild geese from his wagon box as he drove over the winding, unfenced road across the wide cattle pastures that extended from the wheat fields to the Bay. And, after he had unloaded his wheat or potatoes, he could walk along the bank of the slough and start up flocks of widgeons, spoonbills, teal and mallards within easy shot. In the course of a few years, the young men of the rapidly growing community developed a great deal of the true sportsman spirit. They bought good guns, they discountenanced pot-hunting and waste, they had an informal but effective association. Some of the bags they made are still talked of in the valley.

One favorite plan the boys had was to choose a "half light moon," and go to the seaward end of the willow marshes, on a row of old Indian burial mounds. We generally built a roaring fire, well hidden in the trees, and sat around it telling stories until nine or ten o'clock. Then we took our stands on the mounds, near to the ends of the willow clumps, and shot the ducks as they flew overhead from their feeding grounds in the stubble fields back of the sloughs. I have often known four good shots to gather in eight or nine dozen in two hours' shooting, and sometimes a good sportsman well situated to be in the line of wildfowl flight would shoot three or four dozen by midnight. The ducks always "flew in streaks." Between ten and eleven say, those which had been feeding in the lowland fields returned and ran the gauntlet of fire. Then there was a long break, with hardly the flutter of a wing or whistle of a single bird; then suddenly without warning, the flocks that had flown further to the upper valley borders came whizzing overhead. Sometimes, just before daybreak, the last of the wanderers would sweep in on hasty and frightened wings. Night-shooting always has its fascinations for the hunter, but it has especial charms in the warm, frostless California nights where a man can literally shoot in his shirt sleeves, and seldom has his overcoat with him or needs it. The fires we built were for the beauty and mystery of the swift lights and shadows under the willows and along the water channels bordered with tulé and wild cane.

Blinds or shelters were things utterly unknown in those days, and the chief use of a boat was to set the hunter across a slough or creek to some of the islands. You took your gun when the tide was about half full in the channels, and walked over the marsh grass in almost any direction until you came to a "wash" or blind side-channel, of which there were thousands. As you approached it, ducks usually flew up, and gave you a fair shot, at from 25 to 40yds. In half an hour or less you would have chance at another flock. This, in the phrase of the day, was "marshing for mallards," for mallards were considered the most desirable results of such an expedition, and there was not a day, from October to March, when this plan could not be followed with pleasure.

Another favorite method of taking a "day with the ducks" was to start so as to get to the shooting grounds about daybreak. The farms in the valley, along the foothills, were none of them more than four miles from good shooting, and many were of course much nearer. Hunters from San Francisco came up by stage and stopped over night at some farm house or village hotel; by 1865 there was a railroad skirting the foothills, and giving access to the whole region. The sloughs, which ran inland past the points of the Coyote Hills—low rocks, then partly wooded, and like islands rising from the marshes—were filled with wildfowl at all hours of day or night, but the hours between daylight and 9 o'clock offered the best shooting "from the rocks." The hunter, there, was safely hidden at some tide-washed point, looking over wide salt sloughs. He usually sat between black rocks and shot at everything that came within reach overhead. The variety of wildfowl was bewildering. Gray geese, white geese, teal, widgeon, spoonbills, canvasbacks, redheads, mallards, curlew, all came swinging past, cutting off the curve of the slough, and so flying above the smooth hill slope, where, silhouetted against the rose-purple of dawn, they offered most entrancing opportunities for swift shooting. Looking back upon my own boyish experience, I am surprised that so few birds were lost, for it must be remembered that there were not three retrievers in the county at that time. This was owing to the character of the marsh growth. Aside from the willow islands and the tulé bunches, which could usually be avoided, there was little cover for the wounded birds. The whole country really invited good honest shooting on land at birds passing from one feeding ground to another. Hardly any one cared to row a boat down the sloughs to get into the large flocks three or four miles distant. And so through the early sixties, as I have said, there was no diminution in the numbers of wildfowl.

Suddenly the pot-hunters came back, for wildfowl were temporarily driven out from the Sacramento sloughs, and in three or four seasons they broke up and destroyed the large bodies of wildfowl that the sportsmen had left undisturbed along the outer islands and sloughs of the bay. This cut off the supplies; the Alameda shore by 1875 was one of the poorest of shooting grounds, and it is only of late years that it is recovering its reputation, as it passed out of public into private ownership.

The abundance of wildfowl all over the valley, so near to San Francisco, for fully twenty years after the discovery of gold, and the growth of a large city on its borders, has been a surprise to all sportsmen. The wild geese settled down on the fields in flocks, covering several acres. They were often shot by men on horseback, who rode up within distance before the birds could rise. After the winter rains, ducks often settled down into farmers' door yards, or where there were goose ponds, wild geese were found there mingling with the tame ones. For years, therefore, the wildfowl constituted a great source of food supply as well as sport. Every bit of marsh or swamp or wet willow land, every spring or stream or rod-square pond over the entire upland for ten miles east of the bay shore, was teeming with game all winter. And, indeed, all over California, twenty years ago, the abundance of wildfowl was beyond the conception of modern hunters. It recalled the stories that come down five or six generations ago about the New England coast or about the Chesapeake shores. But here, with the clear, warm, open winters, and the green grass and blooming flowers in December, a sportsman felt in those pioneer days as if it were the earthly paradise. "You never had to go anywhere for game; it always came to you," as the old hunters say to each other when they recall the past.

CHARLES HOWARD SHINN.

THE GOOSE CREEK ISLANDERS.—*Editor Forest and Stream:* I have read and re-read with great relish the notes on the North Carolina coast, and the Goose Creek reminiscences in your last issue by "Chasseur." It is vivid and racy enough and is rigidly true. The writer must have been there on the very ground to give such a graphic description not only of the surroundings, but of the physique and character of those beachcombers. I recognize the various attitudes of repose and reclination of the male member on whatever might be handy, the expectoration through the closed teeth, the interior of the cabins and the snuff-dipping old hag. And the gratitude of these miserable specimens—gratitude of the serpent the husbandman found nearly frozen and took home to his hearthstone. I spent nearly a month with them on the Chicimocomico banks, a narrow stretch of sand beach between Pamlico Sound and the ocean north of Cape Hatteras. These brethren are *sui generis*, a mean type, but identical in every respect with the Goose Creek Islanders. After having eaten you bare and drank you dry, after you have loaded them down with gifts of ammunition and clothing, extras that a long life of their intensest energy could never earn for them, and for which they have absolutely done nothing for you, but to lie around and bless you with their ravenous appetite and hideous presence—then when they can render you a slight service will they jump to do it? Not if they know you have a bare copper left.—JACOBSTAFF.

Natural History.

OUT-OF-DOOR PAPERS.

II.—FROM MY WINDOWS.

FOR three years my front windows overlooked the main street of a small Massachusetts city and the side window faced toward the Catholic church which stood near by. The prospect was not an extensive one, although from certain angles there was a glimpse of mountains, and the street widened just below into what used to be called a "heater piece," where beautiful elms overarched the greenest grass. Had it not been for the vacant lot between me and the church, with its old apple and pear trees, its grape vines and quince bushes, and the tall Norway spruce which grew just beside the corner of the piazza, my windows would have afforded few opportunities for seeing the birds, except now and then the meteor streak of an oriole flashing through the elms below or the gold of a thistle bird in the shrubbery across the street. But they came to the apple trees, sang there, nested there and were social. From behind my closed blinds I could spy on all their movements, and by the aid of my strong field glass bring even the most distant under strict surveillance.

During the summer there was rarely a time when some bird was not to be seen in the apple trees; either the sparrows and robins which nested there, or some visitor from a home more or less remote. The oriole, whose hammock was slung in the neighboring elms, used to flaunt his colors amid the apple blossoms, and the sober-habited catbird, stealing from his home among the alders and hiding himself unseen, would establish a Dodonan oracle in the quince bushes. From the bare twigs dissenting flycatchers proclaimed each his peculiar doctrine, eking out a living by catching flies between whiles. In their season warblers of all kinds haunted the branches, singing all the variations of *tweedledum* and *tweedledee* that are put down by the ornithologists. With a few exceptions, such as my cheery friend the summer yellow warbler, whose strong, clear voice was as unmistakable as his habit of singing his best when he was about his work, I seldom undertook to identify them by their voices alone. My note book never made their songs read twice alike; and a description of the music too often resolved itself into mere words.

By putting different materials on the piazza roof, I was able at once to help the birds in their nest building and to see what they preferred when they had a choice offered them. The kingbird wanted cotton. As soon as he saw a bit of it on the roof he would cease his chattering and fly boldly up to the window, yet with such a wild look and such a belligerent attitude as indicated either apprehension on his own part or a desire to frighten others. He invariably elevated his crest when he put on this ferocious appearance, but never in such a way as to show the beautiful crown-patch in the center of it. Hair combings were in great demand. The cherry birds especially sought for these, and, with their usual greed, got the lion's share. The cherry birds also carried off large quantities of string, showing a decided preference for white, although I furnished them with several colors in order to see whether, like the oriole, they had a taste for gay colors. As far as I could tell they did not take a single piece of the pink string, and little or none of other colors. These cherry birds always showed a plentiful lack of wit in getting their string, and seemed not to understand the difference between a firm knot and a slight catch; but would tug at a piece of twine tied to the blind, until they appeared to be out of breath and out of temper.

The purple finches came frequently for hair, once under such suspicious circumstances that I give the note as I wrote it down: "May 16, 1887.—This morning I saw three beautiful male purple finches courting one female. They were making a harsh throat noise, not loud enough to be called either a squeak or a squeal, but a disagreeable hissing which seemed to be made by sucking in the breath, and somewhat resembled the sound of compressed air escaping through a small hole. One uttered a note or two, none sang. The males raised their crests, stretched their necks, dropped their wings and paraded about, showing all their best points. Strange to say, the female at this time was collecting materials for a nest, and the males looked on to see her tug and pull at stray hairs without offering to help. They did not appear to be at all unfriendly to each other. Later.—I have seen these finches again. The gentlemen are evidently a-wooing, but it is hard to make out the object of their attentions, for the lady appears to be mated already. They are gay gallants, but their morality does not appear to be of the strictest, as sometimes there are two males and one female, and sometimes one male and two females together. Are they polygamists or polyandrists?" It may be well to add that as the blinds were closed, all the birds were within 3ft. of me, so that I was able to hear the noise they made. At 10ft. I think it would have been almost inaudible, as it seemed hardly louder than the noise made by pressing the air out of a rubber ball, though higher in pitch.

Only two days before these finches exhibited themselves the Norway spruce furnished me the finest sight of the season. It was very early in the morning, and I had risen with the intention of "going birding" before breakfast, when a noise in the tree told me that the birds were there *de bonne heure*. Looking through the blinds, I saw a flock of ten or twelve small dull-colored birds, streaked with white and dusky, with light bands on the wings, and a short, forked tail. I knew them, but I could not believe my eyes until I had written out a description from life and carefully compared it with a printed description. Then there could be no doubt that they were pine finders. In all my winter drives in Maine I had never seen one fairly enough to be sure it was not a redpoll; yet here in the warm Massachusetts springtime this northern bird, not abundant even in Maine, was giving an exhibition before my window. I watched them for a long time as they pecked at the spruce buds, hanging head downward on the pendant sprays, or flitting from one bough to another with a flip of gauzy wings. "They made no song, but a little rasping throat noise, and an occasional utterance like *k-k-k-kzee*, rather shrill and harsh, but in quality not unlike a canary's voice." I saw no more of them that year, but the next (1888) they came again as early as April 22 and stayed some time. May 9 I saw them singing "a cheerful, sweet little song, very contented," my notes say. And again I find mention of them as making "a sharp, shrill *cheep!* very much like the ear-splitting notes of a canary." None of these birds showed any trace of yellow on the wings, nor, as far as I could see at the distance of 20ft. and with a six and a half power field glass, the slightest olive tinge on the back. Yet I have seen mounted specimens taken in Maine in the winter with a wide band of yellow across the inner webs of each wing. On April 23 I saw a flock of the pine linnets feeding in a little green runlet where the skunk cabbage was growing. They were eating something, what, I could not discover, now and then uttering a low note. A brown creeper, which was mounting an apple tree near by, seemed curious to know what they were getting, and flew down to them, where he began to eat also. I was much puzzled to think what there could have been in that place, which seed-eating and worm-eating birds would both agree to call good. Perhaps, however, the creeper only wanted company.

It is customary to think that the deep woods are the places to find birds and that a city observer has no opportunities. For my own part, I seldom find many birds far away from men, and some of the best notes I ever took have been inside of city limits. Here, if you wish an example, were birds which were unknown to me in their northern home, almost inviting me to observe them from my chamber window.

FANNIE PEARSON HARDY.

FOOD OF CALIFORNIA BIRDS.—The California Ornithological Club was founded in San Francisco, February 9, 1889, for the study and advancement of the ornithology of the Pacific coast. The investigation of the food habits of Californian birds has been undertaken by the club, and in order to make this work successful, the co-operation of all members, both active and corresponding, and the assistance of others interested in this undertaking, is earnestly desired. Assistance may be rendered in two ways: first, by saving material for examination; second, by making careful observations and notes. The contents of birds' gizzards and crops may be preserved in two ways, viz.; in a dry condition or in alcohol. The contents of the gizzards of all graminivorous birds and most of the insectivorous species may be dried and placed in an envelope provided for this purpose by the club. In the case of rapacious birds (hawks and owls), all the water birds, and such land birds as feed on worms or soft, perishable insects, the gizzard must be preserved entire in alcohol. A tag bearing a number written with pencil should be attached before putting gizzard in alcohol, and a few slits cut in it to allow the alcohol to enter but not large enough to permit the escape of contents. Further information and a supply of envelopes may be obtained from the chairman of the committee, Walter E. Bryant, Box 2247, San Francisco, to whom the envelopes should be returned when filled. Full credit will be given in all cases for material and notes supplied. The committee desires to state that the aims of the club are in nowise antagonistic to those of the Division of Economic Ornithology and Mammalogy of the U. S. Department of Agriculture. They are simply trying to do in detail for California ornithology what the Division is doing in a more general way for the whole United States. It is well known that there are many collectors making skins of California birds, who never examine the contents of the gizzards and crops, or give attention to the food habits of birds. With but little additional care they, as well as sportsmen, might greatly increase their usefulness and the debt which is already due them for their interest in advancing the study of ornithology.—WALTER E. BRYANT, CHARLES A. KEELER, HARRY R. TAYLOR, Committee on Food Habits.

Game Bag and Gun.

MY FIRST BEAR.

WE were camped on the mountain crest, a party of nearly a dozen members, including several ladies, for nearly a week during the month of August last past, busily engaged in picking huckleberries.

Soon after getting the camp in order several members of the party became clamorous for fresh venison. The true still-hunter needs but little urging; and the next evening found me watching a pass across the mountain, half a mile distant from camp; and about sunset as a large mule deer buck attempted to cross he caught scent of me and bounded off down the mountain, untouched by the bullet I sent in chase of him. The rifle shot was heard back in camp, for sound travels far through the ghostly silence of these hills; and no explanations of mine met their approval when I returned to camp without meat. They seemed to feel justified in hoping for better things from the old uncle.

It was partly in the hope of redeeming a somewhat tarnished reputation for marksmanship, that the following evening found me watching the same pass, and in consequence brought me into contact with bruin. I was early on the ground, and as the light breeze swayed back and forth across the mountain it became a very difficult matter to decide upon a proper hiding place to the leeward of the small open space through which the game trail ran. A cliff of rock was at length selected, the top of which, rising 20ft. above that pass, was curtained by the drooping limbs of a fir tree, affording excellent cover and a fine view of the trail 30yds. beyond. Climbing to the top of the rock, I seated myself in a comfortable position, and when a careful survey of all the open ground far down the mountain side to the westward had failed to indicate the whereabouts of a single deer, I leaned back against a projecting ledge and resigned myself to that silent communion with nature known only to those deeply in love with the wilderness.

Who shall decribe the charm of these day dreams, so fascinating to the watchful and silently waiting still-hunter? Noting without effort every manifestation of life around him, detecting instantly, with the searching glance grown habitual and easy with him, every indication of the presence of game, the chatter of the inquisitive squirrel, the noisy protest of the scolding jay, and the tattoo of the pileated woodpecker, whose flaming crest flashed a moment since across the green curtain of the drooping fir above him—all blend easily and naturally with the reverie that takes possession of him; while the vigilance, grown sleepless and undemonstrative with the experience of years, would indicate to a chance observer a subdued alertness on the part of the motionless figure, ready to take instant advantage of the unexpected, which is said always to happen.

Far below me and miles to the westward the mighty Columbia crept, a thread of silver, in and out among the distant hills. Away beyond, tier above tier, rose the spurs of the distant Cascade range, hazy and dim with distance; while far to the northwest, misty and ethereal in the far off blue of heaven, climbed Mount Chopaca, the reputed home of the bighorn and of the mysterious goat, he of the ebon hoof and horn and with the fleece of snow.

The hunter sighed as he thought of the adverse circumstances that conspired to delay his long-promised pilgrimage to those haunts of the strange animals he had never seen, and both deer and bear were for the moment forgotten. The sun had sunk low in the west. The shadows far down the mountain side crept slowly and steadily up toward me. Night was approaching, and my time for successfully guarding the lonely trail was growing brief.

Scanning intently all the open ground below me in search of the wary deer, which as yet wisely remained hidden in the cover of the thickets, and with my face for an instant turned away from the trail that I was guarding, suddenly the bump! bump! bump! of a jumping animal behind caused me to turn instantly and there right across the trail sprang a bear of medium size and as black as jet. The eddying breeze had given him just a sniff of his hidden enemy, but had not enabled him to locate the danger.

Jumping into the edge of the first thicket, he stopped and stood, listening intently. His head was hidden from view, but his body showed plainly enough to offer a fair shot.

The .45cal. Sharps was loaded with 120 grains of Hazard's electric powder of fine grain, and with an express bullet of 270 grains weight (experience having led me to adopt the bullet of the weight and shape recommended by the veteran "P."); and as the intervening distance was but 40yds. it was really getting the drop on him.

As the rifle cracked he vanished, but the sound of his running followed for an instant and then all was still. Hurrying hopefully downward I took his trail, and before I had gone 20ft. blood appeared, sprinkled upon everything he had passed. Twenty-five yards from where he had stood in life, an ebon statue, I found him stretched dead at the foot of a young fir tree, with his heart unfolded like a mushroom.

Some idea of the destructive effect of the express bullet (when driven by a sufficient powder charge) may be obtained when I state that the ball struck him back of the shoulder, leaving all of his limbs untouched, and although driven by so large a charge of the quickest powder obtainable, not an atom of lead had gone through him, but, flying into fragments, had expended all its force upon his vitals, and although he ran down hill over ground the last part of which was very steep, he was able to run only 25yds. Imagine the effect when an animal at that distance is obliged to stop such a projectile with its body.

The deed was done. The unexpected had indeed happened. As I stood over the sleek black body of my first bear it was difficult to realize that the haunting desire of years was at last gratified. He had appeared so suddenly and it had all happened so quickly. For years I had sighed to meet a long lost bear, and he had on several occasions almost literally slipped through my fingers.

I had one time gone on a wild goose chase after him only to shoot a climbing fisher in the top of a tall pine; and once I had galloped furiously along a mountain trail in chase of him, impelled by a tale of wild-eyed wonder, but this had resulted in the slaughter of a timid porcupine in hiding among the rocks; and now, when no one was expecting his appearance, and when his very existwas for the time forgotten, he had nearly run into my arms. Hurrying back to camp, I told my tale, and the ladies instantly decided that they must see the dead bear. As the twilight lingers long in this high latitude we had abundant time to view him before darkness came on, and one of the party, a Texan of experience in California where he had assisted in the killing of several grizzlies, pronounced him a probable three-year-old, and a really fine specimen. He was very thin in flesh, although in good coat for this time of the year.

As past experience had demonstrated that my ponies would not submit to the smell of bear's blood nor of his hide without growing frantic with terror, we quickly planned to engage an Indian camped near by to skin the bear and to carry the hide down the mountain to a trading post in the valley. The Indian understood half a dozen words of English, and my Texan neighbor and I as many of the Siwash dialect. A lively pantomime ensued, resulting in my writing on a bit of wrapping paper found in camp, an order on the trader for $2 worth of merchandise to be delivered upon presentation of the bear's skin, and pocketing the important document, and with his face wreathed in smiles born of his faith in the methods of civilization, our Indian acquaintance departed silently and swiftly upon his errand. He did his work with consummate skill and delivered the skin at the store in good faith.

As I pen these lines the chubby face of FOREST AND STREAM'S grizzly looks placidly from the wall down upon me, and the difference between his shape and that of my first ursine trophy is plainly apparent. Judging by the appearance of the formidable looking claws which ornament his fore paws, were I to meet a three-year-old brother of his alone in the forest I might not attack him quite so confidently.

By the way, my little white-headed five-year-old begins to wonder if the artist of FOREST AND STREAM is not after all something of a wizard, or if there is not at the very least something uncanny about the picture of this strange acting grizzly; for, go where he may, in any part of the room, still this mildly inquisitive bear will persist in looking straight at him. Although our dear old FOREST AND STREAM is abundantly able to charm every adult lover of nature in all our broad land, is it not after all just a trifle unfair for it to bewitch the unsuspecting children also? Is the editor or the artist most to blame?

ORIN BELKNAP.

THETIS, Washington.

PATTERN AND PENETRATION.

Editor Forest and Stream:

I have taken much pleasure in watching the gradual piling up of facts in your shotgun tests, and have been busy reducing your crude figures of results to the only true basis of comparison, that of percentage of shot accounted for out of shot fired, and I have come to several conclusions: First, it seems to pay to put plenty of charge in a gun. Second, that black powder is, after all, the most reliable explosive, and that wood and Schultze powder are not what glowing advertisements would make them out to be. Third, that it does not pay to buy a cheap gun, nor, on the other hand, does it seem necessary to run to the other extreme and get the most expensive weapon offered. Fourth, that there seems to be a good deal of ignorance on the part of gunmakers when they play the rôle of gun loaders.

I have made tables of the results, and have separated for ready comparison the gauges one from another. The Remington 16-gauge is still solitary in its class, with the white powder a poor second to the black powder at both of your test ranges. I had hoped to see some response or explanation from the white powder makers on this exhibit, but have watched in vain. Perhaps expert Griffith, of the English Schultze range, can draw from the funds of his vast experience as a gun tester and enlighten us on this point.

Now, of the 12-gauges with No. 8 shot, there is quite a line of them, and with the Colt showing the best percentage, and this curiously enough not with the cartridge selected by the Colt Company, but with the cartridge from a gun shop stock and taken to the range by your gun man. I doubt, however, from your figures, whether you are right in saying that No. 8 shot were in those paper shell loads; 601grs. of weight with a count of 418 pellets is hardly a correct tally for No. 8 shot.

Among the 10-gauge guns at 40yds. which were, I think, misloaded with No. 8 shot, the Parker gun still has the advantage, but taking the average of the two tests of that Parker gun it falls below the average made in the one test of the Greener gun submitted by Mr. Such. Again there comes a black eye to the Schultze powder when the No. 6 shot list is struck, and both the Scott and Folsom guns refuse to show good results with the white, smokeless powder.

That Greener gun of Mr. Such was a fine weapon, with an average of over 69 per cent. out of three varying shot sizes at 40yds. That is what one might call a capital all-round gun.

Coming to the 60yds. distance, the Winchester heavies seemed to jump to the front of their respective classes, and particularly was this seen with the 12-gauge arm. This may explain why it is that this heavy, hard-hitting piece is such a favorite in the West, where long shots are more the fashion than with our Eastern men in the field. It may be the effect of careful loading, as it will be noted that in each case where the armory experts came down to work the weapons capital results were reached, as for instance the Parker, Colt and Winchester arms. What there is in a proper load is well shown in the case of the Greener of Mr. Mead, which with a load of No. 7 shot taken from an old Chamberlin stock got 15 per cent. at 60yds., while with your black powder charges remaining over from the Scott trial 29 per cent. is reached.

So much for the pattern test, which to so many is all that is thought necessary in trying a gun; but looking at the penetration figures the importance of proper charges is brought out strongly. Look at your L. C. Smith gun, showing, for instance, how it jumps as soon as a black powder cartridge is put in compared with a wood powder popgun charge, especially at 60yds. distance. The heavy shot shows up finely at this part of your elaborate tests, while so far as hitting hard is concerned it is hard to see what advantage there is in a heavy 10-gauge gun over a lighter 12-gauge, or even a 16-gauge for that matter. If I may be allowed the expression, it is all nonsense to shoot No. 8 shot out of a 10-gauge barrel, and the only reason so many of these charges are seen, I suppose, is because of the trap-shooters' influence and the desire of the gun concerns to catch their trade. It ought to be strongly borne in mind by those who read your reports and take them as a guide in gun buying, that if they are of the trap-circuit-purse-grabbing class, trained to hold close and fire quick after they have got the gun to the shoulder and shouted pull! then they want a closely choked gun, capable of blowing to smithereens anything within that terrible volley of hard shot; but if game is the object of the shooter, then a weapon and charge which will put 180 pellets into the circle at 40yds. will kill quite often enough and not give game mincemeat to carry home either.

There is one thing that has surprised me in the order of the tests. Why is it that we have not had such guns as the Daly, Lefever, Ithaca, Pieper, Davis, Spencer, Remington and Whitney out for trial. Is it that their makers lack the public spirit to put their guns before the shooting world on their merits or do they prefer to claim everything in nicely worded announcements and catalogues and not risk such a leveling democratic gauging table as your test rest seems to be. The L. C. Smith gun, for one which has such an enviable record at the several trap shoots, makes a very bad showing. When the percentage touch stone is applied I should think that the Syracuse shop could turn out an arm which could if need be put 90 per cent. of the charge in a 10in. circle. I have heard of such arms but I never wish to shoot one.

NICK.

[Our correspondent's careful study of the results reached in the several tests already made present the figures in a new phrase, and the deadly parallel is nowhere, compared with his columns of percentages. We fully agree that readers should discriminate in looking over the results and in studying the loads whether they wish to get the best results in the brush or whether trap scores are to be striven for. A word to our correspondent anent the purpose and scope of our tests, and not to him alone, but to others who have written. The screen is a fixture, and we shall go on shooting and reaching results as opportunity may offer. When we were ready to open operations in March last we sent the following circular to all the gunmaking firms in this country, and it was in response to it that some have come and that all the remainder are expected:

Dear Sir—FOREST AND STREAM proposes to open its new gun-testing screen on the grounds of the Suburban Shooting Association at Claremont, N. J., by a general trial of shotguns for pattern and penetration. It is intended to include in this comparative test all the reliable double and repeating shotguns now upon the American market. The shooting will be at 40 and 60yds., 5 shots, as usual, from each barrel for each range, and each shot will be at once a test for pattern in a fixed 30in. circle, and for penetration in a Dennison pad placed behind the center of the pattern sheet. In addition three shots per barrel at each range will be fired at a sheet 4ft. square, and a circle of 30in. diameter will be struck from any desired center to include the greatest number of pellet marks. This latter test will be an exhibit of maximum pattern, independent of an irregularity of aim on the part of the shooter.

You are invited to submit a gun of either 10 or 12-gauge, which you would consider a model gun of your make. Such a gun, for instance, as you would send to a customer asking for the all-round gun you would most recommend. You will send also cartridges not to exceed three sets, loaded in such charges and manner as you would recommend for such weapon. It will require at least 25 cartridges of each sort per barrel for the complete test, as in all cases five loaded cartridges will be taken by FOREST AND STREAM for analysis by weight, count and measure of shot and powder in our office laboratory. The weather conditions during each test will be carefully noted and all the details and averages published at length in our columns.

It is desired that each gun company shall submit a gun direct from its works, and if possible have the actual work of shooting performed by some expert employé; or, if desired, the gun and cartridges may be sent to this office, and the shooting will be done by a skillful and experienced marksman. By sending, as suggested, a selected gun direct from the works, all trouble on our part in getting a gun of that make from the stock now upon the market will be avoided.

It is desirable that all the tests of the score or more makes to be included in the preliminary trial shall be completed within the next few weeks. If you will, therefore, write as early as possible, we can agree upon a date when we can meet on the range and carry through the open air part of the test with accuracy and expedition. Yours respectfully,

FOREST AND STREAM PUBLISHING CO.

[Of course, all expenses connected with the tests have been met by FOREST AND STREAM, and no charge has been made upon the companies. It is not intended to close the tests when each company has been heard from with its make of gun; but the large field of comparative charges, of various styles of loading, of various calibers, weight and styles of weapons, of powders and shot—all these open up a large and inviting field for our gun man to lead the way and for our readers to follow.]

The following guns have been tested and reported upon in the issues of dates given:

REMINGTON 16 hammer, May 30.
PARKER 10 hammer and 12 hammerless, June 6.
COLT 12, July 25.
GREENER 12, Aug. 1.
SCOTT 10, Sept. 5.
GREENER 10, Sept. 12, Sept 19.
FOLSOM 10 and 12, Sept. 26.
WINCHESTER repeater 10 and 12, Oct. 3.
L. C. SMITH 12, Oct. 10.
COLT 10 and 12, Oct. 24.

RIFLE CALIBERS.

Editor Forest and Stream:

I have been much interested in the correspondence there has been going on for some months in FOREST AND STREAM respecting rifles for small game and all-around rifles. A few years ago when I was in Canada, and used to go shooting along the shores of a lake, I got very much disgusted with my .22 rifle, for the ducks and other waterfowl seemed to mind a bullet very little; I have even shot snipe so that their entrails hung out as they flew away; but I lost them for all that. Then when I took my .38 rifle I found it too noisy and dangerous for that district, and after thinking the matter over I came to the conclusion that a double rifle using the .22 and .32 cartridges was the thing.

However, leaving Canada and coming to a country where shooting can only be indulged in by people with very long purses, it has not been my fortune to get any shooting, so that the rifle question did not interest me so much.

But a few weeks ago, when at the Paris exhibition, I saw a very near approach to my ideal rifle, and it proved that my idea was practical; so for the benefit of any one who may choose to have one made I will describe you my ideal rifle: I would have a steel octagon barrel made, with two holes through it, bored and rifled, one for the .22cal. and the other for the .32cal. rim-fire cartridges. For a breech-action I would have the No. 1 Remington, with the firing pin made so that it would act on the rims of both cartridges. I would have the rifle put together so that the .22cal. chamber was over the .32. As it would be almost impossible to bore out both holes perfectly parallel I would have two sets of folding back sights, one set for each barrel, or the one could have the plain open sight, and the other a Lyman back sight. A rifle of this description need not cost above twenty per cent. more than a single one.

For small calibers I prefer rim-fire cartridges; they are cheap and can be found almost anywhere. Small reloadable cartridges are a nuisance. I can put in hours at a time casting bullets and filling shells for my military rifle, but when it comes to loading my .32 S. & W. shells I get disgusted very soon. As to power, I should think the .32 extra long rifle cartridge powerful enough for deer, even while the short would be just the thing for ducks, etc., although a rifle could be made to take the Winchester .32 center-fire cartridges for any one requiring a heavy bullet. I would like to know what "Iron Ramrod" thinks of my ideal rifle. If he is not too crushing in his remarks upon it, I may give you my ideas about a combination rifle and shotgun.

FRANC-TIREUR.

MELLE, France.

Editor Forest and Stream:

Perhaps no subject has been so fully discussed of late as that of the "all-around rifle," and I doubt if any one will ever arrive at a satisfactory conclusion regarding it. The writer has given it up long ago. The rifle that was good for such game as bear and deer I could never convert into a good arm for small game and short-range practice. Of all the calibers tried, the best, I found, all things considered, was the .38-55 255 cartridge. It has very fair killing power for large game, using fifty-five grains of powder (which has to be poured through a long tube in order to get it into the cartridge case) and an express bullet of 235 grains. For small game and gallery practice fair results may be obtained by using from eight to ten grains of powder and a round bullet, but even then it will tear small game pretty badly. For short-range practice there is a cartridge made which uses a short conical bullet, and gives excellent results, while for off-hand practice at 300yds. the regular charge is too well known to need any comments made upon it. But after much trouble and experimenting I find the most satisfactory way is to have a stock with detachable barrels. For short-range practice and gallery work the .22cal. long rifle cartridge is the thing. I have fired some 4,000 of these cartridges from a Stevens and Maynard rifle and have never had an unaccountable and only about twenty-five missfires, and have obtained first-class results even up to 200yds. and fair results at much longer distances. For small game, such as squirrels, grouse, ducks, geese, etc., all things considered, I believe the new .25-20 center-fire cartridge fills the bill; it has a low curve, does not tear the game much, is remarkably accurate and has splendid killing power; in fact I don't know of any other cartridge embodying so many good points.

For large game use a good charge of powder and a pretty large bullet. I have seen deer killed with charges varying from five grains of powder and a round bullet of fifty grains, shot from a S. & W. revolver to the old Sharp .45-120-550, and have used the .32-40, .38-55, .40-60, .40-65, .40-82, .40-70, .44-40-20, .45-70, etc. The .32-40 I liked very much for a short-range deer gun, having a light recoil and being an excellent cartridge so far as trajectory and accuracy are concerned; but it is too small and light for bear shooting. The .38 55 was better for killing power, but I came to the conclusion that for larger game a larger bore would give better results. The .40-65 loaded with an expansion bullet of 260 grains was one of the best little guns I ever shot. While using this gun I killed eight deer and two bears. None of the deer ran over 20yds. after being hit. One of the bears ran about 10yds. down hill, but when I got there she was dead. If you wish a little more killing power and a lower flight of

bullet use the .40-82-260. The last named cartridges (.40-65 and .40-82) have given me the best satisfaction so far. The .45-70-500 Government cartridge is, to my thinking, utterly unfit for deer hunting. It is used a great deal here and I have had a good chance to note its effects for the past three years, and have seen wounded deer get away double the number shot with all the other cartridges combined. It appears to have no effect upon the soft parts of the animal, leaving a small hole and no stunning effect. It has also its high trajectory and heavy recoil. I am now using the following gun and do not see how I can better it, viz., a Maynard stock with the following barrels: .22-5 40 (long rifle). .25 20, for short-range practice and small game, and a .40-70 270 for large game. Do not try to make one gun do the work intended for two or three; it does not pay. If you use a small bore you are sure to lose a good deal of large game; and if you use a large bore for all-around work, you are bound to tear up your small game, and short-range target practice loses half its enjoyment. CHELAN.

CHICAGO AND THE WEST.

[Continued from Page 268.]

THAT evening, in response to a telegram sent in the morning, Mr. Wm. Mussey arrived at Rising Sun farm. I presume many readers of FOREST AND STREAM will remember Mr. Mussey as one of the best-known shooters of Chicago and a prominent figure at the trap. He arrived on our scene of action at about 9 P. M., and ate a supper whose dimensions I should be ashamed to mention. We showed him the string of chickens we had, and he could hardly wait till morning.

It was just a decent hour when Mr. Mussey and I and old Mack started out to see what we could do. On a meadow near the house I expended one wood powder shell and bowled over a fat cottontail which Billy scared in shooting at a lark. A few moments later we routed out a great band of chickens from the open meadow. They flew very wild, and old Mack's face bore a look of unmistakable disgust. We watched the birds down, nearly a mile out on the dry marsh, took their line and were lucky enough to strike them exactly. Again they rose wild, and before the dog ever winded them. Billy and I each missed a bird at 60yds., and then I got down one that jumped a little closer in. The covey flew out of sight. Mack pointed the dead bird nicely, and we went on through the grass. The day was cold and windy, and we did not hope to do much on the stubbles; nevertheless, Mack struck a faint trail on a high wheat stubble, and while he was puzzling at it Billy jumped a lusty young bird close in and stopped him with a brilliant second. We then worked out to the bottoms again, and killed a jacksnipe each at a bog on a spring branch. Mr. Hicks met us here with a buggy, just as we were putting some court plaster on the abraded heel Billy's new boots had given him. As we all sat on the grass we heard firing to the north of us, and saw numbers of birds scattering out. We marked down three in the east on the pasture, and a big covey to the west on corn. Then we crouched low, for we saw a bunch coming right over us. I shot one bird directly overhead at 20yds., and I don't think I ever saw a bird strike the ground with so few feathers left on it. Mr. Hicks and Billy missed elegantly with both barrels, and I was so surprised at killing my bird that I forgot to use my second barrel. We had hardly loaded before another covey came sailing over us, and the style in which we missed with six barrels was truly elegant. Eleven shots and one bird was our record at this stand, and we didn't think very much of ourselves.

We went east on the meadow after the birds we had marked down. Two jumped directly in front of me. I staggered the first and missed the second, which dropped to Billy's right barrel. Mr. Hicks marked down the crippled bird, and after Billy had killed an owl that flopped in front of him, we went after the cripple, and the old veteran Mack found and pointed him. He was a big cock, stone dead, and had been much worse hit than we had thought. We had yet one bird marked down, and presently Mack located him. Mr. Hicks and Billy both missed this bird at 30yds. and afforded me a whole lot of fun for about half a day.

In passing along a piece of breaking near the buggy, old Mack began to yelp at a hole he found under a sod. "He's got a mink!" said Mr. Hicks. "He'd rather hunt minks than chickens any day."

We tore up the sod and drove the mink to the end of the burrow, where he showed his nose several times. Fearing he would escape the dogs—for we had now been joined by the staghound Archer—we shot the mink, and the dogs had a great tussle over the body. Mr. Hicks has kept most of the minks killed off and loses no chance to get one. The prairie chickens have no worse enemy than the mink.

In the corn Billy and I cross-fired on the same bird, killing it, and he then cut down a second bird stone dead, and lost a third badly crippled, while I was trying to get some shells into my gun. We had had very fair success, and took in seven splendid birds with us, feeling we had earned even the bountiful dinner spread for us.

After dinner old Mack was feeling pretty tired, but he hobbled out with us again. We put up birds all over the country, but they were so wild we could not get a shot. We crouched in the grass and killed a regular grandfather of a crow that came flying over, and which was so large we thought it was a raven. Worst fooled crow ever was. You ought to have heard him squawk when we rose up out of the grass. This finished a very good record on game enemies for the day—an owl, a mink and a crow. We got no more possible chances at chickens till evening, when we both snapped into a bird that sprang out of the grass. I do not think I ever saw any bird, ruffed grouse, wild pigeon or anything else, take wing with such tremendous power. He seemed to go 40ft. before he spread a wing. These grand grouse are so different in October from what they are in August. Make the open season Oct. 1, and enforce the law, and these birds will protect themselves.

We saw plenty of birds that afternoon. One covey flew west of a bare meadow; another went out on the dry marsh, where we followed and jumped them wild. Another very large band flew out from the edge of the tall grass just at dusk. During this day we must have seen between 250 and 300 birds, and they were good ones.

I trust I will be forgiven for so much detail, but this whole hunt was so interesting to me I cannot help telling of it. The most interesting feature of it came as climax right at the very last, and formed one of the most striking sporting incidents I ever saw. We were crossing the meadow where we saw our first big bunch of birds in the morning, and it was so dark that we lost one bird that I knocked down over the fence. The sun had set, but in the east the moon was risen a little height. The light was dim and gray, and only a few objects could be discerned upon the horizon. "We might as well take out our shells," said Billy as we crawled through the last wire fence. But a few yards further there rose a whirr of wings, and a gray shadow shot off to the right of us. Billy cut away right and left, and remembering a trick learned in boyhood, I dropped to my knees and got a fair sight of the bird against the horizon. There was no seeing of the gun barrel so I did as Billy did, swung away ahead and cut away. Which of us struck the bird we could not tell, but we thought we saw it sag after it had flown a hundred yards.

"Look! Look!" cried my companion. And lo! there against the faint eastern sky was the bird, towering straight up in what we knew was the last tremendous exercise of energy. Up and up it soared, and then, directly in front of the full orb of the rising moon, and as distinct as if it had been pasted there, it stopped, long enough to photograph a strange and weird picture on our two minds perhaps forever. Then like a stone, the bird fell straight down, and we knew its soul had gone up to the skies.

"We'll never find him," said Billy, as we looked at each other and started back.

"Billy, we must find that bird, if it takes all night," said I. So we called old hobbling Mack, and sought along the black and shadowy ground. We overshot our mark, it seems, by about a hundred yards, but we had the line all right. Coming back on our tracks the old dog—bless his heart—drew down to a point, and we knew he had the scent. It was fully ten minutes after the bird had been killed, and we knew the bird had never stirred after it fell, but Mack scented it fully 30yds. and went up to it over such a crooked, uncertain route that we wondered if the bird could be running. At last we found the bird, lying dead on its back, and then we just hurried home and hugged the old dog, and told him all he needed was a frame to be a mediæval saint. Poor old Mack! may his tired legs hobble him into a comfortable corner of the heaven where all good dogs go.

So, in a really sensational manner, ended our pleasant hunt, the net bag of which was 20 splendid chickens, 3 snipe, 1 cottontail; 1 mink, 1 crow and 1 owl. And since as much or more may happen for those who may as members of the association enjoy the privileges that were with such kindly courtesy extended to us, let us hope that our host may meet every success he wishes in the project wherein he is so heartily enlisted. Neither to hurt or help him would I give anything but the facts as they appeared to me, but to me it does seem plain that a grand upland park could indeed be started here if the matter were properly handled, and for any that may be interested therein I would like to say that the pinnated grouse are there, and there in large numbers. They are right there to-day, in October of 1889, within 80 miles of the city which will presently hold a World's Fair to show the progress of American civilization. That civilization could show no greater wisdom than in the establishment of a preserve which would keep alive the noble birds whose rapid disappearance has been a blot upon our time.

Oct. 11.—Last Saturday mallards were reported in great numbers on Mak-saw-ba marsh. Mr. J. Wiggins got nineteen, and other good bags were made. Last week mallards swarmed on the Illinois marshes. One shooter at Henry bagged over one hundred in one day. Mr. W. W. McFarland has sent up two barrels of ducks from that country, presumably from Hennepin Club.

A party of gentlemen start for Neep-e-nank Club, up in Wisconsin, next Saturday. I am asked to accompany them, and expect to find something of interest up there. Ducks are the object of the trip. The fishing is thought to be about over.

Mr. Geo. T. Farmer is just back from a business trip to St. Francis, Arkansas. He reports that a grand game and fish country. Ducks are there in quantities. Quail are very abundant and wild turkeys are numerous, while squirrels throng the woods. Mr. Farmer bought four live wild turkeys, and has sent them down to add to his collection of wild birds, geese, etc., at Cumberland Lodge.

Deer shooting has begun in Wisconsin and Michigan. It began last summer. The open date on deer in Michigan is Oct. 1. Three days ago Messrs. G. W. Skinner, Harry Eaton and an employe of the John Wilkinson Co., of this city, got back from a two weeks' trip in the North Peninsula. They are boasting around that they killed five deer. "Don't say anything about it," said the last gentlemen; "you know they all do it."

To-day John Gillespie showed me a sort of decoy that will revolutionize duck shooting. It is a mallard decoy, made of canvas on a very lifelike model, and well painted. When inflated it looks just like a duck. When not in use it can be rolled up and put in a pocket along with a dozen others. The shooter who with infinite toil wades out to a distant pond in the big marsh need not weight himself down with a dozen wooden decoys. The wooden birds will hold their own for certain sorts of work, but for certain other sorts it is likely the new canvas bird, which will cost no more per dozen, will take the lead among duck shooters. This, I hear, is a Tennessee patented invention, and will soon be put on the market.

Messrs. Alex. T. Loyd and R. Donnelly had only fair luck on their Iowa chicken trip. They report the birds scarce. They bagged about 150 birds in two weeks, shooting in early September. Upon the other hand, one shooter this fall bagged 42 chickens in one day near Aurora, in this State. So much for the three years' close season. Give us long close seasons. Give us parks. Give us intelligence and common sense.

A good many ducks have been killed on Tolleston marsh. Mr. F. A. Howe has been down three times, and I hear his lowest bag was 43. One or two bags of a dozen have been made at Cumberland marsh. Ducks appeared in good numbers at Fox Lake Sept. 28, and at English Lake, Ind., Oct 2. No recent word from those points.

Mr. Loyd told me that he and Mr. Donnelly used a preservative called "Preservaline" on their chickens out in Iowa, and got their birds home all right without ice. He gave me some boxes of it, and I used it on the birds in the Ashton hunt. They were in perfect order when we got back, though the weather was so cool we probably did not really need anything to preserve them.

It was at Mr. Hicks's Rising Sun Farm that Mr. Mussey and I found a pigeon-game that would just about down the best of our trap shots, and it is one that Mr. Hicks delights in springing on visiting shooters. He has a tall shed, in which the pigeons, to the number of 400 or 500, live. This shed stands on the edge of a hill. Thirty feet below and to the right of this stands a barn. The birds fly out of the upper window of the shed, duck down and sweep around the corner of the barn. They go like a shot, and the man who can stop three out of five before they get around the barn, Rising Sun rules, can kill 150 out of 100 from ground traps. Billy Mussey and I stood on the hill and went against this game till we sowed the country with empty shells, and we only cleaned up twenty birds, taking only the hard shots as the birds darted down. There are three curves in the pigeon's flight of say 40ft. down, up and to the right, and they go like a streak of lightning when scared out of the shed. It was kill or miss clean at such short range. We both agreed it was the hardest practice we ever saw of any kind whatever, and we have got money to put up on the birds under Rising Sun rules. E. HOUGH.

THREE DEER IN THREE SHOTS.

LATE one afternoon in the early winter of 1880, as I was leisurely riding along returning to our Montana ranch near the Highwood Mountains, three deer, a buck and two does, jumped out of a small clump of trees in front of me, ran out a short distance on the prairie, deliberately stopped short and turned to gaze upon me. The distance was well within 150yds., and immediately dismounting I threw up my rifle, drew sights on the buck, and at the sharp crack he fell. With the remark, "Well, old fellow, you are my meat," pumped in another cartridge from the magazine and fired at the largest doe. With one jump, down she went sprawling. By this time the third deer was running and had reached the edge of the woods, and while she was in the air bounding over a log I fired. She also fell, but was up and off again in a moment. Feeling sure of the first two deer and leaving them to take care of themselves, I ran to the woods for the victim of my third shot. As I expected, I found the snow plentifully spattered with blood. After following the trail for a short distance I found where the deer had lain down, leaving a pool of blood, and not much further along I found the doe again lying down and gasping out her last breath. On examination I could not find where my rifle ball had entered, but beneath the right foreleg I discovered a splinter of wood protruding from a jagged wound. The following day I returned to the spot where the doe had jumped the log when I shot at it, and discovered the bullet hole in the log. I had missed the deer, but as she jumped she had been impaled upon a sharp branch, and in this extraordinary manner had received her death wound.

As for the second deer at which I had shot, and which I supposed I should find dead at the spot where it had fallen, or not far away, on returning to the place I was forced to the conclusion that I had missed it. There was no sign of blood on the snow, and nothing to make me believe the deer had been wounded. The cause of its fall was apparent; at its first jump and at the moment I shot it had struck a piece of ice covered lightly by the snow, slipped on it and went down in a heap. I never saw the deer again. I then looked for the buck at which I had first fired. He was nowhere to be found. I saw where he had fallen and floundered in the snow, and then where he had made off. Two days later I saw a party of a dozen Blackfeet or Piegan Indians circling a deer on the prairie about a mile distant. After an exciting chase, in which they turned the deer from point to point by their shots and shouting, they rode the bewildered animal down and shot him. I rode to the spot, and there lay the buck at which I had fired. I was confident it was the same from a malformation of the antlers, which I had noticed when I had shot at him two days before. And there was the mark of my bullet through the top of the neck. The ball had creased the deer; that is, it had gone through the gristle on the top of the neck, and had dropped him as effectually as if shot through the heart, but the wound had only stunned him, and had done him no further injury. This is the true history of how I knocked down three deer in three shots. NAWDAY.

A MICHIGAN DEER COUNTRY.

METROPOLITAN, Mich., Oct. 21.—There are quite a good many deer, wolves, bears, lynxes and wildcats in this locality. One man in our camp has killed thirteen deer this season right around camp. I do the scaling for two camps three miles apart; I carry my gun back and forth, a Pieper rifle, and shot; and my record since the season opened is two deer, twenty-three partridges, one rabbit. I have picked those up right along the road. I am too busy to spend any time hunting, but would enjoy a month with nothing else to do. The country here is rough, full of cedar swamps, and a thick undergrowth of birch, maple, popple and hemlock. Deer find plenty of cover. I have a set of horns taken off a doe killed Oct. 14. One prong measures 11in., the other 8in. They are covered with coarse velvet, and are quite a curiosity here, coming from a doe, but I saw the deer and helped eat her. She weighed 215lbs. dressed.

B. B.

AMATEUR PHOTOGRAPHY.—I recently made a short trip into the country, and took with me the beautiful little "Lilliput" camera made by Anthony & Co., which is so portable that it can be carried in a good-sized coat pocket. It contains six double plate holders, so that twelve views can be taken, and the plate holders are so small that a dozen more plates can be carried in the pocket. No focusing is necessary, for this wonderful lens appears to accommodate itself to all distances like the human eye. You have merely to point the camera at the object or scene intended to be photographed, touch a little spring and the deed is done. On returning home you have to place the plates in a developing solution and then in a fixing bath, and you have the perfect negative from which any number of pictures can be taken. Those not desiring to complete the process themselves can send the exposed plates to a photographer, who will hand you ready mounted copies for a nominal price. I think the completion of the process the most interesting part, and it is so simple and easy that all (lazy people excepted) should do it themselves.—JOHN MICHELS, late editor of *Science*.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price $2.50. For sale by FOREST AND STREAM.

GROUSE ON THE POCONO.

"See! from the brake the whirring pheasant springs,
And mounts exulting on triumphant wings."

THAT is pretty much as we found it in Monroe and Pike counties, Pa. They may (the grouse) have silently exulted, the triumphant wings were apparent often enough.

Oct. 17, 1 P.M. found Dr. P. W. Levering and your correspondent on the D. L. & W. train at Hoboken *en route* for Canadensis and the Pocono Mountains.

We were much pleased to find that genial, old, reliable Silas W. Harding conductor of the train. Sile is the man who posted us years ago on "where the trout hide" and the grouse drive in Monroe county; and it was a glorious truth he told us too. Sile is an old and valued officer on this well-conducted road. Has been conductor long enough to know everybody, and everybody knows Sile, his smile and hearty words and the replies thereto as he passes along the aisle speak well for his deserved popularity. He informed us that for years even during his experience on the road (some sixteen years) never had there been such a season for grouse. Over two thousand he said he knew of having been shipped on that line since Oct. 1, besides the many that the sportsmen had taken that he had no cognizance of. The grouse this year have certainly been very abundant, of large size and excellent flavor. We thus rolled along to our destination with high hopes for sport and a big bag, for we knew that he was a gentleman, for he reads the FOREST AND STREAM.

We were met at the Cresco depot by Mr. D. M. Crane, the proprietor of the Brookside Cottage, Canadensis, where we intended stopping. A drive of three miles through a rough and not rich country brought us to the little village of Canadensis and to the cottage, a large fourteen-room house, admirably situated on the main road, with ample yard and surrounding of shade and fruit trees. Just opposite is the stream celebrated for its big trout, also the sawmill that used to be a tannery in Jay Gould's boyhood days. His old home is but a few steps above, though I understand he laid the foundation for his early fortune in the tannery business at a small village called Mountain Home, some two miles away.

We were welcomed by Mrs. Crane, a fine specimen of the superior class of farmers' wives, a good house wife, ample of form, with a clear honest eye and a nature fairly bubbling over with hearty welcome. Mr. Crane is a man of more than ordinary intelligence, and one of the most prominent citizens of the place. His family consists of bright-eyed Jennie, the oldest daughter; George, the cowboy, just returned from a two-years' sojourn on a Colorado ranch, a sturdy, open-hearted lad of some twenty years, a good shot, better with the rifle, perhaps, at big game in the West, but he will get his hand in with the scatter gun at the grouse, and lastly, but by no manner of means least, Miss Fannie, the Bella Vokes of the family, the tease, the romp, the effervescent, and the terror of her brother and sister, but a warm, honest heart withal.

We have sojourned and camped down in our thirty years of a hunter's life from Shinnecock Bay to Pamlico Sound, and as far west as the Mississippi, but never have we found a place with which we so fell in love as with Brookside Cottage and its big-hearted inhabitants. There are large rooms, good beds and a table with its fresh, rich cream, butter, eggs, etc., etc., all in great abundance and placed before you with so little fuss or ceremony. You are made at home and feel so at once.

It is a good place to be in when well; it is a rare one when ill, as I found out when laid up for three days with my old enemy, rheumatic gout. No mother could have been kinder than Mrs. Crane and her two daughters, and all was done so unostentatiously and as a mother of course. The only fault we found in their way of running things was that they wanted us to eat all the time, four or five times a day and pie between meals. How they can afford to set such a table as they do at one dollar a day is more than we can see. Others have tried to prevail on Mrs. C. to combine and raise the price of summer boarders to $1.50 a day, telling her they can all get it just as well as not out of these rich city folks; but she says no, one dollar is enough; it pays her; and that ample satisfaction is given is proved by the fact that some of her boarders come in June and remain until October, and only go because they have not their winter clothing with them. They were full to overflowing all last season, some thirty-four or thirty-five sitting down regularly to table; but they always find room for more, for there are beds, and good ones, too, to be had at neighboring houses. I have written thus fully because I think they richly deserve the success they are reaping, and long may it last.

But to our hunt. After an excellent breakfast, in which cakes and light brown biscuit and the pure coffee and cream that was cream were not an insignificant part (and perhaps some may intimate that this was where the gout came in), we started up the mountain just back of the house, Doctor, George and your humble servant. No dog; oh, if we only had a dog.

The climb was tough, and the subscriber thought to himself more than once, "There is no fool like an old fool; and Jacob, your grouse shooting days were over long ago; What in thunder did you undertake this job for?" But it wouldnt do to give away before the Doctor and young George. The summit or plateau was reached at last, and we plodded along through the thinner bushes, when whirr, whirr, and almost from under our very noses started two grouse. Two shots were sent in vain. "What did you shoot into that tree for, Doctor?" and "Jacob, why didn't you kill that big fellow?" Whirr, whirr, whirr, whirr, and four more were off in the same direction up the further hillside. The first barrel made a miss, but the next a good kill and a gather by Jacobstaff. "You got yours down, Doctor, but I rather suspect only wing-tipped," and hunt as we may we could not find him. Oh for Dickey Dine and his staunch Dash. What a paradise for him. Would he have let five big birds out of six get off that way? Perhaps so, and then again perhaps not.

"Well, we'll follow them up; they can't have gone far up that mountain side." Not much for Jacobstaff. "Goodness, boys, I wouldn't climb that rocky precipice for all the grouse in Monroe county. You young legs, go up there and root them out. I will go along this road and take them as they fly back to the bottom."

Very soon I heard the rattling of wings, and the Doctor's gun boomed out, and I saw two brown streaks flashing through the air toward me. Gerwhilleker! how they came, with heads stretched out and feathers lying as close as if greased. A big cock with the speed of the wind bore down a good quartering shot. The first barrel scored a clean miss—too far behind, I mentally observed; and throwing my gun full four feet ahead of the next bird I had the exhilarating satisfaction of seeing him turn in the air and come down with a crash but a short distance away, stone dead. Upon coming together we found the Doctor had killed, making three nice birds out of the six. "Not so bad, boys, without a dog; if we can keep this up all day we'll do." But we didn't.

We then started down the hill toward the swale, where it looked grousy. Of course, when we least expected it, whirr, whirr, up got a couple and were off "for pastures new." The Doctor let drive. "Did I kill?" "Don't know." But the beating of wings on the ground, the thud, thud, so pleasant to sportsmen's ears, told the story, and another was added to the bag. We reached the swale or alder swamp. George had a single barrel, or rather a single shot barrel (this gun was double, an old muzzleloader, with the other barrel rifle, good for deer but a poor thing for grouse on the wing). He proposed that he go in, and that Doctor and Jacob skirt along the edge and take what might come out. With finger on trigger, and eye and ear alert, we silently threaded our way. Whirr; there's one. A big cock sprung out and essayed to sail over the bushy tops. A quick snapshot from Jacob and he was down. Much good it did us. Though we saw just where he fell, when we got there he was not there. "Mark cock!" from George, and two more came sailing out; one to be missed by Jacob, for he was mad at not gathering the other one, and one neatly stopped by the Doctor. We found no more in that, and George proposed that we start for Goose Pond run, a good place

"I say, Doctor, the next time you buy a hunting coat, whether of Fred Quimby, Hodgkins or anybody else, please buy a shooting coat, not a fishing jacket with no game pockets in. This is too thin, or rather too thick; these birds, from a couple of pounds or less, are getting to weigh 10lbs. apiece." George only having his ranch buckskin roundabout, had of course no receptacle for game, and poor Jacobstaff was made the packhorse for the expedition because, forsooth, he had pockets. Moral—Don't have too many pockets when the others don't have any.

"Hold, Doctor; see that hen grouse strutting through the bushes there? Shoot her head off." "No sir," replied the good-natured Esculapius, "I am not that kind of a sport, to huff a bird on the ground that way. Put her up and see how neatly I'll cut her down." "I tell you, Doctor, it is allowable to kill these wary birds any way you can, on a tree or on the ground; that bird will get away." And sure enough, it would not fly until it reached a large tree, around which it flipped and was up and off, and none of us got a shot. "What did I tell you? They are smart, and don't you fail to note the same."

We journey on; and now through the most abominable country the Lord ever allowed to live—rocks, burnt stumps, catbriers, laurels, grapevines and tangle-roots. Would we ever get through? Why is it that these delicious birds are always found in the most inaccessible places?

Well, here we are, out at last. Several birds we heard get up and had a fleeting glimpse of one or two; but it was too thick to even raise a gun. One had to watch out for his eyes all the time. We had killed nothing for more than an hour, when George said, "Now, down in the edge of this swamp we ought to find at least a dozen and we must kill at least six." We had hardly skirted the edge a dozen yards when whirr, whirr; two guns to the shoulder; two quick discharges; whirr, whirr; two more ditto; four barrels; and for ought we know those birds are going yet. Not a word was said. A few steps further and whirr, whirr; two more barrels belched forth and the birds had business elsewhere. Whirr went the third bird from near the same spot; a splendid shot across the opening; two barrels more, the Doctor and Jacobstaff both taking deliberate aim, Jacobstaff confidently meaning to wipe the Doctor's eye as the saying is. Did the bird stop? "Not as we knew of."

"I say, Doctor, what is the matter with you?" "Well, Jacobstaff, I thought you could shoot; you are getting old." "Six barrels and not a feather to show. Let's go home." Oh, for Dickey Dine or John Hen Outwater.*

"I marked that last down, I think, just to the right of that spruce over there, and we may get him up again. These birds don't seem to be so very wild."

We proceeded cautiously, finger on trigger. "There he is, up and straight away. See how he towers over those thorn bushes." The Doctor's gun cracks, and here comes in the balance of that quotation at the commencement of this sketch. Is it Pope or Thompson's "Seasons?" I think the first—

"Shoot is his joy, he feels the fiery wound,
Flutters in blood and panting beats the ground."

But why continue the story? It is about the same. George, with his single barrel, did his part and got another, I rather guess out of a tree, perfectly justifiable. We found the birds in plenty, made some fair shots and (Jacobstaff at least) some atrocious misses. Had we had a good grouse dog that would warn us where the birds were in time, and could shoot even a little, I believe it safe to say a bag of from twenty to thirty or more birds could be made in a day. The birds seemed to be everywhere, in threes and twos or fours, the singles the exception, unless having been put up. Later on in the season it may be different.

Well, we got all I wanted to carry home that day any way. The next I was laid up with my old complaint, the gout; and the Doctor and George, with Grandon Turner, deer and bear hunter of the settlement, started out. Gran Turner is a character, full of quaint humor and a language peculiarly his own. He will keep your risibles up to the top notch all the day long. A good shot, a tremendous walker, and with a knowledge of the surrounding country possessed by few. He is a necessary acquisition with his heavy rifle and stanch hound when the deer season opens, and withal an honest, genial companion to travel with. We hope for a day or two with him and the deer on Pocono Mountains later on.

Upon the whole we were fairly satisfied with our trip; we saw the country, made some pleasant acquaintances, and got a fair share of birds. It was our own fault that we didn't get more, and but for the confounded Gout (spell it with a big G) would have had a splendid time.

But it is as the home of the speckled trout that this region is famous. There are some score of streams close by, which in the spring are fairly alive with the fish, and though large ones—two or three-pounders—are rare, yet a creel filled to the brim with ¼-pound and ½-pound fish is not a rare thing to do in a day's walk on the Bushkill or or Bright's Creek. Even some of the lady boarders at Mrs. Crane's, the brooks being of easy access, have proved themselves no novices in the Walton art, and have brought in respectable creels; among them Emma Juch, the prima donna. We calculate on a week up there in May, when we may be able to give a big but veritable (we did not say reliable) fish story. JACOBSTAFF.

*Dine and Outwater are probably as good brush shots as New Jersey produces.

ON A WYOMING RANCH.

Editor Forest and Stream:

I quote from a letter recently received from friends in the Rocky Mountains. The letter is written from their home, Sage Creek Ranch, Corbett, Wyoming Territory, some fifty miles east of the National Park, and possibly the best place known in the Far West for large game, as the letter will testify. The ranch is something like 150 miles south of the Northern Pacific Railroad, and is reached by stage or appointment by Mr. Frost. The letter was written by Mrs. Frost, as the sturdy hunter was too busy at the time with his ranch affairs; and I think your readers will enjoy a part of it, as I did.

"The weather is perfect, no climate is more health-giving. If Eastern people who enjoy nothing but poor health could see the people—few in number, it is true, but the picture of health and strength—they would envy our lot. We are cut off from the outside world and see but little of it. The mail brings us tidings once a week. But the truth is, we are so busy with our stock (for you must remember we are starting a stock and hunters' ranch) that we have little time to note the doings of the world outside. We have seen it all in other days, and are not sorry for the change. Yes, we have game here and fish, all the trout fishing any sportsman could wish. We have often seen bands of elk numbering from 10 to 100. Mahlon [Mr. Frost] shot at one recently from our door. My son Jesse and an Eastern gentleman went out five miles and camped to fish and hunt. They remained three days, and killed three elk, four deer, two antelope, one bear and all the sage hens and other birds they wanted. They did not hunt hard, and it was not the time of year for game, as it had not come out of the high ranges yet, this being in early October.

"Last week a man walked to the mountain, saw three mountain sheep, shot at a mountain lion, saw a number of foxes, and got back the same evening. But Mahlon went one better than all this near the house recently. He went out to look after the stock, and as is his custom took his gun. He had gone but a short distance when he shot a wolf. He went round a hill and saw standing up in front of him a large silver-tip bear, and shot it. Just then three yearlings came in view, and he killed all three. Then he came home. I went out and helped him dress the four bears. I got eighteen gallons of fat, and it is better by far than the lard we get here for cooking purposes.

"The next day we had a dance which lasted all night; and as our neighbors live from ten to forty miles away, and as we had forty for our guests, you may know they appreciate fun to come so far."

I have known Mr. Frost and his family for some years. They are good people. He is a sportsman in reality and not in talk alone. I met him in Bismarck, where he killed many deer. W. H. W.

CENTRAL ILLINOIS.

JERSEYVILLE, Ill., Oct. 21.—The FOREST AND STREAM has not generally been taken here from the simple fact that it has always been regarded as an "Eastern paper," and to the Suckers of little interest; but I find that this, the only objection, is now removed, and to-day it contains about as much matter of interest to the Western as it does to the Eastern sportsman. Success to its efforts to become so; may it continue until it is classed by the East and the West as *our* paper.

I read with pleasure in the last number, the article on duck shooting; it is instructive as well as interesting. I do not agree with the writer in all things as to the habits of the several species, yet perhaps they may act differently around the Chesapeake from what they do in the waters of Illinois. Perhaps he has never shot ducks on our waters; and I know I never did around the Chesapeake. I would be pleased to read more of his letters on the same subject, as duck shooting is about the only kind of shooting I have really enjoyed for the last twenty-five years of my life, which is not half of it, and to-day I can enjoy some of the good days that I have had by calling them to mind as clearly as though they were but yesterday. Time, although it is beginning to have its effects on me, does not mar the beauty of some of the days that are past.

Speaking of ducks reminds me of the fact that there are none, or but few, in this part of the State. Our lakes are all dry, or about dry; yet they are full of feed, wild rice, etc. Unless we have plenty of rain, or a rise in the river to fill our lakes in the low bottoms, we seldom have fall duck shooting; neither in the spring, but give us water in fall or spring and we will guarantee the ducks. The same thing has occurred for years, and I have been here since 1840. Quail are plenty everywhere, especially in the bottoms along the Illinois River; a man can shoot until he is tired.

Nineteen years ago this fall Miles L. Johnson of New Jersey, E. W. Tinker of Rhode Island, Mr. Fisher of Philadelphia, and a Mr. Brown of Rhode Island, spent several months here shooting quail; and when I say to these gentlemen through the FOREST AND STREAM that quail are as plenty now as they were then, they will know that there are a few. Many is the day we've tramped together, and many the yarn we've told. Miles and Ed I hear of occasionally through the papers, but the others I have lost entirely; yet I hope they are alive and able to pull a trigger and have their share of sport. If we can't kill fresh game we can at least kill again, or rather pick up some of that we killed years ago.

I will try in the future to keep you posted on matters pertaining to shooting, and if agreeable may write of my camp life, or at least a portion of it. KIZZER.

GAME IN NORTH CAROLINA.

Editor Forest and Stream:

My official duties taking me over considerable territory in this section, I am very much pleased to find that although the past summer has been an extremely wet one, Bob White has held his own and gained several points. The coveys are more than usually large and the young birds in fine condition, and there is every prospect for excellent shooting for those of us who have good dogs, of whom your humble servant is one. I have not shot much yet, merely tried my young pointer pup Milo twice, and though only nine months old he is a "wonderful pup." I have not been able to trace his pedigree yet, but it is plain to be seen that he is no scrub. The gentleman who placed him in my hands not being "doggy," made no inquiry of the party from whom he obtained him, simply receiving the information that he was of imported stock, and that his mates sold at $100 each at six months of age, as sufficient evidence of good blood. I shall endeavor to find the breeder and learn more of the dog's blood, as he is an unusually fine dog. My old setter Ponto has taken all the degrees, and is now all that is needed for good sport. He has developed one trait not possessed by any dog ever owned by me before, *i. e.*, if lost in a dense growth on a point, he will invariably round up the birds, back off and bark to let you know of his location. Sounds "fishy," I know, but I can substantiate the statement by numerous eye-witnesses; and one remarkable fact is that the birds do not take flight from the barking. He will also tree squirrels when passing through woods. He is only six years old and is in full vigor.

Speaking of albino or white squirrels, a few days since, to an intelligent farmer of Harvey's Neck (a locality noted for the abundance of game), I was told that it was no unusual thing there to kill fox squirrels perfectly white, and occasionally one perfectly black; in fact, one was shot while I was shooting in that neighborhood almost as white as ermine. The ordinary gray squirrel has been extremely abundant this season, but the incessant shooting has thinned them out. One man killed forty-eight in one day's shooting, and remarked that it was "no unusual day for squirrels either." Turkeys and deer are also fairly abundant, while bruin is lording it over the farmers on the swamps up the river. Too much water to hunt him successfully, though several large ones have been shot recently. A. F. R.

Belvidere, N. C., Oct. 19.

Editor Forest and Stream:

The prospect for Bob White in this State is excellent; at least such is the information I get from all quarters. In the bottom lands on the larger streams there was much destruction, because of high water, but on the hills and narrow valleys the young birds escaped. I hope to have the physical strength and the time to make many a jaunt during the approaching season, to see if my vision and arms are still equal to a sportsman's demands. My old dog Argo has about "served his day and generation," but I have a young setter named Rip, who will be able to supply his place, and a still younger one whom I have called Ned, in honor of Capt. Edwin Sully, who presented him to me. His brother is of royal stock, but he is a *nullius filius*. Still, he is a fine-looking fellow—much fairer looking for a dog than his former or present owner is for a man. Wells.

Rockingham, N. C., Oct. 20.

THE ADIRONDACK DEER LAW.

NEW YORK, Oct. 29.—*Editor Forest and Stream:* I think the New York law limiting the number of deer to be killed by each person to three a most excellent one. Of course it is rarely enforced and often ignored, but it does good for all that. In the first place, it prevents men from bragging of their slaughter; and puts them in the position of feeling that they are law-breakers; and where there are a number of sportsmen gathered there is a certain feeling of pride that prevents most men from violating that law.

At the clubs in the Adirondacks all game laws are thoroughly respected by both members and guests; and at the Adirondack Club no does are ever shot, nor are shotguns used to kill deer. I know personally of one member who had six does come within easy shooting distance on one morning, and he did not fire a shot, although he had not had a chance to kill a buck the whole season.

But the best law of all is the one that prevents the sending of deer out of the woods, for the reason that it is easily enforced. Many a time we have refrained from hunting because we had venison enough in camp; but if we could have sent a deer or two home we would have been glad of the excuse to kill more.

The hotel keepers are the ones most to blame for what poaching is done in the Adirondacks. I have heard this season of one who bought venison in May, June and July, and I dare say there are many others. They serve it as "mountain lamb," or put it away in their cold storage rooms. They do the same with ruffed grouse. By the way, I wonder if the Connecticut sportsmen know that hundreds of ruffed grouse are being shipped to the New York markets. They sell (?) them to the stewards of the steamboats, and they turn them over to the New York agents. W. Holberton.

Editor Forest and Stream:

As a constant reader of your interesting paper, I have noticed that others are bewailing the great slaughter of deer which has been going on since the law allowed all the dogs in Christendom to chase them. Ever since Sunday, Sept. 1, till the sun set Sunday, Oct. 20, there has not been a lake or pond to which deer could be driven but has been watched by from three to a half dozen men or boys, Sundays the most of all. Now that the hounding season is over reports are plenty of parties who went hunting. From 500 to 1,000 deer have been killed since Aug. 15 in the Adirondack region. This is an estimate made by carefully looking over the map and comparing the result of the lake and mountain resorts by reports in the local newspapers and by actual observation in my own locality. Will those who have written for your columns assist me or give me same points on which to work? for I, as a native of those grand old woods, love those timid creatures too well to sit still without a protest against such slaughter. Maine has had to prohibit hounding and Wisconsin will not allow it. Will the Empire State, with those beautiful mountains, allow this deadly work to continue?

Our game protector Major Pond is an energetic officer who never sleeps (in the eye of the law), but I would strengthen his hands by a system of rewards for informers. It may be this is out of place, but I know not where else to turn. I therefore ask all who will to give me their name and address and suggestions as to mode of procedure in the line of concerted action, so that when the next Legislature meets, a vigorous effort can be made toward attaining the desired end, for I am willing to devote time and what little money I can spare. My views as to the proper legislative enactments are for an open season from Aug. 20 to Nov. 10, hounding season from Oct. 5 to Oct. 20. A reward of $25 made payable by the State Game Commissioner to the informer, upon affidavit of the officer before whom trial and conviction of the guilty party is obtained. In order to fully enforce a law that if broken harms no individual or his interest, complaint to the proper officer is seldom made; but if you appeal to the mercenary men—and they are as plenty as the lazy wretches who will put on snowshoes and tramp to the deer yard to slaughter at pleasure—then you will get a watch put on the law-breaker and the State will not have to expend very much in the way of rewards before the cruster and June jacker will cease his work, because for $25 his nearest neighbor perhaps will land him in jail. "Musset," let me help you or you help me.

Ellenburgh Center, Clinton County, N. Y. Law.

OUR TURKEY HUNT.

LAST winter, while collecting specimens of natural history down on the gulf coast of Florida, my boatman informed me that there were plenty of turkeys back in the swamp; and he thought we would have no trouble to shoot a gobbler if I cared to try it, and would get out to their roosting place by daylight. I readily accepted the invitation. A change of diet was not to be ignored after a week's trial of fish and pork; and moreover I had for years been coveting a chance to shoot a wild turkey. Twice in my life had I gone to the mountain region of my home State of Pennsylvania, for the purpose of trying for a shot at a turkey. The first time we saw none; on the second occasion my companion ran on to three turkeys as they were feeding in the woods; he was quite as much surprised as were the birds, and they were out of shot before he recollected that he carried a gun. I had only the satisfaction of seeing them fly over the hilltops to a distant mountain range. Several years had elapsed without presenting an opportunity to fulfil my ambition, and I was determined that no lack of effort of mine should lead to another failure.

We were camped on a creek two miles back from the gulf, and our tent, formerly used by fishermen, was under a clump of cabbage palmettos, just where open marsh or salt meadows met the timbered swamp or low hamak, as it is called in that country. Traveling through the timber was extremely tiresome, there being but a single path leading but a short distance back from our camp—the remains of an old road used for hauling out cedar logs. After leaving this path we had no trails, and for the most part the ground was wet, muddy; or if dry frequently thickly covered with the cabbage palmetto, with naked leaf stalks projecting in every direction, and so close together as to make it a matter of time and exertion to travel any distance.

An afternoon was spent in locating the turkeys, and fortunately they were found to be not far distant from the old road. The next morning we were stirring early. We had planned to have breakfast over an hour before sunrise, but as we were minus a timepiece our guesswork proved in error. After a hasty repast of coffee, crackers and onion omelette, we sat around the campfire for an hour wondering what time it could be. Excepting an occasional rustle of a "cabbage" leaf, all was still. An old bull alligator, who had the night before kept up a continual bellow back of the hut, was silent. We were too far from the gulf to hear the noise of water; and apparently we were alone. Our hunting party numbered three, and it was planned that I should go with S., my boatman and guide, and we to take the dog, while J., who was not a new hand at the work, should cross over the creek a half mile above camp and try his luck alone. He had heard an old gobbler over there a day or two before and was quite confident of success.

After exhausting our patience around the camp-fire, we started through the woods and swamp, trying to keep in the old road; but time and again getting off into the wet ground, stumbling over logs or running up against the outstretched stalks of palmetto. A half mile or more of this brought us to where J. was to branch off; and as there was still no signs of daybreak, we built a fire to temper the chilly night air, and sat around it for nearly an hour; and finally decided (and after events proved) that we had begun our hunt about 2 A. M.

After leaving J. with instructions to yell for us if he should wound a bird and need the dog to trail it up, we followed the old road. Now that we were among the older cabbage my guide showed me a novel substitute for a lantern. Picking up a fallen and dry palmetto leaf with stem five or six feet long, and palm spreading four feet or more, he lighted it, and marched ahead with torch on shoulder, lighting our way most brilliantly. When one was burnt out it was dropped and another lighted from the embers with scarcely a halt. They seemed to ignite easily, but burned steadily and not rapidly. For a mile or more we traveled in this way, with cabbage and pine arching over us, our light glistening through the overhanging branches, until we approached the supposed vicinity of the turkey roost. Then we put down our torches, rested our guns against a tree, and dried our feet for a few minutes by the flames of a few palmetto leaves hastily drawn together. We stood thus probably ten minutes, when S. moved a few steps from the path, put up both hands to his mouth and gave an excellent imitation of the hoot of the barred or swamp owl. "*Hoo, hoo, hoo-hoo oo-oo.*" This, he had informed me, usually provoked a gobble from any turkeys if near at hand. The echo had scarcely died away, when to our astonishment a turkey flew off, with no warning, from the lower branches of a pine not twenty feet from where we were standing. Daylight was far enough advanced for each of us to note a very blank look on the face of the other fellow, as we saw a dark form disappear in the treetops before either could lay hands on a gun. A minute or two later a second bird was heard to fly from a short distance behind us, and apparently close by the path we had followed. We had gone too far and were right in the midst of them. We kept perfectly quiet in hopes others would betray themselves or that we could call them up after a little; but within ten minutes we heard a shot over across the creek and then J.'s call; so, on the uncertainty of our getting another shot, S. took the dog and hurried off. I lay quiet for an hour or more, heard several distant gobbles, which I followed, but saw no birds. I started over to join the others and found they had followed the wounded bird more than a mile, and J. had finally shot it as it flew from a low tree. It was a large gobbler, which we judged would weigh over 20lbs. The meat was excellent as prepared by camp cooks and flavored with a "cracker's" appetite. Thus ended my third turkey hunt, a good deal more interesting than the others, but so far as I am concerned, no more successful. If any of the readers of Forest and Stream know of a few real tame wild turkeys, information is solicited. Meleagris.

A MAINE DEER STORY.

ALREADY several deer have reached the Boston markets, doubtless from Maine, in spite of the law against transportation. The underground railway is open for both illegal partridges and deer. The other morning a friend of the game laws, who hunts in Maine as often as a busy life will permit, observed the carcass of a deer being drawn from a barrel just in front of a commission house. The joints of the legs had been cut in order to get the body into the barrel—the old trick—and marked cranberries. The doe was quickly hustled out of sight, and not a man in the store knew where it came from. But, on the whole, this underground system of getting game into the market is becoming unpopular, even with those who do the work in the States where transportation is forbidden. In the first place, there is the risk of detection and punishment, and besides, the receivers of such goods are likely to "skin" the shipper down to the last cent. The venison is usually shipped here to be sold on commission, and together with the higher cost of freight and teaming attendant upon such shipment, and the extra trouble of managing such a trade, the receivers manage to get about all there is in the shipment. In the case of a fine buck shipped by steamer last winter from Calais, Me., in a barrel, the shipper had left for him the sum of 50 cents—and all this for breaking the law and the risk of detection and fines. Each season the sentiment in favor of game protection improves, and such lessons as the above are weighty instruction for such as can be touched by no other means.

Harry Moore, of the Boston grain trade, has just been down to Maine, though he did not go deer hunting, as he will do later; for the forests were too full of falling leaves. But he did get hold of a good deer story, and all the better from having happened this season. Harry vouches for the truth of this deer story, and brings the names of reputable hunters in Maine to prove it. He also did the same in regard to his celebrated moose story, published in Forest and Stream last year. Mr. Harding, a very respectable business man of Bangor, told the story the other evening, as they sat by the fireside. The evening was chilly and the birch backlogs lent a cheerful blaze. Harding had been hunting only the day before. With a friend, he had tried the deer grounds of Goulds-boro. They had hunted nearly all day without a sign of a deer, other than the tracks, and were about discouraged. At last they came to a brook, and beyond the brook a hill. Here Harding's friend and guide was sure that they ought to sight a deer, and very cautiously they passed the brook. There were fresh tracks that led up the hill. Harding took one set of very large tracks and his friend another. Cautiously he followed up the hill till he got were he dared to peep over. He lay flat on his stomach and took a look. The first sight was disappointing. There were cattle browsing—the land was partially cleared. But about one hundred yards beyond the cattle, though some of the cows had bells on, there was a beautiful buck! He stood head on; his quick ear or scent had detected the presence of a more dangerous enemy than the cows with bells on. Harding had nothing but a muzzleloading rifle, but one with which he had done some fine work. He was a man of quick thought and of quick action. He glanced along the barrel. In his crawling over the hill he had broken off the forward sight of his rifle, but the magnificent deer stood there, head erect, and just ready to jump. Harding was bound to shoot, and he pointed the rifle as best he could. The report startled the cows into a run, but the buck fell as stiff as a log. Harding shouted to his friend and ran to cut the deer's throat with his hunting knife. He came up to where the animal had fallen, but he was gathering up and was nearly erect, though rather dizzily, and was beginning to get away. This would never do. Harding was as quick of action as of thought, and he made a grab for the buck and just succeeded in getting a good hold of the short tail of the beast. Here he hung on for dear life—deer death it proved—and the buck began to bound away. The ground was covered with hummocks and logs, but Harding hung on. Here he paused in his story.

"Harry, did you ever, when you was a boy, try to hang on to the tailboard of a wagon, with the driver whipping up his horse in order to shake you off?"

"Yes, I have."

"Well, you know just how that deer was making my legs hum, only I could not let go as easily as you could let go of the wagon on the smooth road, and it would not do to let go, for I wanted that buck. All at once he stumbled over one of those hummocks and fell to his knees. His prongs plowed the next hummock and stuck fast. He was my buck and he was down, and I jumped for his throat, calling to my friend. The buck kicked as only a deer can kick with those mighty long legs of his. I tried to approach his head, but with a well directed stroke of his hind leg he ripped my vest, shirt, pants and drawers from my throat down almost to my feet and came near cutting my head off with his sharp hoofs. Then my friend came up and helped me dispatch the deer. Afterward he dryly remarked that his first thought was that I was about to retire—from the conflict—I was so well unbuttoned."

"Now, Harry, where do you suppose that buck was hit? The bullet had just grazed his backbone lengthwise and for the moment paralyzed him." Special.

611 Hints and Helps for Sportsmen. A book of 240 pages. Send for table of contents. Price $1.50, postpaid, from this office.

IDAHO WILDFOWL.

It was my good fortune to have spent nearly all the month of August in Idaho and the Yellowstone National Park. The longest stay at any one place was at Soda Springs, and I visited that mainly to drink as freely as possible of the delightful waters for which the locality is noted. Out of an extensive bed of lava there comes gushing and sparkling from the earth a number of springs, mostly cool, and highly charged with the salts of lime, iron, soda and magnesia.

I took my 14 bore Tolley along with me, and quite a number of shells loaded with 2¾drs. of gunpowder and 1oz. of No. 5 and 6 shot, with the view, if the temptation was offered, of trying my skill on sage hens and other small game. While at Soda Springs, and on my way from Beaver Cañon to Snake River, I killed probably fifty of these birds, and found them very agreeable food when well prepared. Ah Sin, Tin Pan, the Chinese cook at the hotel where I stopped, knew how to prepare them, as he did most other articles which were put in his charge. I went to a lake about eight miles northeast of the town, which has no visible outlet. It covers hundreds of acres of land, and one of the streams—the main one—which supply the water for it, is so heavily covered with the salts of lime that the waters have deposited an enormous quantity of gypsum, mixed with silica. The area was no less than fifty acres. In this lake there is a breeding place for ducks and other waterfowl. I saw thousands of them, fully grown, and but for the mosquitoes, which disputed my right of entry, I could have killed a large number of them, even though it was said to be the close season. Among the ducks were quantities of mallards. I did not see a single greenhead. In the hundreds which I saw on Shotgun Creek not one had a green head. They were all grown, and many of them must have been males. Is it a fact that the beautiful vivid color of the heads of the males is not developed until just about the time the migration commences? It must be so.

On my route from Beaver Cañon, while passing through the plains from Antelope Valley to Kooch's Hotel, my companions and myself killed 37 sage hens and a few other birds. If we had not tired of the sport, we could have filled our wagon. So soon as we reached a creek called Sheridan we found them in great abundance. They had just gone to the water for drinking purposes. The following day we killed about 20 ducks, to help out the menu of our host, the most of which were green-winged teals. There were among them five mallards and one spoonbill. The mallards had the green spot on the wings, but the head looked like that of the female. I would like to spend a part of August and September in that section, under a tent, with three companions, each supplied with a breechloading shotgun and a rifle. What a pleasant time we could have! WELLS.

ROCKINGHAM, North Carolina.

ON BOYHOOD'S STAMPING GROUNDS.

Dear Forest and Stream:

Those of us, who when boys lived in the country—God's country—know how to pity the other fellows who, unfortunately in their early days, were forced to inhabit man's portion of creation—the towns; and I do pity such unfortunates from the depths of my heart, for they missed pleasures that brick walls and paved streets know not, that wealth cannot buy, and yet that linger with us through all vicissitudes of fortune, and help us to feel young again even though we may have passed the three score notch in life's calendar. I feel this to be true, for I am spending a few days among the rocks and hills where I received my first lessons of life, and their memory ever has been, and is to-day, bright, pleasant and beautiful.

I did not intend to be sentimental when I began this note, but I know you will excuse me if you "have been there yourself." I simply intended to say that I had come up here to spend a few days in shooting among the birches and alders, the hills and the valleys, where as a boy I had done the same nearly half a century ago. (There I go again, right off my feet.)

Well, quail, woodcock and partridge are fairly plenty here; they are somewhat scattered of course over a broad scope of country, and one has to know in what direction to look for their favorite haunts and feeding grounds, and then has to put in a good day's tramping in order to get even a fair bag; but notwithstanding these difficulties, I find a pleasure I never found elsewhere. I killed my first quail and woodcock in true sport-man's style, but made a dismal failure on my first partridge, and it happened in this way: We had just eaten lunch and got into the wagon to drive to another point, when looking up the road I saw a partridge standing under some overhanging bushes. Before I got within shooting distance he whizzed across the road into a swamp to the left, and at the same instant I saw another run into the brush where I had seen the first one. Moving rapidly, expecting this one to attempt to follow his mate in a flight across the road into the swamp, I was going to give him a snap shot, but to my surprise, the first glimpse I got of him he was sailing straight away 10yds. further up the road and going like a scared partridge (you know how fast that is). I let go at him, and while the boys (probably to console me) said I hit him, he did not stop to show me how badly. When the wagon came up, and one of the boys said he thought I would surely have got him, I told him I had thought so too, but I had come to the conclusion that I had conscientious scruples against shooting a partridge in the road.

Good night. W.

HADDAM, Conn., Oct. 28.

A DELAWARE STATE OF AFFAIRS.

MILFORD, Delaware, Oct. 26.—I have been expecting to see appear in your journal a communication from "Del. A. Wave," of Dover, in which he will claim that the Game Protective Association is seeing that the laws are not violated. Your Dover correspondent made this assertion last year about this time, when it was a well known fact that the law was a dead letter three weeks before the opening of the shooting season.

The woods and fields are now full of men and boys with guns and dogs. This afternoon I stood on my front porch and saw two packs of beagles running rabbits, and a party of three shooting quail. A local paper has it: "Detective Hutchins says that when properly informed he will proceed against those who violate the law." He draws the salary and expects others to do his work. A few arrests in this neighborhood would put a stop to this business at once, but as those in authority are totally indifferent, of course the extermination of game goes bravely on.

Non-residents will be pleased to learn that the cost of license is now but $5. VICTOR M. HALDEMAN.

HABITS OF QUAIL.—Garysburg, N. C.—*Editor Forest and Stream:* I have been a huntsman for thirty-five or forty years and have been studying the habits of deer, wild turkeys and quail for twenty-five years. I have 100 or 150 coveys of quail in a radius of four or five miles of my house. For the past six months I have been experimenting. I bought three dozen hawk traps, which I set in and around my hunting grounds to see if catching the hawks would increase the quantity of birds. I find it a perfect success. The number of hawks caught in the six months was about fifty; and there is a great increase of birds. After the hunting season opened, which was Oct. 15, I took my dog without my gun to examine the coveys, which I find very full. Owing to the wet spring the first brood was drowned, consequently the birds are too small to shoot at this time. In the spring at mating time I leave in the coveys of quail from six to two old birds. In the fall, at hatching time, I take my dog to examine the birds and find on the same grounds a covey of young birds with two old birds. There are no other o'd birds with the covey nor any new coveys in the immediate neighborhood. Can you tell me where the old birds go?—W. T. K. [When quail pair and select their nesting grounds, each cock drives other birds from his own bailiwick, and defends it pugnaciously throughout the breeding season. The rest of the birds seek other nesting grounds.]

THE BELLINGHAM BAY AND COUNTRY.—The editor of the Bellingham Bay *Rereille*, published at Whatcom, Washington, thinks no small potatoes of his corner of the world as a sporting ground. "No other country in the world," he says, "offers better inducements to the genuine sportsman than is afforded here in Whatcom county. Game of all kinds is aburdant. On the mainland deer of the largest size are numerous, but owing to the heavy growth of timber, still-hunting is attended with difficulties. On the islands, from 5 to 10 miles west of Whatcom, across the bay, deer are more numerous and easier of access, and hundreds are killed annually by pot-hunters. Elk abound in the eastern and unsettled portions of the county near the foothills of the mountains. Mountain goats of gigantic size frequent the mountain crags near Mt. Baker and the Cascade range. Throughout the entire county pheasants and blue grouse are plentiful. Water fowl of every description swarm in myriads in the bays, rivers and inlets of Whatcom county. Canvasbacks, spritgails, mallards, teal, wild geese, swan and brant are here taken by the thousand during the months from October to April. Our rivers and lakes are teeming with the speckled and gamy trout, while cod, salmon and halibut may be obtained at nearly all seasons of the year in Bellingham Bay."

WAR ON THE GROUSE SHIPPERS.—Hartford, Monday, Oct. 21, 1889.—Mr. A. C. Collins, the Hartford county game warden, was instrumental in intercepting a consignment of game for New York in this city Saturday, and proceedings against the offenders will be instituted without delay. The game was seized in the office of the Adams Express Company, the lot consisting of twenty partridges and eleven quail. It was consigned to Knapp & Van Nostrand, Nos. 208 and 216 Washington Market, New York city. The game was sent by Orrin J. Whiting of East Thompson, his name appearing on a card in the box. There are sixty-four counts in the offense, there being two for each bird. One count is for killing for transportation out of the State, and the other is for shipping. The fine on each count is not less than $7 and not more than $50. Cunningham & Ladd, of Somers, have also been detected in shipping twenty-seven partridges to Springfield, Mass., the game being secured while in transitu. It is expected that they will be brought before a justice of the peace on Tuesday. The disposition is to enforce the law rigidly in all cases where men are found sending game out of the State.—*Hartford Post.*

OHIO RABBITS AND QUAIL.—Mr. John H. Law, the Ohio State Fish and Game Commissioner, has sent out the following order to all the county game wardens: "Cincinnati, Oct. 11, 1889.—Dear Sir: Between now and the 10th of November many hunters, under the pretense of hunting rabbits, will violate the game law by shooting quail. I wish you to do your utmost to bring all such violators of the law to speedy punishment. It would be well to send to all your assistant wardens a similar notice that they may be on the lookout. I am satisfied that a large number of quail were shot last year before the 10th of November; also, after the 15th of December. You will please look out for such violations. The present law we think lame in not protecting rabbits and making it lawful for them to be shot only during the same time when it is lawful to kill quail, thereby removing the temptation to the rabbit hunters. Yours very truly, JOHN H. LAW, Commissioner."

GROUSE SNARERS.—Providence, R. I., Oct. 26.—There are great quantities of game in the markets this week, and it is mostly snared. I have been this week to Taunton, Mass.; Chepachot, R. I.; Pascoag, R. I., and several other places, and the gunners all complain of the birds being thinned out. Three men with two dogs went up on the train with me as far as Smithfield, R. I. This is a good partridge country, but to-night when they came home they failed to show any game, and seemed disgusted. I know one man who kicked up over twenty snares on these same grounds in a day's hunt.—COHANNET.

A MOOSE INVADES A BARNYARD.—Calais, Maine, Oct. 25.—As Mr. Seth Gerry, of Robinstown (about twelve mile below Calais), was milking his cows in the yard on Wednesday, evening a large bull moose made its appearance among the cows. They did not appear the least alarmed. Mr. Gerry shot the creature from his house window. Not often does such large game come to a man's yard to be shot in such an old-settled neighborhood as Robinstown. The head will be sent to your neighbor, John Wallace, to be mounted.—GEO. A. BOARDMAN.

OHIO NOTES.—Cincinnati, O., Oct. 26.—The guns and general hunting paraphernalia of the late H. F. Robinson, for three terms president of the Independent Gun Club, were all sold by his family last week, realizing a fine sum. Mr. R. T. Belt, the State Game and Fish Warden of Hamilton county, and his assistants, arrested eleven violators of the game laws and had them appear before Squire Hornberger, of this city. Two were arrested for shooting on Sunday at Bridgetown and fined, with costs, $70.10; two for the same offense at North Cheviot, $25 and costs each, and nine for shooting on Sunday and killing two quail, $25 and costs each man. Total fine with cost, $490.10. The open season for quail opens Nov. 10. They are reported plenty everywhere throughout the State. Six quail were seen on the Cincinnati court house Tuesday last, and while at Dayton a few days ago I saw eight birds flushed in the heart of the city.—C. G. NEWSBOY.

THE SCHULTZE GUN POWDER CO. have enlisted the aid of the camera to demonstrate the difference in smoke-producing qualities between their product and ordinary black powder. Messrs. Von Lengerke & Detmold, their American agents, send us a series of instantaneous photographs of a comparative trial. Two gunners shooting at the same instant, facing the camera, are photographed at the moment of discharging their guns, or rather the Schultze man is pictured with tolerable distinctness through the little smoke of his gun, while the black powder man is left to the imagination, his person being entirely shut off by a cloud of smoke.

ALBINO SQUIRRELS.—In your issue of Oct. 17, your very interesting correspondent, E. Hough, mentions seeing two albino or white squirrels in the zoological gardens at Cincinnati, labeled "From S. Carolina." Mr. Hough asks, "Is there such a thing as a species of white squirrel in this country?" In my younger days squirrel hunting was about all the sport I indulged in, and many a squirrel has been killed by me and Mack Quales in our boyhood hunts, and I have never seen but one white one, which leads me to conclude they are of rare occurrence. —BLUE RIDGE. [There is no species of white squirrel].

KANSAS CITY, Mo., Oct. 15.—The hunting season for quail and chickens opened to-day. Mallards, teal and butter ducks are on the market. The migration of geese and ducks has not yet commenced, although a few are shot occasionally. Rabbits and quail are abundant in Wyandotte county, and several good bags have been taken. Nearman Lake, seven miles from Kansas City, will soon be the finest duck grounds near here, although along the Missouri River an occasional flock can be seen. Out fifteen miles on the Northwestern R. R., prairie chickens are found.—W. H. P.

WILD ANIMALS IN SAN DIEGO PARK.—San Diego, Cal., has a park of 1,400 acres, composed chiefly of cañons. Here may be found coyotes, badgers, and a few wildcats. Jack rabbits and cottontails are abundant. Valley quail are present, but not very plentiful, because there is too much shooting. Wild bees are very abundant in the cañons, making honey and storing it up in winter for use during the dry summer when flowers are wanting. The boney is found in large masses in crevices under rock ledges, and in the spring great quantities of it are stolen from the hives.

A PARIS AWARD TO AMERICAN ARMS.—The friends of the Winchester Repeating Arms Co. will note with satisfaction and indorsement the fact that those manufacturers have carried off the highest honors at the Paris Exposition. For their exhibit of arms and ammunition they were given a First or Grand Prize, the only first prize of that class that came to this country. The Winchesters have fairly won this award on their merits and we take much pleasure in recording the Exposition judges' appreciation of the claims of the Winchester rifle.

WORCESTER, Mass., Oct. 26.—The season has been excellent for partridges and woodcock. This evening Austin Warren came in with the best bag of the season, 9 partridges and 3 woodcock. Yesterday E. S. Knowles, of this city, with Capt. B. P. Williamson, of Newburyport, and George R Newton, of Grafton, reported with a bag of 10 woodcock and 9 partridges; while L. E. Divoll, of this city, and George Sampson, of Clinton, to-day secured a bag of 17 birds, and A. R. Dean reported with a fox.—X.

LIVE PRAIRIE CHICKENS AND DEER.—A gentleman who is desirous of stocking a preserved farm in the East with prairie chickens, is anxious to secure a number of live birds for this purpose; and we would be much pleased if any of the readers of the FOREST AND STREAM can assist him. He also wishes to secure a pair of deer; this it appears should not be a difficult thing to do, but his efforts have thus far been unavailing. Any letters sent us will be forwarded to him.

BARRELS OF BIRDS.—Capt. John W. Stiles, of Exmoor, Va., runs a yacht and takes parties duck and snipe shooting. He went once with Messrs. Ben. West, of Fulton Market, this city; S. L. Stone, A. Eddy, and a Mr. Robinson, in ten days bagging 800 ducks. On a snipe shooting expedition with Hamilton Disston, of Philadelphia —the great saw man and Florida everglades reclaimer— and the booty was over a barrel of snipe a day.

WILD PIGEON IN MASSACHUSETTS.—Apropos of editorial in Oct. 24 number regarding wild pigeon; a pair nested this summer in the town of Plymouth, Mass., being seen by myself. I do not mean the Carolina dove, or Cape pigeon as it is known here, but the real passenger pigeon. These were the first seen by me in this State in six or seven years.—H. J. THAYER (Boston).

ALEXANDRIA, Mo.—The first flock of wild chickens to appear here came forth in regular style on Oct. 10. There were fourteen of them, and their presence in dress parade order was rather a pleasing sight upon a beautiful field of growing wheat. Quail and grouse appear to maintain their average numbers, regardless of the dense settlement of the country.—J. B.

ROCK HILL is the correct name of the South Carolina quail shooting resort to which reference has been made in these columns as Rocky Hill. Landlord Howell Cobb, of the Carolina Hotel, at Rock Hill, has published a pamphlet containing letters written by Northern sportsmen who have found the quail shooting at Rock Hill a grand success.

QUAIL IN VIRGINIA.—Mr. R. E. Lewis, of the U. S. Fish Commission, has just returned from Clarke county, Virginia, and informed us that quail are unusually abundant. Fine shooting is to be expected when the open season begins, Nov. 1. Rabbits are excessively common.

Camp-Fire Flickerings.

"That reminds me."

284.

IN my native town in Illinois some years ago lived Charlie B., a bright, active boy 16 years old. He knew little of country life and sports. His uncle, Capt. F., was a thorough-going sportsman and a fine shot. The Captain usually put in about two months each autumn and spring shooting ducks along the Illinois River. One fall he was going up to Senachwine Lake for a month or two shooting, and he had Charlie come out to his farm to do chores and look after the stock while he was away. When he returned he found that Charlie had fallen in love with country life. So Cap arranged with him to stay there through the winter. Cap was keen after game of all kinds, and was well prepared for it. He dearly loved to shoot cottontail rabbit in winter in the open fields. For this purpose he had a little dog named Scip, half shepherd, the other half thoroughbred cur. Scip understood his business thoroughly. He would generally run the rabbits across in front of Cap, when Cap would knock them over "every time sometimes." The first morning that there was snow on the ground the trio started out for rabbits, Charlie going along to carry the game and see the sport. Scip worked beautifully and in a short time Cap had knocked over six. He then had to go to town, telling Charlie that any time he wished he could take out the gun and learn to shoot.

Charlie had enjoyed the sport greatly. Cap had knocked over the rabbits so cleverly and seemingly so easily that he thought he could do it himself, and the more he thought of it the more he wished to try. So after noon came he took the gun, called Scip and started out in the field. Soon Scip was greatly elated to have another run, and did his part of the work beautifully. He quartered off to the right and soon jumped a fine large cottontail, which came crossing right in front of Charlie on the full run. Charlie drew up the old gun, took deadly sure aim on the running hare, shut both eyes and pulled trigger, and killed poor Scip, who was about thirty feet behind the hare. It was a fine shot, but hard on the dog. Cap was notorious for loading his old muzzleloader fearfully heavy; when it went off this time it jumped up and hit Charlie a fearful pelt on the nose, and sent him backward into the snow. But Charlie had grit, he soon gathered himself up; and with the blood streaming from both nostrils went staggering forward to bag his first head of game. He loved Scip dearly, and knew that Cap did and prized him highly, so did the whole family. Then we may judge what was the poor boy's agony when, instead of finding a fine fat dead rabbit, poor Scip lay stretched lifeless on the snow. The boy sank right down on the snow and cried like a baby.

Now, it so happened that Cap was coming up the road intent on an afternoon's hunt, and was in good seeing distance of the whole hunt. Cap loved Scip, but he loves a rich joke, or we may say the funniest fun, better than anything else; and he said the expressions and changes of poor Charlie's countenance, his blank amazement when he found himself sitting down in the snow after the old gun went off, and still blanker when he came to the dead dog, and then the excruciating misery and fear when he took in the whole situation and collapsed all in a heap—this was, of all his experiences, the most ridiculously funny funny scene he ever witnessed, and he sank down and rolled in the snow with laughter. When he recovered so as to straighten himself out, he looked over in the field and saw Charlie still crying as if his heart was broken. Cap went over and tried to comfort him, but it was a long time before he could make any headway; and even to this day Charlie will never touch a gun again. And though he is now the sedate head of a large business and of a family, if any one hints in his presence of shooting rabbits on the wing, Charlie at once has urgent business elsewhere. BYRNE.

PETALUMA, Cal.

THE MAN OR THE PANTHER?

AN agent of the Smithsonian Institution has been digging into the Indian mounds of southern Ohio. In the Cincinnati *Commercial Gazette* he reports the result of his labors. One of the mounds is thus described:

The first mound opened was on the farm of Mr. James, three miles east of Chillicothe, O., and overlooked the Scioto River. It was on rather high ground, the third river terrace. This mound was 13ft. high, 90ft. wide and 110ft. long. It took six men eight days to dig through. We began at the east side with a trench 25ft. wide, and carried this excavation right through the mound. When about 20ft. from the eastern edge we came upon a thick layer of burned bones. This layer was 6in. thick and the width of the trench. The ashes of which it was composed were either resultant from animal or human bones, we could not tell which, but at any rate, whether animal or human, it must have taken thirty or forty skeletons (if cremated) to have made that many ashes.

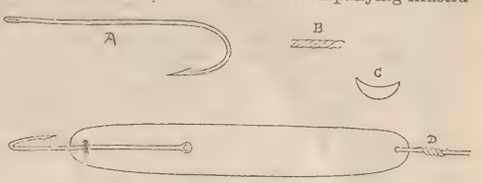
About 5ft. above this layer, or 9ft. from the summit of the mound, was a skeleton of a very large individual, which had burned by the side of it the bones of a panther. Whether the person had killed the panther and it was buried with him as an honor, or whether the panther had killed the individual, I cannot say. This much, however, can be said, that in forty-three mounds opened no find of this nature has been made. It is therefore quite interesting and important. The skull of this panther was very large, the teeth very long and sharp. It would take a mound-builder of a great deal of nerve to attack a beast of this size if he had nothing but a stone hatchet and a bow and arrows to defend himself with. So, if he did kill the panther, he is certainly entitled to a great deal of credit. Just below this skeleton and lying on the layer of buried bones, was a medium-sized personage who had buried around his neck between the upper and lower jaw, 147 bone and shell beads. The shell beads were made from the thick part of conch and Pyrula shells. These shells must have been carried from the Atlantic Ocean, as they are ocean shells, and not found inland, or the tribe to which this man belonged may have traded with tribes near the ocean, and thereby got the beads.

Did the Indian kill the panther, or did the panther kill the Indian, and how did it happen?

Sea and River Fishing.

BARRACUDA FISHING AT SAN DIEGO.

AFTER making several ineffectual attempts to induce some congenial friends to join me and break the monotony of office life by a day's sport with the famous barracuda, I finally decided to go down to "Shanty Town" and seek a companion among the professional fishermen. Inquiries as to the biting brought most encouraging replies. A party of fishermen invited me to go out with them as soon as their boat was repaired, and they expected to have it ready by Saturday night; but when I came to fill my appointment the boat was not done. Fortunately a friend of the boat menders volunteered to borrow a sloop from Portuguese Bill if he did not intend to use it, and to try the fishing with me. Bill agreed to lend us his sloop, "Baby Mine," on condition that we give him our catch of fish. "Good enough," said I. "It suits me," said he, and so the bargain was concluded. I was to go down to the bay about 10 o'clock at night and sleep aboard the sloop. My preparations were soon made. I donned some old clothes, took a good supply of lunch, and carried along my rifle to pay my respects to a certain bull seal, which had a well-known propensity for following the boat, sometimes coming within 20ft., to rob the lines of as many fish as possible. My companion was a sailor and sealer by occupation, and known to me under the name of Bob.



At the appointed time we rowed out to the sloop and found everything in perfect order. There were two bunks and the sides of the cabin were lined with fishing tackle. We retired very soon to await the outgoing tide, which turned at 2:19 o'clock in the morning. About 2 o'clock some friends rowed past in their skiff and awakened us. In a few minutes we hoisted the sail and cast adrift. There was no wind at the time, and we took to the oars, to cross the bay into the channel and use the outgoing tide. Presently a light breeze sprung up and sent us skimming over the bay; and how beautiful was the night. The stars were shining brightly and it was so warm that we had our coats off. Fish were darting here and there, leaving wakes of phosphorescent light resembling streaks of lightning at a distance. Once in a while a large fish, disturbed by our presence, would start off, leaving a glow of light 6 to 8ft. in diameter.

Once in the channel the tide swept us along at the rate of three miles an hour. At daybreak we were drifting past Ballast Point, the entrance to the bay. After floating a mile out into the ocean, assisted occasionally by a cat's paw, we concluded to tie up to the kelp and wait for the wind. Here we enjoyed for an hour the continuous up and down motion of the heavy ground swells, sometimes throwing out a line as far as possible and pulling it in rapidly to entice the barracuda which were playing around us, but without success. So we dropped back into our seats, filled our pipes, and waited patiently for the breeze, which is indispensable for barracuda fishing as it is in the Atlantic for that wily corsair, the bluefish. As I was puffing away at my pipe, and speculating as to our prospects, I heard something like the surf breaking on the shore. After calling Bob's attention to it, and remarking that we were too far out to hear the surf, he laughed, and told me to look over the stern. Here something met my gaze that I had never seen before. About 1,500 porpoises were coming toward us in a line, jumping out of the water and looking like big black wheels rolling along. They raised a wave about two feet high in front of them, that was lashed into foam, and the sound like surf breaking on shore was continuous. When within 200 or 300yds. of us they changed their course, and passed at a right angle for over an hour, until we lost sight of them in the distance.

About nine o'clock a light breeze sprung up, and, cutting loose from the kelp, we began to move slowly over the water, but not fast enough, as Bob said, to put out our lines. In my anxiety to begin the sport I cast out two lines, and very soon we hooked two so-called Spanish mackerel of 10 and 12lbs. apiece. These fish remind me of our Eastern bonito, and I am inclined to believe they are not Spanish mackerel. Presently the breeze freshened and within a half hour we were sailing at a lively rate; so we adjusted outriggers, one on either side, about in the waist of the boat, with two lines on each. We also trolled one from the stern, making five in all. Just then we met our friends coming home loaded with 65 barracuda, which they had caught by towing and trolling while we were tied to the kelp. Being thus encouraged we put everything in readiness and placed in front of the cabin door a fish-box 3×3×3ft. Bob had the first strike and pulled in his fish, then he hooked and landed another, and a third. As I was beginning to wonder what was the matter with my lines, one of them straightened out, and I began to haul in hand over hand. When I was about to lift him out of the water he doubled himself up, and I brought out the bare hook. I repeated this three times, and then caught on to Bob's method of landing fish. Upon hooking another I took Bob's advice, pulled in slowly, and when the fish was within three feet from the boat I threw him up into the air, bringing him over my head, and landed him in the box. Then, by catching hold of the drail and jerking it, the fish came off easily. As I found out, all the drails for barracuda fishing have the barb of the hook filed very blunt, and an inexperienced person might easily lose his fish, while, at the same time, the hook is readily jerked out of the mouth free from the lance-like teeth.

Now the fun has commenced in earnest; first one, then two, four, five, are hooked at a time, and rare sport it was to haul them in. For about five minutes we had all we could handle, and then for ten or fifteen minutes we would not see a sign of one. Now we are into them again, hauling away for dear life! Sometimes when hauling in one or two they would become entangled with the other lines, and before we could get them in we would have one, two or three on the remaining lines, and then there was a sad jumble of lines and struggling fish. Occasionally, in attempting to land fish in the box we missed it, and they fell down into the bottom of the boat; or our uncertain footing would be lost and we were bunched in a slippery mass, fish and all. The sloop was pitching heavily, as half a gale of wind was blowing; wet from the waist down, we had what you might call a huge time. The drails towed at the surface of the water and we could see nearly every fish that took hold. We caught sixty-eight barracuda and two Spanish mackerel —about 425lbs. of fish—filling our box, and with the loss of only one hook. Having all the fish we wanted by 2 P. M., although the biting was as furious as ever, we got under way to save the wind home. Portuguese Bill was well satisfied with his share of the cruise. The fish were selling at the time for ten cents each.

Sixty feet of soft laid cotton line is used for trolling, and the bone drail, shown in the accompanying illustration, is preferred for barracuda fishing. When drails cannot be obtained, common hooks with a piece of rag attached are substituted. The hook is fastened to the bone by means of a rivet and a wire loop. Eight inches of twisted copper wire is made fast to the drail for the protection of the line.

SAN DIEGO BARRACUDA DRAIL.

A. Hook; barb filed blunt. B. Soft laid cotton line. C. Cross section of bone drail. D. Should represent twisted wire, length 8in.

The favorite haunts of the barracuda are in and along the edge of the kelp. Sometimes they can be seen in a mass, making the water boil with their frantic leaping; there may be fifty out of water at a time and as many more just disappearing under its surface. The fishing lasts from about the middle of June to the middle of September, and while it continues there is no lack of exciting sport. J. C. VAN HOOK.

SAN DIEGO, Cal.

AQUARIA NOTES.

Occasional Observations of the Fishes in the Aquaria of the U. S. Fish Commission.

THE RELATIONS BETWEEN SHARKS AND REMORAS.

THE amicable relations existing between sharks and those strange fishes, the remoras, usually attached to them, appear to indicate a considerable degree of reciprocity of some nature. What it is can only be conjectured; but I have often thought that the remora keeps the shark free from parasites, and is thus tolerated. I have seen clusters of goose barnacles growing from the skin of the great sea sunfish, but the skins of the shark, swordfish and rays, which are each attended (or tenanted, as the case may be) by a different species of remora, are, as far as I have seen, free from them. The remora is not a parasite, but is commensal in nature. The laminated disk on top of the head, by which they attach themselves to the skin of the shark—as the small boy fastens his leather sucker to the brick—although giving so tenacious a hold that it is difficult to detach it, slides about on the skin of the shark from belly to back (in which position the remora is upside down), and from head to tail, like a piece of well greased machinery. The common position of the remora, however, is on the belly of the shark.

During one summer at the Wood's Holl station there was a shark about three feet long in one of the aquaria, with three remoras, each about one foot long, attached to it. When the remoras became hungry they would work up under the shark's throat and move about restlessly, and the shark would appear to be looking around anxiously for its accustomed allowance of food. The shark's meal would be two or three pieces of fish about the size of a man's fist, or several fish five or six inches long. No sooner did the shark's teeth close on the fish than the remoras were all activity, seizing the fragments or tearing mouthfuls from its very jaws with the greatest voracity. Sometimes one would detach itself, dart off and catch a small fish, returning at once to its place on the shark to eat it.

Whatever the relations existing between them, they are perfectly harmonious. To the teleologist there can be no fitter illustration of adaptation. The mouth of the shark is underneath. On the other hand the under jaw of the remora is protruding, and its mouth opening upward is perfectly adapted for feeding from the mouth of the shark.

SPOT OR LAFAYETTE FISH.

Reference has been made to the addition of a lot of spot to the collection at Central Station. They prove to be exceedingly hardy, being very easy to transport and live well in the aquaria. They will eat raw beef chopped fine (also oysters, clams, etc.), but seem to enjoy soda cracker equally well. One of them, about 5 or 6in. long, had a great gash on one side and a less severe one on the other, evidently inflicted by the teeth of a bluefish or squeteague. The gash was fully three-quarters of an inch long and gaped open at least half an inch, and was at least a quarter of an inch deep. I would have considered it a mortal wound, but it has wholly healed up, leaving a disfiguring scar. Another one has suffered a severe injury when quite young and is a hunchback.

GIZZARD SHAD.

Three specimens of gizzard shad have adorned an aquarium since Oct. 3. They were somewhat bruised and the fins were considerably abraded when they arrived. Although there was no expectation of keeping them, as it has been generally considered impossible to keep them, or any of the family, in aquaria, they have steadily improved in appearance and are now in fine condition, all traces of bruises and congested blood having disappeared, and the fins having healed up. They eat raw beef scraped fine and soda cracker. They will eat very little while under observation, but a considerable amount of food disappears during the night. In a fresh-water aquarium they would have been attacked by fungus and have speedily died. WM. P. SEAL.

FIRE WEED FOR TROUT LINES.—Judge James G. Swan, of Port Townsend, Washington, informs us that the Indians at Vancouver use the fiber of the common fire weed (*Epilobium angustifolium*) for making an excellent quality of trout lines. The fiber is very tough and lines made from it are strong and durable.

LAKE TAHOE TROUT.

FROM Mr. Max Heilbronner, the genial secretary of the Alaska Commercial Company, we have late reports about the trout fishing in Tahoe Lake and other lakes in the vicinity. Mr. H. went over from San Francisco with some friends early in July, and the party had great success with the trolling spoon, using minnows for bait. Artificial flies were seldom used. In the latter part of June and early in July the fishing is good. During August, owing to the abundance of minnows, the trout will not take the fly. In September the sport is fairly satisfying, but nothing extra. Indians have made a great deal of trouble by using traps in Tahoe Lake; this drain on the supply, however, has been checked. The fishing varies from year to year. Mr. Martin and Mr. Lydell, of Yanks, Cal., are fishermen who furnish the hotels with trout and take parties out. Boats holding four persons are furnished at from $2 to $5 per day, this including lines and bait. The Tallac House charges $3 per day. McKinney's rates are $12 per week. Fallen Leaf Lake, Floating Island Lake and Cascade Lake contain the Tahoe species, but fishing is best in Lake Tahoe. Emerald Bay and Carnelian Bay are lovely sheets of water near by. The route from San Francisco is by the Central Pacific to Truckee, stage to Tahoe City, and boat to hotel. The beautiful trout above referred to is figured in FOREST AND STREAM of April 4, 1889. In June and September all the individuals found in the San Francisco markets were moderately small; perhaps at some other season large examples may still be observed.

THE METABETCHOUAN. — Westerly, R. I., Oct. 28.—*Editor Forest and Stream:* In a recently published communication concerning the winnanish fishing in the Metabetchouan River, I noticed a rather startling series of catches, claimed to be that of a single rod. The score given was composed of a series of catches by four rods, one of which was mine, with twenty-four fish to its credit, in three outings, which weighed at the house several hours after being caught, 89½lbs., viz., three of 11¼, seven of 28, fourteen of 49½. Now, I am only too pleased to hear of a brother's good luck in your eagerly read columns, but when such a glaring misstatement is given, one who knows the truth is apt to think it an advertising scheme. To be sure the fishing in the river is good, but in obtaining it one must take some very hard tramps and put up with miserable food on his return home at night. Give good trails to the pools and good food and one could ask for nothing better. A word to the wise, etc.—EDWIN R. LEWIS, M.D.

WHERE THE KINGFISHERS WOULD HAVE FARED BETTER. —Alpena, Mich., Oct. 19.—One can never tire of reading such papers as those contributed by "Kingfisher." I think his description of that tussel with the muscalonge the most perfect pen-picture I ever read, as one almost imagines that he is doing it himself. But he seemed to have poor luck with black bass on Echo Lake. If he had been on some of our lakes back here, he would have found plenty. Another gentleman and myself with two youngsters caught in five days 659 black bass and 37 pike and muscalonge, all of which we turned loose in the lake as soon as landed except what we wanted for eating of course. It is a day's journey by buckboard to reach those lakes, but the roads are not bad in summer. —H. B.

TROUT FISHING FROM SAN DIEGO, CAL.—The nearest trout fishing is sixty miles northeast of San Diego, at Polar or Smith Mountain. A gentleman went there in the latter part of June and caught 23, averaging about 10in. in length. There are no trout south of this locality in San Diego county. All the streams except those in the mountains dry up in summer; even San Diego River does so and water is collected in wells sunk in the river and pumped by engines into reservoirs, from which it is piped to the city.—J. C. VAN HOOK.

THE OPAH IN CALIFORNIA.—We have received from a correspondent in San Francisco a photograph of a fish previously unknown to the California coast and entirely strange to all who saw it. Upon examining the print we recognized the species as the opah (*Lampris guttatus*), which is occasionally found about the British Isles, rarely in the western Atlantic, and more frequently in Japanese seas. The California example weighed 70lbs., and was caught about October, 1888, in Balenas Bay.

LARGE THIMBLE-EYE MACKEREL.—A fine looking thimble-eye mackerel (*Scomber pneumatophorus*) seen in San Francisco recently weighed 3lbs., which is far above the weight of the largest individuals of the same species in the Atlantic, as far as our observation goes.

POTOMAC BASS.—Bass fishing in the Potomac is affording good returns and the proportion of large fish is much greater than usual. Hancock and Sir John's Run are favorite localities, but there is fine fishing all the way up to Woodmont.

HOLBRICOT OR AMBER FISH.—In San Francisco the amber fish or amber jack (*Seriola lalandi*) is styled holbricot by dealers in Clay street market.

Fisheulture.

LATE APPEARANCE OF SHAD.—On Oct. 5, Mr. Thomas Reynolds caught a female shad weighing 3lbs. in the Susquehanna River, near Havre de Grace, Md. The eggs were so ripe that they ran out of the fish. This is said to be a very unusual occurrence and may have been due to the extraordinary season of cold and wet weather. Shad are caught at the mouth of the Potomac late in the summer and may be taken fresh at Leonardtown and other places all summer in certain years. We believe that this and other anadromous fishes will be discovered in Chesapeake Bay when diligent investigation of the winter habitat of our economic species has been completed. On the California coast shad are to be found in the brackish water of the bays during the winter months. From December to February some very large ones are captured in gill nets of 8¼in. mesh, set for salmon.

EFFECTS OF SEWAGE IN RIVERS.—At the recent Sanitary Conference in Worcester, Mr. Willis Bund, chairman of the Severn Fishery Board, read an important paper on the standards of purity for effluents from sewage works. He charged that experiments, with the exception of the York, were limited to streams containing only members of the carp family (*Cyprinidæ*), and related chiefly to the introduced goldfish, which is one of the hardiest members of this family. Tests which are satisfactory when applied to this fish do not prove anything with regard to the salmon family, whose genera are lovers of purity, and avoid filth even at the expense of forsaking their birthplace. Mr. Bund reasons that the presence of goldfish, roach and other coarse minnows at the mouths of sewage effluents is no guarantee that salmon and trout will continue to inhabit the contaminated waters, and he urges the necessity of establishing the proper standard of purity with reference to the actual denizens of each stream.

The Kennel.

FIXTURES.

DOG SHOWS.

Dec. 5 to 7.—First Dog Show of the Continental Kennel Club at Denver, Col. L. A. Weston, Secretary.

Jan. 6 to 11, 1890.—Annual Dog Show of the Michigan State Poultry and Pet Stock Association, at Bay City, Mich. W. F. Brace, Secretary.

Jan. 13 to 18, 1890.—First Annual Dog Show of the Georgia Pet Stock and Bench Show Association, at Augusta, Ga. A. H. Vonderleith, Secretary.

Jan. 27 to Feb. 1, 1890.—Dog Show of the Colorado Poultry and Pet Stock Association, at Denver, Col.

Feb. 11 to 14, 1890.—Fourteenth Annual Show of the Westminster Kennel Club, American Institute Building, New York. James Mortimer, Superintendent.

March 11 to 14, 1890.—Second Annual Dog Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

March 25 to 28, 1890.—Second Annual Dog Show of the Mass. Kennel Club, Lynn, Mass. D. A. Williams, Secretary.

April 1 to 4, 1890.—Sixth Annual Dog Show of the New England Kennel Club, at Boston, Mass. J. W. Newman, Secretary.

FIELD TRIALS.

Nov. 4.—Third Annual Field Trials of the Indiana Kennel Club. P. T. Madison, Secretary, Indianapolis, Ind.

Nov. 11.—Inaugural Field Trials of the Canadian Kennel Club, at Chatham, Ont. C. A. Stone, Secretary, London, Ont.

Nov. 11.—First Annual Field Trials (foxhounds) of the Brunswick Fur Club, on the Albany Hills, South Paris, Me. Mr. J. H. Baird, Secretary, Auburndale, Mass.

Nov. 18.—Eleventh Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Saratoga Springs, N. Y.

Nov. 22.—Eighth Annual Field Trials of the Robins Island Club, for members only. Walter L. Wellington, Secretary, Brooklyn, N. Y.

Dec. 2.—Inaugural Field Trials of the Central Field Trial Club, at Lexington, N. C. C. H. Odell, Secretary, Mill's Building, New York, N. Y.

Dec. 16.—Second Annual Field Trials of the Southern Field Trial Club, at Amory, Miss. T. M. Brumby, Secretary, Marietta, Ga.

Jan. 20, 1890.—Seventh Annual Field Trials of the Pacific Coast Field Trial Club at Bakersfield, Cal. H. H. Briggs, Secretary, 313 Bush street, San Francisco, Cal.

Jan. 27, 1890.—All-Day Field Trials, at West Point, Miss. F. R. Hitchcock, 44 Broadway, New York, Secretary.

Feb. 11, 1890.—Fourth Annual Field Trials of the Texas Field Trial Club, at Marshall, Tex. W. L. Thomas, Secretary.

"POH PRINNEH."

DODGER has become an old dog. The salubrious climate of Pine Hill fails to restore his youth. He goes around with a stiff, martial bearing. He refrains from altercations and avoids those rude, boisterous curs that sidle and jostle and infringe on his dignity. He never evinces surprise nor betrays himself into a hasty movement. He loves repose. He refuses now to accompany Kellup in his rambles further than the brow of the hill, where he can look back at the house. When requested to come further, he wags his tail in a decrepit way and barks. Then Kellup concludes not to climb the bars, but settles on a flat stone instead, and plucks a spray of spearmint to crush out its odor, while the dog stretches on the grass with his head averted from the expected lecture. He is not disappointed. The old gentleman touches severely on the facts that he never would "travel to heel" nor under a wagon, and never retrieved a bird nor even pointed one in his life; nor ever did a thing a man might be proud of, but often brought derision on his master.

When Dodger barked expostulatingly at this, Kellup could not fail to notice how mournfully hollow it sounded, and how gray the muzzle had grown, and how well it matched the eyebrows, and how bad the coat was getting—rusty and unkempt. He tried to joke it off, and declared he would shave the dog in artistic style, with a lion's mane and a beautiful tuft on the tail, but concluded Susan wouldn't allow it. Then he indulged in comparisons, and recalled how the dog used to come panting, with tortuous wrigglings and convolutions, after describing great circumferences at full speed. He wound up with some reflections on the character of Maria Muzzey for ever bestowing such a nickname on the dog.

"A great name," said he, "for a sporting dog. Might do very well for a poodle." Then, with intense disgust, "Prinney!" said he, "Pore Prinney!" But he couldn't say it just like Maria, for his teeth were not gone in the same place. The truth was, she had bestowed this name on Dodger in memory of a pet long deceased, and claimed it was quite as appropriate, for she never knew him dodge anything, not even the broom sweeping the fireplace, and she said he would lie in the sand and make wagons turn out. So she persisted.

One morning Dodger refused his breakfast, and Maria made him a bed of nice sweet hay in the stall. Toward noon Susan tried him in vain with a tidbit, so Maria trudged off to the village without a word. On her return, an hour later, she unwrapped a brown paper, and proceeded to broil a piece of sirloin over the kitchen fire. She dressed it with butter, and was greatly pleased when Dodger mouthed it a little. When Kellup came home, toward evening, he found her where she had been all afternoon, beside the dog, with her rocking-chair and knitting, "to keep him company."

That night she made an excuse to stay up late, and after the old folks had retired she quietly hung a lantern on the side of the house where the rays would shine through the barn door. In the morning when Kellup came down to breakfast she responded to his salutation, "Oh, poh Prinneh! poh Prinneh! he's dade." JEFFERSON SCRIBB.

WESTERN MASSACHUSETTS FOX CLUB.—The Western Massachusetts Fox Club will hold their annual hunt at Chester, Mass., Nov. 13 and 14. On the evening of the first day a dinner will be given by the club to the guests. Following is a list of the officers of the club: Pres., Geo. W. Romback; Vice-Pres., F. S. Gross; Sec., Dr. O. J. Shepardson; Treas., C. D. Smith; Ex. Com., Gurdon Bill, E. A. Perkins, F. M. Pease, R. B. Crane, R. M. Fairfield, Wm. M. Williams, J. H. Casey, F. S. Hagar, E. T. Slocum and Dr. S. C. Burton.

PAST AND PRESENT CONDITION OF THE A. K. C.

Editor Forest and Stream:

In December, 1887, the FOREST AND STREAM published an editorial in which was questioned the financial condition of the A. K. C. At that time I was chairman of the Stud Book Committee, and I sent a letter to the FOREST AND STREAM on Jan. 7, 1887, which was published in their issue of Jan. 19, as follows:

I am very much surprised that you would permit the statement to be made in your paper that the American Kennel Club was indebted on account of the Stud Book, when the fact is that the club has paid all bills and now has $800 and over to its credit in bank. Again, it is not true that any money has ever been contributed by individuals. The Stud Book has more than paid its way, and the only money received has been for registration fees, advertisements and for the book. I believe that next year we can pay all expenses at 25 cents per dog.

Please also permit me to say that all this howl about "bulldozing" is mere bosh. You might as well say that it is "bulldozing" to have a bench show committee require an exhibitor to pay an entry fee of $3 for each dog. The registration of dogs is to preserve the pedigree. The giving of bench shows is not for the purpose of making money; the object is to encourage and improve the breeding of dogs. Just look at the contest now going on in your own paper over the breeding of the beagle Kino. If this Rule 2 had been in force when this dog was first exhibited the breeding would have then been settled.

I hope in the next issue of your paper that you will correct the statement you have made in regard to the financial condition of the club; and I will say that if you doubt my statement of the same, if you will send Mr. Hammond or an accredited reporter for your paper to the office of the A. K. C., No. 44 Broadway, I will take pleasure in showing him expense account, bank account and all of the accounts of every name and nature, vouchers, etc., of the Stud Book Committee.

I do not charge that you have knowingly made this misstatement, but believe that you have been imposed upon.

C. J. PESHALL, Chairman Stud Book Committee.

NEW YORK, Jan. 7.

I was then of opinion that the fee for registration in the Stud Book could be reduced to twenty-five cents, and that the Stud Book could be made self-sustaining. The FOREST AND STREAM accepted my invitation and the books and the accounts of every name and nature were opened for their inspection. The inspection was made by Mr. Reynolds, one of the editors of the FOREST AND STREAM, and a bookkeeper whom he brought with him. A few days after this inspection was made, Mr. Vredenburgh, who was the then secretary, sent the following statement to the FOREST AND STREAM, which was published in due course Jan. 26, 1888.

STATEMENT OF RECEIPTS AND EXPENSES OF THE A. K. C. S. B. FOR THE YEAR ENDING DEC. 31, 1887.

Receipts.

Received dues from A. K. C. members (not used for Stud Book purposes)		$236.25
" Entries for Vol. IV		1,089.50
" Advertisements, Vol. IV., Parts I., II., III. (Part IV. not yet due)		469.25
" Subscribers, Vol. IV.		221.00
" Cash sales, Vol. IV., Parts I., II., and III., (Part IV. not yet published)		213.50
" Cash sales, Vol. I., II., and III.		76.60
" Tabulated pedigrees		110.00
" Donation for a bookcase		10.00
" Fees, charged for collections		.65
		$2,453.15
Balance on hand Jan. 1, 1888		$650.04

Expenses.

Paid for Club expenses from A. K. C. dues	$58.27
Librarian of Congress, Copyright	4.00
Fees charged by bank for collections	6.50
Petty expenses (telegrams, express, etc.)	8.03
Gas bills	11.19
Postage stamps	67.75
Office furniture	67.95
Paid for Vols. I., II. and III	59.50
Office rent	161.58
Printing Stud Book, Part I., II. and III. (including a new issue of Vol. II. and 5,000 copies of the bench shows edition, distributed at the spring shows for the benefit of advertisers)	954.74
Salary of Secretary	400.00
Balance on hand	650.04
	$2,453.15

Now, it appears from this statement that during the year 1887 the Stud Book was issued quarterly, and that the entire cost of the issue and publication and the costs of the A. K. C., including expenses of every name and nature, as well as 5,000 copies of the Stud Book, as appears by the report, which was published and given away as stated in the report, amounted, all told, to the sum of $1,803.11; so that the dog men and breeders of this country during that year received the benefits derived from the A. K. C. for that sum. During that year we had to contend against the rival register, the *A. K. R.*, which was being published and backed with all of the influence of the FOREST AND STREAM. In addition to that we had to pay very much more for the work of registration, for the reason that very few dogs had sire and dam previously registered, and consequently the pedigrees were extended as far as possible, also all winnings were given as well, and the cost then of registration was very much more than the present cost, for the reason that most of the dogs now offered for registration have their sires and dams registered and all that is necessary in such cases is to give the name of sire and dam, and Stud Book number, breeder, owner and date of birth.

During this year Rule 2, requiring compulsory registration, had not been passed, and dogs could be shown without being registered. Also we must take into consideration that the A. K. C. commenced the year with only thirteen clubs, local members, and ended with nineteen, and notwithstanding all these facts we find that the A. K. C. only collected for the entire year the sum of $2,453.15, as appears from the treasurer's report above submitted. And in addition thereto, from an examination of the treasurer's report made at the last meeting held Sept. 18, 1889, that the secretary now has of the quarterly parts of the volume for the year 1887, 703 copies, which he enters as assets valued at $351.50, and I have no doubt but what $200 worth have been sold since the publication of the secretary's report for 1887; consequently we find that the club for that year, while it perhaps was not governed or had in its possession "health, wealth and wisdom," was yet willing to not only make a detailed report but to invite and stand the critical examination of its books and accounts by those engaged in a rival publication. 1888 was the trying year, for we not only had to contend against the *A. K. R.*, and the influence of the FOREST AND STREAM, with a vigorous opposition made by that paper against Rule 2, but an opposition club sprang into existence, numbering nearly 200 members, which included among their number many of the most prominent breeders in the country, and two of our most prominent club members resigned, namely, the New Haven and Boston clubs; yet with all this opposition we find that the Stud Book prospered and flourished, and when the year closed all bills of every name and nature were paid out of the actual income earned by the club, and a balance was left in the treasury. The Stud Book had appeared regularly each quarter, and the following stock accumulated during the year: Volume V., 498 copies, valued at $249, as will appear by the secretary's report made at the last meeting, was on hand and paid for, besides many numbers of this volume which had been sold by the club since publication. We also find that the club membership had increased during this year from nineteen to thirty-five, and that the opposition club was practically dead, and that through my many interviews and efforts made with Mr. Grinnell, of the Forest and Stream Publishing Co., Mr. Grinnell, through Dr. Perry, offered the

A. K. R. to the A. K. C. for the sum of $500, which offer was shortly after accepted by the A. K. C., and the rival register ceased to exist. The above is a short history of the workings and actions of the A. K. C. under the old constitution, and which gave to the breeders quarterly their Stud Book and a substantial and equivalent return for the moneys which they paid into the A. K. C., and this brings us down to the year 1889.

Shortly before the beginning of 1889 the delegates and the A. K. C. abandoned the practical and substantial registration which had been inaugurated and by putting into force a new constitution and set of rules providing for an annual publication of the Stud Book, and the publication of a monthly *Kennel Gazette*, as well as the admission of what are now known as associate members. Under this constitution a reckless and extravagant management has been inaugurated, an advisory committee has been created, two editor secretaries have been employed, one secretary editor for the Stud Book at a salary of $1,000 per annum, the other secretary of the A. K. C. and editor of the *Kennel Gazette* at a salary of $1,500 per annum, typewriters, stenographers, expensive offices, and with a costly and expensive publication to bring out monthly, which, with the exception of the two advertisements which appear upon the front and back cover, is of no earning capacity whatever except what it received from the dog men and breeders, and to whom it is of no utility whatever, while to some it is a detriment, for many of the breeders have placed advertisements in this *Kennel Gazette* without the expectation of receiving any return whatever therefrom, excepting the object to assist and sustain the club. We now find that since this new constitution went into force and the inauguration of the reckless and costly management, which must necessarily follow under the present constitution and rules, that for the first eight months of this year the dog men and breeders have already paid in about $6,000, and the officers have expended about the same amount, yet we have no Stud Book or even the sign of one, and notwithstanding this great expenditure and cost to the breeder, the Stud Book Committee have increased their demands 100 per cent. upon the breeders, and after Jan. 1 next the breeder must pay to register his dog in the Stud Book for the sum of one dollar.

I earnestly hope that the local clubs will at once take this matter in hand and that at the next annual meeting we proceed to adopt a new constitution for the A. K. C. and rules which will provide and give to the dog breeders in this country a Stud Book published every three months, and a uniform system of bench show rules for the government of clubs.

This can now be done by a concerted action of the local clubs, and the breeders will be enabled under a conservative and economical management to have their dogs registered at a cost not exceeding 25 cents and a stud book which at the end of the year should not exceed $1.50. The associate membership should be done away with, and if these gentlemen are interested in dog matters they should be required to obtain that interest through the local clubs where they reside, for it is this local interest which builds up, improves and encourages the breeding of good dogs. If the breeders have any money to spare, let it be used within their own clubs in promoting bench shows, and thereby they can enjoy themselves much of the "health, wealth and wisdom" which is now experienced only at 44 Broadway. PESHALL.

JERSEY CITY, N. J., Oct. 21.

BRUNSWICK FUR CLUB FIELD TRIALS.

Editor Forest and Stream:

The first annual field trials for foxhounds of the Brunswick Fur Club will be held at the Albany Hills, Me., commencing Nov. 11, and continuing every fair day thereafter till the various classes have been run off. This is the first instance in New England, that I am aware of, where *bona fide* field trials for foxhounds have been inaugurated, and the Brunswick Fur Club claims the honor of instituting them. During the early part of October several members of the club went to the Albany Hills with a few choice hounds to test them, and after five days' running were satisfied that foxes were plentiful and ran nicely, and that good accommodations for the members of the club could be had at reasonable rates. The object of these field trials is the improvement of the stock of hounds; and careful observations will be taken during the races for future benefit. It is expected that about thirty members of the club will be present, and sixty or seventy hounds.

The club, in its desire to ascertain the best type of foxhound, will probably put up a purse of $100 this winter on a pack of six dogs selected from the club's kennels, and challenge any other pack of six dogs in the United States, they to be backed by the same amount, for the best three in five races, the winning pack to take all the stakes. These races will probably take place in February at the New Meadows, Me., where dogs can run all day, and pluck and endurance gain the victory.

Our Southern fox-hunters are especially requested to attend our meets and bring some of their best dogs. The officers of the club are as follows: President, H. C. Newell, Ashburnham, Mass.; Vice-President, R. D. Perry, Braintree, Mass.; L. O. Dennison, Waltham, Mass.; A. McDonald, Rockland, Me.; Secretary, J. H. Baird, Auburndale, Mass.; Treasurer, Henry Stetsoe, Brunswick, Me.; Directors of Hunts, Ed Thomas, New Meadows, Me.; Dr. A. C. Heffenger, Portsmouth, N. H.; C. H. Greenleaf, Bath, Me.; A. M. Gerry, South Paris, Me.; Geo. Russell, Fall River, Mass.; W. S. Perry, Worcester, Mass.

Further information regarding the field trials, rules governing trials or anything pertaining to the meet can be had of the secretary. PISCATAQUA.

PORTSMOUTH, N. H., Oct. 26.

THE GORDON SETTER CLUB.

NEW YORK, Oct. 26.—*Editor Forest and Stream:* Referring to the communication in your issue of Oct. 24, dated St. Louis, Oct. 15, and signed J. Whitaker, M. D., I will merely state that what was originally stated is still adhered to. Several members of this club, among the number the undersigned, did not think the club had been properly managed and that a change in the executive body would prove beneficial. The attempt was made to induce the committee to postpone action for sixty days in the matter of the election. This was not done, but the election was held and the old officers were re-elected. How this election can be valid under the constitution remains for the future to decide. The need of a revision of the constitution was urged which the present executive committee of three may determine to do in the ensuing year. Thus it is easy to perceive that my mission in this regard has ended and the efforts made have proved fruitless. For me to attempt to answer the many personal insinuations or innuendoes that might emanate from the possibly fertile brain of Dr. Whitaker would be useless, or for me to enter into a discussion on many other matters referred to by him which are not at all pertinent to the original subject is not my business, as the subject which originated my first open letter has been disposed of. All further communications from Dr. Whitaker will be treated with silence. In conclusion I will say that it is my earnest hope that the Gordon Setter Club may prosper and that the management for the ensuing year will be less open to criticism than for the past.

JOHN H. MEYER.

INFECTION AND DISINFECTION.

THE disinfection of kennels is a matter of such importance that it is remarkable that the subject should be so little understood; or rather that so many of those intrusted with the care of kennels should have so little idea as to what is really required in a disinfectant. Absence of smell, or possibly the substitution of one odor for another, is considered by many to be the one thing needed to secure freedom from disease.

"Clean sawdust and fresh air is all I use," said the owner of a noted kennel recently, "and I want nothing more. I have been here four years, and have never had a case of distemper, so I am perfectly satisfied." Happy, thrice happy owner. But he never shows puppies, and he does not advertise his stud dogs, the use of which is permited only in the case of personal friends. And then the bitches are isolated long enough to allow of sufficient observation to insure the detection of any signs of infectious disease. It is entirely due to the wisdom of these arrangements that clean sawdust and fresh air alone are needed in these kennels. All that has been necessary was to deodorize the kennels, and cleanliness and fresh air will do that most thoroughly.

Some of our most popular disinfectants rest their reputation simply and solely on the makers' claim to produce something similar to fresh air, or, better still, to sea breezes. The chemical combinations are really deodorizers, substituting a pleasant odor for an offensive one. A disinfectant to be reliable must be a germicide, that is, it must be capable of destroying germ life in every stage and in every form. These "sea breeze" producers will doubtless destroy some forms of germ life, but not when diluted as in common use. In other words they will not destroy germs unless they are used in such strength that they will also destroy or at least injure the coat, or the skin, or the clothing in which the germs are lodged.

To understand what is needed in a disinfectant we must know something of the life history of the germs that cause the diseases which we desire to banish from our homes, our stables and our kennels. To show this briefly and plainly is the object of this article, and we propose to deal fully, later, with the question of disinfection, and to examine briefly the claims of some of the preparations in common use as disinfectants.

In the early days of surgical practice there was a large percentage of deaths from the mortification of wounds. But our surgeons soon discovered that this was largely due to dirt, and they at once set about minimizing the risk of mortification by protecting all wounds from contact with dirt. This was no easy matter, for the air, as we know, is laden with dust, and we are constantly and inevitably in contact with minute particles of dirt, although we can only see them in bright sunshine. But it is important to note that long before the germ theory of putrefaction and disease was mooted English surgeons had adopted such precautions against dirt that serious cases of mortification were reduced to a minimum.

They had discovered that dirt was fatal, and they guarded against it accordingly, but why it was fatal few of them suspected. The first step toward a knowledge of the germ theory was the discovery of the yeast plant, in 1836, by Cagniard de la Tour. Prior to that the belief was current that all epidemic diseases were caused by what is called malaria, and this was supposed to be organic matter in a state of decay. It was supposed that this matter was capable of absorption into the body through the lungs, or skin, or stomach, and that it had the power of spreading in the body thus invaded the destructive process by which it was itself assailed.

Yeast was commonly mentioned as an illustration of this, as it was supposed to be a visible exhibition of matter in a state of decomposition, capable of propagating indefinitely its own decay. Why should not a particle of rotten malaria in the human body set up a similar action?

Cagniard de la Tour gave an unexpected answer to this query by proving the existence of the yeast plant, a living organism, which, when placed in proper position, feeds and grows and propagates itself, and in this way carries on the process which we now know as fermentation—what had hitherto been considered a process of decay was in reality a form of active life.

Schwann, of Berlin, discovered the yeast plant about the same time, and early in 1837 he made the announcement of another and equally important discovery. This was the fact that decoctions of meat, etc., when protected from the action of ordinary air, could be kept for any length of time without putrefaction. Calcined air could be admitted freely to the decoctions without any bad result. Putrefaction, then, said Schwann, is caused not by the air, but by something in the air, something which could be destroyed by heat.

Helmholtz, Ure and Pasteur had already arrived at similar conclusions from different experiments, and further researches by Schultze, by Schroeder, by Dusch, and by others led to similar results. It was therefore established beyond doubt that the decay of dead matter, animal and vegetable, was due not to the action of dirt, nor of the air, nor of gases, as had sometimes been maintained, but to living organisms resting in the dirt or floating in the air. These organisms settling on dead matter and reproducing themselves with marvelous rapidity, speedily consumed the tissues thus invaded, and produced the result which we call decay.

Side by side with these experiments, and supported and confirmed by their results, came the theory that many of the most deadly diseases that inflict men and animals were also due to germs floating in the air and capable of reproducing within the body after absorption a form of parasitic life which would in its turn reproduce the original disease. The strength of the theory consisted mainly for many years in the well-known fact that each disease would reproduce itself infallibly time after time. Just as wheat reproduces wheat so small-pox would cause small-pox, cholera would cause cholera, and scarlet fever would cause scarlet fever. Each disease would in fact reproduce itself with as much certainty as if it were a dog or a cat.

Sir Joseph Lister was the first to apply the knowledge gained by Schwann and others as to dead matter to the living tissues of those suffering from surgical or other wounds, and thus revolutionized the art of surgery. By surrounding the wounds with a spray of carbolic acid he destroyed the germs which would otherwise cause mortification and death. This was the first application of the principle of disinfection, and its efficiency is entirely due to the fact that the carbolic acid destroys the germs that would cause the form of disease known as mortification.

While Lister and his followers were perfecting their antiseptic treatment of wounds, others were working steadily at the germ theory of the causation of disease, the artificial cultivation of the *Bacillis anthracis* under microscopic observation being, we believe, the first great achievement in this field. To Professor Koch belongs the honor of having defined this most formidable microbe, although he did not actually discover it. As early as 1850 Davaine and Rayer had observed microscopic rods in the blood of animals that had died from splenic fever, but they made no use of their observation, and took no further steps in the matter until thirteen years later. Then Davaine's attention was again drawn to the matter by Pasteur's researches, and after some further investigations he stated that these rods were the cause of the fever. But nothing came of this, for these rods lost their potency in a few months, and it was a well-known fact that the contagium of anthrax would hang round sheds and layers for years.

In 1875 Dr. Koch, while holding a small appointment near Breslau, took up the study of anthrax, and cultivated these rods under microscopic observation. During a period of thirty hours the rods developed into a totally different form which had not previously been noticed by any microscopist, and this form was found to retain its virulence for any length of time. In 1876 Professor Koch published a paper giving the results of his experience, and this paper at once gave an impulse to other workers. Pasteur, who had previously investigated the matter without definite result, now resumed his experiments, and by attenuating the virus obtained his vaccine for splenic fever.

The virulence of this disease may be estimated from some statistics. In Russia, where the disease is known as the Siberian plague, it formerly wrought fearful havoc. In one province in one year the disease carried off 100,000 cattle and sheep, while more than 300 persons died from malignant pustule, the name by which the disease is known in human beings. Anthrax was also terribly destructive in Egypt Spain, Italy and France. In the latter country the loss in some years amounted to from fifteen to twenty millions of francs.

The contagium of this disease, as already noted, would lurk in sheds and in pastures for years, and then break out afresh when cattle came upon the scene. Professor Koch kept some of his virus, dried and pulverized, for four years, and then found it as absolutely fatal as when fresh from the fever-stricken animal. But M. Pasteur rendered this murderous virus not only harmless to life, but a sure protection against the disease, which has now lost its chief terrors.

The virus of distemper is now being cultivated by Mr. Everett Millais and other gentlemen with a view to its attenuation for protective purposes. It will, therefore, be well to refer briefly to the theory underlying vaccination.

When a log of wood or a bundle of wheat or barley straw is burned, a certain amount of mineral matter is found in the ash. This amount is very small in comparison with the bulk of the block or the straw, but it is absolutely essential to the growth. When a soil is exhausted of its mineral constituents it is well known that no crop will grow. The germs that cause specific diseases require certain constituents to support their life, just as surely as wheat or barley, or any other plant. It is, therefore, easy to understand how one crop of germs may so exhaust the blood and tissues as to make it impossible for a second crop to exist. The soil is exhausted, and until the lost constituent is restored the body is effectually protected against any further attack of the same disorder.

It is important to remember that a mild or attenuated form of the virus may suffice to exhaust the "soil," and that the more highly destructive virus may afterward be introduced without any bad result. Briefly, this is the whole secret of vaccination.

We have now followed step by step some of the researches of science into the means of infection. Our case would be immeasurably strengthened were it possible for us to deal properly with M. Pasteur's work, which far exceeds that of all other microscopists put together in extent and in its marvellous achievements. But we have said enough to give a fair idea of what science has actually done in this field in the last thirty years or so. And what has been achieved already, affords the strongest possible hope for the future.

We believe the day is not far distant when science will do for puppies what nature does for older dogs by protecting them from distemper. Meantime, for that and for mange, thorough disinfection must be our sheet anchor.

Among the diseases of dogs few are more common than that which is termed mange, and certainly there is none which is less understood generally. Almost every skin disease passes under its head, although there are two, and only two, kinds of mange. Neither is very common, and one is rarely met with. The most common is the "sarcoptic mange," the actual existing cause of which is a very minute and almost microscopic insect. This parasite draws nourishment from the skin and causes intense itching, which, in turn, incites scratching and develops the disease known as eczema. The male insect remains on or near the surface of the skin, while the female digs into the deeper and softer layers, and burrows until she dies, which is generally in three or four months. Along the tunnel which she makes she deposits one egg after another, blocking up the passage with them. The number of eggs which one female lays is near fifty. The young are hatched in about two weeks. As soon as they are sufficiently developed and are released from the furrows, they run over the surface, and the females among them, after union with the males, begin to tunnel like their mothers before them. The itching occasioned by these parasites is intolerable. Around the furrows made by them there forms, first, small pimples, which soon change to vesicles and pustules; they discharge a purulent matter, which dries into thick crusts. These practically close up the furrows, but the itching causes the sufferer to scratch, and by the nails the coverings are torn off and the young insects set free. Unless effectual remedies are applied this form of mange, as might be expected, grows rapidly worse, and large surfaces of skin are soon torn and raw.

The other and more troublesome form, follicular mange, is usually attributed to an animal parasite, the *Acarus folliculorum*. But science has lately cast some doubt on this matter, and it now seems probable that this form of the disease is really due to a vegetable mould. But in either case, as the disease attacks the skin only, instead of invading the tissues, as in distemper, the proper remedy is disinfection, a matter which we hope to deal with thoroughly in our next.—*Mertin, in English Kennel Gazette.*

AMERICAN COURSING CLUB.

[*Special to Forest and Stream.*]

GREAT BEND, Kan., Oct. 29.—The meeting of the American Coursing Club closed to-day. The weather has been good and the attendance large. The class of competing dogs was exceptionally high. Mr. D. N. Heizer's imported dog Trales won first in the All-Aged Stake; H. C. Lowe's imported bitch White Lips second. In Derby Stake, D. C. Luse's Lady Barton and Lady in Black took first and second undivided. These puppies, both imported, are by Trales out of Dick's Darling, and both are owned in Great Bend. There is general satisfaction with the results of the running. The judge was badly hurt by a fall from his horse to-day, and Mr. B. Waters was also hurt by a fall.

E. H.

TRANSPORTATION TO THE FIELD TRIALS.

SARATOGA SPRINGS, Oct. 26.—*Editor Forest and Stream:* Arrangements have been made with all northern railroads for reduced rate of fare to all who attend the field trials of the Eastern and Central clubs. By procuring a certificate from the ticket agent at place of starting, return ticket can be had upon presentation of the certificate at High Point or Lexington, N. C., at one-third the regular fare. Each person can also procure transportation for three dogs, if entered for the field trials, by procuring a card from Col. C. H. Odell, secretary of the Central Field Trial Club, or from me. W. A. COSTER, Secretary.

CANADIAN TRIALS.—London, Ont., Oct. 26.—All the arrangements are about completed for the Canadian Kennel Club's field trials to be held at Chatham, Ont., on Nov. 11 and succeeding days. It has been decided to keep open the entries until Thursday, Nov. 8, as the time has been so short for parties to work their dogs on quail before deciding about entering. Entries should be made as soon as possible with the secretary, C. A. Stone, London, Ont.—C. A. STONE.

COURSING RULES.

ADOPTED BY THE EASTERN COURSING CLUB FOR THE GUIDANCE OF COURSING MEETINGS.

1. The Judge shall be appointed the night the drawing takes place. The Slipper and other field officers shall also be appointed on the night of the draw.

2. Two weeks' notice shall be given of the day of the drawing through the public press.

3. The drawing shall take place at least three days previous to the running, when the time and place of putting the first brace of dogs into the slips shall be declared. A card or counter bearing a corresponding number shall be assigned to each entry. These numbered cards or counters shall then be placed together and drawn indiscriminately. This classification once made shall not be disturbed throughout the meeting, except for the purpose of guarding, or on account of byes. Dogs whose positions on the card have been altered in consequence of guarding or of byes, must return to their original position in the next round, if guarding does not prevent it.

4. GUARDING.—When more than one nomination in a stake is taken in one name, the greyhounds, if *bona fide* the property of the same owner, shall be guarded throughout. This is always to be arranged, as far as possible, by bringing up the dogs from below to meet those which are to be guarded. This guarding is not, however, to deprive any dog of a natural bye to which he may be entitled, either in the draw or in running through the stake.

5. BYES.—A natural bye shall be given to the lowest available dog in each round. No dog shall run a second such bye in any stake, unless it is unavoidable. When a dog is entitled to a bye, either natural or accidental, his owner or nominator may run any greyhound he pleases to assist in the course; *provided*, always, that in Sapling Stakes only a sapling may be used, and in Puppy Stakes none older than a puppy. But if it is proved to the satisfaction of the Stewards that no puppy can be found to run an accidental bye, the owner shall have the power of substituting an old dog. No dog shall run any bye earlier than his position on the card entitles him to do so. The Judge shall decide whether enough has been done to constitute a course, or whether it must be run again. If at the commencement of any round in a stake, one dog in each course has a bye, those byes shall not be run, but the dogs shall take their places for the next round as if the byes had been run

6. POSTPONEMENT OF A MEETING.—A meeting appointed to take place on a certain day may, if a majority of the committee (and the Stewards, if appointed) consider the weather unfavorable for coursing, be postponed from day to day; but if the running does not commence within the current week, all nominations shall be void, and the expenses shall be paid by the subscribers, in proportion to the number of nominations taken by each. In the case of Produce Stakes, however, the original entries shall continue binding, if the meeting is held at a later period of the season.

7. TAKING DOGS TO THE SLIPS.—Every dog must be brought to the slips in proper turn without delay, under a penalty of five dollars ($5). If absent for more than ten minutes (according to the report of any one of the Stewards), its opponent shall be entitled to claim the course, and shall in that case run a bye. If both dogs be absent at the expiration of ten minutes, the Steward shall have power to disqualify both dogs, or to fine their owners any sum not exceeding twenty-five dollars ($25) each. No dogs shall be put into the slips for a deciding course until thirty minutes after the decision of the course in the previous round, without the consent of its owners.

8. CONTROL OF DOGS IN SLIPS.—The control of all matters connected with slipping the greyhounds shall rest with the Stewards of a meeting. Owners or servants after delivering their dogs into the hands of the Slipper, may follow close after them, but not so as to inconvenience the Slipper or in any way interfere with the dogs, nor must they halloo them on while running, under a penalty of five dollars ($5). Any greyhound found to be beyond control, may be loosed out of the slips, and the course decided by the Rules of the Club.

9. GREYHOUNDS OF SAME COLOR TO WEAR COLLARS.—When two greyhounds, drawn together, are of the same color, they shall each wear a collar, and the owners shall be subject to a penalty of one dollar ($1) for non-observance of this rule, the collar to be red for the left-hand side, and white for the right-hand side of the slips. After the first round, the upper dog on the card for the day will be placed on the left hand and the lower dog on the right of the slips.

10. The order to slip may be given by the Judge, or by a Slip-Steward, or the Stewards of a meeting may leave the slip to the sole discretion of the Slipper. The length of slip must necessarily vary with the nature of the ground, but should never be less than eighty yards, and must be maintained of one uniform length, as far as possible, through each stake.

11. THE SLIPPER.—If one greyhound gets out of the slips, the Slipper shall not let the other go. In the case of slips breaking, and either or both dogs getting away in consequence, the Slipper may call both dogs back and put them again in the slips at the discretion of the Stewards.

12. The Judge shall be subject to the general rules which may be established by the Eastern Coursing Club for his guidance. He shall, on the termination of each course, immediately deliver his decision aloud, and shall not recall or reverse his decision, on any pretext whatever, after it has been declared; but no decision shall be delivered until the Judge is perfectly satisfied that the course is absolutely terminated.

13. The Judge shall decide all courses upon the one uniform principle that the greyhound which does the most toward killing the hare, during the continuance of the course, is to be declared the winner. The principle is to be carried out by estimating the value of the work done by each greyhound, as seen by him, upon a balance of points, according to the scale hereafter laid down, from which also are to be deducted certain specified allowances and penalties —all races to be run by courses.

14. The points of the courses are:

a. Speed.—Which shall be estimated as one, two or three points, according to the degree of superiority shown. (See definition *a* below.)

b. The Go-By.—Two points, or if gained on the outer circle, three points.

c. The Turn.—One point.

d. The Wrench.—Half a point.

e. The Kill.—Two points, or in a descending scale in proportion to the degree of merit displayed in that kill, which may be of no value.

f. The Trip.—One point.

DEFINITION OF POINTS.

a. In estimating the value of speed to the hare, the judge must take into account the several forms in which it may be displayed, viz.:

I. Where in the run up a clear lead is gained by one of the dogs, in which case one, two or three points may be given, according to the length of the lead apart from the score for a turn or wrench. In awarding these points, the Judge shall take into consideration the merit or a lead obtained by a dog which has lost ground at the start, either from being unsighted or from a bad slip, or which has had to run the outer circle.

II. When one greyhound leads the other so long as the hare runs straight, but loses the lead from her bending round decidedly in favor of the slower dog of her own accord, in which case the one greyhound shall score one point for speed shown, and the other dog shall score one for first turn.

III. Under no circumstances is speed without subsequent work to be allowed to decide a course, except where great superiority is shown by one greyhound over another in a long lead to covert.

If a dog, after gaining the first six points, still keeps possession of the hare by superior speed, he shall have double the prescribed allowance for the subsequent points made before his opponent begins to score.

b. The Go-By is where one greyhound starts a clear length behind his opponent, and yet passes him in a straight run, and gets a clear length before him.

c The Turn is where the hare is brought round at not less than a right angle from her previous line.

d. The Wrench is where the hare is bent from her line at less than a right angle; but where she only leaves her line to suit herself, and not from the greyhound pressing her, nothing is to be allowed.

e. The Merit of a Kill must be estimated according to whether a greyhound, by his own superior dash and skill, bears the hare; whether he picks her up through any little accidental circumstances favoring him; or whether she is turned into his mouth, as it were, by the other greyhound.

f. The Trip, or an unsuccessful effort to kill, is where the hare is thrown off her legs, or where a greyhound catches her but cannot hold her.

15. The following allowances shall be made for accidents to a greyhound during a course; but in every case they shall only be deducted from the other dog's score:

a. For Losing Ground, at the start, either from being unsighted or from a bad slip, the Judge is to decide what amount of allowance is to be made, on the principle that the score of the foremost dog is not to begin until the second has had an opportunity of joining in the course.

b. Where a Hare bears very decidedly in disfavor of one of the dogs after the first or subsequent turns, the next point shall not be scored by the dog which may be unduly favored, or only half his point allowed, according to circumstances. No greyhound shall receive any allowance for a fall, or any accident of any description whatever, with the exception of being ridden over by the owner of the competing greyhound or his servant (provided for by rule 25), or when pressing the hare, in which case his opponent shall not count the next point made.

16. Penalties are as follows:

a. Where a greyhound from his own defect refuses to follow the hare at which he is slipped, he shall lose the course.

b. Where a Greyhound Wilfully stands Still in a course, or departs from directly pursuing the hare, no points subsequently made by him shall be scored; and if the points made by him up to that time be just equal to those made by his antagonist in the whole course, he shall thereby lose the course; but where one or both dogs stop with the hare in view, through inability to continue the course, it shall be decided according to the number of points gained by each dog during the whole course.

c. If a dog refuses to Fence where the other fences, any points subsequently made by him are not scored, but if he does his best to fence, and is foiled by sticking in a hedge, the course shall end there. When the points are equal the superior fencer shall win the course.

17. *If a Second Hare* be started during course, and one of the dogs follow her, the course shall end there.

18. *A "No Course"* is when, by accident or by the shortness of the course, the dogs are not tried together, and if one be then drawn the other must run a bye, unless the Judge, on being appealed to, shall decide that he has done work enough to be exempted from it. An undecided course is where the Judge considers the merits of the dogs equal, and if either is then drawn, the other cannot be required to run a bye, but the owners must at the time declare which dog remains in. (See rule 21.) The Judge shall signify the distinction between a "no course" and an "undecided" by taking off his hat in the latter case only. After an "undecided" or "no course," if the dogs, before being taken up, get on another or the same hare, the Judge must follow, and shall decide in favor of one, if he considers that there has been a sufficient trial to justify his doing so. A "no course" or "undecided" may be run again immediately, or, if claimed on behalf of both dogs, before the next brace are put into the slips, or, in case of "no course," if so ordered by the Judge, otherwise it shall be run again after the two next courses, unless it stand over to the next morning, when it shall be the first course run; if it is the last course of the day, fifteen minutes shall be allowed after both dogs are taken up.

19. IMPUGNING JUDGE.—If any person openly impugns the decision of the Judge on the ground, he shall forfeit not more than $25 nor less than $10.

20. OBJECTIONS.—An objection to a greyhound may be made to any one of the Stewards of a meeting at any time before the stakes are paid over, upon the objector placing in the hands of such Steward, or the Secretary, the sum of $25, which shall be forfeited if the objection proves frivolous, or if he shall not bring the case before the next meeting of the Eastern Coursing Club, or give notice to the Stewards previous thereto of his intention to withdraw his objection. The owner of the greyhound objected to must also deposit $25, and prove the correctness of his entry. All expenses in consequence of the objection shall be borne by the party against whom the decision may be given. Should an objection be made which cannot at the time be substantiated or disproved, the greyhound may be allowed to run under protest, the Stewards retaining his winnings until the objection has been withdrawn, or heard and decided. If the greyhound objected to be disqualified, the amount to which he would otherwise have been entitled shall be divided equally among the dogs beaten by him; and if a piece of plate or prize has been added and won by him, only the dogs which he beat in the several rounds shall have a right to contend for it.

21. WITHDRAWAL OF A DOG.—If a dog be withdrawn from any stake on the field, its owner, or some one having his authority, must at once give notice to the secretary or Flag Steward. If the dog belongs to either of these officials, the notice must be given to the other.

22. STAKES NOT RUN OUT.—When two greyhounds remain in for the deciding course, the stakes shall be considered divided if they belong to the same owner or to confederates, and also if the owner of one of the two dogs induces the owner of the other to draw him for any payment or consideration; but if one of the two be drawn without payment or consideration from lameness, or from any cause clearly affecting his chance of winning, the other may be declared the winner, the facts of the case being clearly proved to the satisfaction of the Stewards. The same rule shall apply when more than two dogs remain in at the end of a stake which is not run out; and, in case of a division between three or more dogs, of which two or more belong to the same owner, these shall be held to take equal shares of the total amount received by their owners in the division. The terms of any arrangements to divide the winnings, and the amount of any money given to induce the owner of a dog to draw him, must be declared by the Secretary.

23. WINNERS OF STAKES RUNNING TOGETHER.—If two greyhounds shall each win in a stake, and have to run together for a final prize or challenge cup, should they not have run an equal number of ties in their respective stakes, the greyhound which has run the smaller number of courses must run a bye, or byes, to put itself upon an equality in this respect with its opponent.

24. GREYHOUND GETTING LOOSE.—Any person allowing a greyhound to get loose, and to join in a course which is being run, shall be fined $5. If the loose greyhound belong to either of the owners of the dogs engaged in the particular course, such owner shall forfeit his chance of the stake with the dog then running, unless he can prove to the satisfaction of the Stewards that he had not been able to get the loose greyhound taken up after running its own course. The course is not to be considered as necessarily ended when a third dog joins in.

25. RIDING OVER A GREYHOUND.—If any subscriber, or his servant, shall ride over his opponent's greyhound while running in a course, the owners of the dog so ridden over shall (although the course be given against him) be deemed the winner of it, or shall have the option of allowing the other dog to remain and to run out the stake, and in such case shall be entitled to half the winnings if any.

26. DESCRIPTION OF ENTRY.—Every subscriber to a stake must name his dog at or before the entry, giving the name (the running names if they had any) of the sire and dam of the dog entered. For Puppy Stakes the names, pedigrees, ages and colors, shall be detailed in writing to the secretary of a meeting at the time of the entry. No greyhound is to be considered a puppy which was whelped before the first of January of the same year preceding the commencement of the season of running. A sapling is a greyhound whelped on or after the first of January of the same year in which the season of running commenced; and any greyhound whose marks and pedigree shall be proved not to correspond with the entry given, shall be disqualified, and the whole of its stakes or winnings forfeited.

27. BREEDING PUPS.—Every member of the club breeding pups shall notify the Secretary in writing, within ten days after the birth of any pups, of the number of dogs and bitches, colors, and other distinguishing marks, date of birth, and the name of sire and dam. Any member violating this rule will not be allowed to enter or run any of such pups in a Puppy or Sapling Stake.

28. ALTERATION OF NAME.—If any subscriber should enter a greyhound by a different name from that in which it shall have last run in public, he shall give notice of the alteration to the Secretary at the time of entry, and the Secretary shall place on the card both the late and present name of the dog. If notice of the alteration be not given, the dog shall be disqualified.

29. PREFIX OF "NS."—Any subscriber taking an entry in a stake, and not prefixing the word "names" (Ns) to a greyhound which is not his own property, shall forfeit that greyhound's chance of the stake. He shall, likewise, if requested, deliver in writing to the Secretary of the meeting the name of the *bona fide* owner of the greyhound named by him; and this communication is to be produced should any dispute arise in the matter.

30. PAYMENT OF STAKES.—All moneys due for nominations taken must be paid at or before the entry, whether the stakes fill or not, and although from insufficient description or any other cause, the dogs named may be disqualified. No entry shall be valid, unless the amount due for it has been paid in full. For all produce and other stakes where a forfeit is payable, no declaration is necessary; the non-payment of the remainder of the entry money at the time fixed for that purpose is to be considered a declaration of forfeit. The Secretary is to be responsible for the entry money of all dogs whose names appear upon the card.

31. DEFAULTERS.—No one shall be allowed to enter or run a greyhound in his own or any other person's name, who is a defaulter for either stakes, bets, dues or fines.

32. JUDGE OR SLIPPER INTERESTED.—If a Judge or Slipper be in any way interested in a greyhound running, the Stewards shall appoint others to judge or slip any course which that greyhound may run.

33. Any person who is proved to the satisfaction of the Eastern Coursing Club, to have been guilty of any fraudulent or discreditable conduct in connection with coursing, may, in addition to any pecuniary penalty to which he may be liable, be declared incapable to run or enter a greyhound in his own or any other person's name during any subsequent period that the club may decide upon.

THE MUZZLE IN ENGLAND.

THE muzzling order in England is commented upon as follows by 'Ouida" in the *Times* of Oct. 9: "If one desire to measure the change which has taken place in English manhood, and its decay from courage to cowardice, old volumes of Parliamentary history offer indisputable evidence of the melancholy fact. In regard merely to the view which Englishmen take of vexatious bye-laws and of petty legal interference, it is worth while to study 'Hansard' of the present and the past. In one matter alone, turn to the Parliamentary record of the first attempt made under Mr. Pitt's administration to put a half-crown tax upon dogs, in Vol. XXXII. of 'Parliamentary History.' Such a suggestion, emanating from a Mr. Dent, and feebly supported by the Ministry, was received with Homeric laughter by the House. 'One might imagine,' cried Mr. Windham, 'that Actæon had revived' What would the gallant soul of Windham feel now at seeing a Privy Council treat these animals as if they were some noxious vermin, and ignore all rights of property in them possessed by their owners? You have no more right to compel a man to muzzle his dog than you have to compel him to ride or drive his horse with a curb, which he considers vexatious or injurious. You have no right to make a man pay a tax for a property, and then force him to employ methods which ruin the object taxed. The muzzle ruins dogs. It renders them timid and apprehensive, joyless and fierce; they hate it and the sensation of it on their faces is most injurious to their nerves and tempers. It is difficult to believe that the Lords of the Privy Council can have considered what they did; it looks as if they had carelessly put their signatures to an order which they did not trouble themselves to read. Many among them must know, as every owner of dogs knows, that there are many dogs whom it is impossible to muzzle, and none whose temper and courage are not ruined by it. To small dogs it is a barbarous cruelty, as their tiny noses offer no resting place for the noxious appendage; while to large and small the infliction of the muzzle is, I repeat, most injurious to beauty, to character, and to sight; whoever has worn, voluntarily, a *loup* at a masked ball knows its distressing effect on the vision, and can imagine what torture it would be to wear one in metal or leather every day. The obligation to lead your dogs is nuisance enough, but it does not injure the dogs as muzzling injures them, and to small dogs it is scarcely a hardship. But the muzzle is more than a hardship; it is a grave injury, and when the State puts its hand in the pocket of the dog owner for a tax the State is bound to allow the person taxed the exercise of his own judgment in the proper keeping of his dogs. I have repeatedly said in your columns that while those accursed institutions, dog shows, and those haunts of filth and misery, dog fanciers' cellars and yards, are left untouched by the law, it is ridiculous and odious to see ladies fined because their Maltese or Yorkshire terrier runs loose in the square, and gentlemen menaced with prison because they resist the brutalities of the police to their collie or their deerhound. I have considerable knowledge and experience of dogs, and I declare again that many dogs it is altogether impossible to muzzle, and that to all it is most injurious, alike physically and morally. The dog is a merry-spirited, animated creature, made by Nature for play, sport, fun and movement; the more he is throttled, menaced, worried and tormented, the more his health and his disposition must suffer. I hope, for the credit of the English nation in general and the Privy Council in particular, that this tyranny will soon be ended, and the legislation upon dogs be turned in the right direction—*i. e.*,

against those who breed and exhibit the dog as a means of livelihood. To allow constables to annoy a lady because her silky-haired pet is running by her side, while you leave unmolested the fancier, who crowds together his poor, chained, living chattels in the filth of the New Cut or Seven Dials, and that other fancier of higher rank who, to win bank notes and silver cups for himself, rackets his prize dogs about all over the kingdom, put up in railway vans and in exhibition kennels, sacrificed to his cupidity and greed, is a part of that topsided and most injurious by-law making which is doing so much to destroy the naturally sturdy, independent and generous temper of the country.

"Owners of dogs are for the most part attached to them and keep them in health; venders of dogs have no feeling for them whatever, and torture them recklessly to get a £5 note. Yet the one class is badgered, fined and imprisoned, while the other class is left at leisure and untouched."

THE AMERICAN KENNEL CLUB.

NOT by any means for the first time in its history our *confrères* across the Atlantic have excited the wrath of the "kickers" by proposals which appear to be arbitrary and vexatious. We do not for a moment suggest that they are so, but at first blush they certainly have that appearance. The American Kennel Club has, however, given so many proofs of its power to manage its own affairs that criticism or advice from us would be altogether out of place. We simply desire in these few notes to put the issues involved fully and fairly before our readers, and that chiefly because in some of the criticisms recently published on this side some of the points have obviously been lost sight of.

To begin with, the constitution of the club has no parallel here, for its membership consists, not of individuals, but of clubs. Some fifty or more clubs spread throughout the length and breadth of the States subscribe to certain laws by which they agree to be bound, and send duly elected delegates to New York to represent them and to vote on all questions submitted for consideration at general meetings. Each club is bound as absolutely by the vote of its delegate as though the particular question had been fully discussed and voted on at one of its own meetings.

At the annual meetings in New York the delegates elect various committees to carry on the work of the year, thus delegating their own powers to the committees, which meet practically as often as may be necessary to carry on the duties of their respective offices. These committees, consisting of about a dozen members all told, actually legislate in the name of fifty or sixty clubs for all the members of those clubs, and the rules and regulations thus made are binding on all such members.

The various sub-committees practically form the executive committee, a body which really serves, not its own purposes, but the interests of all the clubs that are members of the American Kennel Club.

The American *Kennel Gazette* is thus the organ, not of one club, but of fifty clubs, and every member of each of those clubs has a special interest in making the *Gazette* as perfect a record as is possible of all matters connected with his club. And it will probably be admitted on all hands that no matter deserves more special attention than the official report of the shows organized by those clubs.

The American Kennel Club holds no shows on its own account, and simply recognizes and legislates for those held by associated clubs. One of its acts last December was to authorize the publication of the *Kennel Gazette* and to require from secretaries of associated clubs holding shows a certified list of awards at their shows for publication in the *Gazette*. This was a new thing, as no official award list had ever been issued by the clubs holding shows, but we dot not remember to have heard of any objections being raised by the secretaries upon whom this work was thrown.

It is now proposed that the clubs should go further, and should not only furnish an official list of awards but an official report of the reasons on which those awards are based. The value of such reports would undoubtedly be great, and if the recent proposal is carried after fair discussion there will probably be no difficulty in giving it effect. So far as we can judge from our exchanges the opposition to the proposals does not come from the clubs, and outsiders have nothing to do with the matter, so far as we can see. Practically it is proposed that every associated club when arranging for a show shall also arrange for a report from its judges, most of whom are paid for their services.

The proposal, as it now stands, is in the name of Dr. J. F. Perry, a gentleman who has many friends in England, and who enjoys to the fullest possible extent the esteem and confidence of all sections of the American kennel world. His resolution takes the form of an amendment to Bench Show Rule XXVIII., and is worded as follows: "The secretary of every show must also forward to the secretary of the American Kennel Club a duly certified report of the judges' awards, together with their reasons for making such awards, within five days of the closing of each show."

Dr. Perry supported his resolution by a long and exhaustive argument, in which he dealt fully with the objections that have been advanced. * * * The other matter which has raised the ire of a section of the American kennel world is a proposal to double the fee for registration in the Stud Book, which is at present half a dollar, practically two shillings. The Stud Book was commenced in January, 1887, and this low fee was fixed as an experiment.

Experience has shown that the cost of production of the Stud Book is at the rate of more than three shillings and sixpence per entry, and that there is consequently a considerable loss on the Stud Book. It is therefore proposed to make the charge for registration in the Stud Book one dollar. As this registration is voluntary, and as the fee for registration in our own Stud Book is five shillings, we naturally consider the charge of one dollar reasonable, and a sum that any one desiring a Stud Book number will be ready to pay.

The registration that is compulsory is in the *Kennel Gazette*, and the charge for this is twenty-five cents, practically one shilling—the same as ours. There is no proposal to alter this charge, although one of our contemporaries has written as though it were proposed to charge four shillings for this compulsory (*Kennel Gazette*) registration. The American Kennel Club Stud Book is at present produced at a loss and the Stud Book Committee simply propose to make it self-supporting. Judging from the past we imagine they will do this, for we believe that American breeders desirous of having an authentic pedigree will not consider four shillings an exorbitant sum to pay.

It is worthy of note that no pedigrees are registered in the Stud Book without verification, and as the committee insist on having three generations, the verification involves a considerable amount of work in each case. Dogs of unknown or doubtful parentage or with short pedigrees can only be registered in the *Gazette*, and can never get into the Stud Book at all.—*English Kennel Gazette.*

MASCOUTAH KENNEL CLUB.—Chicago, Oct. 23.—*Editor Forest and Stream:* In a recent issue you publish under some misinformation the date of our next bench show. The bench show committee, who have in hand all matters pertaining to the bench show, have not as yet reported the selection of a date. At a meeting of the directory last evening it was decided to suspend in future the collection of annual dues, owing to the very flattering report made by the treasurer. The initiation fee was raised to $100.—JOHN L. LINCOLN, Secretary.

THE WORCESTER FUR COMPANY.

WORCESTER, Mass., Oct. 23.—The annual meeting of the Worcester Fur Company was held at the Bay State House last evening, when Mr. A. B. F Kinney was re-elected president and Mr. E. S. Knowles secretary.

After the regular business had been disposed of, the question of the annual hunt was brought up and discussed at length. The majority favored an earlier date than has been customary, on account of the probability of getting better weather. A bare ground hunt has long been wished for by many of the owners of crack hounds, who claim that a run on bare ground will test the capabilities of the dogs much more severely than a snow hunt. Where there are as many hounds brought together as at the Worcester hunt, there is necessarily considerable rivalry between their owners, and this year an opportunity is presented for the good dogs to make a showing. The traveling will also be much more comfortable for the participants, and this will doubtless attract many who lack the enthusiasm to turn out at daylight on a zero morning when the snow is knee deep, though, of course, the old veterans would scorn to take any notice of such an advantage. November 20 was finally decided on as the day, and the president and secretary were appointed a committee to make all arrangements for the hunt. It was also decided to have a fox hunters' supper in the evening, which feature proved a great success last year.

Now all that remains is for all fox hunters, near and far, to paste Nov. 20 in their hats and decide to come. An invitation is extended to every lover of the chase, and a welcome is assured you. Come, and bring your dog if you have one, if you have not, there will be dozens here. Come the night before, as we start at daylight. All you need to do is to notify Secretary E. S. Knowles, 416 Main street, how many there are in your party and arrangements for getting you to the meet will be looked after.

Those who drive in from surrounding towns know where to report, as the meet is to be at the Heywood farm, as formerly.

If you have been here before you know what to expect from us, if you haven't, just risk it and see if the Worcester Grand Hunt isn't one of the institutions of the country.

HAL.

DOG TALK.

A CORRESPONDENT wishes to know how to break a dog from killing chickens. "Training vs. Breaking" suggests that young puppies be brought up in the society of chickens; if with an old hen that will give them a drubbing, so much the better. If an old dog, take the chicken that has been killed by him and put its legs around the neck of the dog, and tie them securely, with the body of the fowl under his neck, so that he cannot reach it with his teeth. A day or two of this will in most cases effect a radical cure. Before tying on the chicken beat the dog lightly with it about the head, and at the same time scold him and repeat the scolding occasionally during his punishment.

The *Stock-Keeper* has this to say of the all-day field trials: "Listen to this, ye field trialers. The advice of good King Alfred has been taken by transatlantic lovers of field trials—'eight hours work, eight hours rest, and eight hours play,' seems to have been on the minds of the gentlemen who have just decided to hold field trials in which each heat is to last eight hours. * * * Seemingly a trial of this sort for pointers and setters is a very great undertaking. Say there are 60 entries, it will take a month to run once through the card. Poor field trial correspondents, 'a month hard!'"

The sport of fox hunting appears to be gaining ground. The Brunswick Fur Club give notice in another column of a field trial for foxhounds that will undoubtedly prove to be a very interesting event. The Worcester Fur Company also give notice of their annual meet, which is sure to be a most enjoyable affair. We have also received the programme of the Western Massachusetts Fox Club, which will hold its annual meet at Chester, Mass., Nov. 13 and 14, at which most royal sport will without a doubt be enjoyed by members of the club and their many friends.

Arrangements have been made with all railroads, both North and South, for reduced fare and free transportation for dogs for all who attend the field trials at High Point or Lexington, N. C. In order to secure reduced rate of fare it is necessary to procure from the ticket agent with your ticket to High Point or Lexington a certificate that will entitle the holder to a return ticket for one-third the regular price. Mr. Coster or Col. Odell will furnish cards entitling owners or handlers to free transportation for their dogs.

The Eastern Coursing Club are in hard luck over their supply of jack rabbits, but the officers are energetic and determined, and aver that they will "get there all the same." If any one can help them out by supplying the jacks, Secretary H. W. Huntington would be delighted to hear from him. Unless the jacks are forthcoming, the meeting will have to be postponed to Nov. 22 or to Thanksgiving Day, when northern wild hares will be substituted for jacks.

College item: The Senate has decided to accept the apology of the two Seniors who tied a handkerchief to a dog's tail in Chapel recently, thereby creating much commotion and disturbance during prayer time on account of the dog's antics on the platform. The Senate has, nevertheless, passed resolution censuring the two men.

The dog show to be held at Denver, Col., next month, promises to be one of the best ever held in the West. The management are sparing no pains to make it a success, and a large number of prominent dogs are already promised. A cash special of $350, we understand, will be offered for the best kennel of dogs from outside Colorado.

A correspondent writes that on Oct. 23 a match was run near Bulletsville, Ky., between the English setters Wick's Killbuck, by Blue Dick out of Daisy Cambridge II., and Nellie Hope, by Gath's Hope out of Campbell's Lit. The dogs were down 5 hours, Wick's Killbuck winning with a score of 36 points and 2 flushes to Nellie Hope's 27 points and 6 flushes. Both dogs were very speedy.

Entries for the Free-for-All Stake of the Central Field Trial Club close to-morrow, Nov. 1. As the heats in this stake will be of four hours duration each, it is expected that those who have all-day dogs will give the event a liberal support. The address of the secretary is Col. C. H. Odell, 19 Broad street, New York.

There will be a dog show at Bay City, Mich., Jan 6 to 11, 1890, in connection with the eleventh annual exhibition of the Michigan State Poultry and Pet Stock Association at the Washington Avenue Rink.

At a recent meeting of the English Kennel Club it was decided that any Irish setter whelped after Dec. 31, 1889, if cropped, will not be eligible to compete at any Kennel Club show.

Here is a story of a dog's devotion, sent by telegraph to the press, from Atlanta, Ga., Oct. 29: "Mr. Robert Denham left his house yesterday morning with his dog and gun to engage in a squirrel hunt. He had not proceeded a quarter of a mile in the woods when he was stricken with paralysis and fell to the ground, speechless and helpless. His dog found him in that condition, and unable to move his master to his home, he could only stay by his side, which he did for long weary hours. The dog watched and waited by his stricken friend, but no human aid came, and the day was near its close. Going to his master's house, he went in, and whining piteously, tried to attract the attention of the family. They thought nothing of his conduct at first, but as it continued they noticed his acts more closely. He would start away from the house whining and barking, and going a short distance, would return when he found they did not follow him. This he did eight or ten times. Finally they decided to follow, and when he saw this he was frantic with delight and set off in a straight line through the woods. The dog led them to the old man, whom they picked up and carried to the house. He lay in the same condition till early this morning, when he died."

Mr. George Laick, of Tarrytown, N. Y., the well-known beagle exhibitor, on account of an accident, will be unable to hunt this season and will dispose of some of his dogs.

Mr. A. S. Weston is the secretary of the Continental Kennel Club's show, which will be held in Denver, Colo., Dec. 5, 6 and 7.

OWNER WANTED FOR POINTER BITCH.—New York, Oct. 26.—*Editor Forest and Stream:* On Friday evening last I noticed a fine-looking lemon and white pointer bitch in charge of a boy on the street, who said he had found her and wanted to sell. His price was $2. I purchased the bitch in hopes of being able to find the owner. The bitch acts as though thoroughly broken.—PERCY C. OHL (50 Broadway).

ROBINS ISLAND FIELD TRAILS.—Brooklyn, N. Y., Oct. 28.—*Editor Forest and Stream:* The eighth annual field trials of the Robins Island Club will be run on Friday, Nov. 22. Two stakes will be run, the All Aged Stakes and the Derby, open to setters and pointers belonging to members.—WALTER L. WELLINGTON, Sec'y.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks**

Margery Daw and Rhoda C. By C. H. Crocker, New York, for black, white and tan and blue belton English setter bitches, whelped July 22, 1889, by Rock Belton out of Trusty Gladstone.

Mullcohey. By Michael Flynn, Jr., Bristol, R. I., for red Irish setter bitch, age not given, by Blaze (Chief—Bizreena) out of Gladys (Tim—Lady Edith).

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Nellie—Rattler III. R. Jennings's (Tarrytown, N. Y.) beagle bitch Nellie (Mayo—Trixey), to Geo. Laick's champion Rattler III. (Rattler—Music), Aug. 16.

Sis—Rattler III. Geo. Laick's (Tarrytown, N. Y.) beagle bitch Sis (Trifle—Old Silk) to his champion Rattler III. (Rattler—Music), Sept. 28.

Dora—Rattler III. Geo. Laick's (Tarrytown, N. Y.) beagle bitch Dora (Ringwood—Birdie) to his champion Rattler III. (Rattler—Music), Oct. 23.

Little Dot—Laick's Rattler. P. Whallen's (Tarrytown, N. Y.) beagle bitch Little Dot (Mayo—Dot) to Geo. Laick's imported Laick's Rattler (Chancellor—Careless), Sept. 5.

Psyche—Beaumont. C. L. Griffith's (New York) Gordon setter bitch Psyche (Roy—Dot) to Beaumont Kennels' champion Beaumont (Ronald III.—Floss) Oct. 24.

Gipsey Queen—Buffalo General. A. W. Smith's (Buffalo, N. Y.) black and tan terrier bitch Gipsey Queen (champion Vortigern—Fortune) to his Buffalo General (Halifax General—Lady Lottie), Oct. 27.

Meersbrook Girl—Dick. Rochelle Kennels' (New Rochelle, N. Y.) black and tan terrier bitch Meersbrook Girl (Punch—Meersbrook Jessy) to their Dick (Prince— ——), Sept. 22.

Hecate—Veronese. W. S. Applegate's (New Albany, Ind.) fox-terrier bitch Hecate (Lucifer—Daze) to Fred Hoey's Veronese (Velasquez—Valetta), Sept. 13.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Music. S. C. Graff's (Cadiz, O.) beagle bitch Music (King William—Goodwood Music), Sept. 17, seven (four dogs), by his Driver (Domino—Flirt).

Singer. S. C. Graff's (Cadiz, O.) beagle bitch Singer (King William—Goodwood Music), Aug. 9, five (three dogs), by his Driver (Domino—Flirt).

Bizreena. F. L. Cheney's (Pittsfield, Mass.) Irish setter bitch Bizreena (Nimrod—Bizorah), Oct. 29, seven (five dogs), by Max Wenzel's champion Chief (Berkley—Duck).

Tiny. G. W. Richards's (Bangor, Me.) Yorkshire terrier bitch Tiny (Tug—Mistress Mary), Oct. 6, three (one dog), by P. H. Coombs's Bradford Harry (Crawshaw's Bruce—Beal's Lady).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Nettieyoke. Black, white and tan beagle bitch, whelped March, 1888, by Ruler out of Finette, by Geo. Laick, Tarrytown, N. Y., to Noah Dibble, Kalamazoo, Mich.

Hunter. Black and tan foxhound dog, whelped March 11, 1886, by Jock out of Fanny, by F. H. Hayes, Dexter, Me., to Jas. Hart, Washington, Pa.

Virgie E. Silver fawn pug bitch, whelped Sept. 1, 1889, by Joe II. out of East Lake Virgie, by Eberhart Pug Kennels, Cincinnati, O., to Mrs. Herbert Hammond, Chicago, Ill.

General Burnaby. Red Irish setter dog, whelped Jan. 10, 1888, by champion Tim out of Sally, by Geo. Langran, Yonkers, N. Y., to L. A. Bevin, New York.

Don. Black and tan terrier dog, whelped May 24, 1889, by Buffalo General out of Meersbrook Girl, by Rochelle Kennels, New Rochelle, N. Y., to Henry Lewis, Fairhaven, Vt.

Squaw. Black and tan terrier bitch, age not given, by Salford out of Nettle, by John F. Campbell, Montreal, Can., to Alfred Geddes, Ottawa, Can.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

C. P., Seattle, Washington.—I have a bull-terrier bitch troubled with tenderness and some weakness in hindlegs. She is 14 weeks old and in good health and spirits, also eats well. I feed her on oatmeal. She runs about fairly, but seems to be in pain after any jar, as jumping, etc. She has no other symptoms which would indicate worms, that is, none that I know of. Ans. Give a two-grain pill of citrate of iron and strychnine morning and evening concealed in a morsel of meat.

Dogs: Their Management and Treatment in Disease. By Ashmont. Price $2. Kennel Record and Account Book. Price $3. Training vs. Breaking. By S. T. Hammond. Price $1. First Lessons in Dog Training, with Points of all Breeds. Price 50 cents.

Some years ago there lived at an old mill near Salem, in this county, an old man named Bruen. Besides attending the mill he undertook to run a farm. One day he said to his hired man: "John, we must brush up a little about the place; the barn wants a new door, that fence wants propping up, the well needs a new bucket, the harness ought to be cleaned, and the wagons greased. In fact, there is so much that ought to be done I hardly know where to begin at it. But get some bait and we'll go fishing."—*Elizabeth (N. J.) Leader.*

Rifle and Trap Shooting

RANGE AND GALLERY.

CONNECTICUT STATE SHOOT.

NEW HAVEN, Oct. 23.—The State rifle match was shot at Quinnipiac range to-day, by teams representing the First, Second, Third and Fourth regiments and the Fifth Battalion. Those tied by the First Regiment in the grand total, the Second Regiment was awarded the first prize, as the total on the 500yds. range was greater than that of the First Regiment. The First Regiment team scored 6 more points on the 200yds. range than the Second, but the latter were pulled out of the hole by Pvt. Cummings, Sergt Beach and Capt. LaBarnes, the last three men who shot on the 500yds. range. Not until the last Second Regiment man had completed his score was it decided who was the winner:

First Regiment.	200.	500.	T'l
Lieut Norton	29	27	56
Sergt Ripley	29	30	59

Major T. Attwater Barnes was referee of the match in place of General S. R. Smith, who was too ill to attend. The 2d Regiment takes the first prize, which was won by the First last year. This is a silver cup, which will be held for a year, and when won three times for any regiment will become the property of that regiment. Each member of the winning team each year receives a medal.

The 1st Regiment takes the bronze medallion of General Grant, which the Second won last year. The third prize, which is a statue of a Roman soldier on an oak pedestal, goes to the 3d Regiment.

The 1st Regiment made a grand total of 645 last year, while the Second made 626. The falling off this year can be attributed only to the cold and windy weather, and this fact may cause a good number of marksmen to work to have the time for the brigade shoot changed to another date.

A more unpleasant and disagreeable day for the match could not possibly have been selected. It was not only cold, but the wind greatly interfered with the shooting. It blew down from the northeast with terrific force from the butts into the faces of the marksmen. All the shooters wore heavy overcoats and gloves. When they were not shooting the men were gathered around a bonfire in the rear of the shed and suggesting that the next State match should be held in August.

THE NEWARK TOURNAMENT.

THE United Rifle Clubs of New Jersey have opened their 1889-'90 tournament in good shape, and it promises, before its conclusion, to see some very fine targeting. The schedule for the series has been carefully laid out as follows, the first column giving the date on which matches will be shot on the ranges of the clubs first named, and the last column the dates for matches on ranges of the clubs last named:

1889. Home Range.		Home Range.	1890.
Oct. 21—Electric	vs.	Monroe	Jan. 10
Oct. 21—Excelsior	vs.	North Ward	Jan. 10
Oct. 21—Annie Oakley	vs.	Lakeside	Jan. 10
Oct. 25—Essex	vs.	Howard	Jan. 13
Oct. 25—Puritan	vs.	Oakland	Jan. 13
Oct. 25—Newark	vs.	Sheppard	Jan. 13
Oct. 28—North Ward	vs.	Electric	Jan. 17
Oct. 28—Lakeside	vs.	Excelsior	Jan. 17
Oct. 28—Howard	vs.	Annie Oakley	Jan. 17
Nov. 1—Oakland	vs.	Essex	Jan. 20
Nov. 1—Sheppard	vs.	Puritan	Jan. 20
Nov. 1—Monroe	vs.	Newark	Jan. 20
Nov. 4—Essex	vs.	Lakeside	Jan. 24

There is likelihood of trouble over the time limit of shots, each man now being allowed 15 minutes wherein to fire his ten shots. On single ranges this would give 20 men 5 hours, and would, if the full time were taken, carry a match up to 1 o'clock in the morning. The team instead of each individual should be limited, each team having 100 minutes to fire its string of 100 shots. When a match opens at 8 o'clock this limit would allow until 11:20 to finish the scores for two teams. While a very few of the gallery shooters require from 10 to 12 minutes to fire 10 shots, the majority fire their strings in less than 6 minutes, so that 100 minutes would be ample time for any team. The advantage of shooting on double ranges has been so plainly shown in the work done on the Monroe, Newark and Our Own ranges that all clubs should insist upon double ranges.

PENNSYLVANIA SHOOTING.

THE annual fall competition for the Wm. M. Singerly gold, silver and bronze collar badges, open to teams of four form any regiment, battalion or company was contested for on Friday, Oct. 25, at Hartranft Rifle Range; 5 shots per man, at 200 and 500yds. The weather was very raw and chilly and a stiff breeze from the northeast; light was somewhat dull. Major R. S. Huidekoper was the officer in charge and everything was run as smoothly as a toboggan slide:

CAPTAIN MATT GINDELE.

CINCINNATI, Oct. 27.—The champion 200-yard shot of the United States and Canada is, Cincinnati lovers of rifle shooting are proud to state, a resident of this city. Letter to Captain Matt Gindele, of the Cincinnati Rifle Association. In 1887 the Bullard Repeating Arms Co. offered to all the marksmen of the United States and Canada a handsome and valuable trophy to be won three times to become personal property. The conditions were: 200yds., American standard (or Hinman) target, standing position, with 3-pound trigger pull, 50 shots each match, in other respects National Rifle Association rules to govern. The first match was shot in May, 1887, and was won by Mr. Gindele with a score to his credit of 419. The second match was shot during the month of October, 1887, resulting in a tie between Mr. Gindele and Mr. A. E. Chandler, of St. Paul, Minn., the match being decided in a shoot-off in February, 1888, resulting in another win for Mr. Gindele. In May, 1888, Mr. G. G. Wentworth, of Dover, N. H., won the trophy with 435 points. In October, 1888, Mr. L. A. Huggins, of Pittsburgh, Pa., won it with 440 points, certainly a wonderful improvement over Mr. Gindele's first winning score—419 points. The last and final shoot for the trophy was in May, 1889, Cincinnati's favorite marksman winning it for the third time with a score to his credit of 447 points out of a possible 500. In the last match he scored 44 bullseyes out of 50. Seventy-six competitors fought for the trophy the last time, 16 of which made scores of 400 or more points. Of the five full scores made, two were made by the winner, Captain Matt Gindele, and one each by Dr. A. J. Marling, of Greenville, O.; J. B. Stevens, Jr., of Dover, N. H., and A. E. Knight, of Brattleboro, Vt. Following were the full scores made in detail:

Marling	10	9	10	9	10	8	10	9	10	10—95
Gindele	10	8	10	9	9	10	10	8	10	9—93
Gindele	8	9	10	8	10	9	9	10	10	9—92
Knight	10	8	8	10	9	10	8	8	10	8—89
Stevens	9	8	8	9	9	8	9	8	10	—87

The winning score made by Capt. M. Gindele, and which gives him the title of the champion 200yds. off-hand marksman of the States and Canada, was shot as follows:

Capt M Gindele	8	9	10	8	10	9	9	10	10	9—92
	9	9	7	10	10	8	7	8	9	10—87
	10	10	8	10	9	8	8	7	10	6—86
	10	8	10	9	9	10	10	8	10	9—93
	8	10	10	7	7	10	10	10	8	9—89—447

Mr. Gindele was awarded the medal several days ago, and values it above all the trophies he has won during his career as a marksman. The members of the Cincinnati Rifle Association are more than jubilant over their captain's grand victory, with whom he stands as a pet and the high cockolorum. Personally Mr. Gindele is a modest unassuming gentleman, of few words, possessed of wonderful rifle knowledge and considered *ne plus ultra* as a captain and handler of rifle teams. His profession is that of a lithographer, and his wonderful scores one reads of are due to his temperate habits and regular mode of living. The trophy, of which I inclose a photo, is an exquisitely and artistically gotten up affair of gold and laid in enamel, which by special request has been by him on exhibition at the Bandle Fire Arms Co., this city.

C. G. NEWSBOY.

WILMINGTON, Del., Oct. 22.—The weather combined every element favorable for target-shooting to-day, and the regular weekly practice at Healdmoor Rifle Range resulted in some fine and well-contested work. A clean score of bullseyes each by E. J. Darlington and Simpson in the pistol match and the former's fine run of 94 gave the principal features of the day. Darlington's score at 100yds. with the pistol was also a good piece of work, considering it was his first attempt with that weapon at such a distance. Following are the scores in detail, Standard American target, off-hand:

Pistol Match. 50yds.											
E J Darlington	10	9	9	10	10	9	9	10	9	10—94	
H Simpson	8	8	8	8	9	9	10	9	8	10—87	
E Jackson	9	8	9	9	6	8	9	10	10	8—86	
W H Johnson	7	7	6	7	8	10	8	10	8	8—81	
E Darlington	9	8	10	7	8	9	9	8	6	6—79

ST. LOUIS, Mo., Oct. 25.—The members of the St. Louis Pistol Club who took part in the last shoot did nothing brilliant. Heitel, by defeating Bauer on the shoot off, carried off the honors; standard American 20yds. target:

W H Hettel	8	9	9	10	6	8	10	10	7	9—86
W Bauer	8	10	9	8	10	10	9	6	8	8—86
O Neuhaus	10	8	9	9	9	8	6	10	8	5—82
W J Lord	6	6	10	9	9	10	4	10	8	8—80
M Summerfield	9	6	10	9	9	8	7	8	7	7—80
G Alexander	10	8	5	6	8	7	8	7	10	10—79
E Mohrstadt	6	7	7	8	9	6	7	9	10	9—77
L G Dorman	9	7	6	9	7	9	8	7	7	7—76
W C Mackwitz	5	8	7	9	8	6	7	7	7	7—71
A E Bengel	7	10	0	6	5	7	6	8	6	9—64

The seventh friendly match with pistols between Mohrstadt and Summerfield was shot the past week at the Laclede Gallery, and was won by the former with 11 points to his credit. Mohrstadt took the lead on the first ten shots and held it to the finish. Conditions: Fifty shots each with .22cal. pistols, at a 12½yds. standard American target. The score:

E Mohrstadt	9	6	8	9	8	10	10	8	8	10—86
	10	9	10	9	10	10	8	4	8	6—84
	10	8	6	9	9	8	8	9	8	9—84
	9	9	10	9	10	9	10	8	7	9—90
	10	7	9	8	10	9	9	9	7	7—85—429
M Summerfield	8	8	6	6	10	8	9	7	7	8—77
	8	9	7	8	9	8	8	10	10	7—84
	6	10	10	7	7	8	9	8	7	8—80
	9	9	8	10	8	10	8	9	10	10—91
	8	10	8	10	8	10	8	8	9	7—86—418

Bullseyes: Mohrstadt 39, Summerfield 43.—UNSER FRITZ.

CREEDMOOR, Oct., 26.—The 13th marksman's badge and sharpshooters' matches of the N. R. A. were shot to-day. The attendance was large and good scores were made, conditions were fair, good wind, but the light was bad on account of the foggy weather. F. Stuart, of the 69th Regt., again won the gold marksman's badge and becomes the final winner thereof for 1889, on scores of 24, 25—49, 22, 25—47, 22, 25—47, out of a possible 50. The following were the winners of this match:

Cash Prizes.

	200yds.	500yds.	Total.
F Stewart, N. C. S., 69th regt.	22	25	47
J H McGinn, Co K, 9th regt.	22	23	45
L J Elliott, Co C, 23d regt.	22	23	45
F S Reynolds, Co F, 22d regt.	21	23	44
H Coburn, Jr., Co C, 7th regt.	19	24	43
H A Bostwick, Jr., Co B, 7th regt.	21	22	43
J J Godfrey, Co K, 47th regt.	19	23	42
W C Goffe, Co F, 7th regt.	19	23	42

Medals.

S C Pirie, Co I, 23d regt.	23	23	46
J McNevin, N. C. S., 13th regt.	21	23	44
C H Smith, Co B, 71st regt.	22	21	43

The match on Nov. 5 (Election Day) will be the last one for the season.—J. MANZ, JR., Ass't Sec'y, N. R. A.

NEW YORK VS. NEW JERSEY.—The details for the 100-shot gallery match for the championship of New York and New Jersey, are as follows: Entry—open to all comers; entry fee $5, no re-entry allowed; weapon—any .22-caliber rifle, with sights to conform to N. R. A. rules; no restriction as to weight or trigger pull; position—off-hand (hip or body rest allowed); target—the "Our Own Standard" 25 ring; ammunition—any .22 short. The match will begin on Monday, Nov. 11, and continue on Monday and Wednesday evenings thereafter until all competitors have shot. Four men will shoot on each evening, two at a time. Shooting will begin at 7:30 and 9:30, and each competitor will be limited to 100 minutes for his 100 shots. All ties will be shot off. All moneys received as entrance fees will be divided among one-half the competitors, the highest aggregate scores for 100 shots to count for all prizes in order. The divisions of money will be on the following plan: Ten entries, $14, $11, $10, $8, $7; sixteen entries, $17, $14, $12, $10, $8, $7, $6; twenty entries, $19, $16, $13, $11, $9, $7, $7, $6, $6, $6. Entries, to be accompanied in all cases by the entry fee, must be sent to Charles Mink, Jr., by Nov. 4. This match should certainly have a large number of entries, as several of the finest shots of the Zettler, Miller, Barry, Our Own and other clubs have promised to enter.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

Secretaries of clubs and managers of tournaments are requested to keep us advised of the dates of their shoots, so that we may give due notice in our column of fixtures.

FIXTURES.

Nov. 13.—Tolley's Trap Shooting Contest, Catskill, N. Y. Geo. F. Tolley, Manager.

TRENTON SHOOT.

THE second annual tournament of the Mercer Gun Club was inaugurated on their grounds at Trenton, N. J., on Monday, the 21st inst. The first day was destined for a race between Chas. W. Budd, of Des Moines, Ia., and Capt. J. Frank Kleintz, of Philadelphia, but owing to an unfortunate contretemps, which has been fully explained in our Trap columns, this match did not take place. It was expected that the major part of the day would be occupied in shooting this race, so not many other events were listed. This probably accounts for the small attendance of the first day, as nearly all who might have come knew that the match would not take place, and so waited till Tuesday to make the start. A few, however, were on hand, and shot a number of sweeps at Keystones and live birds, the totals of which are given. The weather was very cold and raw, and the club house stove was a much more comfortable spot than facing the traps.

On Tuesday many more were present, and the regular programme was shot with a few exceptions of events for amateurs, for which there were no entries. The day was clear and warm until toward night, when the wind began to freshen and the clouded sky gave promise of storm for the morrow. This fear was realized when on Wednesday morning a driving snow storm greeted the eyes of early risers. This continued until noon, and the morning was occupied with shooting talk at the hotel. After dinner, as the skies brightened a little, a feeling of restlessness showed itself among the loungers, and although it had been announced that no shooting would take place that day, a 'bus was called, quickly filled and away they went for the grounds, where a few sweeps were shot before dark. The air was piercing and cold, and fingers were numb and noses blue before a return start was made. The live bird event was the principal race shot, and the shoot-off in the tie which resulted was most interesting.

On Thursday morning blue sky and bright sunlight appeared, but during the ride to the grounds it became apparent that the wind would take a hand in the day's sport. Such proved to be the case, and to the strong northeast wind which prevailed all day, blowing directly across the traps, the escape of many birds must be attributed. The birds were about as good as have been seen at any tournament of the year, and when aided by the wind required hard hitting to be stopped within bounds. Event No. 3 was perhaps the most exciting race of the day, though not the most important in a monetary sense, but the long and hot shoot-off in the live bird money was something out of the common, as it required twelve more birds before a settlement could be reached. The $150 guaranteed purse brought out a good list of entries, and the purse largely over-filled. The display of skill was fine, but as usual there were so many in each tie that a number did not get back their entrance money.

On Friday the weather was anything but propitious—dull, lowering clouds hung aloft all day, promising another storm, which fortunately did not fall. The air was cold and made brisk motion desirable. The $300 guaranteed purse was the event of the day and 21 men responded to the call for entries. The birds were good ones, but though only one straight score was made, more could have been made had it not been for the combination which as usual existed. This race was started after a preliminary event of 5 live birds, and before its conclusion the writer was obliged to leave on account of illness. We have been informed, however, that a most disagraceful squabble ensued as to the division of moneys. There were "combines within combines," and for a time confusion reigned supreme. One tie was settled by the referee, H. A. Penrose, who tossed a cent, declaring that "heads" should divide and "tails" shoot off, and vowed if it came "tails" to make them shoot it down to one man. Heads turned up, however, and the money was split. The jangling was kept up till a late hour in the evening, when a division, if not a satisfactory one, was made. The management of a tournament is powerless to prevent occurrences of this description, but they are a shame and disgace to the sport of pigeon shooting. Unless some action is taken to eliminate this gambling element, trap-shooting will descend to a level with six-day walking matches, dog fights and prize fights, and gentlemen will have no connection with it. It seems to us this is a point on which the American Shooting Association should legislate if they desire to popularize the sport and increase the number of those who engage in it. The members of the Mercer Gun Club with a few exceptions were conspicuous by their absence, and had it not been for these few workers the tournament would have fallen flat. The notable exceptions were E. G. Upthegrove, the president; Chas. W. Van Camp and A. R. Kuser; they with the invaluable aid of W. Fred Quimby, Tee Kay, Jacob Pentz and other outsiders, managed to keep things moving fairly well.

For inanimate shooting, Keystone targets, traps and rules were used. American Association rules governed the live bird contests. The scores follow in full:

Monday, Oct. 21.—Event 1, at 10 Keystones, $1 entrance, two moneys: Miller 10, Ruble 9, Fox 8, Wolstencroft 8, Daly 6, Van Camp 6, Lee 5.

No. 2, same conditions: Miller 10, Ruble 10, Wolstencroft 10, Daly 8, Moore 8, Fox 0, Van Camp 6, Leigh 4.

No. 3, at 5 pairs, $1, two moneys: Miller 10, Wolstencroft 9, Van Camp 9, Ruble 8, Fox 6, Daly 6, J. Wolstencroft 6.

No. 4, 10 singles, $1, two moneys: Ruble 9, Fox 8, Moore 7, Daly 6, Leigh 3.

No. 5, same conditions: Miller 10, Wolstencroft 9, Ruble 9, Fox 8, Daly 6.

No. 6, at 15 Keystones, $2.50 entrance, two moneys: Miller 15, W. Wolstencroft 15, Ruble 14, J. Wolstencroft 13, Daly 12, Zwerlein 12, Van Camp 9.

No. 7, 10 targets, $1 entrance, two moneys: W. Wolstencroft 10, J. Wolstencroft 10, Ruble 9, Miller 9, Daly 8.

No. 8, at 10 live birds, $7.50 entrance, two moneys:

Wolstencroft	1121121121—10	J Wolstencroft	2211011212— 9
Van Camp	1121121111—10	Daly	1210020121— 7
Fox	1122113022— 9	Jewell	0020032111— 6
Miller	0111111111— 9		

No. 9, at live birds, miss and out, $2 entrance: Miller 4, J. Wolstencroft 4, Ruble 4, W. Wolstencroft 4, Fox 3, Van Camp 1, Daly 0. Money div. by those killing 4.

Tuesday, Oct. 22.—Regular event No. 1, at 12 Keystones, entrance $1.50, four moneys:

EMERALD GUN CLUB.—Regular shoot, at Burbank's, New Dorp, Staten Island, Oct. 22, at 9 live birds, handicap rise, 80yds. boundary, use of both barrels, 5 ground traps, E. G. C. rules. The figure 2 denotes the use of second barrel. In shooting off ties, miss and out, second barrel counts a half bird. The weather was all that could be desired, with very little wind. The birds were a very fair lot and took flight without much scaring. L. C. Gehering, referee; P. J. Keenan, scorer. Mr. Gehering is an improvement on the average referee, at least at our shoots, as he was calm and deliberate and made haste slowly, and would not back down from any decision once made. L. C. Gehering and Col. John H. Voss shoot from the 32-yard mark as punishment for having won a first prize to keep. Dr. Hudson and Mr. R. Regan must have had their shooting clothes on, as they came near making a full score. Dr. Liveredge, T. J. Crystal and McKenna, who have each won the second prize for the second time, got badly left, as C. Horth gave them the go-by, killing 8 out of his 9 birds. Dr. Vandegrift and Mr. Howard went home before the termination of the shoot and thereby lost their chance of shooting off for third prize, which went to P. J. Brennan. The Washington Heights Gun Club must have some dandy shots if C. R. Terwilliger is a sample. T. F. Russell is also ambitious to shine as a shooting crack. Score:

Dr Hudson (30)	11 2 2 2 2 2 0—8	L C Gehering (32)	2 2 0 2 0 1 2 0 0—5
R Regan (25)	1 1 0 1 1 2 1 2—8	L Schermerhorn (30)	2 0 2 1 2 0 0 1—6
T J Crystal (25)	2 0 1 1 2 2 1 0—7	T P MacKenna (25)	1 0 2 2 0 1 2 0 1—6
I Howard (21)	2 1 2 0 0 2 0 0—4	J Bade (25)	1 1 0 1 0 0 0 0 1—4
C Horth (25)	1 1 1 1 1 1 1 0—8	G Remsen (30)	1 0 1 1 2 0 2 0—6
N Mensel (30)	2 1 0 1 1 0 1 2—7	Dr Vandegrift (21)	1 1 0 0 2 0 1 0—4
M W Murphy (25)	1 1 0 1 0 2 2 0—5	P J Brennan (21)	0 1 0 0 0 0 1 1—3
P Butz (30)	0 0 0 1 2 2 1 0—5	T J Cody (50)	0 0 0 0 0 1 0 1 0—2
J Measel, Jr (30)	1 2 0 1 1 1 0 0—6	T F Russell (25)	1 0 1 2 0 1 0 1 1—6
H Rubino (25)	0 0 0 1 0 0 1 0—2	C R Terwilliger (30)	1 1 1 0 1 0 0—6
Dr Liveredge (25)	1 1 2 0 1 1 1 0—7	J J McConnell (21)	0 1 0 0 1 0 0 0—2
P J Keenan (25)	1 0 2 1 0 0 1 0—5	F Schrader (30)	0 1 0 1 0 3 1 1—5
Gus Nowark (.5)	0 0 0 0 1 1 0 1—4	Col J H Voss (32)	1 1 1 1 1 0 0 1 0—6

Dr. Hudson wins first prize first time; ties on second, Regan 1 0, Horth 1 1, Horth wins second prize first time; P. J. Brennan wins third for first time.—T. P. M.

NEW YORK SUBURBAN GROUNDS.—Claremont, Jersey City, Oct. 26.—Matches at 10 bluerocks, 50 cents entrance, 5 traps, all ties div. Sweepstakes No. 1:

First and third div.

The cloudy threatening weather to-day deterred many from enjoying the usual Saturday shoot on the grounds of the Association. Uncle Billy Sigler did not show up although he intended being on hand, Miller and Quimby did not materialize, probably were engaged in figuring the profits of the season's shooting. Milt. Lindsley and Tee Kay nothing could tire (in the shooting line), so although just returned from Trenton, they were in most of the sweeps to day. There will be shooting all day on Election Day, Nov. 5, and quite a crowd is expected; also every Saturday until further notice. Lunch served on the grounds. PIN.

TWO-MAN TEAM RACE.—One result of the Trenton tournament is a team match between Frank Class and Phil. Daly, Jr., against J. Frank Kleinz and R. E. Irwin, the conditions of which are here given: Trenton, N. J., Oct. 25.—We the undersigned agree to shoot a match at 50 live birds per man for $100 a corner, making in all $400. Strictly Hurlingham rules, with the exception that Daly shoots with a 10-gauge gun. John Erb to select the birds and match to be shot at Erb's grounds, Newark, N. J., on Tuesday, Nov. 12, 1:30 P. M. Mr. Ed. Updegrove, stake holder. $100 has been posted as forfeit with the above, the balance to be put up on day of shoot. (Signed) J. Frank Kleinz, R. E. Irwin, Frank Class, Philip Daly, Jr.

MISS ANNIE OAKLEY sends us from Paris a map of that city and a newspaper clipping which says of her: "Les représentations de *Buffalo Bill* sont toujours très suivies. Le Baron de Mohrenheim, Ambassadeur de Russie, s'y trouvait hier avec toute sa famille; il a beaucoup applaudi le tir de Miss Oakley, ainsi que les exercices de dressage des chevaux sauvages."

NEWARK GUN CLUB.—The members of the Newark Gun Club had a most enjoyable time on Thursday, Oct. 24, when a few of them met at South Beach, Staten Island, for a clam bake and live bird shoot. The dinner was exceptionally good. Nine events were shot, all at live birds, which were of the usual quality. The scores follow:

Event No. 1, at 3 live birds, $5 entrance, 3 moneys, birds extra:

C M Hedden	1 1 2 2 1 1 2—8	S Castle	1 2 1 0 1 1 1 0—6
J Erb	1 2 1 1 1 1 0 1—7	Gus Freche	0 1 2 2 0 2 2 1—6

WOODSIDE VS. MAPLEWOOD.—On Wednesday, the 23d inst. members of the above named gun clubs met at the Woodside Club grounds at Newark, N. J., in a team race. The conditions were for 10 men on each side, but the visitors being short handed the teams were reduced to 7 men each. The weather was cold, with a piercing northeast wind, and not conducive to good scores. The Woodside team was victorious by 29 birds. Conditions of match, 25 Ligowsky pigeons per man:

Woodside Team.

S Geoffrey	1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 0 1—24

D Tillon	0 0 0 0 1 0 1 0 1 1 0 0 0 0 1 1 0 1 1 0 0 0 0 1—9—103

At the conclusion of this event a number of sweepstakes were shot, of which the totals are given:

No. 1, at 5 clay-birds: Heller 5, Tillon 4, Burnett 4, Cockefair 3, Addison 3, Parry 3, Eagle 3, Geoffrey 2, Fuerth 2.

No. 2, same: Fuerth 5, Sickles 5, Byram 5, Cockefair 4, Tillon 4, Lever 3, Walters 3, Geoffrey 2, Heller 2, Addison 2, Eager 2, Carter 2, Parry 1.

No. 3 same: Parry 5, C. Von Lengerke 4, Heller 3, Addison 3, Lever 2, Russel 2, Byram 1.

No. 4, same: Heller 4, Cockefair 4, E. Von Lengerke 4, Byram 3, Addison 3, Sickles 2, Walters 1, Russell 1.

No. 5, at 10 clays: Geoffrey 8, Cockefair 8, Addison 8, C. Von Lengerke 8, O. Von Lengerke 6, Fuerth 6, Parry 6, Heller 6, Sickles 5, Walters 4.

No. 6, same: Geoffrey 10, Byram 10, C. Von Lengerke 9, Cockefair 9, O. Von Lengerke 8, Sickles 8, Heller 7, Carter 7, Walters 6.

CINCINNATI, Oct. 27.—The first of the series of winter one-day live-pigeon shooting tournaments, under the management of Messrs. Al. Bandle and A. C. Dick, was shot on the grounds of the East End Gun Club, Columbia four miles east of this city, Thursday last. It proved a very enjoyable affair, the weather being of the finest possible kind, and the birds used a very choice and select lot, duffers being in the minority, and the shooting of the best. From a strictly financial standpoint to the shooters present in competition, the day's sport was a failure, too many good shots presenting themselves to catch on any heavy paying purses, the tie shooting eating up the profits. Bandle shot in wonderful form, missing but one bird in the entire day's sport, and realizing for his meritable work the magnificent sum of $3.75. The attendance of spectators was large, and the scouts outnumbered the actual competitors five to one; in fact, proved a veritable nuisance. Five ground scoop traps were used in springing the birds, which accounts for the number of birds run off in so short a time. All shooting was from ground traps set equal distance (5yds.) apart, use of both barrels allowed, the rise being 28 for 12 and 30yds. for 10-gauge guns, purses divided into 60 and 40 per cent.:

Match No. 1, 10 live pigeons, entrance $4:

F Ferris	1 0 0 2 0 1 1 1— 6	Apking	1 0 1 1 0 1 2 0—6
Dayton	1 2 1 2 1 1 0 2— 9	Richards	1 0 1 1 1 0 1 1—8
Al Bandle	2 1 1 1 1 1 2 1—10	Whitney	0 0 0 1 1 1 0 2 0—5

Match No. 2, 5 live birds, entrance $2:

Dayton	2 2 2 2—5	Stone	2 0 1 1—4
Bandle	1 1 1 2 1—5	Apking	1 1 2 1 0—4
Richards	1 0 1 1 1—4	N G	1 2 1 0 2—4
Ferris	1 2 1 0 0—3	Shorty	1 1 1 0—4
Girton	2 1 1 1—4		
Bohemian	1 2 0 1—4		

Ties div.

Match No. 3, 5 live birds, entrance $2:

Dayton	1 2 0 2—4	Stone	2 1 1 2 2—5
Bandle	2 2 1 2 0—4	Apking	1 1 2 1 1—5
Richards	2 2 2 2—5	N G	1 1 1 1—5
Murphy	1 1 2 2 1—5	Ferris	2 1 1 1—5
Girton	1 2 1 2—5	Shorty	2 1 0 1 0—3
Bohemian	0 2 2 1—4		

Ties on 4 div. second, ties on 5 each decided the 5 birds in the following race to decide winner of first money.

Match No. 4, 5 live birds, entrance $2:

Dayton	1 1 0 1 2—4	Girton	1 0 2 1 2—4
Bandle	1 1 1 1 1—5	Ferris	2 1 2 2 0—4
Apking	1 2 1 2—5	Shorty	1 2 2 1 0—4
Richards	0 1 2 2—4	Murphy	1 0 2 1 1—4

Apking decided winner of first money in Match No. 3, Match No. 4, Bandle and Apking 1st money, ties on 4 each split.

Match No. 5, 5 live birds, entrance $2:

Dayton	2 0 1 1 0—3	Shorty	0 1 2 1 1—4
Bandle	1 1 2 2 2—5	Murphy	1 2 1 1 1—5
Apking	0 1 1 2—3	N G	0 2 1 0 2—5
Richards	1 1 2 1 2—5	Bohemian	1 1 2 0 1—4
Girton	2 0 2 2—4	Stone	0 1 1 0 2—3
Ferris	2 1 1 0—4		

Ties div.

Match No. 7, 5 live birds, entrance $2:

Dayton	1 1 1 2—5	Ferris	1 2 1 2 2—5
Bandle	1 1 2 1—5	Stone	2 2 1 1 0—4
Richard	0 1 2 1—4	Murphy	2 0 1 1—4
Girton	1 2 1 1—5	N G	1 1 1 2 1—5
Bohemian	1 1 2 1—5	Shorty	1 1 2 2 0—4
Apking	1 1 2 2 1—5		

Ties on 4 div. Ties on 5 for first shot off: Bandle 6, Dayton 6, Girton w., Bohemian 6. Apking 6, Ferris 6, N. G. w. Ties of 6 div.

Individual shooting, live birds. Match 1, $5 per man: Shorty 5, Apking 5.

Match No. 2, conditions same: Richard 5, Apking 3.

Match No. 3, conditions same: Apking 3, Ferris 6.

Match No. 4, conditions same: Apking 4, Ferris 3.

Match No. 5, 5 live birds, 3 men, $5 entrance: Dayton 6, Apking 4, Ferris 5. Dayton and Ferris div.

Summary: Dayton killed 41 out of 46, Al Bandle 40 out of 41, Richard 36 out of 40, Murphy 22 out of 25, Girton 25 out of 33, Bohemian 23 out of 26, Stone 17 out of 20, Apking 61 out of 74, N. G. 21 out of 26, Ferris 45 out of 56, Shorty 25 out of 31, Whitney 6 out of 10.—C. G. NEWSBOY.

TOWANDA, Pa., Oct. 27.—The attendance of club members at our weekly shoot has been gradually growing less until this week but three faced the traps, all using hammerless guns. Turner shoots a Lefever, Snider a new National Gun Co. for first time, and Dittrich an L. C Smith. The following is the score:

Dittrich	0 0 1 0 1 1 1 0 1 1 1 1 1—15	Snider	1 0 1 0 0 1 1 1 1 1 1 0 1 0 1 1—14
Turner	1 0 0 0 1 1 0 1 0 1 1 1 1 1 0 1—12		

TRAP.

CHARTER OAK PARK.—Hartford, Conn., Oct. 24.—The second tournament by the Connecticut Shooting Association, at Charter Oak Park, to-day, was a notable success, everything considered. The day was cold and raw, and the trap-shooting season past, so that the number present and the interest taken shows that the tournament was a perfect success. Six thousand pigeons were thrown, and all the events were well filled. So well pleased was the large delegation from New Haven, that President Bristol, of the New Haven Gun Club, arranged with the officers of the Association to give a shoot at New Haven, on Thanksgiving Day. Shooting commenced at 9:30 A. M., and ended at 5 P. M., darkness then preventing further shooting. Notable among the absentees were Yerrington and Manley. Perhaps the "State champion" race frightened them off. New Haven sent thirteen good men, and they all did fine work. The cold, a brisk wind and traps set to throw hard-flying birds, made the scores poorer than usual. In fact no one made a score equal to what could have been made under more favorable circumstances.

Second extra event, 10 birds, 5 angles: Whitney 9, Webb 7, Melrose and Johnson 5, Alger 6, Treat 4.

Third extra event, 10 birds, 5 angles: Bristol 10, Bates and Sherman 9, Lewis, Widman, Wood, Hubbard and Quinton 8. Widman won on 8 straight.

First regular event, 10 birds 5 angles: Whitney 10, Widman and Sherman 9, Lewis and Wood 8, Hubbard, Henry, Treat, Bates, Bristol and Webb 7. Tie won on 5 straight by Bristol; Folsom, Quinton and Johnson 6, Cowee and Alger 5.

Second regular event, same condition: Widman, Lewis and Bristol 10, Whitney and Sherman 9, Bates, Gould, Alger, Hubbard and N. Folsom 8. Bates and Gould divided 3 on 5 straight. Webb, Johnson and Cowee 7; Treat, Woods and Henry 6, Goodwin and Whittlesey 5.

Third regular, 5 pairs: Cowee 3, Whittlesey and Whitney 7, Lewis, Gould, Putney, Bates, Widman and Henry 6. Won by Widman on 4 straight; Bristol, Webb, E. Folsom, Hubbard and Johnson 4, Goodwin 3.

Fourth regular event, State championship and pitcher, etc., 10 straightaways, 20 singles, at 5 angles and 10 pairs:

	Straightaways.	Singles.	Pairs.	Total.
E Folsom	8	18	19	45
Whitney	10	16	17	43
Bristol	10	17	15	42
Gould	10	16	16	42
Putney	8	16	17	41
Widman	7	20	13	40
Lewis	8	20	11	39
Sherman	7	16	16	39
N D Folsom	9	15	14	38
Henry	7	16	15	38
Burbridge	8	15	15	38
Hubbard	7	15	15	37
Bates	10	15	10	35
Johnson	8	13	13	34
Melrose	8	12	14	34
Willey	8	14	10	32
Cowee	6	12	14	32
Whittlesey	8	10	11	29
Webb	6	12	10	28
Treat	5	10	11	26

Fifth event, at 40 singles, 5 angles, for Parker gun: Woods and Widman 37, Bates and Gould 36, E. Folsom and Sherman 35, Lewis and Whitney 34, N. Folsom 31, Melrose 30, Bristol, Putney and Johnson 28, Willey 27, Webb, Henry and Cowle 24, Hubbard 23.

Sixth event: Widman and Sherman 10, Bristol, Gould and Whitney 9, Lewis and Goodwin 8, Cowle, Henry, Bates and E. Folsom 7, Johnson, N. Folsom, Woods and Treat 6, Whittlesey 5, Webb 4.

In the two-man team, 20 entries, Bristol and Whitney took first money on 20, Gould and Sherman second on 19.

In the miss and out Bates and Henry stood up longest, and Bates finally won. This was the last event, although a number of small events were shot on a set of side traps.

BROOKLYN, Oct. 26.—Leaden clouds greeted the men of the Crescent Gun Club when the members of that organization assembled at Louis Miller's Dexter Park to-day for their regular monthly shoot; the conditions of the weather were such that good shooting was almost impossible, and only one of the crack shots who participated in the competition came anywhere near his real form, and that gentleman was Mr. C. B. Hubbell, the winner of the principal competition of the day. The great match at 25 live birds which was announced to be decided between Walter D. Gilman and Mr. Cromellan of Brooklyn proved to be a grand fizzle, as the latter gentleman did not put in an appearance, and the referee, Mr. Hopkins, decided that, under the rules, if Mr. Gilman went to the traps and shot at one bird he would be complying with the conditions of the match, and that he would award the contest to Mr. Gilman if, after waiting a reasonable time for Mr. Cromellan to appear and that gentleman failed to come to time, the former faced the traps and shot at one bird, thus establishing the fact that he was on hand and ready and willing to decide the event. After the regular shoot for the club medal was decided Mr. Gilman walked to the traps and called "Pull!" to Trapper William Mill, and the bird, a large one, which was a quarter to the right, rose in the air and was immediately bowled over, upon which the referee immediately awarded the match to Mr. Gilman by the score of 1 bird killed to 0. Some good shooting was done in the regular club competition for the gold club badge, which was at 10 birds per man at 25 ats. rise, the scores of which were as follows:

D. Gilman 4, W. J. Bolton 2, W. E. Skidmore 7, L. C. Hopkins 8, Orto Hill 7, C. B. Hubbell 8. The latter gentleman thus won the trophy, and will wear it until the next regular shoot of the club. A sweepstakes at 3 live birds per man followed, the score of which was as follows, each contestant shooting at 25yds. rise: Hubbell 3, Hill 2, Gilman 1, Bolton 1, Skidmore 0, Hopkins 0. Hubbell thus won first money, Hill second, and Gilman and Bolton div. third money. The entrance fees in this event were divided in the ratio of 50, 30 and 20 per cent. for first, second and third prizes respectively. A spirited and very close contest resulted in the next event, which was a team match, at 5 live birds per man, at 25yds. rise, Hubbell's team vs. Gilman's team, which was won by the narrow margin of one bird by the former team, as the subjoined score shows: Hubbell's team—Hubbell 4, Hill 4, Hopkins 0; total 8. Gilman's team—Gilman 3, Bolton 1, Skidmore 3; total 7. Several sweeps at bluerocks followed, and at the meeting of the members of the club held later in the evening it was unanimously decided to hold the regular shoots of the club on the last Friday in each month at Dexter Park.

WORCESTER, Mass., Oct. 20.—The contest for the Norcross trophy last Tuesday was the most closely contested shoot yet held for this cup. E. S. Knowles, C. B. Holden and C. R. Crompton tied on 27 out of 30. On the first shoot-off to decide the tie each man broke 9 out of 10, but on the second round Knowles shot the others out and won the cup. "Lisha" kept open house that evening, and the boys all enjoyed a smoke at his expense. "The best the house affords" was none too good.—HAL.

The scores were as follows:

E S Knowles	27	M D Gilman	24
C B Holden	27	E Jewett	23
C Crompton	27	A R Bowdish	22
G J Rugg	26	E F Swan	22
E Welch	26	W H Dean	22
C Forehand	26	C R Holman	21
W L Davis	25	Wm White	17
George Sampson	25	F Forehand	14
A L Gilman	24		

Ties shot off as follows:

Knowles	11111—5	10111—4	11110—4	11111—5
Crompton	10111—4	11111—5	10111—4	10 w.
Holden	01111—4	110 w.		

WELLINGTON, Mass., Oct. 26.—The amateur shooters being in the bush, the professionals and semi-professionals had a gala time at the traps. In the silver pitcher match Bond again scooped the trophy, and unless some of the shooters return from the bush to compete with him next Saturday the doctor will win the same. The scores of 8 and over follow: Bond 13, Cody 12, Warren 11, Porter, Sanborn and Field 11 each, Gale 8. The first in the sweepstakes were won as follows: Five bluerocks, Cody; 5 pigeons, Bond; 6 bluerocks, Bond; 3 pairs pigeons, Melcher; 5 bluerocks, Field and Bond; 6 bluerocks, Bond; 5 bluerocks, Bond; 6 pigeons, White and Bond; 7 bluerocks, Bond and Gale; 8 pigeons, Warren; 7 bluerocks, Bond; 10 bluerocks, Keystone trap, Melcher; 5 bluerocks, Warren; 6 bluerocks, Sanborn; 5 pairs bluerocks, Keystone traps, Porter; 5 bluerocks, Sanborn and White; 5 pigeons, Bond and Gale; 5 pigeons, Sanborn and Bond; 5 bluerocks, Sanborn; 5 bluerocks, Hurlingham rules, Sanborn.

GRAND CROSSING, Ill., Oct. 22.—Match between W. P. Mussey and A. T. Loyd at 50 pigeons each, 5 ground traps, 30yds. rise, 80yds. boundary, Illinois State rules, for a purse of $100. After each had shot 40 birds Loyd threw up the match:

|

MIDDLETOWN, N. Y., Oct. 22.—The second shoot of the Madison County Sportsmen's Association came off on Saturday at Eaton. The principal event was the contest for the silver cup, for which Oneida entered two teams, Canastota one team and Eaton three teams, each of four men. Following is the score made at 16 singles and 6 doubles: Eaton—First team: Peet 13, Richardson 15, Hall 23, Curtis 17—70; second team: Cole 25, Palmer 16, Fryer 16, Briggs 13—70; third team: Stone 17, Parsons 13, Short 15, Sacket 13—58. Oneida—First team: Tuttle 10, Devereaux 16, Maxwell 18, J. M. Markham 22—66; second team: M. S. Markham 14, Carter 11, Cheney 5, Clark 20—50. Canastota team: Roberts 18, Lansing 17, Salisbury 15, Suits 8—59. Another interesting event was the contest for a Parker hammerle s shotgun and the championship of Madison county; won by J. M. Markham, of Oneida, by a score of 18 out of a possible 20. George Cole won the second prize on a score of 17 out of 20.

TORONTO, Oct. 21.—Messrs. Beldam, of the Toronto Gun Club, and Emond, of the Stanley Gun Club, shot a match at Chas. Ayre's grounds this afternoon at 50 live birds, H. and T. ground traps, 26yds. rise, with use of both barrels, Toronto Gun rules. This is the way it stood at the finish:

Emond .....1100111111211102001210111110210101101111111001—36
Beldam..... .....1101211121121121211111111211112111112100.02112011—43

The figure 2 shows where the second barrel was used. After the match a sweep was shot at 10 birds under the same rules. Messrs. Briggs and P. Wakefield divided first and second with a clean score. They both shot in good form.

NEW HAVEN, Conn. will have a big shoot on Thanksgiving Day, given by the New Haven Gun Club.

Yachting.

"West India Hurricanes and the Great March Blizzard." By Everett Hayden, U. S. Hydrographic Office. Large quarto, with 25 lithographic plates. Price $1. Contains full history of the great storm of March, 1888, with practical information how to handle a vessel in a cyclone; use of oil at sea, etc.

"DOWN THE BEACH" IN A NORTHEASTER.

NORFOLK, Oct. 26, on board yacht Medusa.—*Editor Forest and Stream:* I see so often in the FOREST AND STREAM accounts of little 40ft. or even 30ft. boats that make ten miles an hour as they float gaily over a summer sea, that I thought you might find it interesting to know what a good staunch 54-footer can do when it really blows, with a fair wind. Every one calls Medusa an old tub, and all the forties think they can beat her; I fancy, however, that my trip down here would have completely used up the best of them. I started on Wednesday, Oct. 23, from Twenty-eighth street, New York, at 11 o'clock, with a northeaster that was too good a chance to miss, being bound for Norfolk. The winter rig is bent and everything is good and strong. Of course yachtsmen would laugh at a mainboom that went to the taffrail only, and every mother's son would probably declare that his vessel would prove staunch enough with more sail. Probably a 32ft. bowsprit on a vessel of 64ft. long on deck would also seem a very stubby looking "horn," but it proved long enough.

The first incident of an exciting run met us before we were clear of New York Bay, a tug running into us when we were square before the wind, while I could not alter my course without a certain chance of exactly what did happen next day, a jibe on top of the runner. My men, who were below at dinner, hearing me hail the tug rushed on deck and at a great risk tried for the runner, I keeping away with mainsail just on the tremble, but we went into the tug; result, bad language galore, bowsprit driven in and bitts bent back, and bowsprit shrouds stretched too long, besides a parted mainsheet and a round hole in the topside where the bill of the anchor stuck on entry as a fender. We hove about on the other tack and lost a lot of time repairing damage, or our time on the run would have been considerably better, the damaged head gear causing some anxiety at times in addition to the direct loss of time.

When under way again we set topsail, in fact the wind was so moderate inside that I even got jib topsail out, but on reaching the Hook we found a sad sea on, and sent topsail down on the cap. We passed Buoy No. 5 about 1:20, at Scotland Lightship we had gotten off the bar, sea running regularly, so we set topsail and away we went. Light ship bore abeam at 1:50 exactly, ½ mile to windward, and we set course to clear Barnegat nicely and ran quite lively all the afternoon with breeze gaining strength and no one going our way, but a few working up to get into the hook. One pilot boat was reefed down and one big schooner had mizzen reef d.

At 6 o'clock we took in the topsail, for the breeze had gotten quite briskly "down to work." Barnegat bore abeam at 6:20; distance 42 miles (nautical, of course). Course was now laid to go between N.E. and Cape May lightships, and every effort was made to steer carefully. The sea was getting up, but nothing to bother us as yet. Absecom bore abeam at 9:15, and all went merry as a marriage bell. For a wonder we had no trouble with our binnacle light. Mr. Bliss has at last really succeeded in making something that will burn when the wind blows. At 11:35 N. E. Lightship was one mile distant and exactly on our starboard beam. We were not making 13 knots like our little friends in the FOREST AND STREAM, but we were foolish enough to think our old hooker was "humping along" at a fine pace, and I think the skipper did not care a penny for the racing fortics. At 12:35 we were alongside Cape May Lightship within a cable's length, in fact as close as it was safe to go. I make the distance on the chart from Scotland Lightship to be 103 nautical miles, and we had done it in 10h. 45m. exactly. There can be no mistake, for I took the times myself and we passed both marks too close aboard to be out of the way on bearings.

The wind by this time was a good honest gale, and the sea was rough. Of course, we had all hatches battened down forward and aft, but main companion and the lee side of main skylight were open to keep the cabin stove under some sort of control. I here, in the name of the yachting community, ask the inventors of the country to get us something that will burn while under way. The miseries we have in late cruising, language fails to convey. If ever anything has been carefully, religiously, thoroughly damned, it is the beautiful porcelain affair that stands in my cabin. It is more contrary and "ordinary" than a jibing horse or a kicking mule!

Having such a splendid departure, we now laid our course for Winter Quarter Lightship, 55 miles away. We flew along with an increasing sea, and everything as yet in good shape. I make it to be a very pretty piece of steering to have thus far hit off the mark so exactly; and Petersen, the skipper, deserves much praise for it. Of course, modesty prevents my expatiating on my own part of the "navigation," as Capt. Reuben Ranzo puts it. At 3 P. M. to the minute we were abeam of the new ship off Fenwick Island Shoal, but too close to it; and I found that the sea, which was now big, had hove us somewhat to the westward. I therefore altered the course to allow for it.

By this time the wind had increased so that it was no longer safe with a whole mainsail, small as it is, and we took in two reefs at once—a hard job, as we were about dead before it at this time. The main hatch cover was screwed down and all openings in deck looked after. At 6:38 we were alongside the Winter Quarter vessel; total distance 159 miles from Scotland Lightship, in 16 hours 48 minutes.

It was a wild and grand sight. The ship lay with her trysail up, and looked very small as the big yellow mountains drove down on her. The sea now had the regular feel of an ocean gale and wanted only the color for one to think of mid-ocean. The bottom was still too near the top, however, and the sand was stirred up through it quite thoroughly. We had for the next objective point the new lightship off Cape Charles, distance 57¾ miles. The sea being so long, we were going quite comfortably, and only when we got on the shoal spots did we fear anything from it.

While below, however, at 10:30, alas! I heard a great crash, and rushing on deck found that the boom had jibed over on the runner and was dragging alongside in three pieces. The wind for some time had showed a tendency to cant northerly, and as we were running nearly a S.W. course (S.W. by S.), it needed careful steering. Petersen says the shift came without warning and that the sail went over without a previous quiver of the after leach. It took some time in that big sea to get the wreck cleared away, with the boom back on deck and the sail furled untorn; but we did it and set trysail. As we got down near Cape Charles and into the shoal water the sea began to grow dangerous, as we had run a long time on the wrong jibe gathering in the wreck. Still we were able to go S.W., so that in the end we fetched about ¼ mile inside the Whistling Buoy off Cape Charles, which we passed at 1:30 (within a minute or so at least), making the sea portion of our trip in 24 hours. I thought that when in Vindex I did the same thing in 23 hours I was going very fast and every one considered her speedy down wind. The distance from Winter Quarter to Whistling Buoy is 64 miles, we therefore had come from Scotland ship 225 miles and from the "Hook" to Scotland is 3 miles, thus making the total sea trip 228 nautical miles in 24 hours, I think without the accident we should have been able to do 230 within the day.

Our course now gradually hauled westerly with the wind nearly north. The sea before reaching the bay was already very alarming in character. We soon took in the foresail, and then we went through the worst experience I ever had in a small vessel; we were practically in breakers, as the depth, 6 to 4 fathoms, was much too small for such a big sea. Everything was closed up tight. Water came aboard everywhere, one sea "pooping" us, going clean up to the waist of man at the wheel. It went up to the gaff of furled mainsail and filled my rubber boots standing on top of main skylight. It was enough to frighten any one but a hardened old salt, but I can speak naught but praise for my men; they showed no timidity, and Charles Johnson, who was at the wheel, steered his course as coolly and collectedly to all appearance as on a summer day. It was now slow work with the wind forward of the beam, an ebb tide running and a cauldron of waters around us. In fact, it was 5 o'clock before we got to the Thimble Light, and 7 to the minute when we let go our anchor in Norfolk, making 32 hours for the trip from dock to dock.

The last few hours had let a little water below, but not a drop got through the skylight in my own stateroom, and not a single thing has come out of it to be dried. The men's berths were not wet, their lockers only suffering. The carpet in main cabin got a very good soaking, as several doses of salt water were given it. The cover of cabin skylight was not well secured, and my chart came in for a little. Still the cushions are not wet enough to keep on deck, as the covers protected them and were themselves so little touched that everything was dry soon after we came to anchor. The upper cabin skylight wept a little, the carpet came up, but the beds got a very insignificant sprinkle. The damage below was practically nil. We went to bed, and of course are all now busy repairing damage, getting ready to ship our new boom.

Now that it is all over I feel proud of the little ship that carried us through so safely. The jibing of the boom of course wrecked things a little, runner gone, and manrope stanchions aft demoralized, but the boat did not leak more than usual, and outside is as smooth as an egg. I forgot to mention that the Cape Charles Lightship, the last mark we ran for, we did not make out, but as we got the Whistler we did not care. She was not easy to pick up, for she was not there at all, but had gone adrift with 150 fathoms out and was in Norfolk when we got in. We passed, however, within two and a half miles of her position, and that this error is partly attributable to the accident, I think I can claim in all modesty. ROBERT CENTER.

[Medusa enjoys the distinction once accorded to the old Vindex, of being the cruiser of the American singlestick fleet, in active service practically all the year around. She is a cutter of 54ft. l.w.l., 12ft. 4in. beam, and 10ft. 3in. draft. At present she is bound for a winter cruise in the Chesapeake. The run recounted above shows something of her qualities as a sea-going cruiser, and she is not a whit less perfect in the cosy and comfortable appointments which add so much to the pleasure of cruising.]

NARROW BEAM UNDER THE NEW RULES.

IN commenting on the Kathleen-Shona match the *Field* speaks as follows:

"The Kathleen is more like one of our old 30-footers than a modern 10-rater, and is, we believe, of about 14 tons displacement, while the displacement of Shona would be about 9 tons. If the point sought to be ascertained is, whether 14 tons can be put into a better proportioned form than that of Kathleen's, we think the question can be answered by referring to our 10-raters, which are of about 14 tons displacement on a length of 36ft. Further, a study of the relative performances of Doris (the best 5-tonner yet built) Yvonne and Decima, would throw more light on the rating and classification question than any number of matches between Shona and Kathleen. That Doris would beat Kathleen as much as she would have a Keepsake or Curtsy we have not the smallest doubt; but when the displacement of the 30-footer is put into a form 33ft. long it is a very different matter. The four crack British 10-raters compare as follows:

	Length.	Breadth.	Sail area.	Y.R.A. rating.
Doris	33.86	5.6	1680	9.5
Yvonne	34.10	8.9	1727	9.8
Dis	35.93	9.1	1666	10.0
Decima	35.67	10.2	1679	10.0"

The dimensions given have a direct bearing on the question now uppermost with American yachtsmen; will the new classification by corrected length lead to narrow boats? It would seem a sufficient proof to the contrary that in England, with the strongest inducements in the way of habit, prejudice, conservatism and vested interests to adhere to the old narrow type, the beam has increased greatly in all classes. Decima, with 10.2ft. beam has beaten Doris, with 5.6ft., while the other two new boats, Yvonne and Dis, with 9ft., have been fully as successful. In the next class the result has been the same, the beam has at once expanded from 7ft. 6in. in the old 10 tonners like Undia and Melissa, to 10ft. 3in. or over in the new 20 raters, the latter winning easily from the narrow boats. If such has been the experience in England there can be little question as to the effect in America, where all the habits and prejudices of yachtsmen demand as much beam as they can obtain; very often to the detriment of the more essential qualities of the yacht. To say nothing of the far lighter winds on this side of the Atlantic, there are other conditions which favor a wide rather than a narrow boat, and a rule which has produced a comparatively wide craft in England is certain to give a still wider one here, if its factors are properly proportioned.

NEW YORK Y. C.

THE fall meeting of the New York Y. C. was held on Oct. 24, with Vice-Com. Fish in the chair, Com Gerry being in Europe. The following gentlemen were appointed on the nominating committee for the annual election: J. D. Smith, Ogden Goelet, Lloyd Phœnix, F. W. Vanderbilt, J. N. Winslow, J. R. Platt, T. B. Asten, H. M. Durand, S. Wordon and Augustin Monroe.

Some further correspondence concerning the Valkyrie challenge was read, but its tenor was not made known outside the club. The committee on measurement, Messrs. John Hyslop, L. A. Fish, E. A. Willard and A. Cary Smith, presented their report. While its substance has not been made public it is understood that the committee recommend a classification by corrected in place of waterline length, with no material increase of the tax on sail. They further recommend that when the spinaker boom exceeds in length the distance from the foreside of mast to the forward point of measurement for sail area, on the bowsprit, that such excess be added to the base line, also that the present forward point of measurement, to outf of jib, be replaced by a point halfway between it and the jibtopsail stay. The effect of these two changes will be very slight on the present fleet, but will modify the present tendency toward longer spinaker booms and extensions of the bowsprit far beyond the present point of measurement. It is also recommended that a change be made in the correction to base line for length of gaff, so as to measure the sail more accurately in all cases. A further recommendation was to increase the percentage of the allowances from 40 to 50 per cent., the present scale being low, and a change being especially necessary to correspond with the proposed classification. The committee's report was adopted, but the amendments require to be voted on at a second meeting before their final enactment, and a special meeting will be called as soon as the committee decides on the class limits by the proposed rule.

A NEW YACHT ON THE PACIFIC.

YACHTING has been at a standstill for several years on the Pacific coast, there being practically no racing, while the fleet has declined in numbers. It is pleasant to note, as the first promise of better things, the construction of a new yacht of modern type, which should do much to revive the interest in yachting that was once so strong about San Francisco. The new craft is a keel schooner of 86ft. over all, 74ft. 6in. l.w.l., 24ft. beam and 9ft. 3in. draft., being modeled by Captain Matthew Turner, builder of Lurline, Csispa and Nellie. She has a clipper stem of handsome proportions, a moderate overhang and a midship section not unlike the Burgess boats, something very different from the older boats on the coast. Her keel is a steel trough of ½in. plates, 23in. deep and 24in. wide, filled with lead, the total weight being 29,340lbs. The frame is of cedar, locust and pine, with Oregon pine planking. Her outfit of canvas, winglass, etc., will be of the best Eastern make.

YONKERS Y. C.—On Oct. 23 the Yonkers Y. C. gave a complimentary dinner to its commodore, Mr. Charles T. Mercer. During the evening Com. Mercer was presented with a handsome clock.

ALARM AND ENCHANTRESS.—The famous old schooner Alarm was lately broken up on the sands at Southampton after a lifetime of nearly 60 years, and now another two-sticker is to share her melancholy fate. Enchantress, Mr. J. F. Loubat's schooner, as she was once known in this country, was recently sold at auction in lots at Cowes, England, and a couple of weeks since she was towed to Southampton to have her spars lifted out by the steam shears, returning to Cowes to be broken up. Enchantress was modeled by Capt. Bob Fish, and built at Greenpoint, N. Y., in 1870 by Mr. Samual Pine, being 144ft. 2in. over all, 120ft. 6in. l.w.l., 24ft. 1in. beam and 13ft. 9in. draft, being, of course, a keel boat. She has been in British waters for the past 15 years, being owned during the latter part of the time by Col. Owen Williams.

EASTERN Y. C.—The Eastern Y. C., at its fall meeting on Oct. 22, went no further in the way of an amendment to its measurement rules than to drop the following clause from Rule 4: "Should any yacht of the fourth or any smaller class sail a race exceeding 5 knots an hour, or should any yacht of the third or any larger class sail a race at a rate exceeding 6½ knots, the allowance in the class in which such case occurs shall be increased by one-fourth the amount given in the table."

NEW YACHTS.—Mr. Burgess is at work on a design for a 60ft. keel cutter for Mr. David Sears, of Boston. She will be of composite build. He also has two forties under way, one for Mr. Adams. Lawley has finished and sold the 45ft. centerboard begun last spring for Mr. Owen, of Providence.

A SUCCESSOR TO IREX.—It is probable that Mr. John Jameson will build a large cutter this winter, but it is not known who will design her, or what her length will be. A rumor has been prevalent on this side that Gen. Paine will build a 70-footer, but it is not correct.

LAKE Y. R. A.—The fall meeting of the Lake Y. R. A. will be held at Hamilton, Ont., on Nov. 9. The principal business to come before the meeting is a change of the measurement rules.

SEAWANHAKA C. Y. C.—The fall meeting of the Seawanhaka C. Y. C. will be held at the club house on Nov. 9, when the committee on measurement will make its report.

CTTER.—This handy little cruiser is offered for sale at a bargain. See another column.—*Adv.*

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists are all interested in canoeing are requested to forward to FOREST AND STREAM their address-es, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1887-88.

Commodore: H. C. ROGERS.....} Peterborough, Can.
Secretary-Treasurer: GEO. W. HATTON }
Vice-Com. Rear-Com. Purser.
Central Div..W. K. Huntington..E. W. Masten.....T. H. Stryker, Rome, N. Y.
Atlantic Div..W. P. Stephens.....L. B. Palmer.....F. L. Dunnell, 186 Jerolemon st., Brooklyn.
N'thern Div..Robert Tyson.....S. S. Robinson .....Colin Fraser, Toronto.
Eastern Div..H. E. Rise, M. D.....Maxton Holmes.....H. D Marsh, Springfield, Mass.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of $2.00 for entrance fee and dues for current year. Every member attending the general A. C. A. camp shall pay $1.00 for camp expenses. Application sent to the Secty-Treas. will be forwarded by him to the proper Division.

Persons residing in any Division and wishing to become members of the A. C. A., will be furnished with printed forms of application on by addressing the Purser.

WESTERN CANOE ASSOCIATION.

Commodore—C. J. Stedman, Cincinnati, Ohio.
Vice-Commodore—T. J. Kirkpatrick, Springfield, O.
Rear-Commodore—Thos. S. Gates, Columbus, O.
Secretary-Treasurer—J. B. Keogh, 34 Montauk Block, Chicago, Ill

Applications for membership should be made to the Sec.-Treas., on blanks which may be obtained from him, and should be accompanied by $2 as initiation fee and dues for the current year.

SNIPS FROM SNAPS AT THE A. C. A. MEET.

PART II.

WHEN the fact that there were only two standing rigs used during the regatta this year, and that last year there were only about two hoisting rigs in the fleet, is taken into the account, it is somewhat remarkable that there was so little talk was new in sails or gear, along shore at Suave Island. The Vesper men, as a matter of course, had not been idle, and their rigs showed it, for the gear and fittings had been simplified and worked up to a very decided degree of efficiency, but the only distinctively new feature was the use of leather instead of metal for batten jaws. The Ubique men had each of them, a Notus sail, rigged on a jack stay, formed by a half inch strip of brass screwed to the mast, and this was perhaps the most novel sail fitting at the meet. That the gear worked well both on Una and Mac cannot be denied, but whether it is a decided improvement on the Notus rigging, and whether the long spar of this rig is not a fatal defect are still unanswered questions. As far as I know the Notus rig pure and simple, has never been used with good results upon any canoe out Notus, and Notus is an exceptional craft in every way. Just think of it, she has only broken down once in three long years of hard racing. The Mac's rig was noticeable for one thing, it was throughout the production of that "professional canoeist" her captain; for not content with designing his canoe and her rig, that disgruntled racer made his sails himself out of English linen, and a good job he made of them.

Another canoe, that was in rig and fittings the result of the intelligent and unsparing efforts of her captain, was the Evangeline. Mr. Quick went to work on his cruiser at the meet with pummice stone and coal oil, and put a polish on her that was not surpassed by the vaseline finish of the Vesper men. His rig, made by himself throughout, was as simple as effective, an all-one-mast sail, with no seams between the batten pocket, and his halliard gear was the nearest approach to an improvement on the Tramp double halliards I have yet seen. An Π-shaped piece of brass went over the masthead, to the starboard end of which a block was made fast. The halliard led from the port side to this Π-shaped strap, to which it was made fast, through a boxwood deadeye lashed to the spar, then around the mast, through the starboard deadeye on the yard, through the block at masthead, and to the deck. The double halliard is so simple in itself and gives so little extra trouble, and it affords such a powerful purchase, that I am inclined to consider it superior to any single rig, but there can be no question that the Evangeline's rig worked, and worked well.

Every meet of the A. C. A. is something approaching a manifestation in concrete form of the development of canoeing during the year that preceded it, and of the effect produced thereon by the Association through its rules and practices; and the meet of '89 was in this respect an unusually important one. Shortly before it took place the great agitation for such a reform of the racing rules and practices of the Association as would bring them into accord with the conditions affecting canoe development that now exist, had been brought to a focus by the submission to the executive Committee of such amendments to the racing rules as would prevent the use of the standing rig, the hiking seat and the projecting centerboard in most racing; and although a majority of the executive officers voted for these amendments at the request of the conservative minority, the enforcement of the new rules was postponed until next year. It was, in fact, left for the development of the meet to decide whether or no the Association should legislate against these appliances or no, and the developments are of such a character as to complicate the question to a decided extent. Last year two of the evil features—the standing rig and the projecting board—were in almost universal use, and the hiking seat, otherwise the piazza, was used only by the Vesper men. This year there were only two canoes with standing rigs in the racing fleet, there was practically no change in the character of the centerboards used, and the hiking seat was as universally used as was the standing rig last year. Theoretically, these developments should not alter the nature of the question of racing reform at all; if a standing rig is had in itself, it is no better or

worse because one or fifty use it. But from a practical standpoint, the question has been much altered. If only one or two men use a standing rig, and the great body of canoeists devote themselves to the development of the hoisting rigs, the "abomination, "while none the less abominable, is no more a lion in the path of progress; it is a danger that canoeing has weathered out on. There is, however, no guarantee that the standing rig is dead. It must not be forgotten that last spring, when the majority of canoeists were devising new rigs, there was every chance that standing rigs would be legislated against; and as the trophy was won this year by a standing rig, there will be next spring a reaction in its favor, if the Executive Committee takes no action against it.

The new rule relating to the centerboard did not deal with the essential evil, the devotion of the entire interior of the canoe to the accommodation of the centerboard, but if it was desirable to legislate against projecting boards in '89; it is as desirable to do so in '90; this year's meet has not changed the position of affairs. The developements of this year, as far as the hiking seat is concerned, have been of a most peculiar nature. Last year the Vesper men, and the Vesper men alone, used the railway and defended it; this year the whole clan of racing men use them and like them so well that I believe every mother's son of them would wax so wrathy if they were legislated against that not even a drop from the ends of their railways into deep blue water with an October chill on it would cool their anger to a sufficient extent to prevent them from rebelling. If the hiking seat is left alone, moreover, it will soon prove whether the effect of the railway upon the development of the canoe will be as injurious as it would naturally appear to be, and both canoeing and the Association are strong enough to permit the hiker to work out its own destinies for some years to come. RETAW.

A DISMAL STORY.

IT is very little time I can devote to vacation, winter or summer; but last June I found myself in a Michigan town visiting relations and three whole weeks on my hands to do as I liked with. After a few days of such quietness and carly hours as one finds in a small town or in the country itself, I made up my mind to spend a week at least in the woods; and no sooner had I conceived the idea than I rushed to my cousin Spencer, and after ten minutes' talking had him as enthusiastic as myself. Our camping ground, we concluded, should be a small lake, sixteen miles by almost straight road from where we were. There is a small river running through that neighborhood; and by consulting a county map we found we could go by boat down this stream for about six miles and then turn into another stream that flowed into the first one direct from the lake we had decided upon, though I now recollect the map did not state that it was a very crooked stream. This was the route we determined to take, notwithstanding that those who knew told us the trip had been attempted several times by others and had been found impossible, even with canoes, to say nothing about a loaded boat. But we always knew better than those who would advise.

We started at 5:30 A. M. on a Saturday, the boat containing tent and poles, blankets, minnow pail, bucket, rods and tackle, gun and cartridges, minnow net, banjo, axe, two valises, and last but by no means least, a large trunk full of provisions. Spence took the oars; and the only seat for me was astride the trunk in the stern. The gunwale of the boat when we shoved off was about an inch out of water. Our first difficulties came in the form of two or three railroad bridges; to get under there without upsetting the boat was painful in the extreme. I had no idea before I was such an accomplished contortionist and equilibrist. Spence was on the seat and hadn't much trouble, but I sat some two feet above the water. However, we anticipated some difficulty, owing to the kind advice of our friends not to undertake the trip at all. Our next obstacle was a tree fallen directly across the stream; the water being only 3½ or 4ft. deep, we managed to get out without tipping, and after several experiments succeeded in getting the boat over, and proceeded on our way. To make my tale of hardship short in this quarter, we had to get out into the stream twice more; we cut our way through two small trees across our path; and three times we had to land, unload and carry our boat around.

When we reached our six-mile terminus it was 3:30 P. M. The other stream wound away to the right, clear and deep, and we both heaved a sigh of thanksgiving that our difficulties were overcome. But I always did count my chickens. An old farmer standing on shore greeted us, and we asked how far we were from the lake. He answered, "Well nigh ten miles as the crow flies." We concluded that would be about twelve by stream; and with light hearts we continued our way, feeling sure we could have our tent up by dark, as the stream was clear of all obstacles. The last time we had unloaded we had thrown our coats in the bottom of the boat, and in reloading had piled everything on top of them; but we did not mind, as we were going across a large marsh and the sun's hot rays did not make us hanker for them. About four miles straight across the marsh we could see woods, and as we would be under the shade of their trees soon, we did not mind the heat. Suddenly the stream turns to the west; we go about two miles due left; then a curve and away across the marsh again to the right, the turns in the stream about a half mile apart and running parallel. As we almost reached the right extremity, another turn took us back to the left; and so on back and forth we went six times before we reached the woods, to find only another stretch of marsh. After making a nearly complete circuit of the woods without coming within an eighth of a mile of shade, we went on again as before, back and forth, really gaining from one-half to three-quarters of a mile each trip. To land was impossible, to return folly: so we proceeded, fairly cooked.

Finally the sun went down, the moon came up, the heavy dew and damp air made us very uncomfortable after our severe roasting; our coats were under the cargo. About 2 A. M. the moon went down and we were still crossing marshes. When the moon was gone it was difficult to distinguish our course, and we kept continually running into the reeds and backing out. So we gave it up, and as we seemed to have reached a pond of some sort, as there was no current, our only alternative was to stay there until daylight or to go ahead and take chances. We decided on the former. Then we had a jolly time to keep each other awake. To nod meant to capsize. There must have been more frogs than reeds about us; we could hear them on all sides, the old proverbial "More rum," and "Pull 'em down," sounded quite distinct; and Spence convinced me one little fellow with a piping voice said, "Can't camp here;" but we were very much alive to the fact without his reminding us of it. Along toward daylight I nearly lost my senses; I assigned it to a too sudden change of climate; however that might be, I could see houses and horses, hear people talking and dogs barking. Spence said afterward that he thought I would attempt to get out and walk ashore. I was never so tired before nor since; and when dawn began to break we hailed it with delight, only to find we had to wait for the sun to drive the mist away. All things come to an end, however, and when the sun did rise we found we had been lying on the lake itself since 3 A. M.

At 7:30 Sunday morning we landed and were so stiff we couldn't stand at first; but we got our tent up and blankets out, and oh, how sweet was that sleep.

We awoke just before dusk; I went trolling and captured two fine pickerel, and we had a heavy supper. Spence lit his pipe and said, "Thought they said it couldn't be done." I could only say, "but it can be." But we don't propose to do it again to convince the sceptical. As we had had such a good sleep we didn't turn in until midnight. I was just getting into a doze when Spence got up and told me to "light out." I wanted to know why. He said, "Do you smell anything?" and then I could detect a sour, sickening odor that pervaded our tent, Spence said it was a massasaugua, a snake very much resembling the rattler, only minus the rattles, deadly poison, and no warning given of its intentions. This was told me on the outside of the tent. We gave Mr. Snake about an hour to rest himself and then he left. We didn't see him at all, and neither cared to hunt him up. After his departure we retired once more, and covered ourselves over with the minnow net to foil the mosquitoes.

I was just getting into another doze when Spence gave a yell that made my hair curl and jumped up, I naturally followed suit. After lighting the lantern we discovered that on his turning over one of the sinkers on the minnow net had dropped into his mouth and frightened him half to death. We got composed once more, but now sleep was out of the question; and I lay on my back flicking the mosquitoes off with my handkerchief. In doing so the handkerchief struck Spence in the chin. He swept his arms over his face, gave another yell and jumped up again, peeling his elbow on the corner of our provision chest, and then told me a tale of horror of how a bat had alighted on his face and he could see his eyes gleaming. He couldn't imagine why I rolled and laughed until I was sick for twenty minutes afterward. I would get quite composed, then start off again into convulsions, so that neither of us could sleep. Spence does not know to this day but what it was a bat. I wonder what he will say when he sees this, for he takes FOREST AND STREAM regularly.

Two more days we spent fishing, sleeping, and fighting snakes. Early Thursday morning I was dreaming I was driving through the clouds in a chariot; the earth underneath was inundated, the thunder rolling and lightning flashing and people crying "help." Then I was rudely awakened by Spence calling, "Will you help here? The wind will land this tent over in the marshes." Such a storm, such thunder, such lightning, and how it did blow and pour. Poor Spence was tugging at the guy ropes to tighten them and absolutely everything was soaked through. We finally concluded it was best to let the tent down, which we did until the wind ceased. Matches and tobacco were fortunately dry; we lit our pipes, left our camp a perfect wreck; walked two miles in the rain to a farm house, and stayed there until about 3 P. M., when the sky cleared. We then had the farmer hitch up his team to his lumber wagon and drive us back to camp. On our arrival we put the boat, tent and everything else into said wagon, climbed in, and by 7:30 P. M. on Thursday we were home again.

We had other mishaps while out; but I have occupied too much space thus far, so will leave it to the imagination. But in spite of it all was there not at least the small, but pleasing consolation that no one had accomplished it before and we had. Next time I shall take the advice of those who know, and permit me to suggest that all who read this shall do likewise. Some other time I shall tell you of a trip fraught with more pleasure. It is great pleasure, even now, though, when I think of Spence and the "bat." OSCEOLIO.

ALONG LONG ISLAND SOUND.

LONG ISLAND SOUND is by far the finest stretch of clear water for a short canoe cruise to be found along the Atlantic coast of our land. The coast of the State of Maine is more diversified and consequently more picturesque, making it better for a long cruise, but it lacks the reliable character of the Sound, which in pleasant weather is steady and not subject to sudden changes. Therefore it is good water for canoe sailing.

After a week of waiting, admirably spent, my canoe arrived at the Yonkers C. C. safe and sound, and on Sept. 4 she was loaded with "all my goods and chattels," including my tinsmith's wonder, the "box of tricks," so feelingly aluded to in a recent number of your valuable paper. At half past 10 o'clock in the morning, we (Ilex and myself) started on a cruise along the Sound.

The morning was pleasant, though a light mist hung over the Hudson like a veil, making the Palisades loom upward until they appeared twice their natural height. The wind was light from the south'rd, so reclining upon the cushions I lighted a cigar and lazily floated down the river, until the square uprights at the drawbridge loading into Spuyten Duyvil Creek came into view. Upon reaching the entrance to the creek I lowered sails and spars, and resorting to my trusty blade started down toward the Harlem River. This creek is very winding, but easily followed as far as the coal wharves, where it branches, the branch turning to the right being the proper one. On the young flood tide the current is favorable as far as the falls, which are only a foot high and easily run.

Down the Harlem we had a strong head wind and head tide, and it was not until half past two that the Third Avenue Bridge was reached. Here the canoe was put into the house on a pay float for the sum of half a dollar, having made ten nautical miles in four hours.

Next day we made a start from Third avenue at 1 o'clock P.M., going through the Kills and over the flats. The wind was W.S.W. and steady, so upon reaching clear water the sheets were eased, and more comfort indulged in. A large fleet of coasters was making its way to the Sound, but with one or two exceptions, they were soon left behind. After passing Throgg's Neck Light the sheets were started broad off, and with wings spread to starboard and port, Ilex made very fair time. How enjoyable it is to sail in a light fair wind, lying down on the cushions, a clear sky overhead and the genial warmth of the sun making everything serene.

Execution Rock and Great Captain's Island were passed at 4 and 5:30 P. M. respectively, and at just 6 P. M. Stamford Harbor was made and the canoe hauled upon the beach in front of a swimming school. Mr. Ennis makes all welcome, and a genial man he is. Five hours' sailing and 25 nautical miles to our credit caused the pangs of hunger to be felt, so out came the "box of tricks." From the center of the kit came its alcohol heart, upon which a cup of water was soon boiling; from the grub box came a couple of eggs, which were soon cooked, and then the tea put into the water to steep by the camp-fire; over the alcohol stove a couple of slices of bacon were cooked, and then supper eaten with that relish which only the Corinthian sailor can know. The dishes being washed then came a wonderful exhibition of legerdemain from the hand of the arch magician who exhibited this kit at the meet. A few magic passes, and by one simple twist of the wrist, the "box" was complete and stowed beneath the deck. By this time the moon had risen and its soft radiance turned the Sound into a sheet of light; by its light a pipe was enjoyed, and then, tired nature asserting itself, bed was made in the canoe, and wrapping myself in my blanket bag I was soon beyond the troubles of the day—asleep.

We cut loose from Stamford Harbor about 7 A. M., in the same breeze as of the day before, and at 8:30 passed Norwalk Island Light. Here we made a slight detour, so as to pass among the Norwalk Islands. It was worth the trouble, as it was very interesting, being so near the shore. Oyster fishers at their business formed a floating feature of the scene. At 11 Penfield Reef Light was picked up, but finding that with it aboard the canoe was over ballasted, I set it down behind me, and if not washed away it is there to the present day. At 11:15 A. M. Bridgeport Harbor was passed, and the smoking chimneys of the city factories reminded me that civilization was not afar off. The wind here freshened, and soon there was quite a bobble on. At 12 M. Stratford Point was made, and at 2 P. M. New Haven bore N.W. The Thimbles were passed in the distance, and at 4:30 Faulkner's Light was passed, so turning in shore we landed at Sachem's Head at 5 P. M., having run 41 nautical miles in 10 hours.

At this juncture that heavy northeaster which cleaned out Coney Island happened along, so I housed Ilex and made a visit to the interior of Connecticut.

On Sept. 17, the next day after the big storm, the wind came back in the old quarter and blew hard. Setting my 36ft. dandy forward I started, and it did not take long to start either. With one bound Ilex began the wildest sail it has ever been her skipper's fate to indulge in. The huge green seas from the storm were sweeping toward the west, while the wind blew hard toward the east. I need say no more, for any one who ever saw open water knows what that means, *i.e.*, a regular "monkey and parrot time."

Having started at 8 o'clock in the morning we reached Saybrook Breakwater at noon, and never was rest more welcome. Sea after sea had pounded, first on the forward and then upon the after deck, and by way of variety one would occasionally look in over the side, until, in spite of the apron, the canoe was half full of water. At the breakwater I set about bailing the water out, and at one o'clock started on. Same kind of a time. I did not enjoy this at all, and solemnly vowed that if we ever reached Stonington I would conclude the trip. And I did, for reaching Stonington at five P. M. I stopped then and there, having made thirty-seven miles in eight hours. My canoe and myself, for those two make the "we" of this log, had thus, in twenty-three hours of actual sailing, covered 103 nautical miles of water. In not one of all those miles had the centerboard been used at all, which is quite exceptional in my experience. All along the Sound are houses where provisions may be obtained, and if so desired hotels are plentiful. At no time was I more than seven miles from land, and as long points are continually to be found jutting out into the sea, it makes navigation very simple. If any one contemplates this trip all the advice I can give is, take it by all means. JAMES WELD CARTWRIGHT, Jr., Sec'y P. C. C.

488 COLUMBUS AVENUE, Boston.

P. S.—If any one wants a camp kit, otherwise known as a "box of tricks," my "prize tinsmith" will make one for $8. I will see to it myself.

PURITAN C. C.—After eight unsuccessful dates we have at last had a fine day, and a race for the cup and also for the club record. The big fellows are allowed to race for the record only, the class A and B canoes for the record and the cup, Oct 21. Wind S.W light. Started and finished in the following order: Tobique, 17×40, T. A. MacDonald, first record. Ilex, 15×30, Cartwright, leg on cup and second record. Old Calamity, 16×42, L. Hedge Alice, 15×30, C. W. Fourdrinier, takes pewter mug. Lasca 14.6×29, T. Cooney, Jr. Annawan, J. E. Hill, did not finish. Ibis H. E. Jepson, disabled. Unk, C. J. Underwood, disabled. Course 33¾ nautical miles.—JAS. W. CARTWRIGHT, Jr., Secretary P. C. C.

The second race for the Puritan C. C. cup was sailed on Oct. 26. The wind was fresh from the eastward and there was considerable sea. The regular club course of 33¾ nautical miles was used. The following boats entered and finished in the order named: Puritan, sailed by T. A. MacDonald; Ilex, J. W. Cartwright, Jr.; Old Calamity, Lothrop Hedge: Alice, C. W. Fourdrinier; Urchin, Geo. R. Underwood; Lasca, T. Cooney, Jr.; Ibis, H. E. Jepson, Puritan not being sailed by her owner, was ineligible, so the race goes to Ilex, giving her the second race and the cup for 1889.

SEVERN.—In the account of the B. C. A. meet in our issue of Sept. 5, the beam of the Severn is incorrectly printed as 27½in.; it should be 29¼in.

COMPOUND CENTERBOARDS.

Editor Forest and Stream:

In the description and illustration of canoe Fly in your issues of Oct. 10 and 17, you give publicity to the construction of, and use by Mr. Butler, of a centerboard which consists of "two thicknesses of sheet brass, about 1-16in. thick, rivetted together along the edges. In the upper and after angle a small auxiliary board is fitted, filling the space between keel and board when latter is down. By this means the width of the main board is considerably reduced."

I have seen this board myself and consider that it infringes on U. S. patent issued to me on Aug. 2, 1887, in which is allowed—apart from any combination—my claim, "A lower hollow blade adapted to contain the other blades." This feature, as well as others, was mentioned in your notice of my board in the FOREST AND STREAM about that date. Mr. Butler doubtless had this board constructed in ignorance of my rights, and in a solitary instance I should not have deemed the matter of sufficient interest to notice it, but as your description will give it the utmost publicity, and probably result in its imitation by others, I wish now to respectfully notify all canoeists and yachtsmen that the construction and use of any board which embodies this feature, or any other covered by my allowed claims, will not be permitted without the written consent of myself, or of the W. R. Baker Manufacturing Company, of Watertown, N. Y., who alone have the right to manufacture centerboards under my patent.

CHICAGO, Oct. 21. T. R. BROUGH.

CRESCENT C. C.—At a meeting of the Crescent C. C., of Greenville, Newark Bay, held at Newark, Oct. 23, the following officers were elected: Com., Dr. O. F. Coe; Vice-Com., W. Scott; Sec'y-Treas., Wm. H. Hillier. A constitution and by-laws were adopted. The flag of the club will be a burgee, blue and white stripes, with a red crescent, and the club totem a red crescent. The club house is situated at the end of Danforth avenue, Greenville, N. J., and can be reached by Central Railroad of New Jersey or by horse cars from Jersey City.—WM. H. HILLIER, Sec'y-Treas. (665 Broad street, Newark, N. J.).

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

R. B. P., Cambridge, Mass.—The lines were published on Nov. 17, 1887.

J. S. G., Brooklyn.—Trp the Pocono Mountain region described by "Jacobstaff" in this issue.

C. F. L.—You will do well to try some of the Sullivan county resorts in the vicinity of Ellenburgh.

J. D., Tuscarora, Mo.—The "smallest place in a chokebore gun" is, of course at the point of greatest constriction of the bore, and this is usually one-half or one inch back of the muzzle.

E. H. F. can find good boarding houses at reasonable rates as follows: On the Atlantic coast at Daytona (Halifax River) or Rock Ledge (Indian River); in the interior at Orlando, Winter Park or Ocala; on the Gulf coast at Tarpon Springs.—C. L. N.

H. B. K., Philadelphia.—Will you kindly inform me of the name of the U. S. Commissioner to whom I should apply for any information concerning the oysters and terrapin of Chesapeake Bay and James River? Ans. Address U. S. Fish Commissioner Marshall McDonald, Washington, D. C.

L. J. R., Bristol Center, N. Y.—I send by to-day's mail a box containing part of a weed from Honeoye Lake, in this county. Can you tell us what is on it, and if fish feed upon it, as we think they do? Ans. The plant is one of the mosses, apparently a species of *Hypnum*, and is not eaten by fishes; indeed it is not an aquatic plant, but may be occasionally submerged. The long stem is not a part of the moss, but has merely become surrounded by the debris of its roots.

J. W. G. D., Philadelphia.—The bird you describe is the killdeer (*Ægialitis vocifera*). We should call its notes something worse than "twittering," especially when they interrupt the still-hunter. You will find much aid in identifying birds in Mr. Trumbull's "Names and Portraits of Birds which Interest Gunners." To preserve deers' legs and feet in warm weather for trophies, steep twenty-four hours in a solution of ½lb. alum and ½lb. salt in gallon of water, then dry thoroughly. We have mislaid your address. Please send it; letter for you here.

F. E. W., Newark, N. J.—Will you inform me how I can render a brown canvas fishing suit waterproof and not have it soil the inside suit? Ans. The following is recommended: Take a solution of sulphate alumina in ten times it weight of water, and a soap bath of the following composition: One part of light-colored resin and one part of crystalized soda (sal soda) and boiled in ten parts of water until dissolved. The resin soap is precipitated with half a part of table salt, and is subsequently dissolved along with one part of white curd soap in thirty parts of hot water. It should be put into wooden tubs for use. On made up articles the two solutions can be applied with a brush and then rinsed off.

PTARMIGAN, St. John's, Newfoundland.—1. Is the powder inclosed Schultze powder? It has been sold as Schultze by a firm here. If not, what is it, and is it a good powder? 2. Is the Schultze powder as good for wing-shooting as Curtis & Harvey's? 3. What is the best preparation for removing rust from gun barrel, also for removing lead and powder marks? 4. What is the best thing for putting on gun to prevent rust when putting it away for the winter? Ans. 1. It seems to be, though not as fine-grained nor as light-colored as we have generally seen. 2. It is very popular, especially abroad, for first barrel charges. 3. "Hints and Points" says: "Rust spots in barrels may be smoothed out with emery paste, made from three parts cosmoline, or oil, and one part emery. Use on a soft swab, which fits the barrel closely. Then apply the wire scratch brush, and finally wash out clean. To remove leading warm the barrels and anoint with mercurial ointment, then wipe out clean. Tallow free from salt; or Eaton's rust preventive."

J. L. B. Philgdelphia.—Being quite an enthusiast over the shotgun, having since Sept. 1 killed ruffed grouse in N. H. and N. C., doves in Maryland, using a No. 12 Remington, 28in. barrels, I would like your valuable opinion as to whether the finest powder, say No. 5 Dead Shot, does not give the greatest penetration in barrels say 28in. length? Please state the object of putting one cardboard and two pink-edge wads over powder—does it increase the penetration? Ans. The object of wadding strongly is to hold the gases generated by the burned powder, so that their best work may be done upon the superimposed charge of shot; increased wadding in that way means increased penetration. Quick powder means high initial velocity, gained at the cost of a strain on the barrel. Slow powder burned completely reaches an equally satisfactory result without the strain. Penetration, while largely dependent on velocity, is not wholly so, and increase of velocity generally means an irregular sequence of patterns.

BOOKS RECEIVED.

THE FAVORITE SPEAKER, comprising fresh selections in poetry and prose, humorous, pathetic, patriotic, for reading clubs, school declamation, home and public entertainments, containing the selections published in the Reading Club Nos. 17, 18, 19, 20, by Geo. M. Baker. Boston, 1890. Lee & Shepard. Price $1.

Christmas is coming round again, and Messrs. Lee & Shepard have sent us some very tastefully gotten up New Years and Christmas cards. The illustrations are colored, and the cards in sets are bound together with chains and rings. Price $1.

LOG CABINS;
How to Build and Furnish Them.
By WILLIAM S. WICKS.

The book is thoroughly practical. Every step in the process of construction is explained. The author is an architect who has himself built log cabins, and very handsome ones, too, as shown in the plates. The designs are numerous and varied. Plans are given for cabins, large and small, with details of exterior and interior finish; and there are also some very useful directions for constructing temporary shelters—the Indian camp, brush house and bark camp. The furnishing consists of tables, chairs, bedsteads and other articles, all made of the material at hand, and all in keeping with the style of the house. The illustrations are numerous and helpful. Price $1.50.

CANOE HANDLING.

By C. B. VAUX ("DOT.")

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, $1.00.

ANSWERS TO CORRESPONDENTS.

THE VOLCANOES OF ALASKA.

THE Aleutian chain of islands constitutes a very interesting group. There are more than a hundred in all, which crowd so closely upon each other or else are separated by such shallow waters that there are only half a dozen channels through which ships can be safely navigated. No less than twenty-five of them have been active at some time or other since the advent of the Russians in 1743. So also of the sixty or more craters in the mountain ranges of the mainlands. In fact from Mount Wrangell on the east to the Commander Islands in the extreme west there is a continuous chain of volcanoes, which scientists aver are the vents for a subterranean channel of lava, which finds an outlet first through one and then through another. There is no more extensive theater of volcanic activity known.

Here in the Aleutian archipelago men have witnessed the birth and growth of islands. In 1796 a Russian trader named Kruloff, stationed at Urnnak, discovered a column of smoke rising from the sea about twelve miles off. This was on the morning of the 19th day of May. In the evening a black object, projected from the waves, was visible under the smoke, and during the night the sky was brilliant with ascending flames. At the same time convulsions shook the earth, and rocks were thrown across the sea to the land, twelve miles distant. On the third day the tremors ceased, the flames subsided and a newly created cone loomed up from the waves, which grew apace and expanded into the island which was later known as Bogoslov on the charts.

By 1800 it had ceased to smoke, but a party who visited it then found the surrounding water still warm and the rock too hot to permit a landing. A few years later it had cooled off sufficiently to attract a colony of sea lions, with whom it eventually became a favorite resort. By 1823 it had largely increased in circumference and attained a height of 1,000ft. Then it began to diminish, and finally sank back into the depths of the sea gradually, until a few years ago, when it broke out with renewed eruption, a second commotion took place, and in a single night it disappeared altogether, another islet of about the same circumference making its appearance about two miles away. And now the new Bogoslov is gradually rising, though as yet it presents a comparatively flat surface at an elevation of not more than 200ft. above the sea level. From it there is a constant emission of steam and smoke.

This is one of the most suggestive and authentic incidents of the world's ovology. It affords a practical object lesson, from which it would be deduced that most of the Aleutian Islands have been produced by gradual elevation rather than volcanic eruption—that is, the piling up of lava and debris thrown out from craters. The history of Bogoslov is being constantly repeated. Indeed, it is the opinion of some geologists that the entire eastern half of Behring Sea is steadily decreasing in depth by a gradual elevation of its bottom, though the great floods of the Yukon and other rivers which empty into it and deposit vast quantities of alluvial matter, are doubtless mighty contributory agents in increasing its shoalness. There is every prospect that it will become an archipelago or a part of the mainland. The western part of the sea has a uniform depth of a hundred fathoms or more, the bottom gradually shelving upward until in the eastern half there are but a few places where it is safe for a vessel of ordinary draft to approach nearer than fifty miles of the shore. Some say that it will be dry land in the course of a century.

THE OLD ORDER AND THE NEW.

IN the November number of the *Century Magazine*, in the "Topics of the Time" discussions, is a paper on "American Game Laws." Most of what is there said is a familiar story to readers of these columns, where the subject of game protection is constantly a topic of discussion; but it is worthy of remark and emphasis that the importance of the subject is meeting a fuller recognition among journalists and magazine editors. The conservation of our natural resources of game and fish has a distinct place in national economy; the time has already gone by when communities can afford to neglect the question, leaving it to ignorant or indifferent or shiftless and dishonest legislators and executives. An appreciation of this fact is set forth in the *Century's* comments. Its suggestions relative to the growing tendency to preserve the shooting and fishing privileges are so true and timely that they will bear repetition here:

> The American "poacher," however, will always be a very different offender from his English prototype. All that the American law will require will be a due respect for the rights of the people. Game is not to be preserved for particular persons, but for all; and during the proper time limit all men may become "poachers" so far as the American game laws will concern themselves with him. All this may seem to many quite incompatible with the fact that, even within proper time limits, no one may pursue game upon the land of another without express or tacit permission, and they may conclude that there is not to be any essential difference between English and American game preservation after all. Such a belief confuses two different things, land ownership and game protection. If we are to have land ownership, the owner must be owner altogether, and his ownership must cover the live stock on the estate, be it wild or tame. But this is just as it always has been. It is true that there is an increasing unwillingness to grant permission for the intrusion of others in pursuit of game; but the permission has always been legally necessary, as a part of land ownership, and should not be attributed to the new system of game protection. The change is merely a corollary of the country's development; the permission to hunt or fish, which was once valueless and was given with corresponding liberality, is now valuable and must be paid for.
>
> It would not be fair, however, to leave even an implication that the change, legal as it may be, is withal an injury to the people. When one tract of wild land after another is taken out of the market and reserved as a hunting or fishing park, when the people of successive neighborhoods find that the lakes, brooks and forests over which they and their fathers have fished and shot from time immemorial are now closed to them, it is easy to suggest to them that they have been injured in some way. One must take the development as a whole, not in parts. The case is not one in which powerful barons have entered by force and outsted the people from their natural privileges. It is merely that the lake, the trout brook, or the shooting ground has acquired a new value from a general development which, in another part of it, has enriched our tables with fish and game from the most distant parts of our own country, and with food products from all over the world. The parts must go together. He who wishes to turn back the years, and fish and shoot as freely as his grandfather did, cannot surely expect to enjoy the Northwestern salmon, the Southern berries, the Florida oranges, the California figs, the Western beef, the tinned or glass goods from all over the world, for which his grandfather possibly would have been glad to barter all his meager privileges of the chase. Such details of development are enough to show that, while there is always a scale of popular loss, it is altogether outweighed by the scale which represents the popular gain.

In this change from an old order to a new is also to be found the justification and reasonableness of all those restrictive regulations which are so often complained of as tyrannical abridgments of individual rights and privileges. It is because an old order of things has given place to new conditions, that in Maine, for example, where once every hunter was free to kill all the game he wished and at any time he wished, without directly impairing the public interest, he is now restricted as to both the manner and the extent of his hunting.

There is a class of men, who, having enjoyed the license of former years, do not take kindly to the new order They refuse to recognize the justice of the game statutes they break the laws, defy the officials, and stand on their individual "natural rights." The most notorious representative of this tpye in Maine is Jonathan Darling, whose arrest for breaking the game laws is elsewhere reported. Darling is out of his place in history. He refuses to be reconstructed. He has set out to stem an irresistible current, and though he shall be convicted and sent to prison, we question if he will acknowledge even to himself that he is other than a wronged man, the victim of harsh and oppressive laws. Because it was once permitted to him to hunt unmolested, that permission he regards as an inalienable right, and resents being deprived of it.

THE ST. LAWRENCE ANGLERS' ASSOCIATION.

WE invite special and thoughtful attention to the account of the grand work accomplished by the Anglers' Association of the St. Lawrence River, as related by the founder of the society, Mr. W. W. Byington.

The brief but comprehensive history of dozens of fish protectective movements may be summed up in one word—talk. The netting evil or some kindred abuse is recognized; and with all zeal men set about organizing an association for reform; but the campaign begins with talk, progresses with talk, and ends in talk. The review of the work done on the St. Lawrence River would be valuable, if for nothing else, because it shows in the first place that in fish protection, as in every other field of effort, the one way to accomplish anything is to set to work and do something; and it demonstrates as well the encouraging truth that such activity will be crowned with an adequate reward.

Immediately upon recognition of the extent of the destructive netting in the St. Lawrence, and being assured of the illegal nature of the practice, Mr. Byington and his associates, without delay for organization, took off their coats and went to work; or rather they did not wait to take off their coats, but plunged in, as Cassius challenged by Cæsar to swim the Tiber's flood—

> Upon the word,
> Accoutred as I was, I plunged in,
> And bade him follow, so indeed he did.

The work so promptly and energetically undertaken has been carried forward with intelligence, determination, courage and success. The St. Lawrence River today is in large measure purged of the illicit and destructive traps for game fish. The Association has stood behind public officials with money and moral support, and it has furnished the funds for fighting doubtful cases in the courts. It has waged the war with enthusiasm, and it has been guided by discretion. It has not only cleared the bays of deadly devices, but it has cleared the moral atmosphere, and wrought a healthful change in public spirit. The Association deserves all support; we heartily second Mr. Byington's appeal for the co-operation of all anglers of the United States who repair to the St. Lawrence waters for their annual outings.

What has been done for the St. Lawrence might be done for all the waters cursed with unlawful engines of destruction, if only there were available a like energetic and determined spirit to control the workings of associated bodies of anglers. The St. Lawrence work is an object lesson, showing what associated effort can do. It demonstrates also what one man can do, for after all the Association of the St. Lawrence River grew out of the personal enterprise of Mr. W. W. Byington; to him is due in large measure the credit for what has been accomplished. He organized the society; drafted its constitution and by-laws; was its secretary until elected president; for five years did a large part of the work connected with the Association, even when it encroached upon his private business; and now that he has insisted upon being reduced to the ranks, is there proving himself to be a host.

The Sportsman Tourist.

UNC' JIM'S 'SPEYUNCE.

[It is a superstition among the older negroes around here, that if one sees a nighthawk (or ha'nt-bird, as they call it) sitting on a fence, and does not make it fly, some misfortune is sure to happen to him.]

SEEN a ha'nt-bird on de fence;
Stidder scarin' um offen hence—
Some fool niggers' got no sense!
Luff um stay.

Gwine home my ole mule slip,
Trowed me ober her head kerflip!
Bus' mer nose, 'n' cut mer lip,
Dat same day.

Nex' day, mer gyarden gate onlatch;
Hawgs git in mer tater patch—
Mek um look ez ef Ole Scratch
Hed bin dar.

Went er huntin' in de bawg—
Saw er rabbit 'hind er lawg—
Done shot at um—killed mer dawg
Stedder ole har'.

Den, m' ole 'oman—bone o' mer bone—
She tuk up wid Passon Jone—
Went libbin' wid him, 'n' luff me alone—
Mean ole rip!

'N' dat young huzzy—'Mazen Grace—
Wat I dun 'suade to took her place—
Stay jest er week—den slap mer face—
'N' *she* done skip.

Den dat triflin' Cunnel Briggs—
Jes' caze I borrid one er his pigs,
Ter holp mer save mer crap er figs,
W'at wuz rottin'—

He swore I stole um—den an' dar—
Hed me up before the Squar—
Sent me ter jail fur mos' a y'ar—
Jes' for nottin.

Dass why I says it—pintedly—
'F you see ha'nt-bird, 'n' don' mek um fly,
Bad luck is er comin' mighty nigh
Somebuddy's doo'.

Er ef he holler in de night—
Holler free times, 'n' den stay quiet—
Somebuddy gwine die 'fore mawnin' light,
Sartin sho'.

LOUISIANA. H. P. U.

THE ISLE OF CORMORANTS.

IF THERE is in this world a realization of the poet's ideal of the Isles of Bliss, it is to be found in those waifs and strays of land which seem to have been flung into the ocean in sheer caprice, when nature, in her grandest mood, upheaved the North Island of New Zealand from the depths of the Pacific. Some of these, such as Rangitoto, "blood red sky," the most perfect extinct volcano known, are mere picturesque masses of lava and scoria, which may not be covered with vegetable soil for ages to come. Others, not less volcanic in their origin, are already among the most fertile spots on earth, clothed to the mountain tops with evergreen forest or turf so vivid it is difficult to believe it is not artificial, and, on the lower levels, reveling in gorgeous flowering shrubs that robe the very rocks of the shore with beauty, shade the white beaches under their spreading arms, or trail their crimson blossoms in the sparkling waves themselves. The Frith of Thames, immediately outside of Auckland Harbor, is dotted with these delicious inlets; and any one who is blessed with a love of nature and a taste for sport can gratify both there in a variety of ways. Many of the islands have been stocked with deer, hares and pheasants, while every secluded inlet is alive with wildfowl, and every reach of open water is frequented by gannets and tern, and sometimes the rare and beautiful boatswain bird, with tail feathers of the brightest scarlet more than a foot in length. The reefs and shoals and sunken ledges among the islands are the favorite feeding places of all kinds of fish, hapuka, or snapper, gurnard, moki, and a host of others, while, wherever the gannets are seen to hover, it is safe to count on a shoal of kawhai, the beautiful sea salmon of those teeming waters. When you leave Auckland in your sailing boat in the early morning to beat down the bay, you never know what you may get before you return by moonlight or starlight, running swiftly before the unfailing southerly breeze that comes up at sundown. Rifle, gun, rod and deep sea line may all have helped to fill your boat, and the four hearty meals you have made in the day, having taken nothing with you but bread, tea and sugar, may have comprised a *ménu* varied and delicate enough to excite the envy of a French cook.

The gem of this lovely archipelago is the famous Kawau, or Isle of Cormorants, so-called from the rocks and cliffs upon its shores having been from time immemorial the chosen haunt and breeding place of innumerable flocks of those voracious birds. Kawau, pronounced so as to rhyme exactly with "bow-wow," with the accent on the "bow," which lies between thirty and forty miles from Auckland, off the coast of Mahurangi, has a historical interest of a most peculiar kind. It was purchased far back in the early days of the colony by Sir George Grey, that "great proconsul," as he was called by one of England's most famous statesmen, whose intrepid explorations opened South Australia to the knowledge of the world; who rescued South Africa from the chaos of Boer revolt and Kaffir war; who was governor of New Zealand during the twelve most eventful years of its history, and whose adventurous and heroic career yet left him time to become the greatest authority on Polynesian mythology, philology and ethnology, and a most distinguished litterateur, bibliopole and patron of art and science. Sir George Grey, who is a passionate lover of nature and the most fearless hunter I ever knew, bought Kawau for the express purpose of making it an acclimatization garden. It seemed indeed to have been created for that purpose. It has an area of about 5,000 acres, and its formation is such that within that limited extent it has a mountain 1,200ft. high and a river navigable by canoes for several miles. A great part of it is covered with primeval forest, but it has plateaux, valleys and glens, which afford an endless variety of climate and surroundings. The flats along the shore are very rich, and the lower parts of the island lie toward the mainland, distant twelve or fifteen miles, they are entirely protected from the ocean storms and enjoy the full warmth of the northerly sun. On a sheltered terrace, overlooking a romantic bay, in this secluded paradise, the soldier, ruler, scholar, poet, sportsman, philosopher, built himself a stately pleasure house of chosen cedar wood, with its library, containing the rarest collection in the Southern Hemisphere, its armory, its museum, unequalled in the world, in some branches, its pictures and sculptures and trophies, making every wall and corner of it luminous and eloquent of the life's work of one of the most distinguished pillars of the Empire. Around the house he planted a garden, which I am safe in saying contained the most complete botanical collection to be found anywhere, in the open air. The rest of the island, with the exception of a few fields for his live stock and the comfortable homesteads of his thirty or forty retainers, he devoted absolutely to the acclimatization of animals. From all the countries which he had governed or where there were learned societies or enthusiasts in correspondence with him, he obtained zoölogical specimens, and from remoter parts of the world, beyond the sphere of his personal influence, he brought them by the all-compelling power of gold. It seemed as if he would never rest until he had emulated the celebrated exploit of the patriarch Noah, and brought under his own charge a pair at least of all the creatures upon earth.

All this time, it should be borne in mind, Sir George Grey was Governor of New Zealand, Commander-in-Chief of the Forces and Vice-Admiral of the Fleet. A war, moreover, was being conducted under his direct authority by land and sea, in which were employed no fewer than 20,000 troops and ten great battle ships. It was this that led him to make an experiment at Kawau, which was his first failure and a momentous one.

General Sir Duncan Cameron having inflicted a defeat on the enemy—a most unusual occurrence—found himself in possession of 300 prisoners, Maori warriors, whom he was at his wits' end to know what to do with. Experience had shown that no fort or jail or hulk would hold them. It took a small army to guard them, even for a few days after their capture, when they were half starved and worn out with fatigue. Even then a good many got away. In this difficulty the Governor came to the General's assistance with an offer to take the whole body of prisoners under his own care at Kawau, where, he pointed out, they might receive that fair treatment which was due them as brave men whom the fortunes of war had placed in our hands, while, at the same time, it was impossible for them to escape. They were, accordingly, conveyed to Kawau and established in a camp of huts built and furnished with every regard for their comfort; a man-of-war being anchored in the channel between the island and the mainland. Sir George Grey visited them and received quite an ovation of gratitude and respect. Three nights later every man jack of them escaped, swimming or wading from rock to rock or islet to islet, and safely breasting the strong current along the Mahurangi shore, under the very guns of the frigate. To add insult to injury, they carried off the camp utensils and fixings, and a number of articles belonging to Sir George Grey. After that, the Governor determined to exclude the human race from his biological studies. A few years later he had a serious difference with the Imperial Government, and retired into private life at Kawau, where he found a solace for all his griefs and disappointments among his books and plants and animals.

Thenceforward he carried on his acclimatizing operations with redoubled vigor; his activity in that respect being almost the only tie that connected him with the outside world for many years. I have known Sir George Grey since my boyhood, and, with my love of natural history, one of the most memorable pleasures of my life was a visit I paid him at Kawau after he had made it his permanent residence. He was a most charming host, and nothing gave him greater satisfaction than to show the wonders of his island to a guest in sympathy with his own tastes. It needed some nerve, however, to keep up to his standard of what a forester should be. One day he proposed that we should go to see his herd of wild cattle, of which he was exceedingly proud; and having taken me for a mountain climb, which alone was a good morning's work, carrying a rifle and cartridge belt, he expressed a hope that we should come across a bull which was known to frequent the locality where we were. Sure enough, we did come across the bull, a truly magnificent animal, which no sooner saw us, as we emerged from the bush into a little flat where it was browsing, than it gave a terrific bellow, pawed the ground for a moment, and came straight at Sir George Grey, who was a little ahead of me. Sir George calmly raised his rifle to his shoulder, waited till the furious beast was so close that I thought he must have been gored to death next moment, and then brought it to earth by a bullet which actually penetrated the curl in the middle of its forehead, the most vulnerable part of a bull, he explained to me, which you should always strike—if you can. The muzzle of the bull, as he fell dead, was not five yards from Sir George Grey's feet.

I took a note of the animals and birds successfully acclimatized at Kawau at that time. They included red, fallow and roe deer, several kinds of antelope, kangaroo, wallabi, hares and rabbits, ostrich, emu, peafowl, pheasants, black swan, quail, numerous waterfowl and all the common English song birds. These were all quite wild, taking care of themselves without any sort of protection or encouragement. One of the finest spectacles was afforded by the peafowl, which had become very numerous, flying about among the highest trees and sometimes passing over our heads in flocks, as we ascended the little river in a canoe. The bush was literally alive with creatures of one sort or another, much like the jungle in India, only without the reptiles or the carnivoræ. Near the house, in small inclosures, was a perfect menagerie of other animals which were evidently thriving, but were not suitable to be turned loose.

Quite recently I had a talk with Sir George Grey about his island, and he spoke very despondingly about it. The kangaroo and wallabi, he told me, had increased in number so enormously that they had fairly starved out the cattle and sheep and seemed likely to take entire possession of the island. Wallabi are marsupials a foot and a half or two feet high, very like kangaroo, but more active and more difficult to get rid of because they live in rocky places and get into holes almost like rabbits. I asked Sir George why he did not thin them out. He replied that he had killed more than 20,000 that year and as many the year before, but that it appeared to make no difference. They were steadily and rapidly gaining on him in spite of all this slaughter, and he was afraid he should have to give up the struggle. Shortly after that, he presented his picture gallery, his magnificent library and unique museum to the city of Auckland—a priceless gift, which forms at this day one of the chief attractions of the place—and having broken up his establishment, he sold Kawau to some Australian speculators for less than half the amount at which it had been assessed eight or ten years earlier. He was literally driven out of the island by the animals which he had brought there at great expense and reared with unwearying pains.

This result is especially interesting as a practical exemplification of the principle of the survival of the fittest. It shows that the marsupial herbivoræ, under favorable circumstances as to climate and food, and exempt from the attacks of natural enemies, will eventually occupy the whole ground and displace all other animals, even in a country that is not their own and is not at all like their own in natural conditions. How things will end at Kawau, I am sure I don't know. When I left New Zealand some months ago, Sir George Grey was living at Auckland, mainly engaged in supervising the catalogue and arrangement of his princely gifts to the city; and the new people had not yet gone into occupation of the island. It will be curious to observe how they will get on with their purchase, which simply consists at this moment of 5,000 acres of kangaroo and wallabi, as thick as they can live within the space.

The island is practically worthless in its present state, yet I know of no way in which the animals can be got rid of or kept down sufficiently to make the pastures available for stock. If it were open country the case might be different; though in many parts of Australia, where the country is quite open, the increase of the marsupials, through the destruction of their natural enemies, the natives and the dingoes, has proved too much for the sheep farmers. At Kawau the introduction of their natural enemies would be of little use, because the land is so broken and the cover so abundant that neither men nor dogs could interfere with them very much. The very circumstances which rendered Kawau exceptionally suitable for purposes of acclimatization make it impossible to restore it to a servicable condition for any other purpose. At all events it would cost twice as much to do so as the island is worth.

I could not help thinking of Kawau the other day, when I saw an immense drayload of kangaroo skins in Broadway, being taken, I suppose, to some tannery or leather factory. If Kawau were situated somewhere in Long Island, say, the commercial demand for the skins would make it a most valuable property, and it would pay handsomely to work it as a kangaroo farm and keep the head of game constantly up to the full carrying capacity of the land. Kangaroo skin makes very soft and pliable, yet very strong, leather, well suited for the uppers of the lighter kinds of boots. It has the advantage, too, of requiring very little tanning. There is a common saying in Australia that you can kill a kangaroo one Sunday and go to church in boots made of its skin the next; and it is truer than most epigrams. But lying away down there in the South Pacific, six weeks' steam from any of the great markets of the world, an island full of kangaroo skins, with the animals jumping about in them, is an uncommonly heavy concern.

A friend of mine in New York, with whom I have discussed this and kindred subjects, assures me that wherever animals of any kind have become a nuisance by their numbers, the American pot-hunters are quite equal to the task of clearing them off in the shortest time on record. Judging from the way in which game has been exterminated in the Catskills, diminished in the Adirondacks, and even seriously reduced in the rivers and groves of Florida, as I am told, I am inclined to think there is something in it. If these gentlemen feel inclined to try their hand in a new field, I am sure they would be heartily welcomed at Kawau, the Isle of Cormorants.

EDWARD WAKEFIELD.

Natural History.

WOODCOCK IN TOWN.

NEW YORK, Oct. 19.—*Editor Forest and Stream:* I live just four blocks from the Brooklyn Bridge. On Thursday morning last, at 10 o'clock, my wife, hearing a knock at the door, opened it, and found a woodcock lying on the stone steps. It had apparently flown against the door. The tip of its bill was broken and blood was flowing from its mouth. It was put in a basket in a warm room, but died in the late afternoon. The bird was plump and in fine condition. What induced this bird to come so far within the city limits? S. E.

A CHOCOLATE-COLORED SKUNK.—We learn from Mr. F. W. True, Curator of the Department of Mammals in the U. S. National Museum, that the Government collection has recently secured a unique specimen of the little striped skunk (*Spilogale putorius*) from Morantown, Kansas. Through incipient albinism the color of the pelage is uniform chocolate instead of the usual jet black with areas of white. Mr. True believes this to be the first record of such an example.

ANOTHER ARGENTINE.—One of the statistical agents of the U. S. Fish Commission writes that the crew of the life-saving station at Biddeford Pool, Maine, recently secured a second individual of the rare fish known as the argentine (*Argentina silus*). The first specimen of this deep-water species taken at Biddeford Pool was forwarded to the National Museum in 1886. The fish is allied to the smelts, which it exceeds somewhat in size.

AMERICAN ORNITHOLOGISTS' UNION.—Washington, D. C., Oct. 14, 1889.—The seventh congress of the American Ornithologists' Union will convene in New York city on Tuesday, Nov. 12, 1889, at eleven o'clock A. M. The meetings will be held in the American Museum of Natural History, Eighth avenue and Seventy-seventh street. A large attendance of associate members is hoped for.—C. HART MERRIAM, Secretary.

OUT-OF-DOOR PAPERS.

III.—WINDBOUND ON CHAMBERLAIN.

IT used to be the custom of the old cartographers to leave no blank space on their maps; and when their geographical knowledge gave out they filled the unexplored regions with pictures symbolical of the dangers supposed to be lurking in those wilds—lions and unicorns, dragons, griffins, wyverns, statant, couchant, saltant, rampant, guardant, saliant—neither the animals nor their attitudes being calculated to soothe the apprehensions of the adventurous. In like manner we to-day imagine that the woods are full of wild creatures, yet when I reviewed my woods notes to find some red-letter day full of the birds and their doings, I could not think of one which compared with many spent in field and hedgerow. There are few birds in the woods. The wilderness is a wilderness indeed, barren of life; and you can find more birds, more plants and more game within five miles of settlements, than in an equal space of forest. As Thoreau says: "Generally speaking, a howling wilderness does not howl; it is the imagination of the traveler that does the howling." Since I cannot find a day which is at all noteworthy for the observations it afforded, something prompts me to select one which was wholly ordinary, and yet pleasant to remember; that day when, having crossed Mud Pond Carry, we camped on the side of Chamberlain.

Those who remember the "boundary dispute" of 1842 may locate this lake, on being told that it lies just north of the highland which the English claimed, the Dutch Commissioners debated upon, and Col. Graham surveyed, as the northeastern boundary of the United States, said "highlands" being Mud Pond Carry *et al.* Those who know the country best concede great credit to Col. Graham's ability in his survey, not only for discovering that the land here is high, but that there is any visible above water. Mud Pond Carry is the most famous road in the State. Thoreau says of it, with a pun on one of our lumbermen's terms, "This was the most perfectly swamped of all the roads I ever saw;" but the remark is lacking in originality to those who have seen the place. Mud Pond Carry leads to Mud Pond, and Mud Pond outlets into Chamberlain Lake, the largest lake in Maine tributary to the St. John.

We were belated in crossing the carry, and we delayed a little paddling across Mud Pond, for after a week of rain this morning seemed doubly fine, and the view of Katahdin—grand old Katahdin—lacking nothing of being a perfect mountain, and as savage to-day as when Lief Erickson landed, was so glorious that we could not resist it. Then there was half a mile of quick water at the outlet, where the canoe had to be "waded" down, while the passengers went overland by the carry until they reached the meadows, where they (the passengers aforesaid) stood on stumps in order to keep out of the water, and surveyed the wide, green meadows, fair in color, but desolate to look on, because of the standing dead trees, killed by the flowage, until the canoe came down. Then there was a short voyage through the meadows, past newly-built muskrat houses. At one place the wind brought down the smell of tainted meat—some moose or caribou which had been left to spoil. All these delays consumed valuable time, and meanwhile the wind had risen as we had feared it would, when we were so hindered in crossing the carry. When at last the lake was reached, such a sea was running that it was deemed imprudent to attempt to cross.

Chamberlain Lake is twelve miles long by two to three miles wide and has the name of being a very ugly lake, which in woods parlance is equivalent to dangerous. It lies over 900ft. above the sea, extended from northwest to southeast, without an island in it capable of affording any shelter, and not only exposed to all the winds, but subject to draughts which raise a cross and choppy sea. It is also distinguished by having two inlets and two outlets, one of them artificial. It is not a beautiful lake. There is no high land near it, and the shores, which are straight and forbidding, are even to this day fenced with the trees killed by the flowage when the locks were built nearly fifty years ago. The locks, about which a word should be said, are at the natural outlet—two dams with a space between them, built for the purpose of driving the logs cut on the lower lake, which naturally would go down the St. John, up into Chamberlain, thence through Telosinis and Telos, and down the artificial "cut" into the Penobscot. The locks having nothing to do with navigation, no boat larger that a batteau ever floated on Chamberlain.

We held the canoe in the Mud Brook inlet for a time, and looked at the heavy sea which was running outside; listened to the doleful creaking of the dead wood as the waves sawed one long tree against another, and subsiding showed ugly black snags sticking out, on which a canoe would be wrecked instantly; looked again at the farm opposite, and reluctantly drew back. Experience, in one of her hardest lessons, had taught one of the party not to dare Chamberlain needlessly. As we turned we saw some small duck dipping and feeding among the driftwood, but just as the gun was pointed at him he saved himself by diving. One may be a strict bird defender at home, but in the woods everything goes to fill the kettle.

We were more easily consoled for our failure to cross, because it was dinner time. We managed with some difficulty to get ashore on the right side of the stream, in a growth of sapling birch and poplar; and, fortunately, remembered to build our fire where the smoke would not attract the attention of the men at the farm. For now, as in Thoreau's day, a smoke near the inlet is a signal for the farm to send a canoe across, some two miles and a half. Even in their great sea canoes this would have been no easy task on such a day. Mr. Coe, the owner of the farm, tells me that in winter they always leave a lamp burning all night, to guide any wandering lumberman belated on the lake.

Dinner is not an elaborate meal in the woods. Ours was soon finished, and we had the afternoon before us; for evidently we were windbound. "And yet the wind might go down," we said, watching the treetops bend, and knowing very well that there was no such happiness in store. How beautiful across the angry lake the farm looked, seated on the sloping hillside among fields colored with the soft rich hues of growing grain, of grass land and of cultivated soil. Not one of the other "supply" farms compares with this in picturesqueness, as seen across the lake.

These great farms are a surprise to strangers. Here is Chamberlain, some 80 miles from the nearest railroad, and 60 from the nearest main road, one of the only two houses on a block of twenty-eight townships—a space larger than the State of Rhode Island. What can be done with the produce of these hundreds of acres? It is all for the winter's business. For fifty years this farm has raised hay and grain for the lumbermen's cattle, and potatoes for the men themselves. It is too cold here to ripen maize, although at Trout Brook Farm 30 miles to the east a little is grown. A few staple vegetables are raised, and these, with the large quantities of grain and hay, are the objects of the farm's existence.

While we were thus forced to lie still, there was a good opportunity given to watch the birds; but except for a kingfisher which sat on the other side of the stream, and some impudent Canada jays which came *ca-ca-ca*-ing about, I saw nothing. The jays tiptoed about on the trees, bowing and bending; they fluttered down with spread wings and tails, and made themselves such nuisances, that until one of them came under the scalpel of the taxidermist there was no peace to be had. I should not omit from the list of birds two partridges, which made an excellent stew a little later, and a herring gull which sat on a rock in the lake about 200yds. off, and was saved only by the ball falling a little short of him. These large lakes are close reproductions of the seashore, even to the sea gulls which breed here, although they are never seen between the lower end of Moosehead and salt water. It would be unkind not to mention the beautiful green caterpillar that lived on a poplar near by, so strong, so firm in his muscles, so silken skinned, and so intelligent in his determination to go to the place he had in mind, that I remember him with pleasure. But, except a dish of raspberries, that was all that the woods had for us. What city garden would not have yielded more in half a day?

The wind did not abate as we had hoped; so, at last, the tent was pitched on the same spot where some one else had been windbound before us. But the afternoon had not passed unpleasantly; it was too great a treat to see blue sky above us after our rainy week to demur at having to wait for the wind. And, then, we had resolved to get up before the wind the next morning. That night a woods mouse came into the tent and hopped over me, tapping my face softly. Camping out sometimes gives one strange bedfellows—toads, lizards, bats, flying squirrels, and mice to wit; but it is all part of the fun.

The next morning our first call came at 2 A. M., but this was reconsidered, and for two hours more we were allowed to sleep. Then a hasty toilet in the dark, a cold bite, and the tent was struck, the baggage packed, the canoe loaded, and we were off before daylight. The lake was smooth as glass; yesterday's swell was lost in the calm which on fresh water follows so quickly on the subsidence of the wind. Off in the east a red line pierced the gloom, and spread until it lighted all the heavens on that side with fiery, vermilion-tinted hues, leaving the treetops black and jagged as the walls of a burning building. Overhead flew a young herring gull, and he, too, looked black in this morning conflagration.

And now the water began to curdle like hot milk. Before the sun was fairly up the wind began to ripple over the surface of the water, gathering force as it went, which was in a direction opposite to that from which the curdle came. The wind was up, the waves rolled and broke, but we were across Chamberlain.

FANNIE PEARSON HARDY.

WAYS OF THE WHITE-FOOTED MOUSE.

THE white-footed mouse is the only species of the genus *Hesperomys* found in the District of Columbia, the golden mouse being absent, and from what we know of its geographical distribution, not to be confidently expected north of the Louisianian fauna. A large series of the local form presents some differences from the animal of the more northern States, being shorter-tailed and darker-colored, resembling specimens from North Carolina.

Before the writer learned to trap these mice successfully he found them alive in their daytime retreats more easily than dead in traps, and with the advantage of learning a little of their habits. Several years ago, in the vicinity of Morristown, N. J., I found many of them while searching for the nests of screech owls in neglected apple orchards. Usually they were found in a natural cavity of some small limb, sometimes enlarging a cavity with their teeth, leaving tell-tale marks easily recognized. Old bluebirds' nests were popular with them, and in winter the mice could be tracked over the snow to some downy woodpecker's or chickadee's burrow. On one occasion I frightened a white-footed mouse out of a large flicker's hole, and it struck me that the mouse might have found a smaller place, and one less apt to harbor his enemy, the screech owl.

In the vicinity of Washington there are not many orchards, but the mice are abundant, and quick to find any desirable crack or cranny in a tree. Jan. 7, 1888, teeth marks about a knot hole in a dead apple limb led me to climb the tree and knock on the limb. No sooner done than out came *Hesperomys*, leaping ten feet to the ground and vanishing in a burrow before my companion below could slay him. So far I have never found a nest without a burrow in the ground below where the animal could take refuge in an emergency.

March 16, 1889, about half-past five in the afternoon, while rambling through the woods, I noticed some leaves protruding from a crack in the side of a hollow tree. Peering in my gaze met that of a white-footed mouse sitting on a platform of leaves and regarding me quite as intently as I regarded him. He soon vanished inside the tree, and when the cavity was raked with a switch ran out. He was caught, and soon another brightly-colored adult came out, after his patience and endurance had succumbed to a liberal switching. This fellow escaped in the ground. Affairs had become so interesting now that I expected an exodus of mice from that tree, nevertheless a great deal of switching and prodding brought out one more mouse only, which followed its predeces or into the ground, leaving me of the trio but one, which was taken home for a pet. This has been the only case in my experience where more than a single animal or a female with a litter of young were found in a nest

To the outdoor naturalist there will seem to be considerable analogy between these nervous, active creatures and the fidgety wrens. Like those birds, they will explore any knot hole, crevice or woodpecker's hole, and if the situation is desirable, proceed to lug in a lot of rubbish and fit up a home with all the modern conveniences known to them. The analogy is rendered still more complete by the habit these mice possess of climbing a bush or a smilax vine to a bird's nest, such as a chat's or catbird's, and roofing it over, have a nest not unlike that of the marsh wren, that babbles out his cork-drawing notes in the marshes. The mice are quite variable in the choice of the material used for nest making. Leaves and bark are usually staples; feathers, fur and grass are used, and I have found one nest that was made almost entirely of cat-tail down. This nest was in the hollow limb of a willow tree on the edge of a marsh, from which the material must have been brought. Though the white-footed mouse has achieved some notoriety as a climber and architect in the treetops, probably the majority live in the ground. Numerous burrows are constructed, and they also trespass on the burrows of pine mice. These latter animals are very industrious and steady, and must consider any intrusion by their lively and pleasure-loving neighbors a decided bore.

The food of the white-footed mouse is procured mainly on the surface of the ground, and consists of seeds and nuts rather than roots and grasses. When they can be procured the pits of the wild cherry and the seeds of the basswood seem to be preferred to anything else. At certain times of the year there is no better place to trap these mice than a group of wild cherry and basswood trees in woodland, and the ground beneath is littered with fragments of husks and kernels. Any low bird's nest, a vireo's basket, for instance, in the vicinity is usually full of refuse from the food carried there by the mice. Very often you will find a pile of eaten pits or seeds in a corner made by the junction of the roots of a tree with the trunk. Apparently *Hesperomys*, like certain monkeys seen in zoological gardens, prefers to dine in a corner where comrades cannot break in or steal. Rose hips, beech nuts and seeds of the dogwood (*Cornus florida*) are also eaten. When captured, these mice make interesting pets, being amiable and contented. Placed at liberty in a room, they explore every crevice and endeavor to climb up the walls or the legs of chairs. At times they rise on their haunches like a squirrel, drop their hands on their breast and peer about in an inquisitive way.

In this locality the species is found almost everywhere—in the woods, in grassy meadows, under logs or brush heaps, in stone walls and rocks, and on low land or high. Their favorite locality is a dry wooded hillside with plenty of brush.

MORRIS M. GREEN.

DIVISION OF ORNITHOLOGY, DEPARTMENT OF AGRICULTURE.

A TAME WILD DUCK.—Ashburnham, Mass., Oct. 28.—There is quite a curiosity here in the shape of a tame black duck. A farmer found a brood of them just hatched, and as he had some domestic ducks he caught one of the wild ones and put it with them. This was in the spring of 1888. It was as tame as any of the ducks, but in the fall it got to flying to a pond about a mile away. It would get its feed of corn in the morning, then leave for the water, coming back just at dark again. The 1st of April it disappeared, and it was supposed that some one had killed it. It came home, however, and is as tame as ever. It arrived on Sept. 1; so it must be well posted on the game laws. Partridges are very plenty this fall in this section, but there are no gray squirrels nor woodcock of any account.—H. C. NEWELL.

RUFFED GROUSE WANTED.—*Editor Forest and Stream:* Copious rains the last day or two have broken up a protracted season of drought, and while they have virtually ended the stream fishing, they have put the woods and fields in better condition for the approaching fall shooting. Grouse are quite plentiful a few miles out from Toledo, and the crop of quail in our vicinity is more abundant than for several years. Personally, I am still hoping to secure one or two ruffed grouse hens this fall to mate with my male bird, and bring up that long expected brood of grouse chicks. Doubtless some of the readers of the FOREST AND STREAM can aid me in finding any of these birds now in captivity, and I shall certainly be under lasting obligations for any such assistance.—JAY BEEBE (To edo, O., Nov. 2).

A BLUE HERON OVER CENTRAL PARK.—New York, Nov. 1.—While crossing Central Park in this city on Oct. 26, I observed a large blue heron pass over, flying northward and not more than 50yds. high. At first glance I unconsciously threw up my cane in mock aim at him. He saw the movement and wearily rose a few feet, when I noticed a broken leg dangling helplessly. Somebody had "held too low" and lost a fine specimen. The bird had evidently flown far and was much exhausted and I pitied the cripple. However, musing upon the habits of herons and remembering their preference for one leg when resting, I consoled myself with the thought that none of our birds would be less inconvenienced with a single stilt than this same blue heron.—H. R.

BLACK FOXES.—Ashburnham, Mass., Oct. 20.—*Editor Forest and Stream:* "Stanstead" concludes a note on a black fox, "It is needless to say the fox was a male." A few years ago there was quite a discussion as to whether any female black foxes were ever killed. At the time I was sure that the only black fox I ever saw that was killed in New England was a female; and last winter one was caught in a trap at Cavendish, Vt., and the skin was bought by Henry F. Bond, of Westminster, Vt., who carried the skin with him to show while buying furs in the country towns in New Hampshire and Massachusetts.—H. C. NEWELL.

MIGRATION OF DUCKS.—On Oct. 12 there were in Buzzard's Bay a consid rable number of scattered flocks of ducks, principally whitewing scoters, and also a few large flocks of the same species. Three or four days later the birds had not entered Vineyard Sound. On the 18th of the month a few flocks appeared in that locality. From this it would seem that the migrating birds arrive in Buzzard's Bay from the north earlier than in Vineyard Sound; but this may vary in different years.—J. W. C.

BIRDS OF NIAGARA COUNTY.—Lockport, Oct. 12.—I find two more errors in "Birds of Niagara County," viz.: No. 48, Wilson's snipe, "none" should read "rare," and in No. 141, Bohemian waxwing, "summer" should read "winter."—J. L. DAVISON.

THE ISLE OF CORMORANTS EXPERIMENT of Sir George Grey, as related by Mr. Wakefield, furnishes an instructive chapter of acclimatization enterprise.

Game Bag and Gun.

A WOODCOCK HUNT.

IN the following lines I shall endeavor to give an account of a woodcock hunt differing from usual accounts by including the shots which were misses as well as those which were kills.

The hunt came about in this wise. Frank, "Ruf" and "Gi" had been out for the day and brought home seventeen woodcock and two partridges. So when during the evening chat Jake suggested that he and I go out the next day I agreed at once. The morning was dark and gloomy and "Old Prob." said we might expect rain during the day, but about ten o'clock it brightened up and we determined to start. We first drove about five miles to a very good looking ground, and hitching our horse to the fence hunted through the alders on each side of the creek without finding a bird. Coming back we hunted along the edge of some woods near the creek and alders where it was swampy, and there was an occasional bunch of alders. As we walked by one of the bunches we heard a woodcock whistle, but did not see him. We called the dog, who was working closer to the woods; he came and promptly nailed the bird in an adjoining clump. We got into position and Jake ordered the dog to flush him. It was Jake's shot and he killed with the first barrel. As this was the end of this ground and it was afternoon, we went to the buggy and ate our lunch, while our horse was eating her grain.

Lunch over with we started for a ground made famous for woodcock by a score made in years past by Frank and "Ruf" of 29 birds one day and 21 the next. The mare knew what we were after and pulled up at the post in the fence where we always hitch. Donning our shooting coats again we were soon ready for the work and our dog started in at a slashing gait.

The grounds were very wet and I was thankful that I had taken the precaution to wear hip boots. The dog splashed around, and soon disappeared in some very thick alders; and as he did not come out when he naturally would in quartering his ground, we knew he had located a bird. Jake was on one side of the alders and I on the other. I called to Sim to order the dog to "put 'em up," which he did and away went the bird. I caught a glimpse of it and fired, but failed to stop it. Jake said he "did not see it, but from the noise it made getting up out of the bushes thought it was a partridge." After correcting his ideas on this point, we moved on as far as a creek, which was too deep to wade even with hip boots, so we decided to hunt up the creek on the side we were on. As we turned to start I asked Jake where the dog was. He did not know and began to call and whistle. After a while he came to us and Jake ordered him on, but he at once turned and started back in the direction he had just come from, looking at us the while as if he wanted us to go with him. I said, "Jake, he has got a bird back there, we had better follow him." Jake assented. Sure enough, after going a few rods, he circled around a bunch of alders and came to a handsome point. I immediately wallowed through the mud and water to an open spot, and as soon as I got in position Jake walked in and put up the bird, which did not fly exactly as I had calculated, but I fired through the alders. A second later Jake fired, and I tried again with my second barrel. I thought I saw the bird fall on the other side of the alders, but a search failed to find him, so we concluded that we had both missed.

We hunted along down the creek for some distance, but the dog did not show game; so I decided to go back to where I thought I saw the bird fall, and take another look. After I had been there some little time without finding him, I heard Jake calling me; and I hurried to him. As soon as I got there he said, "There is a bird in here somewhere; you go out there," pointing to an open spot, "and I will stay here." When we were in position he ordered the dog on, and he flushed a bird, which Jake missed with both barrels. Such a shot, too, a beautiful right-quartering bird. Jake asked me to kick him, but objected when I prepared to comply with his request. The bird went around a corner of the bush and disappeared. We hunted where we thought he was without finding him.

I then started along down the creek, on the bank of which at this place was a thick fringe of cedars. These were between me and the creek. I had proceeded about three rods, when up went a woodcock from among the cedars and crossed the creek without showing himself. Luckily, just above I had noticed a log that I could cross on. I was soon across with the dog, while Jake kept on the other side. Working into the alders, the dog soon made game, and after a few moments came to a point. I called to Jake to get ready, and went to an open spot from where I tried to make the dog put up the bird; but the dog would not move. Jake said, "You will have to walk him up and take your chances." So I walked up in front of the dog, and all around him outside a radius of eight or ten feet, but no bird went up. I then went nearer, and got so near that I could touch the dog with my foot, which I did standing beside him, and urged him to go on. At this the bird sprang up between us with a whirr and a whistle. I quickly raised my gun to shoot, and at the same instant the dog made a spring at the bird (something he was never known to do before), but missed him. As I saw the dog jump, I threw the muzzle of my gun up just as I pulled the trigger, to avoid shooting him, and of course missed my bird, which was flying very low and sailed over the creek toward Jake, who promptly fired and dropped him into the creek. Our dog does not retrieve, so we feared we would lose the bird; but Jake got a pole, and after some maneuvering fished him out.

As there was no more brush down the creek we decided to return to the place where we were when the dog led us to a bird, and to hunt up the creek, as we had then intended. Jake went back to the side we had hunted down on, and I on the other bank of the river. And such walking as I had—mud, water and brush, the worse than which does not exist.

I was floundering along about half way back to where we started in, when up went a woodcock. I fired, as I always do when I see the bird, hit or miss, and again scored a miss. The dog was on the other side with Jake. I tried to get him to hunt with me, but he would not stay; so I wallowed alone. I had thought the walking was bad before, but soon after flushing the bird I struck some that could give it long odds and beat it hands down. I went to my knees at nearly every step in black mud and water, and finally the climax came; I made a spring to escape a particularly vicious looking hole, and as I landed I could feel my left foot sinking into the mud until it nearly ran over the top of my hip boot. I mechanically dropped on to my right knee and tried to pull the other leg out, but it was no go, or rather, no come. I was stuck. Within reach of me was a rotten stump, against which I leaned my gun, and off of which I broke pieces to place under the knee that was on top. These supported me if I kept quiet, but when I put any pressure on them they broke. I saw a long piece of drift wood that looked as if it would bear my weight; this I reached after an effort, and just as I got a firm hold and began pulling it toward me, up went that woodcock from near the other end of it. I suppose he had been sitting there and chuckling to himself over my dilemma. I thought so anyway, and hastily reaching for my gun, cut loose on him at long range without ruffling a feather. In a moment or so after I fired I heard Jake say, "What did you shoot at?" and there he was on the other side of the creek laughing at me.

I soon got the long stick under my knee and hoisted myself out; then went directly to the bridge, which was near, and crossed over to Jake. We then worked through some cedars up the creek until we struck the alders again. The dog went in with a rush down the wind, and was not fairly in the brush before he flushed a woodcock, which flew low so that we did not see him. If there is one at this place there are always more. The dog soon pointed where we could see him on his point; and as Jake had killed all the birds so far, he said he would go in and flush the birds, while I was to remain on the high ground at the edge and do the shooting. He went to the dog; then commenced some of the finest work by the dog that I have been permitted to see in some time. He would work along very carefully for a short distance; then stop and cautiously turn his head to see if Jake was coming; then move a few steps further; stop again and look. I could only account for his actions by the thought that possibly there had been a large flight of birds there that had gone that morning, leaving a very strong scent. After going through this performance several times, and covering about six rods, he came to a point. Jake thought he was over-cautious and was stopping again, so he told him to go on. This he refused to do, and Jake called out to me to get ready, as he guessed there were two or more birds straight ahead. I secured a good position, and Jake walked a few steps ahead of the dog, when up went a bird. He did not come my way, but gave Jake a good snapshot, and he killed. The dog took a step or so and froze again. Jake walked the bird up; he was a strong flyer and went some distance before he rose above the alders. As soon as he did I fired. It was a long shot and I scored another miss. Reader, are you hoping that I will hit something before long? So did I.

Jake picked up his bird and told me to come where he was. I went, and we took a drink of water; then proceeded to hunt for the one I had just missed. We had only hunted a short distance before up he went in the safest place in the world for him—among thick alders. I tried a snap shot and missed; then remarked with some side talk that "we would leave him for seed." Jake replied: "From the number of misses you have made I should think you intended seeding rather heavy." Jake now had three birds and I none, so I felt that I must retrieve my lost reputation as a fair wing shot.

We took the dog over to another likely looking place on the same ground, and soon heard a bird get up, but did not see him until just as he came to the ground. We marked him and got in position. We had no sooner done so than he flushed wild, and gave me a left-quartering shot. I looked square at the bird and quickly brought my gun to my face so that I saw the top of the barrels on a line with the bird. Then I pulled the trigger, and had the satisfaction of seeing my first woodcock for the day tumble to the ground near a cedar bush. He had looked very large on the wing, but when I picked him up he exceeded my expectations by proving the largest and handsomest woodcock I have ever killed. Jake remarked that if he had not been so large I would have missed him. The only shot mark to be seen was a scratch on his lower mandible. I at once decided to have him mounted and he is now in the taxidermist's hands. Both Jake and the taxidermist thought him a beauty.

After feasting my eyes on the first bird for the day to my credit, we proceeded up the creek, hunting some distance without finding anything until we came to a place where the alders were thickest on the other side of the creek. Here in a little patch we flushed a bird, and I scored another miss, while the bird flew across the creek. After walking some distance to the next patch of brush, the dog went in and flushed a partridge. Jake had a snap shot, but failed to kill. Soon after this we turned back, and crossing the creek on a slippery log—which nearly caused Jake a ducking—went back on the other side. We did not find any game until we arrived at the place where the last woodcock I shot at and missed had alighted. The dog found him, and as I was in the brush while Jake was on the outside, I told him to get "ready." I did not like his position and told him to move up the creek a short distance. This took him above a clump of cedars, and I thought the bird would fly above. After some grunting he followed my advice. I then walked in and flushed the bird, calling "bir-r-rd" as he went up. The erratic bog-sucker did not fly as I had laid out the programme for him, but went straight for the place where Jake had stood when I advised him to "move up a little." So Jake did not see the bird until he was just going by the open place below the clump of cedars. He fired at long range, and was not positive as to whether he killed or not. A search by dog and men, however, failed to find a bird, live or dead, so we concluded that he had escaped unscathed and recrossed the creek. As there was no practicable way of crossing the creek there and as it was getting late Jake decided to leave the bird "for seed." After he had expressed his opinion of me for advising him to move above the clump of cedars the air was so blue that we were both glad to resume our hunt down the creek and leave this unhallowed spot. We soon arrived at the bridge heretofore mentioned without having seen another feather, drank a cup of the crystal water, then took to the road for our horse, which was tethered near by. When we hove in sight of the mare we were greeted by a whinny which plainly said: "I am glad you have come; it is time to start for home."

We were soon aboard and whirling through the mud at a twelve-miles-an-hour gait, stopping only to give the mare a drink at a cross-road hotel, arriving home shortly after dark. After supper we listened to much raillery on the lightness of our bag, but this did not change our decision that we had enjoyed a fine day's sport.

NORTHERN NEW YORK. OSCEOLA.

A MOOSE.

ON a beautiful forenoon in early September we were paddling up against the slow current of the Little Fork of the Rainy, Burt and I.

We had been on our claims two or three weeks trying to convert a couple of acres of Minnesota's grandest timber land into two little insignificant vegetable gardens, and were on our way back to Tower for new supplies of pork, flour, tobacco and everything that goes to make life in the woods comfortable. We had made this same trip several times before and had seen lots of big game; but had always depended on our little .32cal. Smith & Wesson revolvers to supply our camp kettle with grouse. On our previous trip we had seen so many ducks getting up in front of us, that I made up my mind to bring my gun next time. So here we are this beautiful September morning, Burt in the stern and I in the bow, with my trusty 12-gauge Remington between my knees, six large buckshot backed by 5drs. of powder in one barrel, and a charge of No. 6 in the other.

The air is laden with all kinds of sweet smells and the bees are working everywhere as only bees can work. We have just poled up a little rapid, and now our birch shoots along a still reach of water, leaving a long trail of silver behind her. The water is so still that, as we look over the side of our canoe, we see each wee leaf or blade of grass, and I even notice a rabbit scurrying up the sidehill; he gets into the brush, however, before I think of my gun. Everything around us is so quiet and beautiful that involuntarily we drop our paddles into the water without noise and converse in whispers.

Burt says, "Wouldn't it be great, Mac, if we could get a moose to-day? We are going into Tower and could save the skin and part at least of the meat." I nod my assent, and just as the canoe darts around a bend of the river, we hear and see a mighty splash and a moose is swimming the stream just ahead of us. It is but the work of a second to take up my gun and pull on his head, but oh, the agony and the disappointment—the primer is damp and the six buckshot stay right where I put them in the brass shell. All this time the moose is going diagonally across the river, and Bert is paddling for all he is worth. Just as the animal steps out on the oozy bank I try once more at his full broadside. Bang! roar after roar go the echoes from one bluff to another, and oh joy! the huge beast is down! we have killed our first moose.

After we got through our war dance and were calmed down a little, we found that it was a cow moose and probably weighed in the neighborhood of 700lbs. What a feast we had on tender, juicy steaks, and with what pride did we afterward wear out eleven beautiful pair of moccasins made from the hide of our first moose. M.

GRAND HAVEN, Mich.

THE WEED BULLET.

TARRYTOWN, N. Y., Oct. 26.—*Editor Forest and Stream:* In spite of wind and weather, after waiting for the equinoxial rains to have their day, we went into camp in Essex county, near Wolf Pond, with one efficient guide and a sham affair that pretended to know more than mortals are permitted to know, who proved a mar-plot from beginning to end. He assumed the role of Buffalo Bill with a broad brim that cast in the shade all the hats on the plains. The airs of this would-be hunter would have been amusing if the situation had admitted of a jester.

I wish to mention for the benefit of your readers a hollow bullet, the invention of Mr. A. Weed, which certainly is the most destructive missile it has ever been my fortune to witness. I had a number of shells of the Marlin .40-60, reloaded by the inventor, and he had prepared cartridges for his Creedmoor rifle and also for his Baker. The penetration of these balls is as great if not greater than of the conical ball; there is less recoil to any gun; it carries as straight; makes a clean cut like a punch; but in passing out makes a ragged wound that you can put your arm through. The inventor, Mr. Weed, shot a doe on the run directly in front, the ball grazing the inside of the hindlegs, entering the body near the udder, literally disemboweling the creature, fracturing two ribs and leaving a wound that made me determine not to use the ball in shooting at deer. In an encounter with a more dangerous animal, a grizzly or a panther, it would be a prize beyond price. I did fire one ball at a buck, which striking the shoulder glanced, doing little damage. In shooting into a plank or beam with this bullet, you see on one side the smooth punch-like entrance, on the other side a splintered hole as if a grape-shot had been at work.

During the ten days in camp we had but two clear autumn days, yet Mr. Weed managed to secure four deer and I one fine buck; but the weather giving no signs of clearing we broke camp in a rain storm, the account of which would cast a wet blanket over you; and as I particularly love sunshine, I will wait for a brighter day, which found us on our way from Long Lake by way of the Adirondack Club to Lake George. If any of your friends wish to learn the art of cooking venison, advise them to visit the lower club house *en route* toward Lake Champlain. Such a rendering of the article cannot be approached by any of the leading hotels in any city.

If you have friends who enjoy a wild side and are blessed with a double backbone, send them from Long Lake by way of Newcomb to Clifton on Lake George. No words of mine can describe this trip. One must witness the gorgeous autumn changes that clothe every mountain top with crimson and gold to appreciate that side taken the first week in this month. H. C.

PERTH AMBOY, N. J., Nov. 4.—Quail and rabbits are fairly plentiful in this section, but have been shot for several weeks without regard to law. There is also a good deal of Sunday shooting. Woodcock are scarce just now, but a flight is due this week. There are a good many ducks in Raritan Bay, and some have been killed from sailboats and sculling-boats.—J. L. K.

A TENDERFOOT DUCK HUNT.

I DON'T know why they call a stranger out this way a "tenderfoot," unless a stranger is supposed to have more sensitive epidermis on his pedal extremities than the average Western man, but that's what they call him. But the term seems to refer not to his "foot" but to his brain, and not to the "tenderness" but to the thickness, and hence toughness of that same. And again, I can't get the Western idea of the connection of "foot" and brain, unless the Western man carries his brains in a different locality from most men.

But my story. We were three of this class designated "tenderfoot" who started early one morning in September with thoughts intent on shooting ducks. If the further east one hails from the more "tenderfooted" he may be supposed to be, certain it is that, although in different degrees, we represented an exceedingly high place in this class. For one was a Yankee and hailed from Boston, another came from the Empire State, and the third began life near the beautiful "City of Brotherly Love."

Wending our way to the boat ferry, we roused the keeper and were soon afloat on the broad Mississippi. After a row of two miles down stream, we turned into a slough, shot through a break in a dam, pulled our boat over a sand bank and were afloat on the muddy waters of Target Lake, our destination and the place where we were "going to shoot ducks." One breechloader and two muzzleloaders composed our armament. "New York" possessed the breechloader and had a limited number of shells, with each of which he intended to kill I don't know how many ducks. "Boston" boasted a gun of ancient make, long, thin barrels, and that could scatter shot over something less than an acre of ground at each discharge; his endeavor was to get the muzzle of that gun as near his companions' ears as possible when he fired it; he generally succeeded, and was quite persevering at it. "Philadelphia" had a gun to boast of. Although a muzzleloader, it could beat any breechloader in existence—kicking. The more he rammed the shot the worse it kicked. If he had not stopped ramming, no doubt he would have been obliged to carry his shoulder home in his hand.

Slowly we pulled up along the shore, eyes and ears both open and occasionally the mouth also, for it was early. After going a little way we ran aground, and then concluded to sit there for a little while and see what transpired. A duck soon transpired and settled in the water a little way off. Philadelphia raised his gun, fired and then rubbed his shoulder. The shot struck the water all around that duck, but it scarcely moved. We concluded the most of the force of that charge went backward. Then Boston tried it. Raising his gun to his eye he fired, and then almost went over the other side of the boat into the water. The duck moved on. How could it help it? The surface of the water for rods around was torn up by the storm of shot. "My! how that did kick," said Boston; and then, "Why, both barrels went off." After that he cocked the barrels one at a time. Nothing like experience, is there?

After a little while Philadelphia, having long gum boots on, deserted the boat, and the others went down the lake. Soon they found several flocks of ducks and then began the bombardment. At the lower end of the lake they got right into a whole mess of them, five or six hundred, and began blazing away. They both fired together the first two shots, and then Boston had to reload. But his hand shook like a leaf, and he could not get the powder and shot into the barrel. The poor ducks lost their heads and did not know which way to go, and New York kept pumping his breechloader into them until his shells were all exhausted and he had to stop. Boston got in a few more, and then the ducks took to their wings and got away. Then the shooters began to take account of the slain, and in spite of having been only 25 or 30ft. away from that thick mass of ducks, they found that all they had killed were just 14 of them. Real good that for a tenderfoot.

Meanwhile Philadelphia had reached the shore and was wading through the rushes along the edge of the lake. But fortune never favored him, for excepting a stray half dozen not one did he see to shoot at. After walking about for some time and finding nothing, he concluded to hide himself and wait developments. He hid, and nothing disturbed him either. After a little several flocks began to come up the lake and settle along the banks on the other side, just out of reach. And more came, and more, until there was a multitude of them. They lined the side of the lake in a thick black mass, occasionally moving out almost into gun shot and then back again. Was ever anything so tantalizing. There he had to sit in the mud among the reeds, afraid of moving for fear of scaring them; and yet never a one came within gun shot. After an hour of patient waiting the boat came back up the lake; he got in and there saw the success of the others. To say he was pleased all around were not altogether true. He felt that those ducks had done him an injury in keeping away and he was for revenge.

Again we gently approached them, and just as they were about to rise Boston and Philadelphia let loose their pieces. Out of that multitude two dropped over and two swam off wounded. Better shooting still. We followed the wounded ducks to try to get them, shot several times at them but failed to strike them, and then found we had come to our last charges. We gathered up what we had shot, managed to get one or two more, and then as the ducks were getting wild, our ammunition was almost gone, and it was well on into the day, we started for home. We were rather pleased, to say the least, at our success, and spent the time counting up how far the ducks would cover the expense of the trip. We all agreed that we had come out ahead.

Almost home we met a friend. He pulled his boat alongside, looked at our ducks, smiled and went on down the river. When we reached the dock we proudly got out of the boat and proceeded to take out our ducks and divide them.

"Mud hens!" said the boat-keeper.

"What?" said we.

"Mud hens," said he.

"Ar'n't they good?"

"If you skin them."

Our countenances fell. Doubt began to fill our hearts. But we laughed it off and went on tying them up. Then a friend of ours came along.

"Mud hens!" said he.

"Ar'n't they good?" said we.

"If you skin them," said he.

"Why! don't people shoot them?"

"No! You can go out any time and shoot a hundred in no time."

We felt as though our mothers wanted us. We had a certain idea that a "man wanted to see us," and that we must get away from there. Boston looked blank but was taking it all in. He evidently intended to know all about "mud hens" in just about ten minutes. New York was struggling to keep his face calm and placid. But through it all the nightmare of those mud hens was revealed. Philadelphia put on a smiling face. He joked with his misery. But it was evident that he wished these ducks at the bottom of the peacefully flowing river. But now came the question, whether to leave the ducks there or take them home. New York already had his tied up and in his hand.

"What are you going to do?" said Philadelphia. "Take them home, of course," replied New York.

Then Boston loaded up too, but Philadelphia lingered. In his heart he wished to leave them, but could not go back on his friends. So the melancholy procession started and left smiles of an audible nature behind them. What were the thoughts that stirred their souls, think you? Nothing more nor less than what was the quickest and most secret way home.

Soon Philadelphia made a discovery which he hailed with a shout, "Look here, New York, that's no fair, putting your overcoat over those mud hens."

New York, caught in the act—for he had let his overcoat slip down from his arm where he carried it, so that it covered the hens—caught, I say, in the act, smiled a most sickly smile, and calmly putting down his gun, deliberately wrapped these mud hens up in his overcoat, put them under his arm and proceeded. Philadelphia immediately divested himself of his overcoat and followed suit, and then Boston was "left," for he had no overcoat.

Soon we passed a crowd of men. A laugh greeted us. "Look at the mud hens." "Been shooting mud hens." And then, horrors of horrors, one called out, "Cover your mud hens up." Philadelphia in his hurry had left the leg of one of the abominable birds sticking out of his overcoat, and then it was swinging backward and forward by the side of his ear. The gauntlet was awful. Men would stop, draw near, look and then laugh. Street urchins would run alongside of us, and bombarded us with questions to even a greater extent than we had the "mud hens" with shot. Mr. Editor, if ever you are tempted to shoot "mud hens" don't you do it; flee the temptation.

We reached at last our offices to hide ourselves and "hens" within their grateful walls. Last night New York committed a nicely wrapped up bundle to the current of the Mississippi. To-night two more will go there. We are tired of "mudhens," we've had a surfeit. Our lives are not happy in the presence of that fowl. We can't even eat chicken for dinner, it's too suggestive. Do you remember your first long-tailed coat? That's we. We have come to a "realizing sense" of "mud hens," and we've one less "tender" spot in our "feet." LAX.

ABOUT TAXING GUNS.

Editor Forest and Stream:

This question has been a mooted one from time to time for several years past, and just now seems to be coming to the surface again. It is one of those questions which have two sides, and that variety where the ultimate conspicuous side is not presented to view until something decisive develops to call it out. But it is of such a despotic, foreign nature, that there is little likelihood of its ever coming to a critical test in this country, certainly in liberty-loving New England. I am a native of New England and a frequent visitor there; indeed, I have from time to time traveled through all the northeast States, and recently, too. And, withal, I have been something of a gunner.

And this reminds me of the special horror of a rifle displayed by "Cohannet" in your last issue. It is not improbable that I have hunted weeks there where "Cohannet" has days, and mostly with a rifle, too, with which I have killed far more game than with a shotgun; indeed, hunting in company with men using shotguns, I have day after day with my rifle killed more game than they, and they were first-class gunners too. There are scores if not hundreds of riflemen in New England to-day who can do the same thing, and their game shall include that which is generally killed with shot by our modern gunners. I nearly always still-hunted quail, ruffed grouse, etc., with a rifle, cutting the head or neck and invariably killing them outright, while the shotgun hunters wound more than they kill, and it requires more skill to kill such game with a rifle; a point generally made by shotgun hunters in their practice. I believe that rifle shooting is keeping full pace with shotgun shooting, even in New England. It will be a cold day when any considerable number of riflemen tamely consent to have a special tax laid on their rifles, particularly as many of them practice only at target shooting.

It was an outrage that "Cohannet's" father did not let him use a rifle, if he had a desire for it, and it would be a continuance of the outrage for "Cohannet" to deprive his own son of rifle practice because he was deprived, and probably knows nothing of this unequaled, highly reputable, especially scientific, and in every way respectable recreation. Give boys an opportunity for rifle practice, and very few of them would care much for a shotgun. They could get about as much enjoyment out of a small shovel and a pile of peas. Nineteen out of every twenty boys will find more fascination in rifle shooting than in any other legitimate recreation. And in most instances the practice will be of real service to them in after years, and in too many ways for enumeration here. No intelligent man will deny this. If I had control of methods of common school education, the curriculum would certainly embrace rifle shooting, and, I believe the time will come when this will become a feature in common schools, if not in higher grades.

Now, a little more about the boys. I have had considerable acquaintance with boys during the past fifty years, and with but very few who did not use a gun, mostly the rifle. Among them all there occurred very few accidents in handling guns, and all which I can recall were with shotguns. The mass of accidents we read about are with shotguns, with the exception of one particular line, in which one particular make of rifle is always named. Shrewd advertisers understand this. I have taught quite a number of boys the use of a rifle, and I don't believe one of them ever injured any one with a rifle unintentionally, or in any way except in the line of military duty. A careless and generally heedless boy is liable to cause injury to persons and property, whether he is allowed a gun or not, and is especially liable to injure himself in a multitude of ways, into which he is not likely to be tempted if allowed a rifle, and particularly if instructed in its proper use, whereby the practice becomes intensely interesting to him, winning him from mischievous practices. He takes pride in his expertness, and quickly learns to avoid all features of danger to others as well as to himself. No, Mr. Editor, not for generations yet unborn, will American boys be deprived of the use of the rifle, either by taxation or any other device of selfish, professional gunners, pot-hunters or dudes.

The way this question is going to be settled has already been started in many parts of the country, and is rapidly spreading. I have access to a great many newspapers, published from Massachusetts to California, both States inclusive; and within two weeks past I notice the proceedings of organizations of farmers and other landholders (and numerous calls for such organizations) for the arrest and punishment of every person found hunting or fishing on said lands. The class of gunners referred to in the foregoing paragraph will be relegated to unsettled regions. And, I repeat, there will be no special taxation of guns in this country. Their use may be restricted and doubtless will be, and that would cause but little opposition. Tax the professional gunner! WACAUTAH.

HIS FIRST BUFFALO.

MR. C. MILLS was a first-class mechanic when it came to making pianos, and the year of 1869 found him in London out of work temporarily, and he was therefore a fit subject for the smooth-tongued agent of a Nebraska railroad, who at that time was flooding England with handbills setting forth the many blessings of a prairie farm in the land of the free, and averring that on his particular line of road you would be blessed the most. It was a case of *veni, vidi, vici*, with the agent, on Mr. C. M., who shortly afterward found himself in Lincoln, Nebraska, with a box of tools and $2.30. Mr. Mills had been born and brought up in London, and had never, to his knowledge, seen wheat nor any other cereal growing until he reached America; consequently, although the blessings that were going to fall upon him were no doubt there, he failed to see where they came in.

Board was $1 per day strictly in advance, and as Charley had a good appetite it behooved him to hustle, which he did. Two days later he was in full command of a pair of mules driving to Fairfield. He was engaged in freighting salt. The weather was cold, it snowed for two days, and things were generally disagreeable. Two trips were enough; so one bright day he turned his back on Fairfield and commenced to hunt among the dugouts for pianos to mend. He soon discovered that the hardy settler cared more for a dinner of cold pork than for all the melodies composed by Chopin. After considerable trouble he secured a job, for his board, helping a man to get out logs from the Little Blue; and it is a fact that he had to ask, "What is that thing for?' when he saw a rifle hanging from a deer's horns in the dugout. The properties of the weapon were explained to him by the owner, who also said that one of these days they would go hunting.

The winter wore away and at last the grass turned green, and everything indicated an early spring. One day at dinner Charley casually remarked that there was a funny "bullock" over in the timber, it had lots of hair on its neck, was black, and when it saw him had run away. The boss didn't wait to finish dinner, but grasped his rifle, told Mills to get a pitchfork and come along, as the day for hunting had arrived. Charley and his employer were soon on the buffalo's trail; and while following it, the boss imparted to Mr. Mills the facts of what he knew about buffaloes in general, and that a hump nicely roasted was a dish fit for Charley's Queen. They first saw the bison about two miles from where he stampeded, and after considerable work succeeded in getting a bullet into him. Away the animal went at full speed and the hunters after him, through brush and slough for hours. Night found them twelve miles from home and with no buffalo. They camped on the prairie by the side of a "chip" fire, and at sunrise followed the trail, which was plainly marked with blood. About 8 o'clock they came to a bunch of brush, the boss slightly in the rear. Charley had hardly got into it, when the "bullock" came at him with a roar. To say that he was frightened hardly does justice to his feelings; but scared as he was, he thought of his faithful pitchfork. He jumped to one side and commenced to stab and yell. The buffalo had fallen down, but was still viciously striking with his hoofs. Every chance he got, Charley would "jab" and yell, and with the noise he made, and that made by the buffalo, it resembled a miniature cyclone. The boss was up by this time, and encouraged Charley in his work, directing him to "put it in behind the shoulder," which Mr. M. did and soon put an end to the kicking and the noise.

They were seventeen miles from home, but after securing the robe and the choice portions of the carcass they considered themselves fully repaid for their hunt.

This was twenty years ago, and things have changed since then, the spot where Mr. Mills killed the buffalo with a pitchfork is now covered by the post-office of Hastings, Neb., and of the millions of buffalo that then roamed the prairie, there is not one solitary animal outside of captivity. TEALY.

PENNSYLVANIA.—Smith's Mills, Oct. 29.—Pheasants and rabbits are remarkably plentiful in this section of the county (Gerrlich township) this season. Deer and bear are reported to abound in the mountains in great numbers. Sportsmen are limbering up their guns in preparation for the first snow. Woodcock are, as usual, very scarce. Squirrels are rather few in numbers and have been all fall. Ducks are winging their way southward in great numbers, and the autumn air booms with the reports of light artillery down on the pond. May I some time write you of some big bags made?—C. D.

FOREST AND STREAM TESTS.—Fort Sherman, Idaho, Oct. 19.—Your tests of shotguns are much appreciated and enjoyed here, as they should be everywhere.—CHELAN.

THE CRUISE OF THE LALLIE-POO.

WE had promised ourselves a cruise to Martha's Vineyard and the adjacent islands, but spring had slipped away and summer was flying. August was half gone before we could think of going. The fifteenth was to be our day of sailing. There were three of us, "Genius," the sailing master; "Mate," the executive officer; and the writer, G., was the owner of a small boat which was to accompany us as tender, the Lallie-poo; while the other small boat was the Addie, and the yacht Gracie. The object of our quest was shore bird shooting.

Arrived at Cotamy Bay, we started for the beach between it and the ocean. Some years ago (1874) the Coast Survey endeavored to dig a trench through the beach, hoping to benefit the harbor thereby. The attempt failed from the effects of a storm, and for some twelve years the beach remained closed, but in 1886 nature took the matter in hand, and in one night opened a breach 300ft. wide, through which the fishing fleet of pink-sterned schooners pass in and out unless the weather is too rough. Cotamy Bay is between the Vineyard and Chappaquiddoc Island. There is a hotel with some cottages and lots of room there. The place is called Katama, and is reached from Oak Bluffs by the Martha's Vineyard railroad. Chappaquiddoc is a hilly island with farms scattered over it. The various flats and bars puzzled us some, but we finally anchored near the beach. No sooner was the sail furled than we broke out our guns, shells and decoys. G.'s gun was of some foreign make, so was Mate's. I was armed with a Davis old style, but the companion of years, kind and faithful. G. tumbled into the Lallie-poo and went off toward the inlet, while Mate and I went to the southward toward the head of the bay, which was a little cove some half mile deep and a few hundred yards wide.

We saw a flock of birds running along shore, and Mate landed, while I kept on up the cove, which, by the way, is called Mattakeset Bay. We soon heard G.'s gun and saw three birds coming down shore in our direction, they gave Mate a wide berth, but I was squat so close in the beach grass that they did not perceive me until too late. As they went right over head I dropped all three, using both barrels. They were calicobacks. Birds of any size were not plenty, and I was fain to shoot at a bunch of ringnecks which flew by on the bayside. The wind blew so nearly parallel with the shore that I had to go a long way up the bay to retrieve five, which I would on no account lose. After some tiresome wading through the beach sand we went on board the Gracie again. I had sixteen birds, ringnecks and calicobacks. G. had some larger birds, but not so many, while Mate, who was a novice at gunning, had nothing. We voted the shooting dull, but concluded to go to the head of Mattakeset Bay for the night. We took a walk across the fields inside the beach, and went to a large pond where we hoped to find birds on the ensuing day. At night we were lulled to sleep by that pleasing but sad and lonely sound, the roar of the surf.

On the morning of the 21st we gathered up our traps for a cruise on shore, with much bread and hard-tack packed in knapsacks and many rounds of ammuntion. We landed at the very head of the bay, and soon crossed the plank walk which the Katama Co. have for tourists who go over to the beach. On a tall stake in the first fence we came to was a sign that said "No shooting here," which we found true enough, for there was nothing in the field to shoot at. We crossed a wide ditch or canal and went down to the shore of Herring Pond. Seeing a small flock of summer yellowlegs flying on the side of the cove opposite where we were standing, all hands set up a vociferous whistling, which attracted their attention. As they slanted over our way we subsided into the grass and eagerly watched their coming. At 30yds. they caught sight of us as we raised, and luffed, but too late; it was over in an instant; five empty shells and four yellowlegs off in the water, which did not seem very deep, as grass was growing out where they fell. Here were the first feathers, but how to get them was the question. G. and the writer took off their shoes and rolled up their trousers and essayed wading to them. The writer reefed his breeches close up to the last cringle, but was too short-legged; when G., being the longest sparred, went after them under bare poles, *sans culotte*. Here was a fair beginning, and we followed the shores of the pond, keeping on the beach side, getting now and then a bird—mostly ringnecks—shooting at single birds and difficult shots, for we had by 9 o'clock picked up as many as our conscience would permit.

Mate scored several birds, one on the wing, which being his first he was bound to have, although it fell in the pond. Taking a snug roll in his pants he went in; when half way to the bird the water reached the dividing line, and as his fingers closed on the prize his waist band disappeared from view. When he reached dry land the peep was admired and put with some half dozen of its kind he had before secured. Our proffered assistance in wringing out his dripping nether integuments was politely declined and the march was resumed.

Sometimes we followed the ocean shore, and once we launched a long piece of joist and watched the breakers as they played with it, now dashing it ashore and then claiming it with each recession. We sat on the sand and looked off on the mighty Atlantic and listened to the hollow booming roar of the surf.

Away off on Mutton's Shoal we could see the fishing boats, their white sails glistening in the sun as they tacked back and forth. Stretched on the warm sand with eyes closed and minds at rest, we dreamed of the dear ones at home, and just as our thoughts were in that confused state when sleep begins, we were startled by an exclamation from G. coupled with a sudden getting up of all hands, and a general rush up the beach; the cause being an immense roller which broke right where we were, and with great ambition rushed some yards higher than any of its predecessors, surrounding us with several inches of water and foam. As luck would have it our guns and other impedimenta were lying on a windrow of seaweed above all danger.

Continuing our way we came to a place where the seas broke clear over into the pond, a trench having been dug through by human hands in the first place. Some little birds ran across when the waves fell back and we followed suit. Near the western end of the pond we found a wide ditch connecting it with a smaller pond beyond. At the mouth of this ditch we saw a big winter yellowleg. He was some 60 or 70yds. from the nearest bunch of grass that he could creep to.

Leaving Mate to guard the end of the ditch by the big pond G. and I tried to creep up to him. He, however was wide awake, and, when we were within what he thought was proper distance he jumped up with a loud whistle of "There-here-here!" We began to fire and kept shooting till he fell in the shallow water 80yds. from where we were. Who killed the bird we never knew, as we both shot 6s at it. The firing disturbed another one who flew up on our invitation, to see what the matter was; at 30yds. he came to a sudden stop and proved to be a much smaller bird than the first.

Here we found a camping place where some parties had enjoyed fishing as well as shooting. In the shade of an oak grove we ate our lunch and then started back. When nearly half way to the east end of the big pond we saw ahead of us a team loading with beach grass which some one had mowed and was about to cart off. On the load were two girls whose lower sails were filled to their utmost extent by the fresh breeze. Here was a chance to get some information in regard to the shooting, and as we rapidly drew near the girls took a prudent reef in their skirts by sitting down on the load. The man, we thought, eyed us furtively, and no wonder, for wet through and barefooted, with our shoes and boots tied together and slung over our guns, with coats on our arms and knapsacks on our backs, we looked anything but encouraging. Being three to one, not counting the girls, who were up aloft and could work us no harm, we hauled alongside and asked how he did, and kept up a running fire of questions and a sharp watch on the parties aloft, who were very interesting and quite interested. The man did not know much about the shooting and could not give us any encouragement. One of the girls asked us if we had killed anything and expressed a wish to see our game. Here was a chance to relieve our overburdened consciences and lighten our game bags. Would they like to have some birds? "Yes, indeed." Out from the depths of our haversacks came the birds, and one by one we passed them up to the fair hands that were reached down to receive them. One or two peeps were overlooked from shame at having taken such small life. Yellowlegs, ringnecks, calicobacks, up they all went, except the big winter yellowleg, which the writer clung to with especial fondness, for was he not fat, and would he not make a good show in the kettle? To his shame be it said, the kettle won, though we are sure one more smile from under that Gainsborough hat would have carried the day, bird and all. By this time the hay was all on, and the load with its fair occupants was started for the mainland. Mate, the unmarried one of our party, was heard to say something about being tired or wanting to ride. We were now free to shoot again, but nothing appeared but a crowd of ladies and children at the plank walk near where our boats were; here we had to run the gauntlet again, and were outnumbered three to one with no birds to offer. To the query of "What luck?" we told truly and said we had given our game to a party on the beach. "Lucky man," drily remarked a gentleman in the crowd. Shoving off the Lallie-poo we soon boarded the Gracie. After dinner was over we made sail and ran back to Edgartown to spend Sunday there.

Sunday, Mate was made ship keeper by his own choice, while G. and the writer took a long walk back into the woods to the opposite side of Herring Pond from which we cruised on Saturday. We saw a few dusky ducks and many night herons, but no plover. On our way back we were overtaken by a young man in a light wagon, who asked us to ride, an invitation that was promptly accepted. Our new acquaintance was quite a follower of the sport and possessed a fund of useful information. He told us that for upland plover we would have to ride out in an open wagon and shoot them from the seat, as by no other means could they be approached.

Monday we unbent the sail and had a sailmaker cut it over to make it set higher on the boom. G. and Mate took the Lallie poo and rowed down into Cape Pogue Bay on a prospecting voyage. They returned with a favorable account and we decided that on the next day we would run over to the Cape. Cape Pogue Pond, as it is called, is a large triangular sheet of water covering several hundred acres and bounded on two sides by a narrow beach and on the third by Chappaquiddoc Island. The juncture of the two beaches at their northern ends forms the Cape, which consists of seventy-five acres or so of rolling fields without fences and used as a common pasture. The only buildings are the lighthouse and keeper's lodge.

Tuesday morning we went over to the Cape and found a little cove into which we ran the Gracie. We could see a small meadow with some pond holes in it, and a lot of birds flying and running around them. As soon as the anchor was down we went on shore with our guns and scared up a lot of small birds and quite a flock of plover. We found some pits dug in the beach grass near the ponds. These pits were surrounded with a low wall of stones, and we dropped into them and made ready. Mate, who as before stated was a novice at shooting, occupied a blind about three gun shots to the writer's left, while G. was posted some 200yds. off and nearly in front, so we lay in a triangle with a pond in the center of it. The birds which flew off on seeing us soon came back in small bunches, and we began whistling and peeping, each trying to produce sounds to entice them within shooting distance. The writer is no whistler, and doubtless the sounds he emitted were taken for cries of distress by the birds, who came near from sympathy perhaps. He had the luck, however, to get the first shot at some small plover, which left four or five of their number scattered among the decoys. Mate did not seem to have much shooting, and after a while he concluded to go on board and start dinner. G. had better luck and we two kept at the birds till the writer had fourteen and he about as many. We got several black-breasts here, and saw a few uplands or Bartramian sandpipers. These last were very shy.

In the afternoon we got under way and ran over to Muskeget, which is a low sandy island, being nothing but a succession of ridges of coarse beach sand covered with grass. There is a life-saving station and several shanties, where gunners or fishermen stop; but no one was on the island when we got there. We passed over many shoals and rips on our way, but did not touch anything. A boatman told us to look out for a lime vessel that was sunk off the east end of the island, but we did not see her. There were two wrecks off toward Tuckernuck hard and fast on the flats. We rounded the east end of the island and ran into a cove and anchored about one hundred yards from the beach. This island is half-moon or sickle shaped, wider on the north and east than on the west. Where we anchored it was very muddy, with long eel grass reaching the surface of the water. G. and I hurried on shore and got a dozen birds in short order; the calicobacks were the most abundant except the terns, of which we saw hundreds. These are protected, and there are signs cautioning people not to break the laws in regard to them. A lot of young ones were running on the sand, and G. found an egg which he brought off for the writer, who has taken an interest in oölogy for many years, but had never seen a tern's egg before. We wisely deferred blowing this egg until after supper; then the attempt was a most dismal failure, though vastly amusing to G. and Mate. The writer, who has had some experience with rotten eggs, distinguished himself by smashing this one between his fingers, thereby creating a vile odor.

Toward evening the sky clouded and it looked like rain, the wind blew from the N. E. quite fresh; but we were in smooth water and were pleased, as the prospect for birds was better with easterly weather.

Aug. 25.—Sometime in the night I was awakened by our centerboard striking bottom, and hard bottom at that. We left the board down as it was in the way when up, reaching nearly to the top of the cabin; and it also kept watch, telling us if we got into less than four feet of water. When we struck I ran out in the cockpit and looked for the beach; much to my surprise a flash of lightning showed it to be fifteen yards off instead of a hundred, as it was when we anchored. We were lying broadside to the shore, with the Addie and the Lallie-poo thumping alongside.

To call all hands was the first thought, and the coming up of the centerboard upset the sweet potato kettle, which unhappily had been left on the box. This dumped over on to Mate, striking on his nose as he lay sleeping, and causing him to think we had been run down. We got out our spare anchor, bent on a warp and ran it out to windward and hauled off. This we had to do several times, as the mud was so soft and eel grass so thick that our anchor came home without holding much. After a while we got things straightened out and turned in. Mate had the bridge of his nose barked, and looked as if he had had emerged from a prize ring. The morning found us riding to two anchors in a lively breeze without much sea. We went for birds and got turnstones in abundance, saw a curlew, killed a snipe and came off at dinner time.

After dinner G. and the writer took the Lallie-poo and went to an island which lay off the extreme southwestern point of Muskeget, with a channel of 200ft. width separating them. Across this channel we went with a fair wind. On landing we saw some small birds, but did not shoot any until we got to the middle of the island. There we found a flock of birds of several kinds in a little piece of low ground. We fired as they rose and got in two more shots as they circled around over the dead ones, and then we began to pick up the killed and catch the winged. We picked up thirty, and after a careful search concluded there were none left to die of wounds. We had no excuse for shooting more, although the flock did not leave the island. We got into the Lallie-poo and started for the Gracie, G. rowing and the writer forward. There was a very nasty chop, as the tide was running out through the channel like a mill race. We were hardly into the current before the waves slapped over the bow, and we made such slow way that she was half full of water and in imminent danger of swamping. We changed places, G. rowing forward and the writer in the stern bailing with his hat. We reached the flat by a squeak, and both jumping out ran the boat ashore and got out the water. Our guns were wet and the game soaked, but nothing dampened our spirit and we dragged the Lallie-poo over the flats until abreast of the Gracie, and then rowed off. Mate received us with a burst of enthusiasm quite out of his usual manner. A general drying out was next in order, guns were taken to pieces and oiled, and Mate's attention was directed to a pile of soggy, greasy and bedraggled birds as they were dumped from our game bags.

The wind continued to blow until late in the evening, and we all voted it a mistake to leave Cape Pogue when we did, as a N.E. wind is sure to bring plover there. Thursday the weather was better and we tried the island again. We shot a few calicos and at noon got under way and worked out the S.W. pass and ran over to the Cape, arriving there at 3 P. M. The first thing we noticed was a flock of very large birds that were on a hill near where we had landed before. As we got nearer these birds began to look suspiciously like some we had seen before, and our suspicions were verified when we saw a man step out from a blind and pick them up. This party viewed our coming with evident disgust, and as we came to anchor he took a boat and departed in the direction of Chappoquid loc without saying a word. We were one day too late, as we afterward learned from the ligh keeper. G. got three black-breasts and the writer one. These, with a few small birds, completed our score for the day. We enjoyed a very pleasant evening and were charmed by the music of the surf and cries of the birds The night was quiet and the Gracie lay as still as if frozen in.

Friday we cruised about the cape, waiting for the wind to blow from some quarter, as it was stock calm when we tu ned out, and continued so until 10 A. M. We started with a very light wind and got out of Cape Pogue Pond and towed across the big flats off Edgartown. It was very hot, and Mate steered while G. and I rowed ahead in the Lallie-poo and towed the larger boat. At last the wished for breeze came from the S.W., and we hugged the Vineyard shore by Oak Bluffs, where we saw many bathers enjoying themselves in the warm water. We could hardly head up for Wood's Holl when we left East Chop, but the tide was in our favor and we went through nicely. Once through we started sheets and ran for Nye's Neck, passed out-side of Minister's and Southwest ledges, by Wing's Neck, and then for Hog Island Narrows and home.

On reaching Onset, G. got his dunnage into the Lallie-poo and cast off. Mate and the writer ran the Gracie up through Tom's Narrows and reached the stake at 6 P. M., ending a very pleasant and successful cruise.

CHICAGO AND THE WEST.

CHICAGO, Ill., Oct. 17.—On one evening of last week there were assembled at the Grand Calumet Heights Club house Mr. Alex. T. Loyd, Mr. E. C. J. Cleaver, Mr. Sam Booth, Mr. Bird, Mr. Wilde, Mr. Fleming, Mr. Bissell, Drs. Davis and Jones, Mr. and Mrs. Metcalf, Miss Folsom and a number of other members and guests of the club, who had all run down to take a look at things and may be get a bird or so. The ducks were not very abundant and only a few were killed, although the time was passed very pleasantly as usual. Partly owing to the scarcity of game and partly in pursuance of an intention formed long ago, Mr. Loyd and myself determined to put in two or three days exploring the Little Calumet River, one of the longest and least known of the streams of this strange Calumet country, which lies along the coast of Lake Michigan in a thousand ramifications of big lake, pond, marsh and running stream.

There was a tradition that the Little Calumet ran into Lake Michigan away down at the end of the lake, somewhere near Michigan City. Just where this point was nobody seemed to know, but the supposition was that, after passing through a great marsh to the south, this stream either ran into the lake or, like the Grand Calumet, stopped in the sand hills a short distance from the lake, except in times of very high water. The current of the Grand Calumet runs sometimes one way and sometimes the other, it being a very independent sort of stream. A like independence seemed a quality of the Little Calumet, and I, for one, had always thought that this stream actually ran into the big lake, flowing out from, and not into, the larger Calumet waters, which empty into the main drainway of the system at South Chicago. The fact that I was so much mistaken, and that others also have been so, will show that there was serious need for a little exploring, since no one we found could give us any satisfaction.

Mr. Loyd had traversed nearly every foot of the Calumet region except that portion referred to, and was curious about this. Himself a rare enthusiast on outdoor matters, and much given to lonesome trips in the distant woods and along unfrequented streams, he was the best of company and counsel, and his boat, a long, slim, cayak model of his own make, a splendid one for speedy travel, made as suitable a vehicle as any two outdoor cranks could ask for. In three minutes our plans were laid, and on the following morning we bade our friends a tearful adieu and started out, as did Messrs. La Salle, Marquette & Co. before us, to brave the perils of an unknown land. If the above named gentlemen had as good an outfit as we had, they need not have feared very much. But we had this advantage, that in case of failure of the lunch basket we could fall back upon the farm houses and thus subsist upon the country.

The Little Calumet runs distant from Grand Calumet Heights Club house, and it became necessary to make a portage of about eight miles to start with. Not having any Indians to carry our boat and shell boxes, the method adopted by the early French explorers, we just loaded the boat on the club wagon and rode off down the beach and through the sandhills. We saw few wild animals on this part of our journey, except a number of gigantic bullfrogs, which had been washed up by the recent storm upon the lake. Some of these frogs were as long as one's arm, if frogs ever grow that large. What they had been doing out in the cold and clear waters of the lake is a mystery, but there they were, cast up on the sand, and so stiff with cold that they could barely move. The assistant club keeper killed eleven of them. Mr. Loyd and I sat motionless in the boat with the dignity that becomes all great explorers.

It was noon of a cold and windy day when we turned our backs upon the wagon that constituted the last link which bound us to civilization, and with stern faces rowed around the first bend of the river in search of a warm place to eat lunch. This we found among the wild flags, and so seriously did we devote ourselves to this duty that it became apparent at once that we must either find a farmhouse that night or eat the dog cake that Mr. Loyd had brought along for his semi-Gordon dog Grouse. Failing that, there was nothing left but cannibalism; and as I looked upon Mr. Loyd's willowy figure I shivered with apprehension and wished that he were a trifle fatter. I was going to eat him, though, if we didn't strike a farmhouse.

We had not rowed an hour before we discovered that the Littte Calumet was a fantastically crooked stream. It was so crooked that I could reach across the neck of some of the bends and pull Grouse's tail as it hung out at the stern of the boat. Same time he would have to travel half a mile before he got to where I was, on the front seat of the boat. Moreover, the river was hardly wide enough for our two pairs of long outrigger oars, or deep enough to flood us over all the bars. Lastly, and worst of all, it didn't run the right way.

"Look here, Alex," said I, "I didn't agree to come along and discover no blame river that don't know its own mind any better than this one. This here creek is geographically billed to run into Lake Michigan, and yet here we are pulling against the current all the time. I'd like to know if this is going to last all the way, and if not, how soon we're going to get over the divide."

"It ain't no way to discover things to go to work kicking before you've got out of sight of town," said Mr. Loyd. "You want the mouth of the river brought to you on a silver plate, that's what's the matter with you!"

I subsided after this rebuke, and we rowed along steadily for several minutes. Wind and current were both against us, but the two pairs of oars made the long river racer walk along lively. So, quarreling amiably, and lamenting the absence of game in unison, we slid over mile after mile of water, passing through a wide marsh-valley which seemed for the most part entirely dry, now running close into the big sandhills, beyond which we could hear the roaring of Lake Michigan, and now winding out to the distant line of low timber on the other side. We calculated our gait to be about five miles an hour, and therefore when we landed at a little sandhill farm late in the afternoon, we thought we must have traveled between fifteen and twenty miles from the little village of Lake, near which we had launched our boat. We learned that our surmises were nearly correct, but our informants, three flaxen-haired Swedish women, gave us no very flattering or very intelligent account of that portion of the river ahead of us. The youngest and best-looking of the three, upon whom Mr. Loyd tried his most artful blandishments, coolly informed us in very broken English that if we wanted to go very much further up we had better get out and carry the boat. No knowledge could be gotten of the relations of the river and the lake. It was about three miles to the lake, about seven miles to Chesterton, and beyond that all was a blank.

"I dinks dot river he run at Valaparaiso," said the young lady. "Purdy soon you can yoomp ofer him at Valparaiso, I dinks."

Now, Valparaiso is away down in Indiana, and not anywhere near Lake Michigan. Moreover, we knew it must be twenty or thirty miles to Valparaiso in direct line, and on that basis it would take us about a year to discover all the river properly. We were not pleased, as we had only three days to devote to exploring purposes, but it seemed certain that much remained to be done, and we therefore went back to the boat.

Half an hour before dark I broke one of the oars, and our progress after that was slow. The river at times was very narrow and shallow, but again it would expand into wide pools whose bottom we could not find with the longest oar. The stream had lost its marshy look, and was more like an upland river. The total volume of water seemed nearly equal to that noticed twenty miles below.

When night shut down upon our exploring party, we were out in the middle of the marsh with not a friendly light in view in any direction. We hauled up our boat, and taking with us only our arms and astronomical instruments, labored across the rough marsh to a grove where we thought we had seen a house. We found the house, but no one was at home, and we gladly accepted the pilotage of a Swedish boy whom we met and who at last led us to a pretty house lying high on a hill. Here we found an old Swedish farmer and his wife, simple, good hearted and kindly people as ever lived. These took us in, got us a good supper and a good bed. Their quiet life does not bring them much in contact with the outer world, but their quaint ways and simple hospitality made a delicious experience for us, and we have promised ourselves that next summer we will see Mr. and Mrs. Samuelson again, if Providence spares their gray hairs so long and we are still exploring things.

Mr. Samuelson told us that half a mile above where we left our boat the Little Calumet was joined by Salt Creek, which stream ran at the foot of the hill whereon the house stood. It was Salt Creek that ran into Valparaiso. Salt Creek was a good fishing stream, with plenty of bass and pickerel. The Little Calumet was not larger than Salt Creek. It ran through many obstructions of fallen logs and the like to Chesterton. Once it was dammed at Chesterton, and there were wells there. Now the dams are probably destroyed. It was about seven miles direct to Chesterton, and about seven miles above Chesterton there was a sort of marsh in which the Little Calumet took its rise. It did not touch Lake Michigan or go anywhere near it. We could not get up the stream more than a mile or so further with a boat, and above Chesterton we could do nothing at all by way of navigation. We might rest assured that the only way we could get our boat over to Lake Michigan was by way of a wagon portage.

That was the way we explored the Little Calumet, and the way in which we exploded the erroneous ideas about the mouth of that celebrated stream. It is now established that the Little Calumet begins in a marsh, like any ordinary stream, and runs down hill, after the fashion of most rivers. It is impossible to sail down this stream, or up it, into Lake Michigan. In its upper reaches it is like an upland creek, lying well below steep banks. In high water it overflows its banks, but at the time of our visit the "marsh" through which it runs was perfectly dry and there was nothing watever to attract wildfowl to it.

We named the pool on whose bank we had landed Lake Alex. Nyanza; then, not wishing the public to be at the expense of fitting out an expedition to discover us, we set out early on the next morning upon our return journey. The wind was favorable, and we spread our sail, and such were the sailing qualities of Mr. Lyod and his boat, that we actually sailed 12 or 15 miles of that prodigiously crooked stream without putting out an oar. Our long, low, piratical craft, favored now by wind and tide, flew swiftly on, and Grouse, who followed on the bank, was kept on a steady trot. We went so fast, and so engaged did we become in an argument over the FOREST AND STREAM gun tests, that we sailed by the village of Lake in an unguarded moment, and the first thing we knew it was nearly night, and we were in a marshy section of the river which we had never seen before. We now began to see a considerable amount of game. Mud hens were present in thousands, and there were also many ducks and snipe. The marsh was now wide and wet, and as far as we could see seemed fit for game and full of it. We passed the Michigan Central bridge, and came to the Pittsburg and Ft. Wayne bridge.

"We must be near the Tolleston Club grounds," said Mr. Loyd. And sure enough, just below the latter bridge we saw the posted notices of that club, warning us, under penalty of the curse of Rome, to step no foot on that sacred ground. We backed out from under the bridge, hid our boat, and after a devious night-time journey of a mile or so found ourselves at another strange but hospitable home, in the shape of the hunting hostlery kept by Mr. Hoffman. This place, before the organization of the present Tolleston Club and the closing of the marsh, was the rendezvous of such choice spirits as Harry Orvis, "old man" Orvis, Roll Organ, the Phillipses, Fosses and others, some of whom afterward went into the Water Valley Club or others of the Kankakee organizations. We passed a cheerful time talking over these people and things with our new host.

On the next morning Mr. Loyd and I did about the only hunting we indulged in on the trip. Shooting on the ground between the two bridges above named, which is, so far as we could learn, quite open territory, we bagged sixteen snipe and a mallard. Previous to this we had killed only two mallards and a few snipe along the river. The dog Grouse caught one mallard in the grass, and for the life of us we could find no wound of any kind upon it. There was a flock of tame ducks near by, and we thought the mallard had been using along with them and had so grown tame enough not to fly unless they did.

After dinner we pulled our boat around to the ditch which runs down to the river from Mr. Hoffman's land. In order to do this we had to cross a mile or two of Tolleston marsh. We did not shoot any upon this marsh, but we wanted to almighty bad, for we saw numbers of snipe and some ducks in range. We met Mr. Gillespie, one of the club members I met on my Tolleston visit last fall. He was out with Ernest, the pusher who went with me. We three recognized each other presently, though not until Mr. Gillespie had told us we would probably drop into the yawning maw of a policeman if we went much further. We assured him we were not abusing the rights of the club, but only trying to get our boat out of the marsh, and so we parted pleasantly.

Mr. Hoffman now got his wagon down to the end of the ditch, and we loaded our boat upon it. A drive of about three miles brought us to the railway station of Tolleston, and from there we got a guide and made a short cut through the sandhills of a couple of miles, and then, just as dusk was falling on our third day out, we launched our boat on the Grand Calumet River, and started on a three-mile pull to the landing near the club railway station, about half a mile from the club house whence we had started. This we duly reached in good order, and were banqueted as all great explorers should be.

We doubtless traveled in our water journey between 60 and 70 miles. We accomplished the main object of our trip, of course, which was to discover the real antecedents of the Little Calumet. Another discovery we made by accident, and this is of more importance than the other. We discovered that ducks know a good thing when they see it. We saw abundance of game on the Tolleston marsh. The Tolleston Club last year spent $1,100 putting down feed. Grand Calumet Heights Club spent nothing; yet during the three miles pull over the best part of this stream, once preferred by the market hunters to the Little Calumet, and in the night, late enough for the birds to be in on the marsh, we saw just one lonesome, solitary duck, and it was asking the way to Tolleston marsh. The moral of this is plain: Grand Calumet must feed if it would shoot. The boys know this, and will this month put in a lot of feed, mostly mill refuse and buckwheat.

I should say in passing that Grand Calumet Heights Club now numbers ninety-two, mostly live young fellows. Several improvements have been made; an addition has been built to the club house proper, giving much more room, and one also is made to the dining-room and kitchen at the keeper's house. A cosy cottage has been erected by three of the members, and a good boat house is put up on the beach in front of the club house, near the trap-shooting stand, at which Mr. Loyd conducts his private experiments in gunnery. I have been in the main truthful in describing the incidents of our trip, and I would not wish discredence cast thereon through the statement made by Mr. Loyd himself in regard to these same experiments. He says that in the labor of targeting his gun he is much assisted by his faithful dog Grouse, who displays an intelligence almost human. Grouse retrieves each pattern sheet as soon as it is shot, and then carries out another sheet and sticks the tacks in with his teeth. He even counts up the number of shots in the thirty-inch circle, and otherwise makes himself useful. This story of Mr. Loyd's gives me trouble. I suggested to him that he write it up for the column in FOREST AND STREAM known as "That Reminds Me," but he said it didn't remind him of anything in particular. This story shows on its face the elements of improbability, and if he is going to persist in work of that kind, I would like to know how he can expect to maintain an unsullied reputation as an explorer.

E. HOUGH.

ON THE MEGANTIC CLUB TERRITORY.

Editor Forest and Stream:

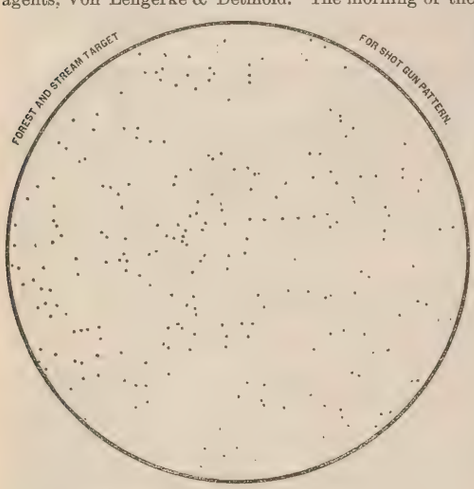
Inclosed find slip from one of our local papers in regard to a trip I made: "J. J. C. Browne and son Louie returned from a two weeks' fishing and hunting trip to Spider Lake, P. Q. Mr. Browne is a member of the Megantic Fish and Game Club, an organization composed of some 200 members, who own a large preserve in that section, which is carefully guarded by competent frontiersmen in the interest of the club. Mr. Browne and son took quite an extensive ramble over the country in that section during his stay there, being accompanied by the famous guide Jack Doyle. Fish and game were plenty, and the excursionists had all the fishing and hunting they desired through the country bounding a chain of beautiful lakes. One of the trophies secured on the march was a 210lb. deer, which Mr. Browne brought home with him, together with the hide. The trip was a most enjoyable one, especially so on the part of Master Louie, who brought home also a box of partridges brought down with his own hand."

I wish to say one word about sportsman's club preserves. Before the Megantic Club was formed, the game was just slaughtered all over the grounds now owned and protected by the club. Deer were killed by the hundreds in the crust in winter, the hindquarters and skins taken out and the rest left to rot. In the spring does heavy with fawn were killed, and in the fall dogs ran them into the lakes and ponds; and this kind of work was kept up until there was hardly a deer to be found; and the lakes and ponds were netted until there was nothing more to net.

Since obtaining control, the club has been to a good deal of expense in fitting up a club house and camps at the best points, restocking with fish and keeping competent men to protect our interests; and the consequence is that the game has increased very rapidly and the fishing is good; and any good sportsman can make a good bag of birds with a chance to add a deer or caribou and perhaps a moose to his list of game, and every year it is growing better.

And now, having made somewhat extensive inquiries in regard to the hue and cry against sportsman clubs, I find it comes almost exclusively from those who would kill game both in and out of season and leave it to rot in the woods. I have seen so much of this in our sporting papers, and some of it shows so little common sense, that I thought I would like to ventilate a little through my old standby, the FOREST AND STREAM. I have been something of a sportsman all my life, not a big one on paper, but one who has had a great deal of pleasure from it and has put considerable money into it; and now I like to go where I can get something to show for the time spent.

J. J. C. B.

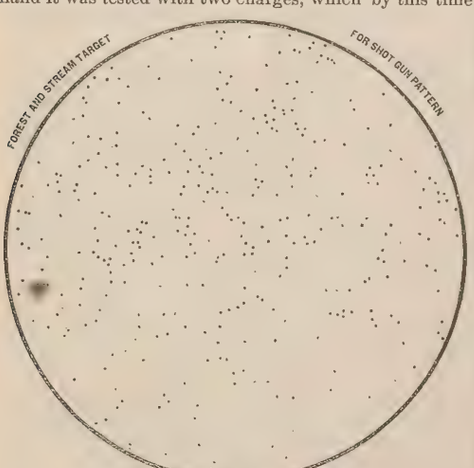


LACONIA, N. H., Nov. 1.

PATTERN AND PENETRATION.

HOLLIS 10-GAUGE GUN.

WITH the test of this week one of the cheaper grades of guns on the English market, and frequently brought to America, comes up for examination. It was marked "I. Hollis & Son, London," and was a heavy 10-gauge weapon, with Damascus barrels. The right barrel on its hidden portion under the forestock had the label 11, while the left barrel was marked "11 B. 12 M., not for ball," showing its choked build. Once on the trial table, it was very evident that the two barrels were various, since one far surpassed the other in grouping the shot within the 30-inch circle.



The trial was made, as usual in these tests, as comprehensive as possible, and to that end the customary order for two sets of cartridges was given; one set to be of a good standard black powder, the other of the Schultze make. Dannefelser furnished one lot, while the white powder charges came direct from the Schultze powder agents, Von Lengerke & Detmold. The morning of the

HOLLIS GUN, 10-G., RIGHT BARREL, 40YDS., BLACK PDR., 228 PEL.

test was a capital one, and the gun did its best. Shooter Moss, who held the gun, said it was a rare old kicker, and in manipulation it was not altogether as smooth as might be desired. Still, it seemed to be a hard hitter, and that right barrel was enough of a scatterer to satisfy those who complain, and with some justice, against the tendency to excessive choking on the part of gun makers.

When the targets were marked up for counting it was found that there was no material gain in shifting for a better pattern from the center aimed at. This shows that the gun was well-sighted, well-held and that the day for the test was a fair one. As a matter of form we give the averages for the distances between the centers of the several struck circles. At 40yds. with the black powder the variation was 7 and 6½in. respectively for the right and left barrels, while with the Schultze powder the distances were 6 and 7in. at 60yds., the variations were 5in. for both barrels with black powder and 3½ and 4in. for the two barrels with white powder. While the gun was in hand it was tested with two charges, which by this time

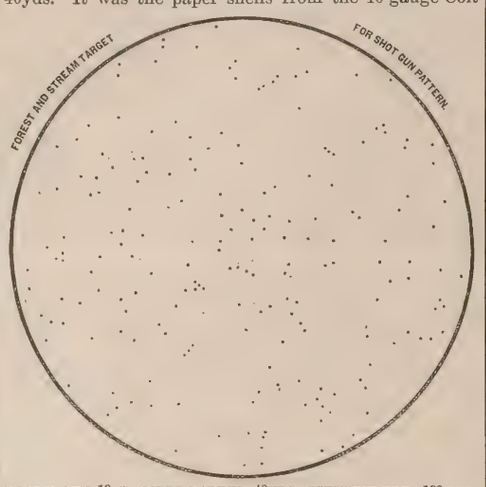
HOLLIS GUN, 10-G., LEFT BARREL, 40YDS., BLACK PDR., 348 PEL.

have become familiar with those who follow our tests. The first was the Schultze powder charge used in the Scott gun and again in the Folsom arm. It will be remembered that this had a charge of No. 6 shot counting 274 pellets and weighing 588grs., with 60grs. of Schultze powder behind the charge. With this the Hollis gun acted as follows:

HOLLIS GUN, 10-GAUGE, 40YDS.

Right Barrel.				Left Barrel.			
Aimed Circle. Pellets.	Selected Circle. Pellets.	Between Center. Inches.	Penetration. Sheets.	Aimed Circle. Pellets.	Selected Circle. Pellets.	Between Center. Inches.	Penetration. Sheets.
55	58	6	22	72	123	8	24
98	66	5	24	116	162	6½	25
34	47	8	..	134	167	10	32
62	67	6	23	107	150	8	27

HOLLIS GUN, 10-GAUGE, 60YDS.



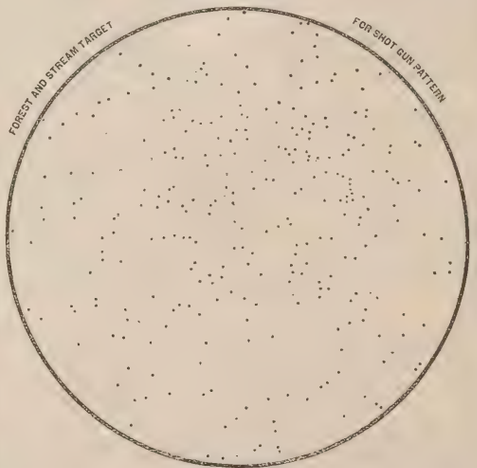
36	41	2½	11	9	12	3½	..
60	23	3½	6	31	34	2½	11
11	11	2½	..	..	..	..	..
35	25	3	8	20	23	3	11

This enables us to make a direct comparison by percentage between the three guns, and borrowing the figures in part from the tables of our correspondent "Nick," in the last issue, we have:

40 YARDS.

Gun.	Charge.	Right Barrel. Pellets.	Pr ct.	Left Barrel. Pellets.	Pr ct.	Whole Gun. Pellets.	Pr ct.
Scott	274	81	29.5	69	25.1	75	27.3
Folsom	274	43	15.6	107	39.0	75	27.3
Hollis	274	67	24.4	150	58.3	108	41.3
60 YARDS.							
Scott	274	52	18.9	54	19.7	53	19.3
Folsom	274	24	08.9	54	19.7	39	14.3
Hollis	274	25	09.0	23	08.3	24	08.6

The other charge put in the Hollis gun was used only at 40yds. It was the paper shells from the 10-gauge Colt



HOLLIS GUN, 10-G., RIGHT BARREL, 40YDS., SCHULTZE PDR., 199 PEL.

arm. They had 542 pellets of No. 8 shot, weighing 601grs., with 119grs. of powder. They showed as follows:

Right Barrel.				Left Barrel.			
Aimed Circle. Pellets.	Selected Circle. Pellets.	Between Center. Inches.	Penetration. Sheets.	Aimed Circle. Pellets.	Selected Circle. Pellets.	Between Center. Inches.	Penetration. Sheets.
103	142	5	15	276	310	6½	16
153	188	7½	19	273	281	6	15
149	189	7½	12	195	240	5	17
135	173	7	15	248	277	5½	16

It will be remembered that the Colt gun in its right barrel at 40yds. put in 367 pellets and with the left 339 pellets. Out of these same cartridges a feature of the test was the uniformity with which the loading of the cartridges was done. There is now little or no trouble on this score and one of the points which makes the re-

HOLLIS GUN, 10-G., LEFT BARREL, 40YDS., SCHULTZE PDR., 298 PEL.

cords of previous gun tests so uncertain and unsatisfactory, that of doubt about the charge used, is now, thanks to cheap and accurate loading devices, entirely done away with. The annexed formal record of the double test tells its own story:

CLAREMONT, N. J., Oct. 30, 1889.

TEST MADE AT FOREST AND STREAM GUN-TESTING SCREEN.

Gun—I. Hollis & Son's (London, Eng.) Hammer Gun. Cost, $50. No. of gun, 23,198. Weight, 9¾lbs. Length of barrels, 32in. Gauge, 10. Right barrel, cylinder. Left barrel, choked.

Weather—Clear. Direction of wind, 4 o'clock. Force of wind, 4 miles per hour. Thermometer, dry, 49°. Do., wet, 45°. Humidity, 73°. Barometer, 30in.

Charge, as given by holder of gun:

BOTH BARRELS.

Shell—U. M. C. "Club."
Powder, Brand—Dead Shot.
Powder, Quantity—4¼ drs.
Shot—*Make*—LeRoy. *Quantity*—1¼ oz. *Size*—No. 8 Chilled.

CARTRIDGE ANALYSIS.

Three Cartridges Taken at Random.

BOTH BARRELS.

Loading.		*Powder.*	*Shot.*
Card over shot; B. E. and card over powder.	1...	133 grs.	607 grs. 617 pellets.
	2...	132 grs.	607 grs. 615 pellets.
	3...	133 grs.	613 grs. 619 pellets.
	Average	132 grs.	609 grs. 617 pellets.

TEST AT 40 YARDS.

Five Shots per Barrel from rest at fixed 30-inch Circle.

RIGHT BARREL. *Pattern.*	*Penetration, 3 pellets.*	LEFT BARREL. *Pattern.*	*Penetration, 3 pellets.*
1. 194 pellets.	18 sheets.	1. 270 pellets.	17 sheets.
2. 224 pellets.	16 sheets.	2. 315 pellets.	13 sheets.

Editor Forest and Stream:

The thanks of the users of shotguns are due to you for your "Pattern and Penetration Tests," not only on account of their intrinsic value in the dissemination of knowledge of gunnery and in stimulating the production of superior guns, but as well also on account of the labor performed by you in obtaining the necessary data for those articles—labor monotonous, uninviting and indescribably wearisome in its infinity of detail.

In connection with these gun tests a query has occurred to me, namely, Why do not your records contain accounts of the shooting qualities of the guns produced by English makers of renown? To be sure, Greener's guns have made their marks on your targets, and very creditable ones too, but why can we not there have exhibitions of the performance of guns by Grant, Dougall, Purdy, Lancaster, etc? Surely such guns are within reach. The impression sought to be conveyed by the owners of these guns concerning them is, that in their shooting qualities they are immeasurably superior to American guns and to guns of lesser known English gunsmiths.

On the other hand, American gun makers state that their guns equal in performance those of the best English makers, and in support thereof, target their guns at your ranges. In the absence of evidence—patterns by English guns—impugning such statements, must we not perforce accept them as true? I hope the question here raised will be determined at the FOREST AND STREAM ranges by the impartial, unanswerable testimony of shot patterns. No such opportunity for a comparison of the guns under consideration will occur again in years perhaps. And yet I fear the comparison will not be made. Possibly the subject is too insignificant or is of too limited an interest to warrant inquiry and experiment, and it may be well perhaps for us to conclude without bothering about it, that guns by celebrated English makers really are, as their

owners in disdainful manner claim, closer, stronger, further-killing shooters than other English guns and guns made here. Were I the possessor of a Purdy or a Dougall I would demonstrate the truth of that conclusion at your ranges. W. H. M.

ARREST OF JONATHAN DARLING.

BANGOR, Me., Nov. 4.—The officers say the arrest of "Jock" Darling, the Lowell outlaw, whose arrest for illegal hunting was reported in the *Herald*, is the most important capture made for years. Well-laid plans were made by Commissioner Stilwell and Detective William McNamara, of Boston. They claim to have secured enough evidence to prosecute to the full extent of the law. The commissioners have been aware for some time past that Darling was chasing and killing deer by the use of dogs, having learned through a number of parties who had been at his camps that such was the fact. Recent complaints about Darling's wholesale slaughter of deer have also reached the commissioners from various parties, so that they thought that the time had come to do something about it.

About three weeks ago Commissioner Stilwell sent for the detective to see what could be done. After consulting with Mr. Stilwell he returned to Millbridge, and in company with Fred Swanton of that place they set out for Darling's camp at Nicatous Lake, which is in township No. 40, Hancock county. Darling's camp is well known to sportsmen. Darling has always been a vigorous opposer of the game laws, and has written articles for publication, and has also appeared at various sessions of the Legislature in opposition to the laws for the preservation of game which he claimed interfered with the just rights of the native hunters, ruining their occupations.

Darling's camp on Nicatous Lake is very difficult to reach, and is a sort of stronghold for poachers. It is 50 miles from any railroad station, and to reach it one must travel over a rough road. It can be approached only from the foot of the lake, and the detective and his companion, pretending to be sportsmen, were compelled to walk seven miles over a road almost impassable. Then they had to take a boat and row four miles. When there is no boat in reach—and Darling always took care that there were none that a warden might use in reaching his camp—one is obliged to make his way for five miles through a perfect jungle, an almost impossible thing to do without a guide. These woods have always been guarded so that the inhabitants of the camp could be warned of the approach of officers. McNamara and Swanton made their way to the camp with much difficulty, and engaged quarters with Darling. They also hired his guides and dogs to hunt deer with, paying well for them. They remained five days, and during that time collected all the evidence they could to be used against Darling and his guides.

They were out each day with the dogs, Jock putting out the dogs twice each day for three days, the guides doing the business the other two days. They killed four deer, one each themselves, Darling one and a guide one. They came upon Darling after the dog had run the deer into the water, just after he had shot him. They heard the report of the rifle, which was still smoking when they came up, and the deer was still warm. McNamara says they were obliged to kill the deer to accomplish the purpose for which they went there. During the stay, Jock, little suspecting their purpose there, unbosomed himself to them, and told them that he had been hunting deer with dogs all the year round for eight years, and sent large numbers of them to the markets. He said he should continue to do so in the future. It is well known that Darling has intimated that it would be very dangerous for any warden to molest him. When McNamara and Swanton had obtained all the evidence they wanted—enough, they thought, to convict Darling on some twenty or thirty cases—they left the camp and came to this city.

As the offense was committed in Hancock county, they were obliged to go into that county to swear out warrants against Darling and his guides. The warrants were sworn out and assistants were obtained. On their way to Darling's camp they met Darling in the town of Lowell and immediately arrested him. "Jock" wanted to go to his house to change his clothes and get his overcoat, which the officer consented to, but said one of them must go with him. But "Jock" insisted on going alone, which the officers would not agree to, and he was accordingly handcuffed, and Officer Davis volunteered to bring the old man to this city, while the others kept on to the camp in quest of the guides. Darling in some manner sent a warning to the guides, so they disappeared before the officers arrived. Darling had $770 with him when arrested. Darling is charged with hunting deer with dogs, keeping dogs for that purpose, and hunting and destroying deer on Sunday. The penalty in each case is not less than $20 or more than $100 fine. Darling has been a hard customer to catch. He is quite well off, and the case will be a hard-fought one.—*Boston Herald, Nov. 6.*

THE DELAWARE SITUATION.

Editor Forest and Stream:

Since I wrote you last week that the game law was a dead letter in this section of the State, I see in the papers that Detective Hutchens has arrested five prominent citizens of Dover for rabbit hunting. I may have been unjust to Mr. Hutchens, he appears to do what work he can energetically, of course he cannot be all over the State at one time.

Local sentiment here is against the game law, and the prevailing impression is that farmers have a perfect right to snare and kill game upon their own farms at any time. To remove this idea it is only necessary to make a few arrests. No attempt has been made to enforce the law in this vicinity during the three years I have lived here. There would be no trouble to collect evidence, as the violators are bold and defiant. Of three bevies of quail within a rifle shot of my house two have been already utterly exterminated, while the third consists of but three forlorn birds.

The Game Protective Association of Delaware is responsible for this state of affairs in neglecting the duties it has taken upon itself. The apparent indifference of the Association has a degenerating influence upon sportsmen, formerly law-abiding, now apathetic and soon to join the rapidly growing ranks of the law violators.

MILFORD, Del., Nov. 1. VICTOR M. HALDEMAN.

CONNECTICUT GAME.

Editor Forest and Stream:

Game is more plenty in southern Connecticut than it has been for years. Partridges (ruffed grouse) have been on the increase for five years. Quail are quite abundant, and woodcock, which have been very scarce for some years, have appeared in good numbers for that rare bird. One bag of fifteen was secured in one day's hunt by two local gunners. In the last two weeks I have spent part of three days in the field and have started woodcock on every trip. My best bag was four woodcock, two partridges, eight quail.

Shooting does not begin here much until the leaves are off the underbrush, as that is so dense it makes very difficult shooting, but in the month of November I do not think the shooting can be excelled by any place in the State of Connecticut. Pot-hunters are an unknown quantity. Snarers are a thing of the past. Our market for game is poor now, as the two channels that absorbed our game in the past are closed. The New Haven stage line and the New York boats in the past have bought up all the game. The stage line was abandoned five years ago; and our Legislature has stopped the shipment of game to New York. Five years ago every boy and some men had their line of traps and snares spread through the woods in every direction; almost every thicket had its snare-fence or dead-fall; and by the 1st of January game was badly thinned out. Twenty birds were then snared to one being shot, as our marksmen about here are generally deficient in the art of wing shooting.

As the demand for game has fallen off, the birds are on the increase every year. A good marksman with a good dog can secure a decent bag almost any day. Being only three hours' ride from New York it is a surprise to me that this part of southern Connecticut is not more sought by New York sportsmen. I could guarantee them a good time and game enough to satisfy any decent hunter. The country is rough and the cover rather heavy, but under what other conditions can we find plenty of game in so close proximity to civilization?

C. A. L.

WINTHROP, Conn., Nov. 4.

Editor Forest and Stream:

Under the caption of "The Adirondack Deer Law" in your issue of the 31st ult. I find the following from the pen af Mr. W. H. Holberton, which reads: "By the way, I wonder if the Connecticut sportsmen know that hundreds of ruffed grouse are being shipped to the New York markets. They sell (?) them to the stewards of the steamboats and they turn them over to the new York agents." As one of the "Connecticut sportsmen," I most respectfully ask for further information touching the above. More particulars are needed, Mr. Holberton, either publicly or privately. A. C. COLLINS.

HARTFORD, Conn., Nov. 4.

AN AFTERNOON WITH THE QUAIL.

Editor Forest and Stream:

On the 25th of October, having an afternoon "on my hands," I loaded twenty shells with No. 8, and taking my pointer pup Milo, reached the fields, about two miles away, about half-past 2 o'clock; walked probably 1,000yds. across wheat stubble and pea patches; and at the end of two hours had one shell left and sixteen as fine, plump, full-grown birds as ever graced a sportsman's bag. I don't think I ever enjoyed an afternoon's outing more than I did this one. My pup more than fulfilled my expectations. He seemed to know by intuition just what to do and when to do it. He found three coveys; and out of the first covey I killed eight straight, two when they first flu-hed, and six singles after marking them down in a beautiful oat stubble. Leaving the remaining scattered birds I then hied him on; and within 200yds. he pinned another covey. The birds rose before I got quite to him, but I gave them both barrels and scored one bird and a miss. I followed them up, and secured two more singles. Then leaving them scattered in thick brush I struck across a piece of stubble, and within less than 300yds. the pup pointed another large covey. Out of this covey I secured five, and left the birds beautifully scattered along a hedge about 15ft. wide—the prettiest place imaginable for shooting them had I been accompanied by some one to take the opposite side while Milo and I worked the windward. But having enough, and being no hog, I called the pup, and was back home by half-past five. The birds were fine large fellows and the coveys very full. Don't think I exaggerate at all when I say there must have been fully twenty-five birds left in the three coveys. I did not hunt one-tenth of the field.

I have broken quite a number of young dogs, but have never had one to equal Milo in point of acute scent, carefulness and steadiness. During the whole afternoon's hunting he flushed only one time, and that was done while retrieving a dead bird. He became a little excited and rushed after it, running over a brace of scattered birds. He is such a romping, rollicking, mischievous "rattle-brain" around the yard, I thought severe treatment would be necessary in the field, but I am agreeably surprised, and think he will develop into something to be proud of. If I had hunted with a companion, and with sufficient shells, I could have doubled my score easily. A. F. R.

BELVIDERE, North Carolina.

RHODE ISLAND MARKET SNARERS.—Chepachet, R. I.—The laws here in this section are a dead letter. This town, or rather village, is located on the Providence & Springfield Railroad and is about twenty miles out of Providence, right in the center of the best partridge ground of this State. The hotel keeper informed me today that 2,000 partridges had been sent into the city by express this season. I doubted it until the stage driver verified his statement, and also volunteered the information that the ratio of birds snared to those shot is nineteen to one. How is that for protection! The only man here who apparently takes any interest is the hotel owner, and he dares not say a word for fear these game thieves will close his bar room. There are only two good wing shots in this village, but when the mill closes (at noon Saturday) the pot-hunters come out by the dozen with dogs and guns of every description, and for the remainder of the day it is as much as your life is worth to venture out, about one-third of them carrying rifles. There is great need of a missionary here.—COHANNET.

GAME IN VIRGINIA.—Washington, D. C., Nov. 1.—*Editor Forest and Stream:* I have just returned from a successful hunt in Virginia and believe you will be glad to know that there is still an abundance of game in the region over which I have traveled. The place of my headquarters was Shankland, on Jackson River. The route from Washington is by Va. Midland and Chesapeake & Ohio to Millboro, thence by stage to Warm Springs, and private conveyance to Shankland. The stage fare from Millboro to Warm Springs is $3. Wild turkeys and ruffed grouse were abundant all the week of my stay. Quail were plentiful; gray squirrels and red squirrels were as thick as hops. As I was about to leave Col. Beall was coming in with a party equipped for deer hunting. They had a lot of hounds and a wagon well stored with provisions. This will be about the first camping party in that section; they invited me to join them, and I was only too sorry to have to decline on account of business. It was snowing on Warm Spring Mountain when I arrived. It is scarcely necessary for me to say that sportsmen will find a pretty near approach to paradise by way of non-euphonious Shankland.—J. S. POLLOCK.

GAME ALONG THE LOWER SUSQUEHANNA.—Port Deposit, Md., Oct. 29.—Quail are more plentiful this fall than they have been for many years along the Columbia & Port Deposit Railroad, and as for rabbits, there is no limit to them. Peach Bottom and York Furnace are very good points for gunning. Back of Fishing Creek, near Liberty Square, there are a good many ruffed grouse or pheasants. Gerritt Smith flushed a number of them in the woods on his place ten days ago. The river hills are pretty well supplied with these birds. I have seen them occasionally frightened up by trains. Ducks are abundant on the flats at Havre de Grace, and the opening of the season (Nov. 1) is awaited with much interest. A gentleman living in Port Deposit told me that a double sinkbox last season sometimes brought the enormous hire of $150 per day, this including the services of an expert gunner, and the whole bag of ducks. It seems incredible that any one should be willing to pay such exorbitant rates, and yet my informant speaks from his personal knowledge.—G. C. C.

TOWANDA, Pa., Nov. 2.—Friday morning, Nov. 1, was the opening day on quail and rabbit in this State, and long before daylight the boys were starting out for the favorite hunting grounds. Some in the past month, looking for grouse, had marked down a few coveys of quail, and made direct for them. Bags as follows: Snyder, Sawtelle and Wilbur brought 4 grouse, 6 quail, 1 rabbit and 1 woodcock. Their bag consisted of the greatest variety. Dimock, Decker, Turner and Dittrich brought in 2 grouse, 13 quail and 4 rabbits, the largest bag. La Plant, hunting alone, brought in 8 quail and 2 woodcock, killing them in fifteen shots, a most excellent bag. Rittenberg and Benjamin, 1 quail and 1 grouse, the smallest bag, but not owing to poor shooting, as they are as good as we have them in this section, but failed to find or locate their birds. During September and first part of October very few woodcock were seen or killed, but lately many covers that then failed to contain birds will very often develop a small bag.—W. F. DITTRICH.

A ROBIN SCORE.—Hornellsville, N. Y., Nov. 11.—*Editor Forest and Stream:* There is a chance for some missionary work around New York. Geo. W. LaRue says in a Western sporting paper that he killed forty-three robins, one woodcock, one squirrel and seven clape. I don't know what a clape is, may be a song or insectivorous bird; if so, added to the forty-three robins, the fine would be just an even $500. Have you no game wardens or game constables in New York or Tarrytown? If not you had better get A. C. Collins, of Connecticut, or get some of our club members, as we arrest and fine every violator of the game laws, rich or poor.—J. OTIS FELLOWS. ["Clape" is a name for the yellowhammer, which it is forbidden to kill.]

SCHULTZE POWDER.—Wilmington, N. C., Nov. 2.—*Editor Forest and Stream:* Permit me to ask that some of your readers who have used Schultze powder give results through FOREST AND STREAM.—TAR HEEL.

OHIO.—Cadiz, Oct. 28.—Rabbits and quail are very plenty here this season, and there have been more gray squirrels than for years, owing to the big crop of hickory nuts and other mast.—S. C. G.

CONNECTICUT WARDENS.

Editor Forest and Stream:

I give a list of the county game and fish wardens appointed this year:

Z. R. Robbins, Norwich, for New London county.
F. W. Whitlock, Waterbury, for New Haven county.
Theron J. Loveland, Bantam, for Litchfield county.
George A. Reed, Chaplin, for Windham county.
A. L. Kurau, Tolland, for Tolland county.
J. W. Trantum, Middletown, for Middlesex county.
J. A. Wilson, Bridgeport, for Fairfield county.
Abbott C. Collins, Hartford, for Hartford county.

The above gentlemen were appointed by the county commissioners under the following law passed at the last General Assembly, 1889: "Chapter CXCI., Section 1. The county commissioners of each county shall appoint one person to act in such county as game warden, who shall hold his office two years from the date of his appointment, and shall have the same powers as other officers to arrest for the violation of any law relating to game. Said game warden may deputize another person to assist in detecting and arresting any person who may be violating any law relating to game. * * * Section 2. The game warden or his deputy shall have free access at reasonable hours to search any refrigerator or other receptacle in any place where gray squirrel, ruffed grouse, commonly called partridge, woodcock, or quail are bought, sold, or transported, for the purpose of examining into any suspected violation of the game law."

The appointment of game wardens prior to this year was by the selectmen of each town, who were supposed to appoint two or more persons to act in their town as game wardens. Many selectmen would not appoint game wardens, and those that did—the appointed game wardens were never heard of in the way of arresting persons violating the game laws. Under the old order of things the game wardens could not search for illegal game, but by referring to Section 2 of the above-quoted law (which, by the way, is the backbone of any game law) you will see that our hands are not tied.

The following gentlemen have been appointed county fish wardens:

J. W. Trantum, Middletown, for Middlesex county.
Dr. Fred'k Farnsworth, New London, for New London county.
Theron J. Loveland, Bantam, for Litchfield county.
J. F. Nettleton, Branford, for New Haven county.
Abbott C. Collins, Hartford, for Hartford county.

To my knowledge no persons have been appointed county fish wardens for Tolland, Windham and Fairfield counties.

The law conferring the appointment of fish wardens to the county commissioners was also enacted at our last (1889) Legislature:

"Chapter CCVII. Section 1. The county commissioners of each county shall appoint one person in such county as fish warden, who shall hold his office two years from the date of his appointment, and shall have the same powers as other officers to arrest for the violation of any law relating to fish. Said fish warden may deputize any other person to assist in detecting and arresting any person who may be violating any law relating to fish. * * * Sec. 2. The fish warden or his deputy shall have free access at all reasonable hours to search any basket, bag, vehicle, or any other place where fish are placed, kept, or carried, for the purpose of examining into any suspected violation of the fish law. Sec. 3. Said fish warden or his deputies shall be paid the same fee allowed to grand jurors in criminal cases, and shall also have half of any penalty recovered and paid into the treasury for any offense detected by them."

Fish wardens were formerly appointed by the Fish Commissioners, two or more for each town, but rarely were they ever heard of in connection with prosecuting fish law violators.

Referring to Section 2 of the last quoted law, you will see that if we find a party fishing on a trout stream in the close season, we can search his basket. Before, Mr. Violator could snap his fingers at an officer. Section 2 in this case is the spinal column of the fish laws. As the game and fish wardens receive no pay (but in some cases part of the fines), it behooves every true sportsman and also true angler to aid them in every possible way.

Let me assure your readers that each and every one of the above named gentlemen are ready and willing to do their duty, and we are ready to help them. A. C. COLLINS, President.

Connecticut Association of Farmers and Sportsmen for the Protection of Game and Fish.

HARTFORD, Conn., Nov. 4.

THE IDEAL MFG. CO., of New Haven, Conn., are out with a tool for reloading shells for the U. M. C. Co.'s new .38 long center-fire cartridges, which have lately been adopted by the Government. These cartridges, being inside lubricated, will undoubtedly take the place of the old .38 long center-fire outside lubricated cartridges. The new shell is about $\frac{5}{32}$in. longer than the old, and the cannelures of the new bullet holding the lubricating material are inserted below the muzzle of the shell, which is crimped upon its leaving the cartridge when loaded the same length over all as the old, making a clean inside lubricated cartridge that can be used in any arm that now uses the old .38 long central-fire. The users of the new .25cal. rifle will be pleased to learn that they can get Ideal tools for the .25-20-87 cartridges, also special molds for same caliber that cast bullets weighing respectively 77 and 67grs.

Camp-Fire Flickerings.

"That reminds me."

285. •

AS FOREST AND STREAM says, "That reminds me" of a little incident that occurred that I think worth repeating. While strolling around Denver one evening, I passed a restaurant, in front of which were standing several people, and among them two "sons of the Emerald Isle," looking at some fine lobsters that lay in the window. One said to the other, "And do they raise them things here?" "Yes," replied the other, "they grow them up here in the mountains." The reply being so forcible, I stopped and found it made in good faith; so I put it down among my collection of "Western Yarns," and tried to imagine what the future of Colorado *might* be. T. A. T.

DUTCHESS COUNTY, N. Y.

Sea and River Fishing.

ASSOCIATION OF THE ST. LAWRENCE.

IN JULY, 1883, the writer of this, while *en route* to the St. Lawrence River, took the steamer Island Belle at Cape Vincent, for Clayton. In passing down the river, the steamer put in at Millen's Bay, about six miles below Cape Vincent, where it was not accustomed to stop, but which landed there that afternoon on account of some passengers of unusual importance. In coming out of the bay, passing close to the New York State shore, there were seen along the surface of the water, large numbers of black objects forming lines in various directions. One of the deck hands was asked what they were, and he replied that they were net buoys. It took but a second to see that the water in that immediate vicinity was filled with nets, and that the river, which is not there very wide between the New York State shore and Wolfe Island, was almost entirely blocked with nets. The shore was marked by some large, heavy bushes just opposite the net buoys. On the arrival of the Island Belle at Clayton, a conference of some of the leading Thousand Island tourists was called at the Hubbard House, and the fact of the existence of these nets, which were believed to be illegal, was fully discussed.

The Hon. H. E. Morse, a leading lawyer of northern New York residing at Clayton, and who is the present collector of the port, was sent for, and after careful consideration it was decided that the nets were clearly illegal, and that any one had a right to raise and destroy them. It should be remarked here that no one among the residents and the property owners upon the river, or among the regular visitors at the hotels at that time, seemed to have any idea what the law was in regard to net-fishing. Mr. Morse advised us, however, that no nets of any kind were legal which could by their construction catch or kill game fish.

Acting on this information a steamer was chartered the same evening, and we left Clayton about 12 o'clock with five St. Lawrence anglers and a half dozen oarsmen. Mr. G. M. Skinner, the trolling spoon manufacturer, was one of the party and one of the hardest workers. Proceeding up the river some eleven miles the dark mass of bushes was discovered, and from that time until daylight the people who were on board were occupied in pulling and securing the trap nets, and in throwing back into the river the live fish which were found in them. It was one of the dirtiest pieces of work the members of the expedition had ever been engaged in. The tar of the nets ruined every suit of clothes, and the individual members of the party were a sight to behold when daylight made them visible. Soon after daylight tired nature asserted itself, and the work, although entirely incomplete, was stopped. Proceeding to Clayton the nets were hauled to a vacant lot in the rear of the village. It was estimated that fully a ton of game fish were liberated during the night. The fish consisted largely of black bass, with a good many wall-eyed pike and other fish. During the next evening the nets were publicly burned. It created much excitement on the river at the time, and many threats of retaliation were made, but no one ever received any injury from it. For the remainder of the year 1883 very few nets were placed in the river.

After the tourist season was over a circular was sent out to many of the well known tourists of the river, calling attention to the necessity of organizing an association for the protection of the river, and a meeting was called, to be held at the office of Mr. W. W. Byington, in Albany, for the purpose of effecting such an organization. This meeting was held on the 26th day of October, 1883, and a committee was appointed to draft a constitution and by-laws, and another committee to name permanent officers. A subsequent meeting was held on the 9th day of November and a permannent organization was completed, the late John J. Flanagan being made president, with other officers, all of whom were well known anglers. At this meeting the constitution and by laws were adopted, and a large number of members elected. So earnest was the belief in the importance of the work, and of the necessity for active and organized effort, that a further meeting was called, to be held in Utica on the 11th of March, 1884. At this meeting there were present Thousand Island tourists and anglers from all parts of the State—in fact, from all parts of the country—many of them coming hundreds of miles to attend the meeting. The generel situation in regard to the protection of the river was fully discussed at this meeting, and the working plan of the Association mapped out. Assurances were given the officers from every quarter, that help in the way of money and influence would be given them to any extent which might be asked.

As a result of this meeting the Association secured a redistricting of the State, and shortly afterward, on their recommendation, a State game protector was appointed by Governor Cleveland for the district covering the river. The officers of the Association at once set about work by securing the coöperation of many of the residents along the river, asking them to inform them of the first appearance of nets in the river. In the early spring season, after the breaking up of the ice, a number of the officers visited the river and with a steamer patrolled the whole river, seeking information in every direction about the persons who would be likely to violate the law, and taking steps to prevent them from using their nets. Kingston was visited, and the authorities there conferred with with reference to the use of nets on the Canadian side of the river, and everything was done that could be done to prevent the putting of nets in the river.

In the summer of 1884 the most constant vigilance was used by the anglers, and net-fishers had but little chance. The first regular meeting of the Association was held at Clayton, Aug. 5, 1884. The work of the Association was recounted and further plans made. The officers were generally reëlected, except that a much larger executive committee was made, and it was decided also to secure the passage of bills making more clear the laws in regard to having in possession black bass during the close season, and also in reference to seizing nets upon shore. These bills were passed as recommended the following winter. From that time to this the Anglers' Association of the St. Lawrence River, with its membership averaging about 300, has been one of the most active fish and game protective associations ever known in the world.

Each year the annual meeting has been one of enthusiasm, one of congratulation over the work of the previous year, and of planning as to the best methods for the future. Mr. Flanagan remained president of the Association until his death, which occurred at Utica, N. Y., in February, 1888. A special meeting of the executive committee was held at the Brunswick Hotel, in New York, soon after, and Mr. W. W. Byington was elected president, and was again elected president at the annual meeting of the same year. At the annual meeting of the Association in 1889, Mr. Byington declined re-election, and Mr. H. H. Warner, of Rochester, was made president, which position he afterward accepted with an enthusiastic letter in regard to the protection of the river, and Mr. W. H. Thompson, of Alexandria Bay, was for the third time elected secretary.

During the six years which the Association has been in active existence, there has been intense enthusiasm on the part of its officers and its members. Each one has been willing at all times to do everything that it was possible to do to protect the river from net-fishers. It has not always been easy work, and at many times there has been great doubt as to what course should be pursued.

In 1887 the State game protector destroyed a large number of nets in the upper portion of the river and its adjacent waters, and the net-fishers, through a Watertown lawyer, brought suit for damages, with the plea that the law which prohibited the destruction of nets was unconstitutional, and to the astonishment of the anglers and the friends of the river, Judge Williams of Watertown sustained the plea, and declared the law unconstitutional, and judgemnt was entered against the protector for the value of the nets and damages. The protector, at the time of the destruction of the nets, was acting under a request of the Jefferson County Society for the Protection of Fish and Game, a valuable and plucky organization located at Watertown, with Dr. E. L. Sargeant president. The Anglers' Association promptly assured them that they would stand by them in the question of expense. The case was appealed to the General Term, and there Judge Williams's decision was reversed. It has now been carried to the Court of Appeals by the net fishers themselves, where the legality of the law will be finally decided.

In the fall of 1888, the Association employed Mr. E. W. Rankin, of Albany, N. Y., to draft a bill which should cover all the points in regard to the protection of the game fish in the river, with special reference to its constitutionality as well as to its practical value. The bill was prepared with the greatest care, Mr. Rankin being greatly assisted by Judge George L. Ingraham, of New York, and was submitted to the Legislature of 1888 for passage. It was supposed the bill would pass readily enough, but it was neglected until too late to make a determined effort of value, and it therefore failed of passage. The bill will be again submitted at the coming session of the Legislature, and it is believed it will be passed. If it is passed, it will then be certain that the days of net-fishing are over in the St. Lawrence River. It provides for such punishments for the violation of the law that it is believed net fishers will not even try to use their nets.

The work of the Anglers' Association may be summed up in a few words. A constant and untiring fight has been kept up to prevent nets from being used in the river; the State Game Protector has been advised and aided; an assistant in the pay of the Anglers' Association has constantly been on duty; every officer has taken a personal interest in the work; nets in large numbers and of great value have been destroyed from time to time. The laws have been changed and improved, and every person now knows what the law is, and what their rights are under the law, and nothing has been left undone to protect the river which enthusiasm and wisdom could suggest. The great improvement in the fishing in the river, which each year becomes better, attests the result of the work performed by the Association. It was clearly in proof that many tons of game fish were annually taken from the river by net-fishers, prior to the organization of the Association.

At the time of the organization of the Association in 1883, the property in the vicinity of the river was nearly at a standstill in prices. It is well-known that the hotels were scarcely half filled. Islands unpeopled by their owners were numerous, and the travel by rail was meagre. It was difficult for the angler at times to secure enough fish for his island dinner, and boxes of fish sent home to friends were small and infrequent. As a summering place and a watering place, the river seemed doomed, and this doom was the result of net-fishers; but this has all been changed in the six years which have succeeded. Several new and large hotels have been erected. Nearly every island has a handsome cottage, and the travel by rail has been very greatly increased. Within a year, two residences have been erected by Messrs. George M. Pullman and H. H. Warner, of very great value and beauty.

To show the great change which has been made in the fishing of the river, it is only necessary to state that in the year 1881 there was shipped by the tourists to their friends from the two principal points on the river, Alexandria Bay and Clayton, 344 boxes of fish. In the year 1888, there were shipped from the same two points, 616 boxes. In 1889, the number of boxes shipped from the two points was 553, and covered a total weight of 35,000 lbs. These numbers do not include the fish shipped from Thousand Island Park, Round Island, Point Vivian, Central Park, Cape Vincent and several other small points, from none of which were any fish of consequence shipped in 1881 and 1882. It is believed that over 1,000 boxes of fish were shipped from the river during the present year, and three times as many fish were eaten by tourists as were consumed six years ago. It is perfectly apparent that there were three times as many fish caught by the angler and tourist in 1889 as were caught in any one of the years immediately preceding the organization of the Anglers' Association.

During its existence, the Association has constantly been in consultation with the Canadian authorities in regard to the protection of the two sides of the river, and has secured much active co-operation. One of the most active members of the Anglers' Association, Mr. H. R. Clarke, of Jersey City, has been of very great value in connection with the co-operation of the Canadian authorities, as well as in securing large numbers of new members for the Anglers' Association.

The protection of the river which has been given during the last six years from friends of the Association, has resulted in a very large increase in the number of game fish. The black bass and the muscallonge are much more frequently caught, and are of much better size and quality than at any time before, except in the early history of the river. The number of pickerel (pike) has increased to an extent which makes it easy for any one to catch them in quantities to suit themselves. The value of the protection extends to the yellow perch, which can now be caught in enormous quantities, and of very great sizes. In fact, there is no fish which has ever been found in the river which cannot now be found in large quantities, and which can be caught with great ease by the angler and tourist.

But the river needs even more protection than it has ever had. There is now a State game protector watching the river. The Anglers' Association should have at least two men located at different points during the netting season. The Association needs membership, not only for money which they pay to the Association, and which is necessary for the expenses in connection with the protection of the river, but also for the influence which its membership will bring to bear upon necessary legislation. Very few organizations have ever existed with such enthusiastic members. From the first they have been on the alert for anything which would be of value to the river. It is felt now, more than ever, that greater influence is wanted, and this can be had only by greater membership.

At the recent annual meeting it was decided to reduce the annual dues from $5 to $3, in order that all those who go to the St. Lawrence should become members of the Association and participate in its work. The payment of $3 a year to the Association, to be used in the protection of the river, is a very small sum in comparison with the results obtained.

The Association appeals now to their old members and to all who have enjoyed the beautiful waters and the pleasant fishing of the St. Lawrence to come to their aid. If the Association is allowed to die through the indifference and neglect of those who should be its friends, or if it is able to do its work only partially and incompletely for want of means and influence, the noble river it designs to protect will be covered with nets and the angler be driven from his private fishing grounds. It is no exaggeration to say that nothing stands at present in the way of despoiling the St. Lawrence but this Association. With a large membership to back its efforts, with judicious official watching of all legislation that concerns the St. Lawrence, with skillful, prudent, vigilant protectors in their employ patrolling the river, and with necessary means at their command to add additional force whenever needed and to protect them if molested, the Anglers' Association will pledge itself to a continuance of its good work. Will not all anglers, from sympathy with a good cause or from personal interest, whose numbers every year are growing larger and who include some of our most influential citizens, unite and preserve the finest fishing ground in the United States for the use and pleasure of the thousands who enjoy the gentle art?

W. W. BYINGTON.

ALBANY, N. Y., Oct. 30.

A LARGE HADDOCK.—The *Gloucester Daily Times* has a record of a haddock bought by William H. Grimes, of Gloucester, from Capt. Nelson, which weighed 23lbs. This was caught by one of the shore boats; it is claimed to be the largest on record.

CAPE MAY DRUM FISHING.

THERE is no denying the fact that the drum is in the main an object of heartless piscatorial neglect. In the South—its permanent home—it is pooh-poohed emphatically. As for the North, the prevalent feeling with regard to it here is very lukewarm, favoring the creature's pretensions perhaps a little, but yet holding any direct laudation of it as in poor sporting form. One locality here however, to its credit be it said, sees the matter in its right bearing; estimating the majestic inches, splendid fighting qualities and the gustatory worth of the species at their right value, and classing their possessor, as is its due, among the chief salt water piscatory prizes.

The fish is an annual visitant to the Cape May waters, sojourning therein throughout all the finer months. But the period when it is to be successfully fished for here is a relatively brief interval, including as a rule little more than the last two or three spring, and the like number of the earliest summer weeks. If it takes the bait with any avidity later than this it is something greatly out of the line of its ordinary programme.

Coming fairly under the head of a blue water enterprise as it does in the main, and with blow and squall as a chance contingency to be reckoned with, a boat of the stauncher class is in order for this diversion. The tackle employed is a 30 or 40 fathom handline of a stouter quality, to the end of which, weighted by an appropriately heavy sinker, a large strong halibut hook is attached. The favorite bait is a quahaug, which is used quite *au naturel*, being simply bound in its cracked shell well upon the back part of the shank of the hook, leaving the point bare to get in its work without interference. It should not be forgotten to state that it is on the days justly to be distinguished as halcyon that the fish bites the best, foul meteorological conditions—more particularly easterly spells—taking all the gastronomic snap out of it.

The fishing grounds commonly resorted to comprise the chain of oyster reefs stretching along the Delaware Bay shore of the Cape and rounding its point seaward. These reefs may be said indeed to constitute in our time the staple haunts of the fish hereabouts, and where it seeks the molluscan and crustacean appetizers which form the *menu* demanded by its notably fastidious palate. Occasionally, however, fair fishing is to be had in the ocean inlets opening into the peninsula, and more especially during the hotter spells of the season, in the seaside breakers as well.

As will be surmised, this fishing admits only of bottom fishing pure and simple. Naturally, solicitous care is exercised to select a resting place for the lure where it will be displayed to the best effect and readily attract the eye of the passing fish. Preliminary soundings are resorted to to attain this end, and the bait is further renewed from time to time, the drum having no use for stale diet, turning up its nose at it in fact without the least show of ceremony.

The most interesting form of the sport is unquestionably that to be had in the surf. The use of a boat is dispensed with here, the breakers being too rough for a boat to live among them. The fisherman finds his *point d'appui* in his own stout underpinning as stationed waist deep among the combers. From his post here he casts his line—by a peculiar knack taking a long time to be perfectly acquired—in such places in the watery wetter beyond him as he has reason to believe prove attractive resorts to his game. When a fish is hooked there is indeed fun alive to the fore; the heaving breakers lifting the creature often to the surface and so revealing much of the combat to the naked eye. The onlooker—whose stake in the gentle art is notoriously of a vested character—is, as well he may be, immensely taken by this exhibition, and in reality it is treasured as a big memorial nugget by him; but all the same when the contest is ended he will quite surely see the propriety of belittling the victor's laurels in his own mind, which is the amiable way with all of us mostly when we have been regaled with the spectacle of notable deeds, and whereby we flatter ourselves that in some sense we get even with the doers.

The fishing on the oyster beds and in the ocean inlets is of the usual off-shore marine order, the bait being dropped plumb to the bottom or nearly so. The length of line required to be put out varies as a rule from five to six fathoms, but double this allowance will occasionally be needed. As is plainly obvious, a bite at short range is the bite that most surely facilitates the fastening of the hook. But this favor does not come altogether as one would desire in every instance, and what really gives proof of proficiency on the part of the piscator is his ability to do his work equally well with a long or short stretch of gear.

The drum's mode of taking the bait, if not exactly a rabid demonstration, is nevertheless a procedure with a notable degree of tone in it. But it takes the prick of the hook to rightly call forth the creature's gameness, and when this incident takes place it lets itself loose instantaneously in a way that would do no discredit to a mustang in the first stage of its disciplinary experience with spur and rawhide; rushing and tearing about in every conceivable direction, but mostly keeping well down in the water, as if realizing that at this particular stage of its fortunes daylight and destruction were convertible terms with it. The fisherman's game is of course to play the creature until it is sufficiently exhausted to be taken in out of the wet without threatening the wreckage of his gear. In this undertaking he will be engaged in ordinary instances some five or six minutes: and when he happens to be fast to a veteran fish, for a considerable longer interval. If some would be led to aver that these scrimmages are of a defective style in that they want the due lasting quality, it is to be confidently retorted that as such things go when timed by the watch, and not by one's heated imagination, they are decidedly lengthy. All angling contests, let it be openly declared, would seem ludicrously brief when timed by the cold mechanicism of the chronometer beside the stretch that would be ascribed to them by the upper-air belligerent when taking his cue from the promptings of his high-strung feelings only. Furthermore, we are to bear in mind that in the present case the piscator boasts the rare advantage of waging battle on the merciless basis of a line manipulated directly by the hand and thus readily responding to the applications of ruder muscular force, and at the same time sufficiently coarse and strong in most instances to answer the purpose of the hangman. No fish less than a whale, it is scarcely too much to affirm, could hope to stave off the moment of submission for any considerable period when brought to book in this fashion; and the drum shows what stuff it is made of by holding out as pluckily as it does. If, in the place of this cut-throat equipment, the rod and reel and suitably light running tackle were brought into requisition in trying conclusions with it, our finny hero would of a certainty prove one of the toughest of combatants, perhaps, indeed, turning out a veritable piscine Napoleon; for this, with the backing of the fitting opportunity given the creature, would seem one of the most reasonable surmises.

Of feather weights and juveniles, one never sees a single specimen among the catches, their numbers being made up exclusively of fishes of maturer years, and rating all the way from 30 to 50 and even 60lbs. If the admission must be made that the returns of the sport are apt to be fluctuating, experience demonstrates that this is in the line of fishing in general, and, therefore, we have no right to look for anything different. A good catch for a single hand, as the rating of our time goes, may be put at three or four fish a day. Takes of this scope will sometimes be repeated at brief intervals. Sometimes, again, a series of days will all unaccountably, and in despite of abundant apparent promise of better things, turn out flat blanks. Still, again, the angler must content himself with the putting in of his day with the requital of a single fish. So it goes, after the usual system, or the want of it, attending the dispensation of their awards by the piscatory fates. Of preaching we have had enough; far too much, indeed, for men's appetite for the delectation. Nevertheless, we may be permitted to drop the adjuration here that the way of the little bee, as set forth in a well-known distich, is a very winning one in this sphere of action and has a special application thereto; and for whoso that devotes himself to the work of the field in question in the true spirit of the poetized lesson, the fate of getting badly left is in nowise (as yet) on the cards.

It will surprise no one, however, to learn that the scale of success was much higher years ago, since of yore our fish life universally was in much more plentiful supply than now. Thus in due order stories recounting the big hits made in the fishing in the past are very rife on the Cape. So far as bait-fishing is concerned, it would appear from these narrations that the bagging of from twenty to thirty drums was no infrequent day's work with one handliner even so late as in the forties of the century. But it becomes manifest from these sources of information that the seiners were the true heroes of this pristine fishing, the fact that the drums were more given at that earlier day to foraging for their feed nearer the shore than now, particularly favoring the use of the net in their capture. The reports of the hauls made by this apparatus are in some instances well calculated to excite one's gravest wonder. Below, one of these reports, attested not by hearsay but invested with the authority of contemporary journalistic indorsement, and given to the public in *Nile's Register* of July, 1833, is appended, being copied at second hand from Professor Goode's "American Fishes:" "Some days ago a haul was made in Great Egg Harbor near Beesley's Point, Cape May, at which 318 drumfish was (*sic*) caught, their entire weight being from 8,000 to 9,000lbs."

This catch, of course, calls for no elucidatory comment, the fact being stated with such business-like brevity and directness, that its full significance appears at once on its face. One could wish that it had been the regale of a monster barbecue, with the fitting addenda of fiddle and "straight four," as the ways of the latitude would readily have admitted, but the historic muse being silent regarding this point, we cannot promise ourselves that it was the occasion of any marked expression of rejoicing. For the decline in fishing we cannot in justice so much blame the fisherman as the oysterman. The former has doubtless had a hand in the thinning out of the fish, but the latter, by the unceasing push shown by him in pillaging the oyster reefs of this particular section makes the sustenance of the species here a problem of much less easy solution than it was of yore, and consequently a check has been given to the old-time freedom with which it congregated in the locality. But the total withdrawal of the breed from the district as a contingency of the near future anyway, is not to be feared. Doubtless for a relatively long period one may promise himself a bout with the fish hereabouts if he addresses himself to the business with an adequate understanding of its ins and outs.

In preparing the drum for the board its susceptibilities in this particular should be scrupulously heeded or trouble may be looked for. Thus the attempt to serve it up with entire acceptability in the guise of a boiled dish or a chowder is bound to end in disappointment, the creature's culinary bent being, sooth to say, too rigidly fixed to admit of a clean cut unexceptionable exposition of these methods of kitchen practice. To treat it in the way most fully answering to the demands of its nature in the sense now concerning us, the cook should slice it in delicate steaks, and having coated these well with egg batter, submit them to the action of the frying pan, and with the right art brought to bear in this mode of working, a *plat* is produced sure to evoke the thankful plauddits of all so lucky as to have it set before them.

W. L. TIFFANY.

FISHING IN THE LOWER SUSQUEHANNA.—About the middle of October Mr. W. L. Powell, of Harrisburg, a member of the Pennsylvania Fish Commission, caught a good many wall-eyed pike, locally known as "salmon," at Fite's Eddy. On Oct. 25 I saw one of the pike at Columbia weighing 8½lbs. Peach Bottom is growing in favor as a point for black bass fishing. Conowingo is another good place. Robert Stewart, who lives there, takes out a good many visitors. At the present time, on account of the muddy water, few bass are caught. There are numerous places along the Columbia and Port Deposit road which are famous resorts for anglers.—G. C. C. (Port Deposit, Md., Oct. 29).

PROVIDENCE, R. I., Oct. 31.—Soon the "American whiting" will be here, as they are being caught just below at Wickford. These fish are speared by lantern light, as they follow the flood tide up the beach. They had been absent for eight years until last year, when they came in great numbers.—COHANNET.

FISHING AT PATCHOGUE.—Patchogue, Long Island.—Fishing has been very good and fish are plentiful still. Some very nice bass were caught in the surf the other day, one of the striped bass weighing 70lbs.—L. B. T.

NEWFOUND LAKE.

CHARLESTOWN, N. H., Nov. 2.—*Editor Forest and Stream:* Probably Col. Riddle has sent you the inclosed from the Massachusetts *Union*, but I want to be sure you have it. We began to stock Newfound Lake with landlocked salmon in 1878, the year after we began at Sunapee, and it has been followed up nearly every year since. We also put the saibling, of which Prof. Baird sent us the eggs, in Newfound Lake, but I fear they were destroyed by the lake-trout (*namaycush*), of which the extract speaks. I have sometimes thought they got changed, *à la* Pinafore, and got into Sunapee by mistake and started the new trout.—SAM'L WEBBER.

The report, which will be hailed with satisfaction by anglers in New Hampshire and elsewhere, is as follows: Col. George W. Riddle, of the Board of Fish and Game Commissioners, has returned from a trip of three days to Newfound Lake and is in the most jubilant frame of mind over the fishery interests in that locality. It will be remembered that the Legislature at its last session appropriated the sum of $1,000 for the establishment of a hatchery at Newfound Lake, leaving the location of the same in the hands of the Fish Commissioners. The latter visited the lake and after some negotiations with property owners selected a site at Bristol, advertised for proposals, let the contract, and the house was completed on the 10th inst. at an expense of $700. When the Commissioners first visited Bristol they met with every encouragement from the citizens, who pointed to a catch of 100 trout weighing 1,000lbs., as indicative of the fishing facilities of the lake, and guaranteed that there would be no trouble in getting all the trout needed off the spawning beds. Superintendent Hodge, of the Fish Commission, assisted by residents of the town, has just completed five days of work at the lake, in which he was assisted by George H. Fowler, Charles N. Drake, George D. Cross and E. T. Pike. They made the almost unprecedented haul of 500,000 lake trout eggs, which have been placed in the fishing trays at Bristol. Walter Aiken, of Franklin, was present some of the time and was much interested in the operations and delighted with the success achieved. Between 200 and 300 spawning trout were secured weighing from 6 to 12lbs. each. The method employed in catching them was to visit the spawning bed in the night and scoop up the trout with a net, the best time being between the hours of 12 and 4. Dr. Fowler at one scoop secured four trout weighing 40lbs. The trout were placed in a tank and towed a distance of one and one-half miles to the hatchery. The expense of securing this great stock of trout and spawn has been trifling, and it is estimated that the sales of young fry which can be made in the spring will entirely liquidate the expense of the hatchery.

The Commissioners also visited a stream eight miles distant in Hebron, which flows into Newfound Lake, and took a look for salmon, discovering about 50 weighing from 5 to 10lbs. each. They caught 12 by means of a net, but there were but two females among the number. From one of these they secured 5,000 eggs. They also discovered evidence of these magnificent fish being speared, one dead salmon with spear marks upon him and weighing 12lbs. being found which contained 8,000 eggs. The Commissioners have offered a reward of $50 for the conviction of any person who has been spearing these fish, and propose to make the guilty parties suffer for their transgressions of the law.

The establishment of the hatchery at Bristol seems to have been a most successful move.

A CRANK SPEAKS UP.

THERE are cranks and cranks. Whoever reads this is probably a brother angling crank, for the other species of this large family will disdain such "trash" as the FOREST AND STREAM is made up of. Do you own a gun or a "fish pole?" If so, you will at once recall some near friend whose ideas are entirely at variance with your own; and all summed up, he finds no other word to express his supreme contempt for either one of the two blessed articles than, "You are a crank." But we cranks of our family can take from its case a rod, light, symmetrical and loving in all its parts—I say loving, for do we not, as cranks, have to love our rods, guns and tackle? The rod is jointed for perhaps the hundredth time. We feel its weight; and the mind is carried to a fine fat trout caught here or there. Not only is the trout again at the end of the line and the weight felt the same as in actual experience, but the grand scenery, the cool and invigorating air, the freedom from care and business, all combine to even now cause that restful and exhilarating sensation that comes from a trip such as we cranks only know.

Does there live a man who never cared to and never did catch a fish or shoot a quail or to quiver with that excitement only gotten when squinting along the rifle barrel at a buck, and calls us cranks, but who loses every year he lives the most enjoyable of all pleasures given us?

Take away my guns, my rods, my waders, duck coats and general outfit, so that I can not fuss over and look at and fix over and lay plans and review the past; and you take away a part of my mind; for my mind is stored with past pleasures and is continually being stored with those fond anticipations that only hunters and anglers ever realize. How we cranks do anticipate far ahead during the winter months to the time when we stroll along the beautiful streams with rods and flies or a gun on the hills; and how much we enjoy the tired tramps, wet rains, slips into the water and tumbles over snags. But we have the sport and do not tire of it. Why is it that we do not tire of it, and that the older we grow the more we want? Do any of my crank friends know of one who at any time in life says or has said, "Well, I'm wrong; I'm a crank on fishing and hunting in every sense; my imagination has led me to think it was fun to fish and hunt; but I can buy them cheaper; I will sell all my guns and rods and buy what I want," and who sticks to this resolution feeling perfectly satisfied that he has been in the wrong? I do not remember having met one, and all crank friends seem to get worse every year.

It is not crankism but the gift of a desire to see nature, to be free, to have a sort of sentiment akin to poetry and music, that only nature can satisfy; so be proud of the name "crank" when the scoffer stands by, as you fuss over and pack and unpack the tackle and guns. TILE.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price $2.50. For sale by FOREST AND STREAM.

FISHING CLUBS IN CANADA.

Editor Forest and Stream:

By a communication from "Podgers" in your paper of Aug 8, he would seem to imply that the leases of lakes by Americans is not distasteful to the inhabitants of this country. We are not speaking of Quebec territory, but of the next province to it and adjoining, and the fact that two years ago the Government having attempted this outrageous proceeding on the people's privileges a club immediately organized and made their complaint against it, securing in a very limited time 3,000 signatures of the inhabitants of St. John city and surroundings to the petition, shows at once the fallacy of "Podgers's" assertion of there being no prejudice against the system. The Government almost immediately stopped the business of leasing on this complaint, which is proof positive.

Now, "Podgers" thinks it is all right to absorb the universal love of sport in man to himself or a few like himself, just because he happens to possess an extra supply of gold dust; but it must be acknowledged by the common lot of mortals as a most unsportsmanlike and selfish feeling. So many rational and fair arguments could be adduced to show the extreme conservativeness of his views that it would be taking up too much space in your valuable journal to refer to them.

We are a sport-loving people here and as desirous as any other people in any country to have correct laws to protect the fish from unlawful slaughter; but if our Government has been remiss in adopting the proper means to that end, it is no sense to say that Americans or Canadians among themselves should appropriate the waters for trout fishing because they, the lessees, offer to protect them and bear the expense thereof. These waters in the wild wastes of the land are the peoples' by all human and common consent, and the people here have never growled against the proper preservation of the fish from the greed of the pot-hunter and unlawful fisherman. A $50 fine, strictly enforced by any Government, would call up the whole country of honest fishermen, and would make this a land where the American tourist would secure more generous fishing than he could ever dream of in the present selfish, one-sided club plan.

What is the result now as compared to the days when Halleck, of former FOREST AND STREAM fame, published his "Gazetteer" for the guidance of fishermen and others? The Americans could fish trout at any place indicated or wherever they visited, and were welcomed by town or country with civility and love wherever they roamed. But the instinct that "Podgers" possesses was, unfortunately for us, stamped on some of their numbers; and like "Podgers," having some dust, they at once formed plans to stop even the guide who showed them the spot where the speckled beauties lay from fishing that spot again, as well as debarring their own countrymen from doing so by offering to lease the lucky fishing pool, and all other like spots to boot, if they could have a chance to gobble them up. Could anything be more grasping or ill-natured? No, such are not of the common mold of men, but of the glutton kind that occasionally crop up from the midst of humanity. Thanks to the people of St. John and vicinity for the stopping by our Government of such gluttons over-riding the people with such selfish actions.

How ridiculous to state that clubs help the country more than the old system of free fishing. When that was in vogue grocers and supply dealers and even fishing tackle makers here say they had a rousing trade, as every American who had moderate means would visit our then free-to-all shores and waters. Now only the few club men come, and they generally bring their own supplies, as a club, with them, so in this sense the great majority of former-time fishermen do not come now, as the clubs have absorbed the greater part of the best waters, and consequently a great falling off is felt by many among us, who once did a flourishing business in the season, and this cannot be refuted. The Dufferin Hotel here, an American house so called, experienced a case of six gentlemen who came here thinking to fish as usual at their old-time haunts, but who discovered their brothers from the States had purchased leases of these very waters, and of course they turned back thoroughly disgusted with the system practiced by their countrymen.

And this is the way "Podgers" would have things—sport for the gold dust man only. I think all true lovers of sport must feel abashed at his article, but I think I have discovered enough to show that he is not writing in the interests of even his own nation. If gold is his god, because it relegates whatever waters he pleases to his own selfish tastes, then let him get a good big pond and fish alone.

R. O. S.

ST. JOHN, New Brunswick.

THAT METABETCHOUAN SCORE.

Editor Forest and Stream:

Your issue of Oct. 3 contained an article copied from the Quebec *Chronicle* in regard to ouananiche fishing on the Metabetchouan River. It stated that a New York gentleman, who had just returned from the river, made the following splendid score with one rod, using the fly:

Sept.	1, 8	fish,	weight 27lbs.	Sept.	10, 11	fish,	weight 41lbs.
"	3, 11	"	" 45lbs.	"	12, 4	"	" 13lbs.
"	5, 19	"	" 75lbs.	"	14, 13	"	" 55lbs.
"	8, 9	"	" 31lbs.	"	17, 9	"	" 32lbs.

In a note in your issue of Oct. 31 Dr. Edwin R. Lewis, of Westerly, R. I., calls this a startling series of catches, a glaring misstatement, an advertising scheme; and claims that part of the score was made by himself. Now in regard to above score as published by you, I, the party to whom the Quebec *Chronicle* referred (although I did not write the article, nor do I know by whom it was written, having given my score to several gentlemen on my way home), would like to say that the scores as given are true in every particular; that the catch referred to was all my own; and that I used one rod only, a seven-ounce split-bamboo made by Fred D. Devine, of this city.

My largest fish was taken Sept. 3, and weighed nearly 6lbs., and this after being out of water seven hours. On this day I killed eleven fish inside of three hours, fishing at one pool only. My largest catch, Sept. 5, was nineteen fish, weight 75lbs. On this day I was accompanied by Mr. Jesse T. Lazear, of Pittsburgh, Pa., also by my guide. Dr. Lewis left the river Sept. 10 for Chicoutimi; on this and three subsequent days I fished the river with my usual good luck, killing eleven, four, thirteen and nine fish, as per above score. Dr. Lewis is an enthusiastic angler and a thorough gentleman, and while he is a little mixed on this question, I am positive he would not intentionally make any unfair statement nor throw doubt on one which he knew to be correct; had he looked more closely at dates as given by you he would have seen at a glance that four out of the eight scores given were made after his departure from the river; and I feel positive he did not have any information relative to scores made after he left. What makes the score more wonderful is the fact that the catches made by Dr. Lewis were made on days when I was not on the river, and that between us we could give an almost unbroken line of dates from Sept. 1 to 17, on which good scores were made. For the record I made I care very little, but I do not propose to leave the party who furnished the item to the Quebec paper in a false position. Whether it was put in as an advertisement or not I cannot say, and have nothing to do with, but wish to state positively that the scores as published are perfectly correct in every particular.

It is as stated by Dr. Lewis, very hard work fishing this river, and the food was not of the best, but should any fisherman be tempted to try his luck on the river next year from say Aug. 25 to Oct. 1, I think he could stand both the food and hard work for a short time, and if our good luck follows him he will feel amply repaid for any discomforts he may suffer.

UTICA, N. Y., Nov. 1.

AMERICAN SEA TROUT.

IT is well known that the American brook trout (*Salvelinus fontinalis*) leaves certain fresh-water streams for a portion of the year and goes to sea. This is true in regions where it is not cut off from access to the ocean by intervening areas of lowland traversed by streams of high temperature. The sea-going habit is more pronounced as we approach the northern limit of trout distribution. We think there is still some doubt as to the proper application of the name sea trout in Canada. The *fontinalis* certainly may be included under this title, but we believe that another and larger species, which is better entitled to the name sea trout, occurs in Canadian waters. We refer to the great sea trout of Labrador, *Salvelinus stagnalis*. This splendid fish grows very large, much larger than *fontinalis*, attaining the proportions and shape of the Atlantic salmon. It is well known to anglers and fishermen, and the fishing for it is prosecuted extensively in the sea. This species, according to Mr. L. M. Turner, spawns only in large streams and does not penetrate far inland.

On the Pacific slope the Dolly Varden becomes a sea trout, especially in Alaska, where it is known commercially under the name of salmon trout. This handsome species is found in the bays during a large portion of the year. Some individuals exceed two feet in length. When taken from the salt water they are brilliant silvery, with scarcely a trace of red spots, but exposure to the sun or immersion in fresh water will soon cause the spots to appear.

We have thus far spoken only of trout belonging to the genus *Salvelinus*, and we have made no mention of some species which occur only in the high northern regions of our country. It may not be amiss to remark, in addition, that several species of *Salmo*, or large river trout, also have the sea-going habit well developed. These include the brown trout, the rainbow, steelhead and redthroat.

T. H. B.

FISH PROTECTION IN PENNSYLVANIA.—The annual supply of eels has been harvested in the Susquehanna, and now the Lancaster county authorities have come out with a proclamation, in huge type, reciting that information and discovery have developed the presence of dams, baskets, kiddles, eel weirs and brush nets in the river. The appliances mentioned are declared a common nuisance to be abated by the owners within ten days under penalty of dismemberment and destruction of the apparatus by the officers of the law. We have said that the winter supply of eels is harvested and the unlawful fishing implements have accomplished their mission. The proclamation, therefore, is a trifle late, but we suppose it comes under the principle of "better late than never." These insinuating devices for the capture of fish have been visible from the river banks for a period of two months and the terms of the proclamation allowed them an extension of their precarious existence for ten days longer, by which time they were safely laid away for future use in anticipation of the time when information and discovery will again reveal their hurtful presence. Verily we are learning lessons in war from the savages who give the enemy notice of an intended attack, in order that he may not be taken by surprise.

A HISTORIC REEL.—Post Mills, Vt.—*Editor Forest and Stream:* I had the pleasure of having shown me by Thos. H. Chubb, the fishing rod manufacturer, a fishing reel which was presented to him by Dr. E. Sterling, of Cleveland, O. It was the reel formerly owned and used by Dr. Theodatus Garlick, the author of "Artificial Propagation of Fish." With the assistance of this reel was caught the Naiad Queen, the first trout ever used for artificial propagation of fish. As Dr. Sterling aptly said, "What a story this old reel could tell," of many streams and of many fish; and how much of health and pleasure has been inherited by the anglers of to-day by those experiments of Dr. Garlick's; and the time will come, after we have passed away, that the angler who fishes with rod and reel will say that Dr. Garlick was the "father of all fish." The reel, which was used by him, is a brass two-multiplying click with balance handle, and will hold some 100yds. of line. It is solid and substantial and is good for many years yet.—OMPOMPANOOSUC.

BLACK BASS LURES.—Lancaster, Pa.—In Conestoga Creek brown hackles have proved very killing in black bass fishing. Mr. Al. Rauch has taken a bass weighing 4¼lbs. and several others of about 3½lbs. each with this fly. At Fite's Eddy minnows and stone catfish are favorite bait. On Oct. 10, at Bald Friar, two Baltimore gentlemen caught 110 black bass by skittering with minnows.—H. C. D.

MR. WM. C. HARRIS'S nctice of the New York Fish Commission report, last week, was cribbed from the FOREST AND STREAM of Oct. 24. It was stolen bodily except one sentence referring to this paper. "I know a good thing when I see it," said the cock in the fable, as he picked up a diamond and stowed it away with the gravel in his crop.

CERO IN BAYS AND RIVERS.—I note in "The Fishery Industries of the United States," Prof. Goode quotes Mr. Stearns as authority for the observation that the cero or kingfish (*Scomberomorus caballa*) always lives at sea. I have seen numbers of them at Maleo Inlet, three-fourths of a mile from the gulf, and have in my collection a fine one weighing 24½lbs. In jumping after a school of mullet it made a mistake and fell into a sunken skiff lying at the wharf. It certainly visits the bays and rivers in that locality, but it may not further to the north.—J. W. VELIE (Chicago, Ill.).

DYNAMITING FISH.—At the November term of the court of Lancaster, Pa., will be tried several cases of killing fish by dynamite. On Sunday, April 7, some parties used this deadly material in the Conestoga and destroyed a lot of catfish, as well as large numbers of carp. They are likely to repent of their folly.

LARGE WALL-EYED PIKE.—Last week Mr. Wm. Beard, of Washington Borough, Pa., caught a wall-eyed pike weighing 8½lbs. in the Susquehanna, and Mr. Charles Franciscus, of Columbia, captured an individual of 10½lbs. on a trolling spoon, with lamprey eel for bait.

Fishculture.

A LARGE CARP.—The *New Era*, of Lancaster, Pa., Oct. 29, has the following account of a carp taken in Conestoga Creek: "David Hurst, Jr., an employé of the Eden paper mill, caught a German carp in a spring near the mill [Oct. 28] which measured 26in. in length and weighed a trifle over 9lbs The monster had wandered from the Conestoga into shallow water and was caught by hand."

The Kennel.

FIXTURES.

DOG SHOWS.

Dec. 5 to 7.—First Dog Show of the Continental Kennel Club at Denver, Col. A. L. Weston, Secretary.

Jan. 6 to 11, 1890.—Annual Dog Show of the Michigan State Poultry and Pet Stock Association, at Bay City, Mich. W. F. Brace, Secretary.

Jan. 13 to 18, 1890.—First Annual Dog Show of the Georgia Pet Stock and Bench Show Association, at Augusta, Ga. A. H. Vonderleith, Secretary.

Jan. 27 to Feb. 1, 1890.—Dog Show of the Colorado Poultry and Pet Stock Association, at Denver, Col.

Feb. 11 to 14, 1890.—Fourteenth Annual Show of the Westminster Kennel Club. American Institute Building, New York. James Mortimer, Superintendent.

March 11 to 14, 1890.—Second Annual Dog Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

March 25 to 28, 1890.—Second Annual Dog Show of the Mass. Kennel Club, Lynn, Mass. D. A. Williams, Secretary.

April 1 to 4, 1890.—Sixth Annual Dog Show of the New England Kennel Club, at Boston, Mass. J. W. Newman, Secretary.

FIELD TRIALS.

Nov. 11.—Annual Field Trials of the Philadelphia Kennel Club, at Richland, Va. For members only. Francis S. Brown, Sec'y.

Nov. 11.—Inaugural Field Trials of the Canadian Kennel Club, at Chatham, Ont. C. A. Stone, Secretary, London, Ont.

Nov. 11.—First Annual Field Trials (foxhounds) of the Brunswick Fur Club, on the Albany Hills, South Paris, Me. Mr. J. H. Baird, Secretary, Auburndale, Mass.

Nov. 18.—Eleventh Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Saratoga Springs, N. Y.

Nov. 22.—Eighth Annual Field Trials of the Robins Island Club, for members only. Walter L. Wellington, Secretary, Brooklyn, N. Y.

Dec. 2.—Inaugural Field Trials of the Central Field Trial Club, at Lexington, N. C. C. H. Odell, Secretary, Mill's Building, New York, N. Y.

Dec. 15.—Second Annual Field Trials of the Southern Field Trial Club, at Amory, Miss. T. M. Brumby, Secretary, Marietta, Ga.

Jan. 20, 1890.—Seventh Annual Field Trials of the Pacific Coast Field Trial Club at Bakersfield, Cal. H. H. Briggs, Secretary, 313 Bush street, San Francisco, Cal.

Jan. 27, 1890.—All-Day Field Trials, at West Point, Miss. F. R. Hitchcock, 44 Broadway, New York, Secretary.

Feb. 11, 1890.—Fourth Annual Field Trials of the Texas Field Trial Club, at Marshall, Tex. W. L. Thomas, Secretary.

A TRANSACTION IN DOG FLESH.—Suspension Bridge, N. Y., Nov. 2.—*Editor Forest and Stream:* Something over two years ago a friend of mine here had in his possession a handsome black corded poodle dog, and being anxious to secure a female of same breed I volunteered to advertise in FOREST AND STREAM for one. In reply to this advertisement there came a letter from a Mr. Graff, of Pittsburgh, Pa., saying that he had one of the very choicest bitches of this breed in America. He named no price, but said he was anxious to secure a fine fox-terrier bitch. My friend knew of a fine bitch that was in season; and at once had her served, and wrote Mr. Graff about her. In reply Mr. G. requested that she be sent to him at once with express charges paid, and he would on her arrival send the poodle by first express. The fox-terrier reached Pittsburgh in good condition and Mr. Graff acknowledged her arrival, and said the poodle would be along in a few days. More than two years has now passed, and not even so much as an apology has reached my friend. I am informed by Pittsburgh friends that Mr. Graff now resides at Cadiz, Ohio. Should these lines meet the eye of this gentleman, I would say that my friend found through his advertisement in FOREST AND STREAM an honest man who sold and delivered to him a genuine poodle.—JEWELER.

INDIAN DOGS.—*Editor Forest and Stream:* In an article in a back number (Dec., 1888) of the *American Magazine*, written by Wm. Hosea Ballou, descriptive of picturesque west Michigan, I find this statement: "Often I have taken trips over the ice along the shore in this (Grand Traverse Bay) country, behind Indian dogs, on slender sledges. The dog will not carry an Indian, but seems to understand that it is honorable to carry a white man. If an Indian wishes to ride, he rolls himself up in a blanket and feigns death, when the dogs will trot along with him, in hopes, no doubt, that the brave is being borne to his long home." Is there any truth in that? If it is not a yarn Mr. Hallock should surely add it to his notes on the husky.—TEEPEE. [Fol de rol de ri do!]

THE ST. BERNARD CLUB OF AMERICA.—New York, Oct. 31.—The monthly meeting of the Board of Governors will be held Monday evening, Nov. 11, at 8 o'clock, at the Hoffman House, New York city. Many matters of importance will come before this meeting. A full attendance is earnestly requested.—LORENZO DANIELS, Secretary.

AMERICAN COURSING CLUB MEET.

GREAT BEND, Kan., Oct. 24.—Had the fourth annual meet of the American Coursing Club been held at the date of earlier years, it would have fallen upon most unfortunate weather, as heavy rains have prevailed throughout Kansas for the past week or two. The later date of Oct. 24, which it was feared would bring the meet upon inclement fall weather, has proved fortunate, for to-day the skies are clear and the sun warm, although yesterday the prospect looked cheerless enough.

Even so early as yesterday morning the crowds which regularly attend this singularly popular and usually pleasant event had begun to make their appearance. Each Santa Fe train was met by numbers of the club members already on hand, and the new arrivals and their dogs found abundant and hearty welcome. Hotel Morrison is headquarters, and its treatment of the boys is everything that could be asked. Great Bend has surrendered herself to the annual jubilee, and there is little business transacted by her enthusiastic and generous citizens except that connected with the meet. The bright little city shows unusual improvement, and appears to flatter herself upon nothing more than upon the growth of her unique feature, the American Coursing Club meet. There is probably no town upon the face of the earth which can offer what Great Bend presents to a coursing association. In earlier reports of this meet, however, enough has been said regarding the features of this country and especially regarding that home of the American hare, the wide plain known as the Cheyenne Flats.

While some of the old faces are not here, it is the privilege of the club to welcome many new guests and members. Mr. E. T. Vernon, of Larned, is an accession of the right sort, an owner of many greyhounds and a practical plains courser. Mr. A. Haigh, of Cable, Ill., is another able and enthusiastic greyhound man who joins the ranks this year, and enters for the stakes. Mr. Watson, of New York, was elected a member. Mr. Wm. Green, of Colorado, was elected a member. Mr. B. Waters, of Chicago, in return for past able handling of the club reports, was elected an honorary member. It was learned with regret that Mr. Frank K. Doan, secretary of the club, could not be present by reason of press of business. Col. Taylor, of Emporia, the club president, is unfortunately detained away by serious sickness, and Col. R. S. Macdonald, a St. Louis visitor whom all wished to see this year, is also ill and unable to be present, while Mr. Roger D. Williams, of Lexington, is kept away by business. Numbers of new faces are seen among the visitors. Emporia sends down a lot of fine young fellows with Dr. Foncannon. Larned will have yet more people here to-morrow. Mr. T. W. Bartels, judge of 1887 meet, is on hand. Mr. E. L. Branch is here from Pueblo. Mr. E. Burgess is on from St. Louis. There are dozens and perhaps hundreds of visitors now in town for the purpose of seeing the meet or taking a hand in it. Mr. Carney, Mr. Heizer, Mr. Luse and other Great Bend men are courteous and energetic as ever.

The class of dogs entered was never so high as it is this year. As mentioned in a previous number of FOREST AND STREAM, Rookwood-Landseer Kennels have a lot of good ones to run. Their Babazoun looks well and fit, and so does Verdure-Clad. Mr. Luse, of Great Bend, has entered for himself and Mr. Heizer a number of very likely ones, and the Trales puppies show extremely well, while Trales himself will make trouble low down in the stakes unless there is no telling by looks. Mr. Allison has several puppies here, all red ones, as usual, but not so good a lot as usual. Mr. Lowe has entered Lord Neversettle, a stylish large dog, imported, and also his popular favorite, imported White Lips, a beautiful bitch, and Partera, his other imported bitch, who looks dangerous. The great puppy, Spring, who won first at St. Louis's National meet, is fit as can be, and Uncle Bobby Smart, for Doan & Smart, has entered Belle Smart, runner-up at that event, hard as nails and like as not to beat a lot of them. A good many people are going to feel as if they had been to a dog race this week, and sure winners are as thick as leaves in Vallambrosa.

At the business meeting last night little was done besides the drawings. Mr. D. C. Luse was chosen temporary secretary, the chair being filled by Mr. D. N. Heizer, of Great Bend, vice-president. Mr. Wm. Green was chosen judge, and Mr. Chas. Halloway slipper.

THE RUNNINGS.

A late start with but small crowd was made. The first dogs ordered into the slips were Mr. E. L. Branch's red dog Don Fawcett and Messrs. Doan & Smart's blue bitch Belle Smart. Belle was a trifle favored in the start, and Don was momentarily unsighted and thrown out. Belle got in, wrenched, turned and killed in 125yds. This was properly a no-course, but to the astonishment of all old coursers the judge gave it to Belle Smart.

Mr. D. C. Luse's (Dr. Royce's) white and blue bitch Handmaiden and Dr. Van Hummel's brindle and white dog Master Rich had a four mile walk and got up a strong hare. Handmaiden was unsighted at slip, but when placed did beautiful work. Master Rich when placed drew away. The judge, who by courtesy of the best-natured man on earth, Mr. W. W. Carney, was riding the latter gentleman's old cutting-out horse Bob, ran away with his horse and so held the course undecided. Adjourned for dinner.

After dinner the above brace went in again and got a good hare. Handmaiden was favored at the start and did the work after placing Master Rich, scoring eight points. At the road Master Rich drew by and led into the corn. He had much to cut down, but the judge decided that he did it. On the straightaway he was the superior. His work in the corn was not seen by the reporters.

Mr. M. E. Allison's (Mr. Burgess's) light fawn dog Spring and Rookwood-Landseer Kennels' brindle bitch Verdure-Clad were well sighted on a "long" jack. Verdure-Clad was first in, and for over three-fourths of a mile worked the hare beautifully. Near the barn Spring closed and drew ahead up the hill. It was chiefly a following race then. On his return the judge announced that "if the bitch had had any heart she would have won, but she stopped, and he therefore gave the course to Spring." Not being close up with the hounds it was impossible for him to tell whether or not she stopped on the brow of the hill through lack of "heart" or from being unsighted, and her score up to that time would in any case count. She did the work in that course, although Spring showed himself a great stayer and all over a good one, he had no right to the course, which, by some occult system of judging, Mr. Green gave to him.

Mr. Lowe's imported Neversettle went into the slips with Mr. Luse's (Mr. Heizer's) Lady Graham Glendyne. Neversettle got the run-up, but at once placed Lady Graham, who held possession for a half mile, scoring with remarkable beauty and rapidity. Neversettle got a possible go-by in this work, but Lady Graham gave him a racing go-by in return. Lady Graham had 13 points to her credit when Neversettle gave her a racing go-by, which brought his score to 7 points at the most. Neversettle led in the following race across the flat to the hills. At the fence Lady Graham was closing slightly on him, and the hare was gaining on them both, and at least 50yds. ahead. The hare turned square off for cover. Neversettle followed her across the angle, and Lady ran a trifle wider. The hare escaped. The judge said that Neversettle stopped short in his course, and Mr. Lowe, his owner, gave it out that he had re-broken the shoulder that he broke last winter. He certainly never scored a point after the go-by, yet on this showing, which is the actual one, the judge placidly announced that Lord Neversettle had won the course. Such a decision was either rank robbery or rank incompetency. There is no ground to call it the former, and Mr. Green may therefore content himself with the other horn of the dilemma in which he placed himself in rendering this truly remarkable decision. The result was received with just derision and indignation. Mr. Heizer, the vice-president, announced that the running would be closed for the day. Upon advice of his friends, Mr. Heizer re-considered the announcement and at the business meeting in the evening he apologized to the club for his hasty action. Mr. Heizer was indeed mistaken; but the only mistake he made was in offering any such apology. Such work as Mr. Green's has not been seen in the four years of this club's experience.

Mr. Bartels's white and brindle dog St. Patrick and Mr. Luse's white and blue bitch Little Lady Glendyne ran a hot course. The bitch threw St. Patrick full length, and he struggled for a moment flat on his back. He came stronger at the close, and really won the course easily. A third dog, belonging to Mr. Luse, broke away and joined the course, and the hare was run to earth. The judge seemed to think the course necessarily ended when the third dog joined, and held the course undecided. The Executive Committee heard Mr. Bartels's protest, enforced the rule and gave St. Patrick the course. Mr. Bartels had expressed himself as a great admirer of Mr. Green, yet he did not like his decision in this case. It seems to make a difference whose dog is in the soup, so to speak.

Mr. Branch's red dog Arkansas Traveler and Doan & Smart's brindle bitch Bessie Lee, winner of last year's cup, went in together. Bessie had the run-up, a trifle favored by the hare, and for a mile did all the work in good coursing style, beating Traveler on every corner. Bessie won her first six points untouched, and then doubled them rapidly; so that her score, counting three go-bys, must have been 18 or 20. Traveler then drew by, and Bessie being pumped out never closed again. The red dog ran a game race for a mile and a half, and killed. He scored repeatedly, but could never cut down the lead the bitch had given him. The judge gave the course to Arkansas Traveler, and this pleased the crowd, inasmuch as he was the nearer dog to the hare at the finish. Traveler broke loose and coursed and killed another hare alone before he was taken off the grounds. He ran two very punishing courses. This was the last course for the day.

SECOND DAY, FRIDAY, OCT. 25.

The weather was bright and clear, but cool. The attendance was larger, reaching perhaps 1,500. The first event was a bye race; Rip Van Winkle being absent. Mr. Vernon's blue bitch Beauty took a spin with Lady Graham Glendyne. The latter showed phenomenal speed and cleverness, and excited comment.

Rookwood-Landseer's white and red bitch Minnehaha was drawn against Mr. Lowe's black and white bitch White Lips. White Lips won, doing most of what was done after a corking hare that ran to the bluffs.

Rookwood-Landseer's white and blue bitch Miss Rare and Mr. Luse's white and brindle dog Trales, imported, got off well, Miss Rare a trifle better up, and at first leading in the exchanging. The dogs worked the hare handsomely, but Trales did more at the close of the very pretty course and won.

Mr. Vernon's blue bitch Blue Bessie and Mr. Carney's blue dog Holly went in. Holly won in a good strong course, turning to Bessie's kill. Two young men rode this course who had no right there. The horse of one threw him, and the judge in passing called out it was "good enough for him." The other young man took offense at this and at the close of the course insulted the judge shamefully, and even laid his hand on his collar. He was finally persuaded to desist, but no action was taken by the club to prevent a repetition of such a disgraceful scene, and the two youths, exultant at what they doubtless thought a great victory, announced that they would ride when and where they pleased. The club has always been singularly meek in all such cases as this, and now is a fit time to renew the remark of last year's report, that there should be a system of deputy marshalls on the grounds with full power to make arrest. So long as a judge is acting as judge he ought to have full protection against insult. Such affairs as this bring a club into an unnecessarily bad position.

Emporia Kennels' white and brindle bitch Lightning and Mr. Haigh's black and white bitch Bar Maid ran a cracking long course, Bar Maid showing fair quality, killing and winning.

After dinner Emporia Kennels' fawn dog Jack Baird and Mr. Haigh's blue dog Nip ran a long hare to the corn in a following race. Nip did the work for a mile, then Jack drew by, showing great staying qualities and was awarded the course.

It was announced that Mr. Lowe had withdrawn Partera—she having a bad toe. Mr. Luse's white and fawn bitch Jessamine therefore ran a bye, a long course to the hills. Her mate was Lady Graham Glendyne, and this grand bitch showed once more how wrong was the decision that threw her out in her first course. She did great work in the three courses which she showed the public.

Emporia Kennels' blue and white bitch Meta and Mr. Luse's imported black bitch Dick's Darling got a good slip on a strong hare. Meta was favored by the hare, but Darling drew by and held the hare to the hills, wrenching seven times and turning twice. As the procession went into the bluffs Meta closed up, but Dick's Darling had plenty to win.

Emporia Kennels' fawn and white dog Axtell went in with Rookwood-Landseer Kennels' imported red dog Babazoun, a grand looking greyhound. Babazoun took the run-up and half a dozen go-bys, passing every time the dogs extended. He worked the hare in exceptional style through a hard course and won every way. Axtell yelped often in the course. The hare escaped. It had so far been the exception to kill the hare, and the imported dogs have been especially unfortunate.

Mr. Luse's red bitch Lavina and Emporia Kennels' blue dog Bobolink went in together. Bobolink led up and did all the work for three-fourths of a mile. Lavina drew by, tied the points in a half-mile, came strong at the finish, killed and won a very close course.

THE GREAT BEND DERBY.

Running was now taken up in the Puppy Stakes. Mr. Luse's brindle dog Lancaster and Mr. Allison's red dog Reno Redwood went in first. Lancaster was young and green in the slips, and was unsighted, not getting a very good show. Redwood ran up and scored often, coursing the hare well into a road and into high weeds. Here Lancaster was unsighted again and stopped, but began again, following. Lancaster blundered on the hare as she struck the open, and led for a time toward the hills. Reno Redwood won.

Mr. Vernon's black dog Jack and Mr. Branch's black dog War Cloud got a good whitetail jack and a good slip. Jack led up and did the better work for a moment, then rapid exchanging and a long course followed. War Cloud's owner rode between the dogs and the judge; the latter very properly returned from the course and asked action of the executive committee. Mr. Vernon was disposed to draw his dog, but the matter was held over till the following day.

THIRD DAY, SATURDAY, OCT. 26.

The weather was beautiful and the crowd a very large one, though not more difficult to handle than that of the day before. Mr. Luse's white and blue bitch Lady in White went in with Mr. Allison's (Mr. Burgess's) fawn dog Spring, and ran a rattling undecided course, the little bitch showing elegantly.

Mr. Allison's red dog Rexensnoozer and Mr. Luse's red bitch Lady Barton, another of this litter of good ones, went in together. Lady beat the red dog pointless.

Another one of the Dick's Darling puppies came on in Mr. Luse's black and white bitch Lady in Black, who was slipped with Mr. Massey's blue bitch Belle Walton. Lady showed herself too clever for her game mate, and held possession for three-fourths of a mile, crowding the hare into the grass, where it was lost. Lady in Black is a very slight-looking bitch but handy.

Lady in White and Spring went in for their deciding course. Spring ran up. The hare placed Lady and Spring placed himself, showed the speed, turned, wrenched seven times, and led beyond the fence. Lady began to close and then got in and began to cut down the points. The judge stopped at the fence. Spring was seen by the reporters to draw in again, and it is thought he killed. After dinner the judge decided the course for Spring.

Messrs. Doan & Smart's brindle dog Dublin Paddy ran a bye, Mr. Brougher's dog Lord McPherson being absent.

Mr. Allison's red bitch Fanny Oller and Rookwood-Landseer Kennels' blue and white bitch Melodrama found no hare till after dinner. Then they got a good one. Fanny led up and wrenched. Melodrama took a go-by and held possession in a long following race, neither dog scoring much. The hare turned at the road. Melodrama still leading and holding possession. The hare was killed unseen. Melodrama won, Fanny doing very little.

Mr. Luse's brindle bitch Little Thought Of and Mr. Allison's red bitch Queen Downs closed the gap, but could not get in as the hare reached the hills. Little Thought Of won.

ALL-AGED STAKES.

Second Series.

In the second series of the All-Aged Belle Smart and Master Rich ran an undecided course, the judge being on the wrong side of a fence.

Jack and War Cloud were put in again, Mr. Vernon being induced not to draw his dog. War Cloud scored what there was to the flat near the hills. Jack closed and scored pluckily at the end, but not enough to win.

Spring and Lord Neversettle were slipped well on the short buffalo grass. Neversettle led up and showed fine balancing powers on the turns for so large a dog. He did the work for over a mile, the hare drawing off for the hills. Spring drew by at the barn and led over the hill, not scoring. He showed himself a great puppy, but his owner was giving him too much to do, and perhaps spoiled his chance for one stake by entering him in both Puppy and All-Aged Stakes. Neversettle won, and did pretty well for a dog with a broken shoulder.

Belle Smart and Master Rich went in again. Belle led up and handed the hare to Master Rich a half dozen times, but selfishly took it away again. Master Rich slid too wide for the clever blue, who did admirable work, killed elegantly, and won.

St. Patrick and Beauty were in the slips when a hare sprang directly in front of them on good ground. The judge called out, "Let them go!" and the dogs were slipped at 25 or 30yds. Beauty, not at first well sighted, ran wide. Patrick went in, wrenched a time or two, and with a great burst of speed tripped the hare. Beauty came around and picked up the hare. By the rules the other dog could not begin to score till she was placed, yet her first point was a kill. The entire course was not over 125yds. The judge gave the course to St. Patrick, under the occult system known only to himself. It could not have been better than an undecided course, even had both dogs been sighted at the start. For the benefit of the judge, who appears not to have seen them, the rules on these points are quoted below:

"The length of slip must necessarily vary with the nature of the ground, but should never be less than eighty yards, and must be maintained of one uniform length, as far as possible, through each stake."

"The following allowances shall be made for accidents to a greyhound during a course; but in every case they shall only be deducted from the other dog's score: *a. For Losing Ground*, at the start, either from being unsighted or from a bad slip, the Judge is to decide what amount of allowance is to be made, on the principle that the score of the foremost dog is not to begin until the second has had an opportunity of joining in the course."

Arkansas Traveler and White Lips got a good slip. The beautiful little bitch went out like a rocket, clung to the hare in her best style, knocked it about merrily and killed in elegant style. Arkansas Traveler was not in it. Doubtless his unnecessary double work of the day before had left him unfit. White Lips won.

Trales and Holly were put in the slips. Holly looked whimsically full, and there was considerable smiling suggestion that he must have been dallying with the flesh pots, though that may not have been. Trales led up, wrenched twice, turned, wrenched five times and turned, wrenched and turned in sole possession two miles and a half and lost the hare in a field. Holly tried hard to get his commissariat up to the scene of action, but couldn't.

Jack Baird and Dick's Darling were slipped well on a long hare, one of Mr. Carney's best brand. For three-fourths of a mile the grand old bitch did the work and did it well. Then the big fawn dog, a great one on a long race, drew by and crowded the hare across the flat to the hills, a mile and a half, scoring repeatedly and going clear away from Dick's Darling, who at one time stopped in the course, though she resumed quickly and followed. Jack won with a wide margin, although the judge, who, with a presence of mind that amounted almost to genius, had again gotten on the wrong side of a fence, could call it only an undecided course. This was most unfortunate, for Jack had earned his course, and it was a punishing one.

This closed the runnings of the day, and out of this last event grew an unpleasantness much to be deplored. Mr. Loftus, owner of Jack Baird, met the judge at the hotel and, it seems, charged him with injustice, or something of the sort. Mr. Loftus is a gentlemanly young fellow, and would not have done this except in great anger. He afterward sought confirmation of his position from the newspaper reporters. The reporters of these meets are continually appealed to for their opinions of such and such a course, and they usually say, "Oh, it was a good race," or "Wait till the paper comes out," or something like that, trying not to offend the questioner and not to go on record except in their professional capacity. Mr. Loftus was therefore answered in this way and was shown that the judge had not seen the course and so could not decide it. He was also told that "Jack won the course if Dick's Darling had stopped in the course." He unfortunately quoted this statement to Dr. Van Hummel and the judge, Mr. Green. FOREST AND STREAM's representative was a few moments later invested by these gentlemen and Mr. Bartels, all of whom wished to offer him bets that he didn't know the rules, and didn't know anything about coursing anyway. Mr. Green was moderate and delicate and showed his dignity as a judge. He only wanted to bet $5 with the newspaper man. It seeming easier to decide the question by referring to the rules than by a bet, this was done and the mare's nest discovered, the reporter admitting that his statement as made had perhaps misled Mr. Loftus This question was settled, but the animus for this action of Dr. Van Hummel was soon made apparent. He was hunting for the red, flowing gore of the FOREST AND STREAM man, and nothing but blood would do.

"I've got it in for you," said the bald-headed baron from Caldwell, "I know you and your whole outfit. You have always jumped on me every chance you got. Now, I can buy your man Mason and your whole measly outfit for $5. I've been laying for you, and I'm goin' to git you. I've got

Allison, and I'm goin' to git *you*. I'm goin' to settle with you some day."

Under these circumstances there seemed little to do except to suggest that the settlement be made at once, C.O.D. This was accordingly suggested to the gentleman. With a lofty forbearance which was touching in the extreme he replied, "I won't lay hands on you." The gore was therefore not spilled, and the insatiable vengeance of the terror from Denver remains to be appeased at some very remote day in the future.

The whole scene was a disgraceful one, but as FOREST AND STREAM was publicly assailed in this way the matter is matter of news and not of personal interest alone, and may therefore be briefly continued in mention.

"Dr. Van Hummel," said the reporter, "you are quoted as having said that I last year attempted to bribe the judges, Mr. Nash and Mr. Williams, to decide a course in favor of Mr. Allison's dog Rowdy. Now, you lied if you said that."

"The judges told me you did," said Dr. Van Hummel."

"No, they did not," said FOREST AND STREAM'S representative, "and if they had they would have lied." The Doctor declared he would furnish proof of this. Inasmuch as Mr. Roger D. Williams was one of those judges, inasmuch as he has offered the hospitality of his home to this writer, and inasmuch as he is a gentleman of honor, without reproach and incapable of falseness to himself or another, Dr. Van Hummel will never furnish such proof from that source, nor will he from an honest young man like Mr. Nash. This is mentioned simply to show the methods by which this noble gentleman "gets even" with one who has offended him. This writer has offended him in the most serious possible way, for he has told the truth about him. This writer has attended this meet annually from the first, and knows the record of Dr. Van Hummel from the moment he dawned on Great Bend with an officer after him and the seventeen greyhounds, which he hastily conveyed by bill of sale. This writer last winter showed that the credit for the formation of this club belonged to Dr. G. Irwin Royce and not to Dr. Van Hummel. Other writers for FOREST AND STREAM may have failed to see in his dogs at bench shows all that he himself saw. But in every case he has had truth and justice—the most painful treatment he could have—at the hands of this journal. It is no wonder that he hates the journal which can so well afford his hatred.

Dr. Van Hummel said that FOREST AND STREAM hurt the American Coursing Club among his wealthy friends, like August Belmont in the East, because it reported all the disturbances on the grounds, etc. He was informed that FOREST AND STREAM was a newspaper, and would always get and print the news. He was also informed that his mere statement was not enough to prove that Mr. Huntington and August Belmont "wanted to come out here, but were afraid to on account of the hoodlums, as the FOREST AND STREAM reports showed the members and visitors to be." He volunteered to show proof of this also. He was then complimented on being a patient, meek and forbearing old bluffer, and was left to his own devices and his great plans to ruin FOREST AND STREAM and all connected with it.

Let the gentlemen in the East, among whom FOREST AND STREAM has shed its baleful light on the matter of strict facts concerning these meets, understand that the above is a sample of the conduct of a man who has been posing in the East as the parent and protector of the American Coursing Club. There is no member like him in the American Coursing Club. There is no other "hoodlum" so selfish and unprincipled as he. Now let us go on record. This man will kill the American Coursing Club or it will expel him. An element like that cannot exist in an organization of gentlemen. The signs of great dissatisfaction are in the air. Mr. Vernon, of Larned, announces that he runs greyhounds for sport, and so will not come back next year. Dr. Foncannon, Mr. Loftus and all the Emporia boys announce that this is their last year, for they cannot stand the treatment they have had. Mr. Allison, Mr. Burgess and many others have already declared that this year ends it for them, and it has even been thought doubtful whether another meet will be held, although this is written before the final business meeting.

The facts above related are lamentable. So far as this paper is concerned, the position described was not sought but thrust upon it. For the sake of the paper this mention is necessary, not otherwise.

FOURTH DAY, MONDAY, OCT. 28.

The day was cloudy and cool, warming up in the afternoon. The crowd was not so large as on Saturday, but was far more orderly.

Jack Baird and Dick's Darling were the first pair in. They were slipped at 30yds. Jack led up, wrenched five times and scored lightly on the hare after her turn into the road. Dick's Darling seemed dull and unfit. At the corn Jack was unsighted, and Dick's Darling got in a little work. The course was made throughout by Jack, who won it easily. The judge, however, applied his celebrated occult system and called it an undecided course.

Lavina and Barmaid got a rattling long hare. Barmaid took the run-up, a turn and two wrenches. At the half-mile Lavina took a racing go-by and held the hare to the hills, scoring lightly. The dogs crowded the hare from the hills back to the flat. Lavina showed clear in the lead, wrenching all the time, and killed nicely after a three-miles course. Lavina won.

Jessamine and Babazoun went in. In an 80yds. course to a 33 or 40yds. slip Babazoun scored seven or eight points to little or nothing, and was given the course. This course should properly have been run again for more work.

Jack Baird and Dick's Darling tried it again. At the slip Jack was unsighted for an instant and ran wide. The hare struck tall grass and Jack ran by 250yds., while Dick's Darling was working the hare back in the opposite direction. When they struck clear ground Jack sighted them, and made a gallant effort to close. Little by little he drew up, and at last amid cheers went by with a burst and began scoring. After that it was all his, and he made six or seven go-bys and showed better on every turn, handing the hare to the bitch to kill. He having beaten his mate three times, and there being no wire fence to get on the other side of, the judge concluded to let Jack have this course.

GREAT BEND DERBY.

Second Series.

Reno Redwood and War Cloud started a long jack and lost it after two miles of hard buffalo grass. War Cloud did all he knew, but the long plains puppy was too much for him and made a clinking course to win. The hare took to earth or hid in the tall grass.

Spring and Lady Barton got another long hare. Lady ran wide, unsighted. Spring drew across and wrenched twice. Lady extended nobly, took a go-by, wrenched seven times, and led steadily, scoring additional points as the hare drew off for the hills, and winning handsomely. Spring was a grand puppy at this meet, but Mr. Burgess, his owner, gave him too much to do in placing him for both stakes.

Lady in Black and Dublin Paddy ran a hot short course, properly undecided, and went in again, getting a whitetail hare of truly devious ways. Lady ran up, turned and wrenched. Dublin Paddy laid up a bit on the corners. There was much exchanging, the hare being a rare dodger. Paddy killed. Lady did most of the work, took five go-bys at least, and won rightly.

Melodrama and Little Thought Of got a good hare and ran as beautiful a course as any yet seen, the scoring running over twenty points. Melodrama stuck well to the hare, worked it beautifully at the close, and killed three feet ahead of Little Though Of, winning nicely.

ALL-AGED STAKES.

Third Series.

Belle Smart and Lord Neversettle were slipped together. Belle had in the morning broken loose and coursed a hare to a kill with the chain about her neck, running a mile or two. She also broke loose and ran a distance at the close of the last course. She showed little against the big fellow, who went out of the slips elegantly, placed Belle, took the hare again and led to the close, the hare taking to earth. Lord Neversettle won.

St. Patrick and White Lips got a good slip. St. Patrick had slightly the advantage in the run-up, and that was all. White Lips took the hare, and in her unapproachable style clung to it, a merry course of a half mile, killing cleverly. White Lips is the most popular dog on the grounds. She is a wonderfully true and elegant bitch.

Trales and Jack Baird ran a short course, which never served to give Jack a chance at his forte, a long finish. Trales led up elegantly, and placed Jack, who lost at once, and was never in it again. Trales made three turns, wrenched handily, scored ten points, and won.

Lavina and Babazoun had a long time finding a hare, and then lost four hares unsighted. Sighted, finally, Babazoun led up and placed Lavina, who turned. Babazoun took a go-by and a turn. Lavina took four wrenches and Babazoun drew by; Lavina wrenched four times and killed to merit, scoring eight points. Babazoun scored ten points and won. Lavina is always a scorer at the end of a long course, and her kill was a detriment to her chances. There was, however, no doubt that Babazoun won.

FIFTH DAY, TUESDAY, OCT. 29.

The weather was raw and the crowd small.

GREAT BEND DERBY.

Third Series.

Reno Redwood and Lady Barton ran a quarter-mile course, and Lady beat Reno pointless. She showed a very fine little bitch.

Lady in Black and Melodrama got a good hare. In a long run-up Lady was a bit the better, and wrenched eight times. Melodrama drew by and wrenched repeatedly. Lady fell at wire and was unsighted, and Melodrama went on. Before Lady was again placed the hare was lost. Lady in Black won.

ALL-AGED STAKES.

Fourth Series.

Lord Neversettle and Trales went into the slips amid excitement, and betting ran high on both the imported ones. They had a good slip and and a long lead-up, in which Trales showed ahead by two lengths. Trales turned and placed Neversettle, who wrenched four times and turned. The dogs raced away at great pace, and Trales was again placed and scored handsomely. At once Neversettle was placed again, and balancing finely indeed for a dog of his size, wrenched again four times. Trales then took a go-by on the inner circle. At great pace there was more trading, Trales the better in it. Trales then raced ahead in a little draw and killed at the bank, sliding ahead with his forelegs under him as he reached. Trales ended winner of a grand course.

Shortly after this course there was a bad-looking accident. Mr. B. Waters was riding at full speed, when his horse stepped in a grass-covered hole and fell, rolling over him. Mr. Waters was seriously shocked and had a thumb very badly sprained. Directly after lunch, and only about an hour after the above accident, a yet more serious one, apparently, befell the judge, who was riding after White Lips and Babazoun, just slipped in the last course of the fourth series in the All-Aged. In this case also the horse stepped in a grass-covered hole, and gave Mr. Green a terrible fall, rolling over him, as so often happens in these prairie falls. Dr. Royce and the press men riding behind the judge at once went to him, finding him motionless and insensible, with blood flowing freely from a badly cut face. Mr. Lowe, Mr. Allison and a few others who did not see the fall, with Dr. Van Hummel, owner of Babazoun, rode on after the dogs, who ran really the best and longest course of the meet. Babazoun had the better in the run-up, but it was said that White Lips was scoring at the finish. Those remaining with the judge cared for him, and after a time he regained consciousness and was later on taken into town, where he rapidly recovered from what at first had all the look of a very ugly accident. This was the fifth similar accident of the week.

The Executive Committee appointed Mr. C. G. Page judge in place of Mr. Green. Mr. Lowe and Dr. Van Hummel had an earnest private consultation, and when White Lips and Babazoun were ordered in again, it was announced that Babazoun was drawn.

ALL-AGED STAKES.

Final.

White Lips had had her full hour when she went into the slips with Trales to settle the possession of the All-Aged cup and stakes, but those who saw her last course knew she could not win against Trales at the time. Trales led up and scored a turn, the bitch struggling gallantly for a place and finally getting it. Trales, however, raced by her time and again, working handsomely. Near the finish White Lips returned him a go-by, and to the astonishment of all, began to score. The hare ran to earth, Trales won every way, but the work of White Lips after such a course as she had run, made her a most worthy runner-up. The wildest excitement followed the announcement of the decision. Of all present, none were happier than Arthur Massey, the club's old slipper, who trained Trales. He lost his chance as slipper by being trapped into a bet as to the result by a dog owner, who thereupon objected to him. The wager, however, was well-placed, and the above-named party, who had said he would give $50 to see Trales beaten, found that neither his wishes nor his precautions were strong enough. At the last course there was strong talk for a divide, but this Mr. Heizer, owner of Trales, rightly refused to listen to. Trales is a 58lb. imported greyhound, white and brindle, symmetrical and compact, a good one and run in good form. White Lips was runner-up in this stake last year, and is a well-known greyhound. The two are a noble pair.

The vice-president of the club had the last hare dug out from her earth, and she was found unharmed. She was formally presented to the National Coursing Association, of Hutchinson, Kas., and will be marked and kept on the grounds and never run again while she shall live.

THE DERBY WINNERS.

Mr. Luse, owner of Lady Barton and Lady in Black, concluded not to run off for first and second, but divide the money and allowed the little bitches to share the full honors. These puppies are two of the six Trales—Dick's Darling puppies entered by Mr. Luse, and are 13 months old. Lady Barton is a brindle who would do fairly on the bench. Lady in Black is weedy-looking, but was a surprise. It was not thought she could beat Melodrama, who is quite a remarkable performer for a young dog. Melodrama is by Master Rich out of Catchfly. Master Rich is a brindle and Catchfly a black. Melodrama is smaller and shorter than either and is blue and white.

The people were hardly home from the grounds when rain began to fall heavily. The weather selected by the executive committee had been most fortunate.

At the business meeting on Tuesday night a letter from Mr. Doan, secretary, was read, explaining his absence. The books not being brought up to date it was impossible to tell just how the club finances stood, but it was apparent that a considerable amount remained to be made up. The usual vote of thanks to the press was passed. The following officers were elected: President, Hon. D. N. Heizer, of Great Bend; Vice-President, Mr. W. W. Carney, of Great Bend; Secretary, Mr. Ira D. Brougher, of Great Bend; Treasurer, Mr. J. V. Brinkman, of Great Bend; Executive Committee, Mr. C. G. Page, of Aurora, Ill.; Mr. H. C. Lowe, of Hutchinson, Kan., and Mr. D. C. Luse, of Great Bend; Grounds Committee, Mr. W. W. Carney; he to select two associates. It does not appear of record that Mr. Carney received any vote of thanks, yet if ever any man was entitled to this and far more it was certainly Mr. Carney. He has been the strong support of the American Coursing Club and has thrown open his ranch, his barn, his house and his heart unreservedly and without thought of pay. As the club makes history, let it not forget the men who have made it.

Not all the business necessary to be transacted was finished Tuesday night, and a second meeting was called for Wednesday night. By that time, however, the press representatives were all forced to leave, and it is trusted that brief mention of the latter meeting will be sent on by the club secretary.

In summing up the features of this year's meet, little need be added to the details given. It would be wrong to attempt suppression of the fact that schism and dissension have been rife, and the future of the club put in jeopardy. Much depends upon the result of the Wednesday meeting, but it is earnestly and sincerely to be hoped that the purer and more sportsmanlike element of the club will be able to outweigh all selfishness and intrigue, and so keep up for a noble future what is so fine a feature of the American sporting year. The sport of coursing needs no explanation and no pushing now; but a few facts to show the possibilities of next year's meet may be of interest. There are over fifty puppies in the vicinity of Great Bend, all by the imported dog Trales. There are eighteen puppies out of the imported bitches Lady Graham Glendyne, Lady Milly Glendyne and Little Lady Glendyne, these showing the blood of London—Lady Glendyne and Jester—Lady Glendyne. There are six puppies out of imported Dick's Darling, and nine puppies by Lord Neversettle out of Partera, and Rookwood Landseer Kennels will doubtless have many good ones also. All the above-mentioned young dogs can qualify for next year, and out of this rapidly increased number of fine ones there can be selected some astonishing ones. This is the greatest comment on the growth of greyhound interests in this country since the establishment of the American Coursing Club. Such is that growth and such the evident superiority of the imported dogs, that next year it will doubtless be found necessary to establish a separate stakes for American-bred dogs. All the dogs in at the close this year were imported or of imported stock. Next year, under methods rendered better and better each year by gained experience, there should be a meet fit for all America to see and to be proud of.

SUMMARY.

ALL-AGED STAKES.

First Series.

Doan & Smart's blue bitch Bella Smart
beat
Mr. E. L. Branch's red dog Don Fawcett.

Rookwood-Landseer Kennels' brindle and white dog Master Rich
beat
Mr. D. C. Luse's (Dr. Royce's) white and blue bitch Handmaiden.

Mr. M. E. Allison's (Mr. Burgess's) fawn dog Spring
beat
Rookwood-Landseer Kennels' brindle bitch Verdure-Clad.

Mr. H. C. Lowe's white and brindle dog Lord Neversettle
beat
Mr. D. C. Luse's (Mr. Heizer's) white and blue bitch Lady Graham Glendyne.

Mr. T. W. Bartels's white and brindle dog St. Patrick
beat
Mr. D. C. Luse's white and blue bitch Little Lady Glendyne.

Mr. E. L. Branch's red dog Arkansas Traveler
beat
Doan & Smart's brindle bitch Bessie Lee.

Mr. E. T. Vernon's blue bitch Beauty, *a bye.*

Mr. H. C. Lowe's white and black bitch White Lips
beat
Rookwood-Landseer Kennels, white and red bitch Minnehaha.

Mr. D. C. Luse's (Mr. Heizer's) white and brindle dog Trales
beat
Rookwood-Landseer Kennels' white and blue bitch Miss Rare.

Mr. W. W. Carney's blue dog Holly
beat
Mr. E. T. Vernon's blue bitch Beauty.

Mr. A. Haigh's black and white bitch Bar Maid
beat
Emporia Kennels' white and brindle bitch Lightning.

Emporia Kennels' fawn dog Jack Baird
beat
Mr. A. Haigh's blue dog Nip.

Mr. D. C. Luse's white and fawn bitch Jessamine *a bye.*

Dr. D. C. Luse's black bitch Dick's Darling
beat
Emporia Kennels' blue and white bitch Meta.

Rookwood-Landseer Kennels' red dog Babazoun
beat
Emporia Kennels' fawn and white dog Axtell.

Mr. D. C. Luse's red bitch Lavina
beat
Emporia Kennels' blue dog Bobolink.

Second Series.

Belle Smart beat Master Rich.
Lord Neversettle beat Spring.
St. Patrick beat Beauty.
White Lips beat Arkansas Traveler.
Trales beat Holly.
Jack Baird beat Dick's Darling.
Lavina beat Bar Maid.
Babazoun beat Jessamine.

Third Series.

Lord Neversettle beat Belle Smart.
White Lips beat St. Patrick.
Trales beat Jack Baird.
Babazoun beat Lavina.

Fourth Series.

Trales beat Lord Neversettle.
White Lips beat Babazoun (withdrawn).

Final.

Trales beat White Lips and won.

GREAT BEND DERBY.

First Series.

Mr. M. E. Allison's red dog Reno Redmond
beat
Mr. D. C. Luse's brindle dog Lancaster.

Mr. E. L. Branch's black dog War Cloud
beat
Mr. E. T. Vernon's black dog Jack.

Mr. M. E. Allison's (Mr. Burgess's) fawn dog Spring
beat
Mr. D. C. Luse's white and blue bitch Lady in White.

Mr. D. C. Luse's brindle bitch Lady Barton
beat
Mr. M. E. Allison's red dog Rexensnoozer.

Mr. D. C. Luse's black and white bitch Lady in Black
beat
Mr. A. Massey's blue bitch Belle Walton.

Doan and Smart's brindle dog Dublin Paddy *a bye.*

Rookwood-Landseer Kennels' blue and white bitch Melodrama
beat
Mr. M. E. Allison's red bitch Fanny Oller.

Mr. D. C. Luse's (Mrs. Luse's) brindle bitch Little Thought Of
beat
Mr. M. E. Allison's red bitch Queen Downs.

Second Series.

Reno Redwood beat War Cloud.
Lady Barton beat Spring.
Lady in Black beat Dublin Paddy.
Melodrama beat Little Thought Of.

Third Series.

Lady Barton beat Reno Redwood.
Lady in Black beat Melodrama.

Final.

Lady Barton and Lady in Black divided first and second.

DOG TALK.

HE DREW the line at dogs: Metamora Cole, colored, who said he had been a dog catcher for nine years, was tried in the Criminal Court yesterday on the charge of stealing a dog, valued at $40, the property of W. Stewart Diffenderffer, says the Baltimore *Sun*. The jury were out nearly three hours, and were discharged, as they were unable to agree. Cole testified that he had been honest in his business. "I have caught dogs on the pavement of the City Hall," he said. "I caught Mayor Latrobe's little dog and Police Captain Cadwallader's little dog, and have never been arrested for stealing a dog. I wouldn't steal a dog." "Would you steal anything else?" asked Mr. Michael A. Mullin, who was assisting the State. "Yes, sir," candidly replied Cole, amid general laughter.

About the *American Kennel Register*.—In Mr. Peshall's letter last week was a statement which it was our intention to correct by a note in that issue. Mr. Peshall said, "Through my many interviews and efforts made with Mr. Grinnell, of the Forest and Stream Publishing Co., Mr. Grinnell, through Dr. Perry, offered the *A. K. R.* to the A. K. C. for the sum of $500, which offer was shortly after accepted by the A. K. C., and the rival register ceased to exist." In this Mr. Peshall is mistaken. The sale of the *A. K. R.* was not effected through his influence, nor was it ever offered through Dr. Perry to the A. K. C. It was sold to Dr. Perry, and his subsequent disposal of it to the A.K.C. was entirely his own concern.

In one of the New York courts a case has been decided awarding $500 damages to a bicycler who was injured by a dog. "Judge Barnard finds that the defendant harbored the dog, and although he was owned by his son-in-law, Hoolohan, the defendant is liable for the damage for harboring a vicious dog, knowing him to be vicious. The proof shows that before the plaintiff was hurt the dog had attacked others, who told Kennedy of the viciousness of the dog, and instead of disposing of him he still harbored him."

Chief Detective Wade has been following a hot trail close upon the heels of literary thieves, and he tells us that part of the article by "Merlin," which we copied the other day from the English *Kennel Gazette*, was stolen by "Merlin" from a Boston *Herald* paper by Dr. J. Frank Perry, the authority on canine disease. Dr. Perry will please take it as a compliment to himself that we recognized the merits of his paper, though it came to us tricked out in the disguise of a plagiarist.

Mr. C. Bunn, of Peoria, Ill., has purchased from Mr. Chas. W. Cunningham, Kensington, Eng., the mastiff dog Ormonde, a half brother to champion Minting. He was whelped April 7, 1886, and is by Victor Hugo and out of Cambrian Princess. He won second in the puppy class at Crystal Palace, 1887, and first and cup at the show held at Southampton in September.

The types made us say last week that the English Kennel Club had decided that any Irish setter whelped after Dec. 31, 1889, if cropped will not be eligible to compete at any Kennel Club show. The reader will please substitute terrier for setter and then the item will be correct.

About the Eastern Coursing Meet Mr. Huntington writes: "The hares not yet having arrived as ordered, our meet will be postponed. Will advise you of exact date, which will be as soon as a few days' familiarity with the locality will enable them to run well."

The Eberhart Pug Kennels, Cincinnati, O., have recently received from Miss A. H. Whitney, Lancaster, Mass., the pug dog Sir Loris, bred by Mrs. Foster, of Bath, Eng. He is by champion Loris and out of May Queen.

Mr. R. B. Sawyer, Birmingham, Conn., has sold to Mr. John H. Mathews, New York, the well-known bulldogs Portswood Tiger and Lion, and the bitches Soudan and Thespian.

Mr. H. L. Goodman will judge the dogs at the Denver dog show next month.

BULL-TERRIER IMPORTATION.—New Haven, Conn., Nov. 1.—*Editor Forest and Stream:* I have just received from England, per S. S. State of Nebraska, the well-known medium weight bull-terriers Chessuetts Flyer (first and special Birmingham, 1888; first and special Brighton, first South Hampton, 1889, and many other prizes) and Young Bendigo, second Birmingham and second Aquarium. Both dogs are under 30lbs.—FRANK F. DOLE.

WHITE TOE NAILS IN MASTIFFS.—*Editor Forest and Stream:* Some weeks since I wrote you as to the absurd ideas novices often entertain as to the above, and I sent a copy of FOREST AND STREAM to Richard Cook, Esq., the Secretary of the Old English Mastiff Club of England. I append an extract from his reply: "Your remarks on white toe nails are quite to the point. It was in the spring of last year that a gentleman having used Ilford Chancellor and had a fine litter, was actually going to kill them because most of them had some white marks on feet or chest. He, however, sent for me, and I very soon disabused him of that nonsense. I wonder who ever saw a Beau puppy without some white on it." I had no idea that this notion had taken hold in England as it has done here, and after the instance Mr. Cook gives, it seems to me that it is high time for the Old English Mastiff Club to "distinguish and divide" on this.—W. WADE (Hulton, Pa., Oct. 29).

DENVER DOG SHOW.—We have received the premium list of the first annual dog show of the Continental Kennel Club, to be held at Denver, Col., Dec. 5 to 7. Challenge classes, dogs and bitches to compete, with prizes of $10, are provided for mastiffs, St. Bernards, deerhounds, greyhounds, pointers, English setters, Irish setters, Gordon setters, cocker spaniels, collies, bulldogs, bull-terriers and fox-terriers. The prizes in the open classes are $10 and $5, and the same for puppies. Valuable specials are also offered, among them being one of $250 by the citizens of Denver for the best kennel of five dogs of one breed owned outside of Colorado. Entries close Nov. 20. The address of the secretary is A. L. Weston, 910 Seventeenth street, Denver, Col.

WHERE LOST DOGS GO.—Aurora, N. Y., Oct. 29.—*Editor Forest and Stream:* I occasionally read laments over the loss of a valuable dog strayed or stolen, which is never found. The dogs may have found their way into some medical college, and there undergone a torture (vivisection) and death as practiced by a lot of inhuman wretches in the guise of gentlemen, who would make an Apache warrior turn green with envy. I was informed by a student in one of the medical colleges of our neighboring city that there were quite a number of English and Irish setters cut up alive there last winter. They seem to prefer a kind and gentle dog, as they are too cowardly to tackle a large, fierce dog.—G. W. H.

INDIANA TRIALS.—Bicknell, Ind., Nov. 4.—The third annual field trials of the Indiana Kennel Club began to-day with the Derby for setters. In the preliminary running against a scale of points for a place in the second series, Zulu, King Leo's Boy, Modesty, Braxton Bragg and Clochette were thrown out. The drawing for the second series resulted: Hope's Ray against Sam C., Nannie B. against Simonides, Tempa Cambridge against Lilly Burgess, Daisy Girl against Frankie Folsom. In the absence of Mr. D. C. Bergundthal and Col. A. G. Sloo, Mr. P. T. Madison and J. B. Stoddard acted as judges with Royal Robinson.
